The speakers this year were the distinguished Senator from Kansas [Mr. SCHOEPPEL], the distinguished Senator from Ohio [Mr. LAUSCHE], and myself. All of the addresses placed emphasis on the high cost of government and the course we must take to maintain the economic stability of the United States. Unfortunately, we cannot have printed the speech of the able Senator from Ohio, because he spoke from notes and did not have a written address.

I feel that these speeches are of interest to the general public, and I ask unanimous consent to have printed in the Appendix of the RECORD the Genesis of the Amen Corner, the address of the Senator from Kansas [Mr. SCHOEPPEL], and my remarks on that occasion.

There being no objection, the Genesis and addresses were ordered to be printed in the RECORD, as follows:

GENESIS

The Amen Corner is not a club. Don't forget that.

It is something that just happened, and, without rhyme or reason, might happen in any well-regulated wide-awake, self-respecting urban community.

It happened to Pittsburgh in 18—let me see—well, as far back as the memory of this scrivner runs, debates to the contrary notwithstanding, there has been about town a coterie of boon companions, men of many minds, without regard to race, creed, politics or previous condition, who have gathered nocturnally, quite haphazardly, at some place of convenient rendezvous, to discuss as the spirit moved them, any subject under the rising or the setting sun, and, without let or hindrance, apply to the arts forensic any system of logic or reason, which, the individual in his sovereign right, might elect.

Membership in the Amen Corner is one of the difficult mysteries of the day. There is no set formula and no rules of procedure are made to guide the ambitious tyro who would have his name inscribed on the roster of membership. Indeed, the only information on this head which is available is that to gain the open sesame one must be a one hundred percent man. In truth manhood is the acid test which the Corner prescribes, apparently in secret, for one never knows when, if, or how, he is to become a member until some day he is slapped on the back, hale fellow-like, and is told that he is an "Amener."

That's the simple, frank process, but, like the higher degrees in some of the fraternities, the reason why one has been elected is never disclosed.

"Many are called but few are chosen" seems to be quite literally the maxim of this unique fraternity of good fellows.

The progenitor of "The Corner" was called "The Steps" and its place of concourse then was at Liberty Avenue and Sixth Street.

One dark night some scalawags, out of tune with that splendid spirit which preserves the best traditions and usages of an epoch, wantonly and without ruth, moved "The Steps" to make room for the ignoble and sordid march of progress—moved them no one knew whither.

Up to Grant Street to the offices of one of the group, the fathers of the Amen Corner trekked and metaphorically pitched their tent.

Not long thereafter this same iconoclastic march of progress—to be exact, in the fall of 1915—the William Penn Hotel offered a rendezvous which the dispossessed members of "The Steps" grasped with an appreciation of the hospitality extended, in a way that warmed the cockles of the heart of the genial Boniface.

"Come over to the William Penn," said he, "and meet in a corner of the lobby."

So, they came, and out of "The Steps" there evoluted The Amen Corner.

On its roster, as active or honorary members, are ambassadors to and from the Old World, Governors, Senators, Judges of all the courts, clergymen, lawyers, business men, politicians, literatti, artists, actors, musicians, and notables in greater or lesser degree in nearly every profession, vocation, and avocation.

Many brilliant prandial functions have marked the history of The Amen Corner. Annually the president is honored with a testimonial dinner. That's why we are here tonight.

But nightly, and now daily since it has its own spacious quarters on the club floor of the Wm. Penn Hotel—the real zest of membership in The Amen Corner may be judged from the casual gatherings and the open discussions that animate them.

Controversies rage on every conceivable subject. Questions are never settled. That's too much to expect from "men of many minds."

But though the disputation may work itself into the velocity of a typhoon or the heat of argument may rise to the temperature of Hades, and, the end of the day may leave some sorely tried tempers and furniture may be a bit awry, the day after dawns with the same sunny skies breaking through Pittsburgh's changeful atmosphere, and the same happy, smiling faces and the same warmth of handclasps all around, that prevailed before the last argument.

THE ROLE OF THE CONGRESS IN THE PRESERVATION OF FREE ENTERPRISE

(Address by United States Senator ANDREW F. SCHOEPPEL, Republican, of Kansas, at the 31st annual dinner of the Amen Corner, Pittsburgh, Pa., on April 6, 1957)

It is a pleasure to be with you in Pittsburgh tonight—the city aptly referred to as the Renaissance City of America, the great metropolis with the Golden Triangle.

Many of your fine leaders, from all walks of life, have contributed to this great enterprise, prominent among them being Walter F. Schulten, one of the outstanding industrialists.

He has interested himself, as you know, in the great civic advancement of your city, and is to be congratulated for his splendid accomplishments.

It is always a pleasure for me to meet with business leaders to discuss some of the problems which confront the Congress of the United States in preserving the free enterprise system which you represent and symbolize.

The 531 individuals who constitute the Congress, 96 Senators and 435 Representatives, are the board of directors for the American people. We are responsible for determining the policies of what has become the biggest business on earth.

As in most corporations, boards of directors have no administrative responsibilities. In the Federal Government, executive responsibility is the province of the President.

The American people—170 million of us, with only 7 percent of the world's population—enjoy the highest standard of living of any country on earth.

We have only 6 percent of its land area, yet we account for 40 percent of its production of goods.

We generate 45 percent of its electric power.

We have 60 percent of all the telephones in use, and more than 75 percent of the automobiles.

The other side of the coin is, of course, the fact that 93 percent of the world's population has far less of the good things of life than do our own citizens.

With the bulk of the world's resources available to them, they should be able to do more for their own people without depending on the American taxpayer.

People from many lands visit America to see our factories, our farms, and to study our productive processes. Our Government fosters these exchanges, as we believe that others can benefit through the application of our advanced technology and scientific developments to raise their own living standards.

I support these efforts. However, I am disturbed that so many who visit our industrial plants leave our shores without finding the key to America's well-being and strength.

They believe that our progress can be transplanted to other lands by capital grants and the application of technical know-how.

They have failed to grasp the fact that the accumulation of capital in the United States, as well as our technical superiority, is based on a unique system of relationships between private citizens and their governments. These relationships are derived from the spiritual and moral concepts which our Founding Fathers wrote into our Constitution.

They are the basis for a competitive capitalistic system, which today protects the free world from atheistic communism.

I believe in this system, and none of us should hesitate to voice our belief that this is the most productive system man has devised.

The United States Information Agency has sent an exhibit to many countries to explain our American system described as "the people's capitalism." This is a good phrase. We have no classes in America.

Here in Pittsburgh your industrial society provides one of the best exhibits in the world to show the success of this system. Many of your neighbors are at one and the same time workers for, investors in, and customers of the same firm.

The distinguishing feature of each of these relationships is the fact that they are based on the voluntary decisions of individuals.

We in the Senate must make sure that its growth is fostered by the development of sound fiscal and monetary policy.

Any one can buy or sell a share of stock in any listed American corporation.

You can seek any job for which your abilities qualify you.

You are free to spend your income as consumers to satisfy your personal wants and express your individual preferences.

This voluntary system based on free individual choice is the unique feature of "the people's capitalism."

The Congress of the United States, your board of directors, promises to protect these rights for all our citizens, which rights have been handed down to us by our forefathers.

These freedoms are possible only because individuals have the right to own private property. The productive tools in America belong to the people and not to their Government.

In recent years we have heard a great deal about the fifth amendment. Every one here is familiar with the fact that it protects individuals from self-incrimination.

Some of you perhaps are not aware of the fact that it also provides the basic security for private property. This amendment, a part of our great Bill of Rights, provides that private property cannot be confiscated without due process of law, nor can it be acquired for public use without just compensation.

From our earliest days as an independent country, we have believed in private enterprise.

It is an article of faith that every individual should be free to develop his God-given talents and to enjoy the fruits of his own labor.

Our country has prospered greatly because of these basic fundamental beliefs.

Our Constitution protects freedom of conscience, freedom of speech, freedom of assembly, and the freedom to petition one's Government.

These freedoms have fostered intellectual development, the spirit of scientific inquiry, and the willingness to explore the unknown, which underlie our great scientific and industrial accomplishments.

Let me remind you that our scientific developments come from the efforts of individuals. We believe in the dignity and importance of every individual.

Let me discuss our current concern with lobbying in terms of the freedom guaranteed in the Constitution to petition one's Government.

I am reminded of an article written in 1935 by Raymond Moley, who is truly an elder statesman in the field of political journalism. Mr. Moley wrote:

"Lobbies about which we are hearing so much these days are an inevitable aspect of republican government. They fill a need created by modern economic life, which is a mesh of many interests. If we recognize these interests as legitimate, we speak of them as interests.

"If we do not like them, we call them in an italicized voice interests. If we hate them and are fighting them, we call them big, special, or vested interests. But interests they are, and they multiply, overlap, and conflict."

It is the admitted responsibility of the Congress and the Senate to prepare and pass upon the ground rules under which these overlapping and conflicting interests compete with each other.

We should run no risk that our deliberation turn into a Roman holiday for the benefit of sensational journalism, and referring to the general area of the activities which we call lobbying, I would like to again quote Mr. Moley: "It is difficult to indict a method which in its essence is the ancient right of petition in a modern dress."

Regarding this right of petition, there is a traditional policy in Washington which every American citizen critical of lobbying should know and understand.

On nearly every entrance door in the Senate Office Building there is a sign which reads, in effect: "Come in. You are welcome."

Were the sign ever to be removed, dictatorship would get its first toehold on the Republic of the United States of America.

Those among our population who in their lack of information condemn the practice of business lobbying as a sinister influence in our public life would be astonished to discover that the widely-publicized groups referred to as the power lobby, the oil and gas lobby, the steel and chemical lobbies, etc., are relatively unimportant compared to other groups.

These other groups are the farmers, the veterans, the labor unions, and others whose activities are usually considered to be exclusively in the public interest, instead of in the private interest.

These citizens would be still more astonished to make the discovery that the biggest of all lobbies are the departments of the Federal administration: The Army, the Navy, the Air Force, the Post Office, the State Department, the Treasury Department, Foreign Aid, and its associated lobbies.

As to the actual day-to-day operation of Washington lobbies, I do not know a single Senator or Representative who does not value the data and information emanating from these offices.

The public which, unfortunately, is preoccupied with the more sensational aspects of lobbying, does not know that one single, well-written, time-saving analysis is more influential over Congressional action than a dozen offers of special favors, free dinners, or elaborate cocktail parties.

Our system of government is founded on the concept that those who govern do so with the consent of the governed. This concept, in turn, rests on the fact that our citizens own private property, not only homes and personal possessions, but the tools of industrial production.

They can live and support their families regardless of whether their political views are attractive to those in power.

When the United Nations was established in 1945, one of its first acts was to establish a Commission on Human Rights.

Our Government supported the work of this Commission, as we wished to foster universal recognition of the guaranties enumerated in our Bill of Rights, including the right to own private property.

You will be interested to know that your Government, in the councils of the United Nations, has attempted unsuccessfully for 11 years to secure recognition of the private ownership of property as a basic human right.

What is even more disturbing is that fact that in 1952 a resolution was adopted by the United Nations General Assembly which, in effect, condoned the right of countries to nationalize private property without compensation. Only four countries, including the United States, voted against the adoption of this resolution.

As we turn the pages of history we can find no instance in which a war of aggression was started through the legislative actions of a free people. Under our Constitution, only Congress can declare war.

It is inconceivable that we would ever debate a program for an aggressive attack on anyone.

The danger to world peace arises from the fact that in so many countries decisions which determine the course of history do not rest with the elected representatives of free people, but are in the control of individuals who have dictatorial powers over the manpower and resources of their countries.

Permanent progress toward achieving a world in which more of our energies can be directed toward fulfilling the desires of our own people for a more satisfying life, rather than in colossal military expenditures, requires that other countries achieve systems of government in which the aspirations of individual citizens will have a more important place.

The people living behind the Iron Curtain, if they understood our way of life and if they controlled their own destinies, would never vote to make war on us. Our danger lies in the actions of their leaders who have kept the truth about our economic system from their own citizens.

It is because I believe so strongly that the spread of our system of private competitive capitalism would not only help others to raise their living standards, but would remove the threat of nuclear warfare, that I feel we must further a better understanding of our economic system throughout the world.

Every foreign study group which visits the United States must learn that the real secret of our progress lies in the fundamental freedoms which we enjoy.

Until the right to own private property is established as a human right, every citizen will always be subject to the arbitrary actions of those who control the economies of countries where the people are not free to express their own wishes.

Furthering respect for private property will advance the economic well-being of other countries. What is even more important, it will enable us to reduce our own military burdens.

In the months ahead the Congress of the United States must determine the character of our foreign-aid program. Its size, duration, and method of operation will affect the future of our own economy.

Because of the impact foreign-aid expenditures have on the Federal budget and, hence, on industries' tax burden, the Congress will give this program careful scrutiny.

Last year the Senate authorized an extensive study of the present program. The Committee on Foreign Relations has secured assistance from a number of private groups representing different points of view. Their work is now being published by the committee in a series of reports to guide the Congress in its deliberations.

President Eisenhower also established a committee to examine this problem. He appointed Benjamin Fairless, one of your most distinguished citizens, to serve as chairman.

Last month the committee's unanimous report was made public by the President. It strongly urges that we stimulate private investment, rather than depend on Government grant aid. Let me quote from the report:

"Foreign investment of private capital is far more desirable than investment by Government; and during the past fiscal year it appears that there was approximately $3.7 billion of new, private United States investment abroad. Such investments provide much more than capital to the cause of economic development, for they carry with them the initiative, the managerial skill, and the technical aptitude which have proven of great worth to the American economy.

"Moreover, private capital does not constitute a drain on the taxpayer. Indeed, to the extent that private capital can proceed, the burden on the American taxpayer can be reduced without impairment of that economic development of the free world which is so essential to the realization of American aspirations.

"Beyond that, private American capital can join more easily with private capital in other countries than can Government investment.

"We believe, therefore, that the United States Government should increase its efforts to make known, both at home and abroad, the productive contributions and possibilities of private capital. This can and should be done by our diplomatic missions and by friendship and commerce treaties. In our opinion, this effort has not been pursued, thus far, with the vigor that the obvious benefits of such an undertaking would justify" (p. 8).

Obviously, private investors are not going to send their money abroad unless they feel that the countries receiving their capital will

not arbitrarily nationalize it or discriminate against it because of its foreign origin.

However, in spite of all that we can do to further private investment, the Fairless committee realizes that our Government must continue to make some direct grants and loans for many years into the future.

The Congress must decide whether grant aid should be administered by our own Government or through the United Nations.

There are two schools of thought on the subject of foreign grant aid. The first, which is supported by the Fairless committee, and which I endorse, believes that governmental assistance financed with your tax dollars should be given primarily to those countries which are willing to take the necessary political, economic, and military measures to safeguard their own freedom against the only aggressive force in existence in the world today—international communism.

The second school of thought, which has many supporters, believes that foreign economic development financed by the American taxpayer is a noble end in itself. The adherents to this philosophy believe that we should support the establishment of a new specialized agency within the United Nations, to be called SUNFED.

The initials stand for Special United Nations Fund for Economic Development.

The reasons for adding the word "Special" to the title of this agency are that without the "S" the initials would read "UNFED," and this is not an appealing word.

Walter Reuther is one of the strongest advocates of SUNFED. He has suggested that our Government pledge an annual contribution of 2 percent of our gross national product to such a fund. This would mean additional expenditures of more than $8 billion of tax dollars.

Establishment of SUNFED would encourage underdeveloped countries to develop along socialistic lines, as they would not feel any compulsion to create the necessary internal conditions to attract the funds of private investors. I am, of course, opposed to such an increase in our foreign-aid expenditures. However, I am even more concerned with the direction the program would take, if the funds were contributed to such an agency.

Any such international organization supplying grant aid would be directd and operated by individuals from many countries in the United Nations whose economic philosophy would range from an adherence to our system of private competitive enterprise to socialism, communism, and every form of economic organization which might lie between the two extremes.

Experts and technicians who are exponents of socialism and communism would be sent into many underdeveloped countries. Yes, they would bring capital and technical training, but I am sure they would not bring the one priceless gift we could give these countries—namely, an understanding of the basic principles of human organization which underlie not only our material well-being, but are responsible for the political freedom which makes each of us rejoice in our United States citizenship.

I am very happy that the Fairless committee in its report to President Eisenhower unequivocally said, and I am again quoting: "The contributions of other economically advanced nations to the task of providing external assistance to nations in need should be actively sought. But it does not appear that there is need for yet another worldwide bureau, such as the Special United Nations Fund for Economic Development, for the distribution of grant economic assistance" (p. 11).

Mr. Fairless, as the chairman of this presidential commission, has performed a great service for the United States and toward the advancement of the private enterprise system to which he contributed so much in his work as a business leader here in Pittsburgh.

Let us now turn our attention to some of the domestic concerns which confront your board of directors, the Congress of the United States.

I have stressed the necessity of preserving freedom for every individual to express his views, and to live his life according to his own dictates as long as he does not infringe on the similar rights of others.

In our present industrial society, there is a definite need for free labor unions. The labor movement can play an important part in advancing our concepts of freedom.

The Labor-Management Relations Act of 1947 provides that a union, which is certified as a bargaining agent for a majority of the employees in any establishment, shall represent all the employees in collective bargaining negotiations and in the handling of any grievances with the employer.

The Congress provided that union-shop agreements not prohibited by State or Territorial law could be executed by unions and employers. Unions contend, with some justification, that they want all members of the bargaining unit to contribute toward the benefits all the employees receive from the activities of the union working as their agent.

The Congress in 1947, when the Taft-Hartley Act was written, regarded the rights and obligations of labor unions in terms of their traditional function as representing their members in dealing with their employers and not as political parties. Recently it has become obvious that in some respects some unions regard themselves as political parties.

I would never infringe on the political rights of any group. I do not object to unions engaging in politics. However, I do feel that any political action by a union must be truly voluntary. No union which participates in politics should be allowed to negotiate a union shop agreement and force all its members to contribute to a political campaign.

The results of the last election clearly show that many union members did not carry out the wishes of their union leaders in the privacy of the polling place. These members, in effect, were forced to contribute dues under a union shop agreement to pay for a political campaign in opposition to their own political beliefs.

More recently, the select committee investigating racketeering under the chairmanship of my friend and colleague, Senator McCLELLAN, has revealed that funds collected on a compulsory basis through union shop agreements, allegedly for political purposes, actually were used for the private gain of a few unscrupulous and, I am sure, unrepresentative union officials.

One task which this Congress must undertake is the amendment of the Labor Management Relations Act so that every union may be given the choice of whether it wishes to operate as a political party or as a trade union.

If it chooses to become a political party it should enjoy the immunities of the first amendment, but lose the right to negotiate union shop agreements.

On the other hand, if it wishes to confine itself to acting as a bargaining agent for its members and not engage in any political activity, it should be permitted to negotiate union shop agreements under State and Territorial law. I know we cannot continue our present course of fostering compulsory membership in political parties. This was the technique of Mussolini and Hitler. It is fascism, and not Americanism.

For many years I have been a member of the Select Committee on Small Business. I sought this assignment as I believe that if our economy is to prosper, today's small businesses must be encouraged to grow into the big business units of tomorrow.

We must constantly revitalize the ranks of our business leaders with newcomers of ability and energy. Every American glories in the achievements of your pioneer industrialists—Andrew Carnegie, Henry Frick, and Andrew Mellon.

They started with nothing but new ideas and a few dollars, which they had saved before the tax collector made saving so difficult.

They gave this community new industries, supplying employment to hundreds of thousands of your fellow citizens. To be sure, they earned large profits, but these profits are small in comparison with the benefits the consumers of our country received from their purchase of the products created by their efforts.

Under our system, the consumer of America really receives the profits from any industrial endeavor.

In recent years it has been more difficult for small business to succeed and move forward. I have been disturbed that so much of the work of our Small Business Committees has been directed to attacks on big business rather than to the development of measures to further the growth of our smaller firms.

One proposal advanced to assist small corporations is to reduce the normal tax on the first $23,000 of corporate profits.

It has great merit, and I support it. However, it only partially solves the problem. We must remember that many of our smaller firms are either individual proprietorships or partnerships. They will only be helped by reducing our personal income tax rates.

If a small business shows a profit of $25,000 and this profit represents a return of 5 percent on invested capital, the stockholders must have invested a half-million dollars. Most small businesses are owned by only a few stockholders.

A family, or two or three individuals, have risked all their assets in a venture.

I wonder whether those who speak with feeling about the small business concern whose profits total only $25,000 have the same solicitude for the stockholders with assets of at least $500,000. Yet, we are talking about the same people.

Under our present personal income tax laws rates in the top bracket reach 91 percent, and it is becoming more and more difficult for individuals to accumulate funds for investment. We can do a great deal to help small business by making it possible for individuals to once again save capital from their current income.

This will accomplish more than attacks on big business or the establishment of new Government programs to loan funds to small business. Loans cannot be repaid unless equity capital can be substituted for Government debt.

The Congress must reexamine our tax structure so that it will produce the maximum possible revenue without depriving individuals of the incentive to establish and expand new businesses. Present tax rates were established under the previous administrations, and many of them are designed to punish success rather than to raise revenue. This is a luxury we can no longer afford.

In view of the large expenditures which our Government must make for years to come it is essential that taxes be levied with due regard to the fundamental economic principle of diminishing returns. Any tax rate which is set so high that it discourages new investment and hence produces a smaller net revenue for the Government than would a lower rate is completely indefensible.

The subject of taxes invariably requires an examination of appropriations. The Congress is considering the budget for the fiscal year 1958 which will start July 1. President Eisenhower has recommended the largest peacetime budget in our history. The greater portion of this budget is dedicated to our defense and foreign-aid activities.

I can assure you that the Congress will examine these items closely, and we will endeavor to effect every possible economy without jeopardizing the security of our country.

In the last analysis the domestic items included in the budget reflect the demands upon the President and the Congress by the people of America. We must reverse the trend to ever-larger Federal budgets if we are to preserve our system of private enterprise.

This can only be done if every community leader assumes a personal responsibility to see to it that demands are not made upon the Federal Government for services which could be better performed either by private enterprise or by the States and local communities.

The Atomic Energy Act was amended in 1954 so as to make it possible for private enterprise to devote its resources to the development of this new great force. Here in Pennsylvania at Shippingport you will shortly be producing electrical energy from the atom on a commercial basis.

I can see no reason for the Federal Government to compete with private industry in the development of peaceful uses for atomic energy. Yet, proposals are repeatedly made which would ultimately require spending billions of tax dollars to place the Government in the utility business in competition with private industry. We must resist these measures which would not only tend to produce a collectivist economy, but would add ever-increasing burdens on our taxpayers.

The 83d Congress authorized the disposal of the Government's investment in synthetic rubber plants to private industry. This transfer has been completed.

The Government is out of this business, and properties valued at hundreds of millions of dollars have been added to the tax rolls of our States and local communities. There is much more to be done in getting the Government out of business. The Government is still the country's largest insurer, its largest lender, its largest tenant, its largest holder of grazing land, its largest warehouse operator, its largest shipowner, and its largest truck-fleet operator.

If the Government withdraws from businesses which can be undertaken by private industry, we will place billions of dollars of additional property on State and local tax rolls and at the same time we will increase the revenue of the Federal Government by their sale of these properties.

All funds realized from the sale of these properties should be dedicated to a reduction of the national debt. The increased local revenues will make it easier for the States and local governments to build schools and perform other necessary community services themselves, instead of seeking Federal assistance in Washington.

As an illustration of how we can apply new approaches to complex economic problems, let me mention briefly Public Law 480 of the 83d Congress, providing for the sale of our agricultural surpluses for foreign currency.

This law also permits bartering surplus agricultural commodities for strategic materials which are placed in our military stockpile where they add to our national security.

The foreign exchange derived from these transactions is used to pay necessary expenses of our Government in foreign countries. Some of the funds have been lent back to the countries purchasing these commodities for economic development.

This program has two features of interest to all taxpayers.

First, it disposes of surplus agricultural products. Appropriations for agricultural programs, a large domestic item in the budget, can be reduced drastically when we are no longer burdened by surpluses which overhang the market and depress agricultural prices.

The second feature of this program of interest to you is that it does not require current funds from the taxpayers. The money for the acquisition of these commodities has already been spent.

In disposing of them we reduce storage charges, we secure needed foreign currency for Government purposes, we acquire strategic materials, and we contribute to our foreign-aid program, which would again otherwise probably involve the expenditure of additional tax dollars.

This Congress will undoubtedly extend this program for an additional year. Programs of this type can be utilized to maximize the benefits to all our people from every tax dollar spent.

As a former governor, as well as a legislator, I am concerned with the problems of education.

We must improve our educational programs, if we are to keep pace with the Russians who have placed great emphasis upon the training of scientists and engineers. You cannot train scientists in our great schools of technology without first providing the applicants for the freshman class with an adequate foundation in mathematics and in the basic sciences.

I find that in many cases our secondary schools have broadened their curricula so as to include so many subjects that it becomes a difficult task to find adequate revenue to pay all the specialized teachers this program requires.

Furthermore, those who are qualified to teach science and mathematics will not accept the salaries normally paid schoolteachers, as they have opportunities to work at their specialties in private industry.

Our communities must reappraise their educational programs. We must make sure that we are doing the best possible job in teaching the fundamentals. We must eliminate some of the frills that our school budgets cannot afford so that we can pay better salaries to those teachers who have a real background in the subjects they are teaching, as well as the teaching qualifications.

This task cannot be undertaken by the Federal Government. It is one of the jobs which I hope that you will do in your local communities.

The future of our country is in the hands of those who are now in school.

It has been a great pleasure for me this evening to review some of the issues which concern us in Washington. The preservation and development of a private enterprise economy both at home and abroad is the most important task before the Senate today. You, as citizens, are stockholders in the greatest business on earth.

In my limited time I could touch on only a few of our problems. I can assure you that your board of directors, the Congress of the United States, regardless of party, and your Chief Executive, are working together to advance the interests of this great Republic.

Big Spending or Economy—You Must Decide

(Address by United States Senator Edward Martin, of Pennsylvania, at the annual dinner of the Amen Corner, in the Penn-Sheraton Hotel, Pittsburgh, April 6, 1957)

Of all the great powers in the world the United States is the only one where the people still control the Government.

This significant fact of modern history is the foundation upon which was built the structure of American freedom.

It is given impressive expression in the preamble to the Constitution which declares that "We, the People * * * do ordain and establish this Constitution of the United States."

That concept of government gave force and effect to the principle set forth in the Declaration of Independence that governments derive their just powers from the consent of the governed.

If that ideal is to survive—if we are to continue to control our Government—our people must recognize that we have responsibilities as well as rights.

History teaches that it is a heavy responsibility to live as free men. Great nations have gone down to destruction because their people allowed control of their government to slip from their hands. The great powers of the past failed when the people started to depend upon government and not upon themselves. The result has always been extravagant spending, a crushing burden of taxes and debt and eventually the loss of freedom. They passed out of history as completely as if they had been destroyed by invading armies.

The record of the past shows very clearly that freedom cannot long be retained by a people who ignore or evade their responsibilities. That means that we must all accept a personal share of responsibility for keeping our Nation strong, secure, sound, and solvent. We must all take part in government. We must become interested and active in politics—not merely from a partisan standpoint—but as a patriotic contribution to the public welfare.

You men assembled here tonight are leaders in business, industry, and in the professions. You are vitally interested in building the economic strength of this important area and of the Nation. Therefore, the situation in our country, as it relates to Government spending, taxes, and debts should be a matter of great concern to you—and I am sure it is.

I am sure that you are all seriously disturbed over the alarming increase in the cost of government at all levels, local, State, and Federal, during the last quarter of a century.

Let us look at the figures.

In 1932 the people of the United States paid $6,375,000,000 for local government. That cost is now $26,230,000,000.

For State government in 1932 we spent a total of $2,028,000,000. Now the States are spending at the rate of more than $11 billion a year.

The cost of operating the Federal Government in 1932 was $5,125,000,000. The current budget calls for the expenditure of nearly $72 billion.

Now, if we add up these figures we find that the overall cost of government has jumped in 25 years from $13½ billion to $109½ billion, an increase of more than 700 percent.

Now let us look at the debt, which is a mortgage on the future of every man, woman, and child in the United States.

The bonded indebtedness of local government, which was $16,680,000,000 in 1932, is now above $33 billion.

The debt of State government has grown from less than $3 billion to $11 billion in the same period.

The Federal Government debt shows the most startling increase—from $19½ billion in 1932 to the present debt of more than $274 billion.

The total Government debt has gone up from $30 billion to more than $318½ billion, an increase of more than 700 percent.

In addition, many States and local subdivisions have created authorities to finance various types of construction and other public works by the sale of bonds. For example, in Pennsylvania the debts incurred by State and municipal authorities have reached a total of nearly $2 billion.

One illustration of the increase in the cost of government is that the Federal Government proposes to spend $14 billion a year for welfare programs as compared with a little more than $3 billion 10 years ago.

Unfortunately we are continually taking on new projects and new spending programs

which grow bigger and more expensive year after year. Local government, with hat in hand, goes to the State for handouts. The State government, with hat in hand, goes to the Federal Government for handouts—the so-called grants-in-aid. Even our big cities are bypassing the States and go directly to Washington for financial assistance. And to raise the money the Federal Government has two courses to pursue—higher taxes or bigger debt.

The time has come when each level of government must stand on its own feet. Otherwise it will not be long before all government will be controlled at the national level. Each grant of Federal funds carries with it a measure of Federal control. That control never lessens. It always increases.

The time has come when we must look ahead with extreme care before we take on new projects.

Two of the greatest men in our history had something to say on this subject.

Washington said this to Lafayette: "It is a part of the military art to reconnoiter and feel your way before you engage too deeply." This was stated when Lafayette was urging some reforms for France.

Abraham Lincoln said in a letter to a friend: "I hope to stand firm enough to not go backward, and yet not go forward fast enough to wreck the country's cause."

The automobile gives another illustration of watching both the past and the future.

It has a mirror which gives a view of the road in the rear, while the driver has a perfect view of the road ahead.

The careful driver sees both the rear and the front.

Let us not move too rapidly in government until we survey the road of the past and carefully reconnoiter the road to the future. Let us not lose sight of the dangers that lie ahead.

One of the greatest dangers to national stability is inflation. Inflation is suggested by many economists as a cure for certain economic ills, but it is only a shot in the arm.

Inflation, high taxes, deficit governmental finance, big government debt and big centralized government have destroyed more nations than invading armies. It will destroy more countries than the most terrible bomb that could be invented.

Before it is too late, let the American people take over, because it is still our Government. The people still have the power to control.

Let us bear this in mind. No nation, regardless of how rich it may be in natural resources, can live and pay taxes which destory initiative and the private-enterprise plan of economy. Many are now advocating things which tend toward socialism: public power, restricting the right to work at the job of our choice, centralization of government.

The free-enterprise economy plan has done more to advance our living standards and our cultural and spiritual attainments than all our vast natural resources.

There are many systems of government that advocate some form of socialism. Let us look at some of the results.

After 40 years, the Soviet type of communism has produced a living standard only one-tenth as high as that of the United States.

The so-called Swedish welfare state has produced a living standard only one-third as high as the United States.

In England, where nationalization of basic industries has continued for 12 years, the living standard is about one-half what it is in the United States.

Many of the Founding Fathers who were interested in the independence and freedom of the individual feared that our Government, unless most carefully and economically administered, would fail, of its own weight, within 200 years. Time is moving rapidly. It's our Government. Let us look it over. If we are spending too much for government let us have the courage to make corrections.

One of the principal reasons for the alarming rise in the cost of government is the constant demand from organized pressure groups who have no regard for the welfare of our Nation or its future.

They demand appropriations of public funds for their pet projects, for new and expanded functions of government, for sectional advantage and for every conceivable form of spending. Some do not hesitate to threaten political reprisals unless their proposals are given immediate and favorable attention.

That same sort of pressure must now be exerted in support of economy. If we are to achieve government at lower cost we must develop a demand for economy so strong and so insistent that no one in the executive or legislative branches of government will dare to ignore or oppose it.

It must be supported by business associations, chambers of commerce, service clubs, labor organizations, farm groups and welfare and educational societies. It must have the driving force of an aroused public opinion, so strong and so powerful that it will be irresistible.

As I said in the beginning of my remarks—in the United States the people still control the government. Therefore the battle to cut the cost of government must begin with you.

Big spending or economy—you must decide. And I have complete confidence that you will make the right decision.

Address by His Excellency Tran Van Chuong Before Far East-American Council on Commerce and Industry Luncheon

---

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. CHAVEZ. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by the Ambassador from Vietnam to the United States before the Far East-American Council on Commerce and Industry luncheon on April 11, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HIS EXCELLENCY TRAN VAN CHUONG, AMBASSADOR TO THE UNITED STATES FROM VIETNAM, DELIVERED BEFORE THE FAR EAST-AMERICAN COUNCIL ON COMMERCE AND INDUSTRY LUNCHEON, APRIL 11, 1957

I am certainly not a speaker, nor an economist. Yet, I have accepted your invitation to address your Far East-American Council on Commerce and Industry for two reasons.

First, it is very difficult for me to refuse an invitation in this great friendly country of yours.

Second, I know the importance of your group.

Therefore, I cannot resist the temptation of trying to get across to you a few simple ideas about a matter of common concern to those among Asians who know that communism is a mortal danger and count on American leadership to stop it.

You are certainly very concerned about the explosive situation in the Middle East, about the vacuum left there by the withdrawal of former colonial powers. You are certainly concerned to see that in such a vacuum, a country as weak and small as Egypt can defy such Western nations as France and Great Britain, your strongest allies, and even disrupt their economic life.

Let me tell you that the same vacuum exists almost everywhere else in Asia and Africa, that it must be filled if we are to survive, and that it cannot be filled by any government unless you, American leaders and businessmen, are more aware of your own importance in such circumstances.

What I want to propose is a new concept of American leadership, of American security and of human solidarity, a new and juster concept in which you, as members of an elite, of a powerful minority in the most powerful nation of the world, can play the major role, and can gain by doing it a tremendous amount of prestige, influence, and extra wealth.

To understand it, we must first realize what is the basic cause of that vacuum of strength and power in Asia and Africa and what can fill it.

What is the basic cause of that vacuum?

It is not merely the withdrawal of former colonial powers; it is the lack of technical and industrial development in Asia.

Europe, America, and Russia are powerful because they have learned to transform their coal, rivers, and waterfalls into power and energy and to multiply their natural resources with machines.

Most Asian countries are weak and poor because their native rulers or their former colonial masters did not care much to lead them on the road to technical progress. And now their relative poverty makes them more vulnerable to Communist propaganda; their relative weakness makes them more vulnerable to Communist aggression, infiltration, or subversion.

WHAT CAN BE DONE TO REMEDY SUCH A TRAGIC SITUATION?

You cannot fill this vacuum of wealth and strength in Asia with military bases and alliances alone. Nasser, for instance, has openly defied the West without ever being frightened in the least by those alliances nor by the British Navy or the French Army.

It was enough for him to side with Russia. Military strength and alliances are necessary but not sufficient.

Nothing is more dangerous than the wrong belief that American military might and alliances can deter or stop Communist expansion, that the umbrella of American airpower can be for the free world and the United States itself an effective protection.

Indeed each border country of the free world should be given the possibility and the will to defend itself against eventual Communist aggression or subversion and, for this purpose, nothing can replace aid and investments.

Aid is most important and necessary.

American aid is, indeed, American defense because each country of the free world is an American frontier and must be defended, and cannot be better defended than by its own Army and people.

It is American aid which has enabled President Ngo Dinh Diem to achieve almost miraculous successes in Vietnam, to save it for the free world, to resettle 860,000 refugees, to defeat the feudal sects, to put an end to internal insecurity, to discover hundreds of depots of arms, and thousands of Vietminh cadres that the Communists had left behind them, after the Geneva Armistice, to prepare a Communist subversion.

This is the most shining example of how necessary American aid is and of what it can do in Asia.

Yes, foreign aid is American defense and if it were cut, it would lead to another loss or to another Korean war that would cost a hundred times more to the American taxpayer and to American families.

But foreign aid has its own limitations in quantity and in quality.

Almost everyone in the United States recognizes that Vietnam has achieved tremendous and almost miraculous successes during these last 2½ years, but nobody is surprised that in spite of these miraculous successes, American aid to Vietnam has been cut by about two-thirds during this last 30-month period; from about $800 million in 1954 to about $250 million now.

Foreign aid is most necessary but we cannot rely solely on it to save a country, we cannot go very far and very long with ounces of aid wrapped up in pounds of red tape.

That is why foreign aid must be completed by foreign investments. They are absolutely necessary to give an underdeveloped country a minimum of industrial equipment without which it cannot raise the living standard of its people and keep an army strong enough to defend its frontiers.

Therefore, I must tell you: More than any others and even more than your own Government, you can stop communism, help your country, your human brothers and yourselves by merely realizing that you can make greater profits for ourselves in producing in Asia, for instance, more bicycles for Asians than a second car or a second TV set for each American family.

What I would like you to achieve for our common interest and safety, with the help and under the protection of American aid, is that sphere of coprosperity that the Japanese dreamt of during the Second World War.

Of course, I am not inviting you to any economic conquest, but to a true, profitable association.

The United States is the country that can best realize such an association because it is the country which owes an important part of its economic prosperity to a more just association between capital, management, and labor. It is the country where a Henry Ford realized that he could make greater profits for himself by paying higher wages to his workers than by exploiting them.

You will do the same with countries that have plenty of almost untapped natural resources but lack capital investments and technical knowledge to transform them into power and wealth. You will do it for our common interest and safety.

All this, you already know.

You already know that American aid has led many American firms to very successful enterprises in Europe, in the Philippines, and in Japan.

What I would like you to know better is that it is absolutely necessary that you do it and more resolutely and more systematically in other Asian countries as well; that you should do it as a matter of policy and not only as a matter of business and you would then discover that Vietnam, for instance, can be a gold mine for many American enterprises.

Indeed, it is an ideal country for an experiment of this kind.

It is not a barren, poverty-stricken country as many Asian countries are. On the contrary, it is a green, fertile country which has been able to resettle 860,000 refugees and could receive a few million more. It is a favored country where people are never cold nor hungry.

The people are cooperative, intelligent, and active. They have the gentleness of the Thai and the Indonesians, with the dynamism of the Chinese.

And they are not half ready to surrender to the Communists.

I also would like you to realize that you should not wait in an armchair for our people to bring to you keys and maps for American penetration and influence. You have enough experience and money to do it yourselves and our administration, alas, has other urgent tasks against the Communists.

Please, do not forget that Saudi Arabia's oil has not been brought to you on a tray.

Each great firm or foundation has only to decide, as a matter of policy, to devote a small part of its profits or money to some survey, planning, study, or investment in one of the distant countries that must be strengthened against communism, and it would soon discover that it is absolutely impossible not to make great profits in Vietnam, for instance, in producing in Vietnam for a virgin market of 12 million people who have had to import almost everything from abroad until now.

Indeed, the primary source of all our present troubles, the basic cause of the insecurity of the world is the neglect or failure of the West to share with Asia and Africa its ability to multiply its strength and wealth with machines.

You, Americans, are not responsible for it but you have to repair it for your own safety; you alone have enough extra wealth and power to do it on a great scale; and you have enough idealism and realism to realize that only solidarity can undo what selfishness has done.

Propaganda Costly

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "USIS Staff Costly; Many Are Drones," written by Walker Stone, Scripps-Howard editor in chief, as it appeared in the April 9, 1957, issue of the New York World-Telegram and Sun.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE THE MONEY GOES: USIS STAFF COSTLY; MANY ARE DRONES

(By Walker Stone)

BANGKOK, April 9.—"USIS," said an American correspondent in Korea, "provides total job security for newspapermen."

USIS means United States Information Service. It is the overseas extension of what in the States is called by the initials USIA (U. S. Information Agency). Abroad, as well as at home, it is one of our Government's most controversial agencies.

This large and growing bureaucracy, now appealing to Congress for a spectacular increase in appropriations, is staffed in large part by former newspapermen and women.

They are of varied experience, judgment, and industry. Some are talented and dedicated in their work as America's public relations representatives abroad.

SOME ARE DRONES

Others are drones and timeservers, drawing salaries and living allowances far in excess of what they could earn if they could obtain jobs in private newsgathering organizations—and many couldn't.

The number of ex-newsworkers employed by USIS in Asia is in excess of the number of active editorial workers employed by the American wire agencies (UP, AP, and INS) plus all employed in Asia by the individual American newspapers, plus all employed by American radio and television broadcasting systems, and news magazines. For good measure, include the British, French, German, Canadian, and Australian correspondents in Asia—and still the USIS list is longer than all combined.

USIS operates on a budget which could never be matched by any combination of private news organizations, which have to depend for revenues on the market value of their services.

CULTURAL ACTIVITIES

USIS is in many fields besides gathering and giving away news. It operates libraries in cities all over Asia. It engages in cultural activities, which include the sending of Asian students, teachers, journalists, and other intellectuals to America to study and observe our ways of doing things.

In practically all fields it employs too many people. And in the news and propaganda effort, USIS is wide open to criticism.

An American correspondent in Tokyo had this complaint: "Too many USIS personnel want to be bigtime executives. They sit in their offices and expect the Asians to come to them. Communists on the other hand work completely without offices and mimeographs. They work in the beer halls. Practically all Japanese newspapermen go out for beer after work. The Communists buy reporters drinks, become close personal friends. When some local crisis arises, the Communists are in a position to call on the actual working newsmen to inject the Communist line."

DINNER PARTY

Here in Bangkok, an American newsman had become friendly with several Thai reporters who came to him seeking an American slant on developments. He learned the Thai reporters were not well acquainted with USIS personnel. He tried to correct that condition by giving a dinner party for USIS people and working Thai reporters. After a week of having invitations declined, he gave up. "The USIS folks couldn't come," he said. "They were too busy going to parties they were giving for each other."

Over in Saigon, a fourth American newsman, voiced the apprehension that USIS may be building into a worldwide newsgathering organization to compete against private American news agencies.

That competition is not marked yet, USIS news bulletins are too meager in content, too slow in delivery and viewed suspiciously as containing propaganda.

EXPENSIVE TELETYPES

In such major cities as Tokyo, Hong Kong, Manila, and Singapore, where newspaper competition is fast and fierce, the local press gives scant attention to USIS handouts, rely entirely on their own reporters and the wire services. Even in Saigon the USIS sheets frequently show up as cone wrappers for peanuts peddled on the streets.

But there are signs USIS may be planning large-scale competition, despite the provision in present law forbidding competitive news activity. Throughout southeast Asia, USIS is installing expensive teletype receivers, indicating plans for a more elaborate and more costly communications network than can at this time be provided by private news agencies whose budgets are limited by charges that can be levied against newspaper clients.

Whatever are USIS shortcomings, they cannot be laid to understaffing. Perhaps it could be made a more efficient and less controversial agency if the payroll were drastically pruned—but USIS budgeters are not planning it that way.

EMPLOYEE BREAKDOWN

Here's a breakdown on the number of USIS employees in some of the countries of Asia:

	United States personnel	Local personnel
Japan	60	396
Korea	22	200
Philippines	56	661
Vietnam	32	203
Malaya	11	60
Indonesia	24	193
Cambodia	17	93
Laos	7	43
Thailand	35	254
Burma	16	105

The figures include those engaged in all USIS enterprises—libraries, cultural activities as well as news and propaganda. They include translators. The explanation given for the large number employed in the Philippines, disproportionate even in this table, is that the Philippines is the regional headquarters for USIS in southeast Asia. Communications relay stations are maintained, and printing establishments turn out books and pamphlets for the whole area.

VAST ORGANIZATION

Yet the figures above do not tell the whole story. A vast administrative organization is employed in the United States embassies in all these countries, to care for the housing, transportation, and so forth, of all United States Government personnel in each country. For example, the administrative section of the United States Embassy in Manila charges the salaries of 22 Americans and 93 Filipinos against USIS, for it is computed that the time and efforts of that many are required to attend to the housekeeping chores incident to maintaining the USIS establishment in the Philippines.

In many countries USIS personnel is larger than the personnel of the embassy proper.

And in many stations, USIS salaries and living allowances are larger than is paid to men and women of comparable qualifications on the regular embassy staffs—a fact which does not help improve morale in our career Foreign Service.

Effective Use of Newspaper Advertising

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article containing an address delivered on April 6, 1957, by Mr. Albert A. Stone, vice president and general manager of the Jackson, Tenn., Sun, at a meeting of the Tennessee Press Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Jackson, (Tenn.) Sun of April 7, 1957]

POWERFUL FORCE IN AD COLUMNS, EDITORS TOLD

The effective use of the advertising columns of newspapers constitutes the most powerful and profitable advertising force in existence, members of the Tennessee Press Association were told last night at a banquet at the New Southern.

Albert A. Stone, vice president and general manager of the Jackson Sun, cited figures to show that "when our American people are spending over $1½ billion a year for their newspapers, we have the best evidence that our product is read and appreciated." And, he added, "subscribers read the advertisements in our newspapers as eagerly as they read the news."

Speaking before the west Tennessee divisional meeting of the TPA, the Jackson newspaper official was introduced by Carl Jones, TPA president and publisher of the Johnson City Press-Chronicle. The title of Mr. Stone's address was "What of Tomorrow?"

The complete text of Mr. Stone's address follows:

"At the annual meeting of American Newspaper Publishers in New York last April the ensuing 10 years were heralded as the dynamic decade. Outstanding industrial leaders and highly accredited authorities on finance completely documented the advent of unprecedented expansion in the United States.

"Phenomenal advances in technology, greater facility in distribution and increasing demands of a constantly growing, more prosperous population, give credence to the conclusion that big industry is destined to become very much larger. Already, the definite trend in that direction is being accelerated. The low of the survival of the fittest is operative. Quite obviously, this rather disturbing situation is not peculiar to industry. It extends into virtually every line of endeavor. Yes, even to newspaper publishing.

"This poses the vitally important question: What of tomorrow? What does the future hold for our newspapers here in west Tennessee? Specifically, will our newspapers continue to go forward in community leadership and service; will they become even more strongly entrenched in our trade area, or will they become victims of that immutable law, where there is no vision the people perish?

"We alone can answer that all important question. We must face the issue squarely and we must make our decisions without equivocation. A complacent attitude or any kind of dilatory action could well prove fatal.

"If my conviction has any validity we must expand and intensify our coverage, we must improve our facilities and, most important of all, we must provide a definite, sane, and vigorous program of community leadership if we hope to survive. We cannot avoid the issue and we cannot escape the fact that we are today engaged in a battle for our existence. The very logical and timely question arises: Is the reward worth the effort to keep apace with the onward march of progress?

"There are valid reasons for our giving most careful consideration to the major factors and the known quantities in our operation before exploring too deep into the realm of future possibilities. The relative merit of our product in a highly competitive field and the potential of the market we cover are factors deserving first consideration.

"Let's take a realistic view of newspaper advertising which provides the major portion of our revenue. Regardless of the entry of new media, newspaper circulations have risen more than 3 million copies per day in the last 4 years showing a 5.8 percent gain since 1952. All records were shattered last year when the 1,761 daily newspapers gained a total net paid circulation of 57,101,510.

"That nearly everybody reads a newspaper nearly every day is proven by reliable Market Research Corporation of America statistics. It is obviously true that the newspaper is basic and the effective use of its advertising columns constitutes the most powerful and the most profitable advertising force in existence any day and every day.

"When our American people are spending over a billion and one-half dollars a year for their newspapers, we have the best evidence that our product is read and appreciated. The very authentic Continuing Study of Newspaper Reading shows conclusively that subscribers read the advertisements in our newspapers as eagerly as they read the news.

"Furthermore, this readership is entirely voluntary and leisurely performed at the readers' convenience. In this most receptive atmosphere the advertiser registers solid impact in selling his merchandise.

"The newspaper is the only medium that is specifically designed to reach all the people all of the time. Its intensely local appeal and infinite range of daily services are effective in bringing together every member of every family in one big market place.

"Today 20 million women in the United States work in offices or in industry. One out of every three women is gainfully employed. To reach this vast market of most important consumers would be difficult through other media. But they can be reached through their newspaper, and are reached—because 95 percent of the women in America read a newspaper sometime during the day. When they will, where they will. Remember, 80 percent of the buying in America is done or influenced by the women.

"When people think of advertising they think of newspapers. That psychology is most important. More than 400 million individual classified advertisements were published by newspapers in our country last year. Your sales appeal in newspapers is never resented. It is expected and welcomed by thousands of eager readers who want to know where the best quality and the best values are to be found.

"Many studies have been made in recent years to find out how people feel about newspapr advertising. The most recent one was made by Northwestern University. The question was asked of housewives, "Would you rather have your newspaper published with or without advertising?" Ninety-three percent answered that they would prefer their newspapers with advertising.

"An overwhelming advantage newspapers offer advertisers is their complete flexibility. You can run a full page, a collection of many pages or as little as 1 inch. You can insert your message once a month, once a week or several times in the same issue. You can get your ad in the newspaper practically overnight, and you can cancel it just as quickly.

"The most powerful and the most profitable advertising force in existence remains most economical. In spite of greatly increased costs of production and moderate rate increases you can still buy a big, full-page newspaper advertisement for less than a penny for each household to which it is delivered.

"Newspapers move more merchandise than any other advertising medium—thus, they play a most important role in preserving the Nation's healthy, ever improving economy.

"Newspapers are first with the people and first with the advertisers of America. The irrefutable evidence in our favor is the fact that advertisers invest more money in newspapers than they do in television, radio, magazines, and outdoor advertising all combined.

"Thus, the first factor in our consideration—the relative merit of our product in a highly competitive field—certainly points to the wisdom of making necessary improvement and expansion of facilities to maintain our positions in the tremendous surge of progress that simply cannot be held back under our changing order.

"The second factor for our consideration here is the potential of the market we cover. I am really kneedeep in clover now. Next to bragging about my five exceptionally fine grandchildren I like to talk about the greatness and the grandeur of this wonderland we call west Tennessee.

"Appropriately enough, this highly productive land, so richly endowed by nature, has borne such titles as the Promised Land, the Land of Canaan, and the Garden of Eden, between the original Land of the Chickasaws,

and the present title. This choice segment of mother earth, so favorably located between the major TVA Lakes on the east and the mighty Mississippi River on the west, embraces 10,893 square miles of level to gently rolling land inhabited by 1,112,666 very fine citizens.

"West Tennessee remains one of the most productive areas of our section. We have a total farm population of 266,100 with an annual income of over $300 million. The growing season for West Tennessee is frequently more than 7 months, and rainfall ranges between 40 and 50 inches per year. Our mean temperature is 60.3 degrees with the average for January 40.4 and for July 79.3.

"In addition to these most favorable conditions for the promotion of agriculture and dairying interests in west Tennessee, our soil ranks unusually high in productivity and responds more readily to fertilization treatments than other soils of Tennessee. The silty sand loam in our section lends itself to the most economical tillage and actually produces better crops. Tennessee agricultural experiment stations have demonstrated this significant fact. Three acres of corn—one in west Tennessee, 1 in middle Tennessee, and 1 in east Tennessee—were accorded the same treatment. The west Tennessee acre was 25 percent more productive than either of the other acres.

"West Tennessee is surely gaining its rightful place in the industrial expansion of our section. More than 1,200 plants now operating here employ over 75,000 people and have annual payrolls in excess of $250 million. The manager of one of west Tennessee's largest plants made this typical comment: 'I have nothing but the highest praise of the quality of labor here. Both male and female laborers are extremely cooperative, trained easily and quickly, and are always interested in doing a good job.' With such loyal and intelligent employees readily available, unsurpassed facilities for distribution, TVA power, abundant water supply and most favorable climatic conditions west Tennessee is indeed industry's land of opportunity.

"Last year a consumer spendable income of almost a billion dollars ($974,479,000) was distributed among the 293,980 households in west Tennessee. Total retail sales amounted to $804,957,000.

"The second factor in this consideration—the potential of our market—certainly passes with a top score.

"We are entering an age of automation and accelerated production. It appears certain that big business is to become much larger. It does not follow, however, that small business must suffer a decline. This is a big, rapidly growing country with the widest possible diversification of interests. The small operator who renders an essential service to his community and properly adjusts his operation to the changing times is just as secure as he ever was before.

"This is particularly true of the small newspaper that adequately serves its local community. It is absurd for the publisher in any such community to assume for a moment that he can compete with metropolitan journals in quantity of news and feature content supplied the reader. The impregnable fortress of the small newspaper publisher is consistently good and complete reporting of his local community news. So long as the publishers are faithful to that trust the small newspapers, constituting the vast majority of all journals published in west Tennessee, have nothing to fear from outside publications.

"That the whole is equal to the sum of all its parts, as we were taught in school, is perhaps technically correct, but the old axiom has some fallacies. All of the parts of this building could be heaped together on the lot with the result quite different from the beautiful and serviceable hotel building we occupy. In reality, then, the whole is equal to the sum of all its parts plus their relationship.

"The component parts we have analyzed for building a successful newspaper operation in west Tennessee in a new era are indeed most excellent.

"The unrivaled merit of our product—newspaper advertising—and the superior qualities of our market, the most highly productive west Tennessee area, are thoroughly demonstrated facts. Effective coordination of these controlling and highly promising factors is the responsibility of the individual publisher.

"In surveying the field of competent, intelligent and alert newspaper publishers in west Tennessee I have no doubt that the challenge offered by these changing times will be met and more powerful, more prosperous newspapers will emerge to better serve this truly great and growing market.

"This genuine interest you have manifested in the promotion arranged by General Price and your eager desire to master the important art of newspaper selling are most commendable. The stimulating attitudes you have shown predict for our section a strong, prosperous and independent press, so vitally necessary to keep our country free."

Protective Organizations for Workers

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Shades of 1850," published in the Christian Science Monitor of April 1, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHADES OF 1850

On Monday morning just a week ago 125 employees of the accounting department at headquarters of the Missouri-Kansas-Texas Railroad in St. Louis arrived as usual to begin the day. They found the office dark, locked, and an armed railway guard outside the door. Posted was a printed notice which said in effect:

This office has been moved to Denison, Tex. (some 600 miles away). Those who wish to continue their employment must report to the office at Denison by 8:30 Wednesday morning. The railroad will furnish transportation of persons and household goods.

Forty-eight hours in which to pull up roots and begin new lives three States away. Some of the employees had worked in the old office between 30 and 40 years. Many had left personal belongings—spectacles, money, uncashed checks—in desks which had been sped on their way over the weekend. None of them had had warning. The company had recently denied rumors that any move was contemplated.

The M-K-T had elected a young president recently who is faced with the necessity of making economies. This, apparently, is one of the ways that economizing is being done.

An act such as this has one merit: It exhumes a bit of the past against which to measure the progress of industry's practices since the 14-hour day of a century ago. Management appears as indignant as do unions. The Chamber of Commerce of Metropolitan St. Louis immediately expelled the M-K-T railroad from membership and returned in full its current dues.

The occurrence may have still another merit: It may help some people to understand why so many workers, even in the face of fair wages and hours, wish to cling to some form of protective organization of their own.

Hon. Theodore Francis Green, of Rhode Island

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. MANSFIELD. Mr. President, we Senators who serve on the Committee on Foreign Relations are extremely fortunate to have a chairman of the caliber of the distinguished senior Senator from Rhode Island [Mr. GREEN], who not only knows the subjects over which he presides but is also a great asset to his own State, to the Nation as a whole, and to the free world at large.

Mr. President, I ask unanimous consent that an article from the Harvard Law School Bulletin pertaining to our distinguished and outstanding chairman of the Committee on Foreign Relations, the senior Senator from Rhode Island, THEODORE FRANCIS GREEN, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR THEODORE FRANCIS GREEN

(By William H. Edwards, '21)

(With the thought that THEODORE F. GREEN, a senior alumnus of the school, Rhode Island lawyer, and veteran Member of the United States Senate, would be an interesting man to know more about, the editor of the Bulletin sought out William H. Edwards. A fellow member of the Rhode Island bar, he has known the Senator for many years and has graciously responded in the disquisition below.

(Mr. Edwards is a partner in the Providence firm of Edwards & Angell. An active alumnus of the school, he has served as Rhode Island chairman of the law-school fund, and he is secretary of his class, 1921.)

THEODORE FRANCIS GREEN, senior United States Senator from Rhode Island (and Harvard Law School, 1890–92), is a special case history in, among other things, geriatrics. He is not only the exception that violates the proverb and proves no rule; he is the case that disproves all rules. Born in October 1867 (only 2½ years after Appomattox), he is now serving his 21st year in the United States Senate and will be 90 this autumn. A vigorous and dynamic individual, both physically and mentally, he appears, as all observers agree, like a man in his sixties. Yet he can and does discourse with vivid recollection of the law school of 1890 and of those far-off solar myths, Ames, Gray, and Thayer.

Elected for the first time to the governorship of Rhode Island in 1932, he began the important part of his political career in his 66th year, at an age when in that "little principality" bank presidents are usually in the habit of retiring. Yet Mr. GREEN has been going strong ever since—an Aristides whom his electorate on 5 occasions (2 guber-

natorial and 3 senatorial) have not become tired of calling "the Just," and an elder "Cato" who follows very literally that other hardy gentleman's precept, "Senesco discens (I grow old learning)."

With this session he has become chairman of the Senate Committee on Foreign Relations and is at the time of this writing struggling day after day with Mr. Dulles and with what some logician has flippantly called the undistributed Middle East. His schedule would break the back of a far younger man. On the day this writer talked with him, Senator GREEN had been at his office or in the Senate from 8:30 a. m. till 5:30 p. m., or later, some of the time acting as chairman of a committee hearing. He had come back to the University Club (of Washington) for dinner. At about 8:30, beginning with dessert, he started reminiscing about the years of his early education. He talked, with few interpolations on the part of his guest, for nearly 2 hours, and when the conference broke up late in the evening appeared as genially fresh as if he had just finished breakfast and as young in zest and manner as if he had gotten through law school in, say, about 1910 or 1915, or even later.

Altogether we have here a portent of no mean proportions—a portent of personality and achievement in which the law school, one of his two legal nurses, can take proper pride. To have survived to such age with such vigor is remarkable, to be sure; but to have survived with credit to himself and the State and Nation he serves is phenomenal.

With his accession to the chairmanship of the Committee on Foreign Relations and with the establishment of a record for age in Congress (there seems to be a little doubt on this score, but the next few months will dispose of any transient and embarrassed phantoms who have turned up as competitors in congressional records), Mr. GREEN'S history and political activity have been given wide publicity, particularly in a full and sympathetic article in the Saturday Evening Post (issue of January 5, 1957). It would be idle, in the space allotted to this disquisition, to go too much over the same ground.

What is interesting, one supposes, or may be interesting, one hopes, to the law school constituency has to do with those events of his life when pertain primarily to his education and his legal training.

Mr. GREEN was sickly as a child. He received much instruction at home. At the proper time, his father, Arnold Green (Harvard Law School, 1865–66), taught him Greek. No lessons or the study of them was permitted on the Sabbath. Arnold Green got around that by a legal fiction which permitted study of the Greek Testament on Sundays. "I saw through him," said the Senator. "But we got on all right till I became better at New Testament Greek than he was. He didn't like that." Biographers struggle these days with the problem of father-son hostility. Catherine Drinker Bowen struggled with it in "Yankee from Olympus," and now Professor Howe, in his just-published volume on Holmes, struggles with her struggle. Senator GREEN is lucidly direct and frank. "I was always rather afraid of my father," he admits. No lack of admiration, apparently; simply a little fear.

The first school Senator GREEN went to was Miss Sawyer's, nearby on Benefit Street in Providence. "Keep him off the streets," said Arnold Green to Miss Sawyer. "Whether he learns anything or not I don't care." Later he went to Mr. Shaw's school. His class had only six members. The chief advantage of this school was that he had a walk of a mile or more each way. His health began to improve.

Thereafter came Classical High School, a public school of high standing in Providence. Here Mr. GREEN must have found himself intellectually, for he speaks with zest of his 2 favorite subjects, mathematics and Greek (1 of his respected teachers in mathematics being an uncle of the writer, Stephen O. Edwards, who later was a brother lawyer of Mr. GREEN'S). Mr. GREEN liked mathematics and Greek, but he did not like the girls in this coeducational school. They had all the seats near the window; Mr. GREEN had a corner seat surrounded by blackboards; and the teachers tended to "placate the girls." Whether this early experience produced later results no one can tell. Mr. GREEN says characteristically: "Well, it's true I was a bachelor then, and I still am." He graduated from Classical in 1883, at the age of 15.

He was uncertain about going to college. If he did, it was to be Brown. He never had a thought otherwise. The family was a Brown family—alumni, fellows, trustees galore. Mr. Arnold Green left decisions to his children (there were the Senator, 2 sisters, and the 3 "little boys") with a freedom that was remarkable. On the day for matriculation in the autumn of 1883, he asked Theodore if he was going to college. The son said he was uncertain, though he had taken rather casually and passed an entrance examination, giving up a picnic at the last moment to attend to it.

But the college bell was ringing, and Theodore strolled over to the Brown campus and climbed to upper Manning Hall where matriculation was in progress. Someone set off some firework caps, and the future Senator suddenly found himself held for questioning by President Robinson, literally before he had made his final decision to enter college. This was his first encounter with "Zeke" Robinson (stern but undignified). Green told him he was not guilty, did not know who the culprits were, and would not tell him if he did. This outraged Robinson, who called on Arnold Green. "Forget it," said the father, and as Green, Sr., was a prominent citizen, the president forgot it. Later that year the president raided 16 Slater Hall, where Green lived with John Henshaw. Green did not gamble, but some of the group were gambling. Robinson went again to Arnold Green, and there was even talk at that or another time of young Green's going to Amherst. "In any event," said President Robinson to the father, "the room was so full of smoke it was unhealthful." "Get him a larger room," said Arnold Green.

The son did top work scholastically—mathematics under Prof. "Nat" Davis, Greek under the elder Prof. Albert Harkness. There is a well-known story that THEODORE reported to his father that he stood second in his freshman year. "Work harder," said Arnold Green. At the end of the sophomore year THEODORE reported: "I led my class." "They must have pretty low standards," the father replied. The writer asked the Senator if this story was apocryphal. "No," he replied; "something very much like that happened."

The transition to Harvard Law School, after a 3-year interval, 1 year of postgraduate work at Brown and 2 years in a law office, seemed natural. Senator GREEN was the fourth oldest son in four successive generations to be a lawyer: Timothy Green, Timothy Ruggles Green, Arnold Green, and the Senator. A fifth oldest son in the next generation is the Senator's nephew, Ronald C. Green, Jr., Harvard Law School, 1934, now practicing in Providence with the firm of Hinckley, Allen, Salisbury & Parsons (once Green, Hinckley & Allen, of which the Senator was a senior member for about 20 years).

Mr. GREEN lived for his 2 years on Cambridge Street ("near that big red building"—obviously Memorial Hall). He said that as far as grades went he "did all right," but he remembers with some pride that he officiated as usher at two weddings during examination periods. This did not trouble him. "I never took examinations hard," he says.

Dean Ames, John Chipman Gray, and James Bradley Thayer were among his teachers, and he remembers them as great men. Ames, he thought, was not great as a teacher, but a very fine person. Gray was the outstanding teacher of this trio of giants.

After finishing 2 years, Mr. GREEN decided to go to Germany to complete his work. He and his father consulted Dean Ames, who was opposed. His opposition was obviously useless, as Arnold Green had done the same thing in his youth.

So the future Senator set off for Germany, to Weimar for a summer and a winter to learn the language, and then to Bonn for two terms with a term at Berlin in between. One of his vivid recollections is of Dr. Paul Krüger, famous German jurist and historian, and translator of the Gaius palimpsests. Krüger would take the matter in hand (for example, the Institutes of Gaius) and call on students to read a paragraph of the Latin and then translate it, at sight, into German for the benefit of the class. Mr. GREEN says this was terrifyingly hard for him. On the street after class he ran into the great Krüger, walked along with him, and mildly suggested that perhaps Krüger would have thought, because of language difficulties, of passing over him. "No," said the professor, "I do not discriminate. I will continue to call on you. You will be able to do what is asked." And he did. The Senator says that nothing has seemed hard to him in life since.

The Senator's admiration for Roman law and its great figures is boundless. For 3 years after his return, he taught Roman law at Brown. He practiced law with his father, and after his death with Frank L. Hinckley, 1894, and the late Arthur M. Allen, 1900, and others, as mentioned above. Subsequently he practiced with Henry C. Hart, 1907, and Patrick P. Curran (later judge of the superior court of Rhode Island) in the firm of Green, Curran & Hart. For the past 2½ decades political interests have been paramount. Space does not permit an account of his charitable and educational activities and his connoisseurship in art, particularly in the field of Chinese painting.

One observation may be made in conclusion. The Senator's attitude to his education explains in part his cheerful longevity. He has taken things as they came, with no undue fear or distrust. If he had any advice to give younger men and younger lawyers, it would, he said, be this: "Just tackle things as they come up. Things are never as bad as they seem."

By way of confirmation of this spirit, his easy serenity is well expounded in a piece of verse which he composed for the Class of 1887 Gate on the Brown Campus. He frankly likes the lines and thinks that they are rather pat. There are two examples of paronomasia in it—the metaphorical reference to the actual college pump and well which are close by and to "Hope College," the ancient dormitory beside the gate.

Welcome, O undergraduate,
Within this '87 gate!
All ent'ring here find hope endures,
The fount of knowledge still allures,
And here good fellowship abides,
To cheer and help whate'er betides.

The Senator has in his own life, perhaps without realizing it, been the perpetually optimistic and perpetually youthful hero of his own couplets.

The Unworkable Lease-Purchase Program for Federal Buildings

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. MAGNUSON. Mr. President, when the current administration first proposed a lease-purchase program for such public buildings as post offices, back in 1953, many of us on this floor said flatly we did not think the program would work.

The program has not worked. A House Public Works subcommittee discovered further proof of the unworkability of the program when Comptroller General Joseph Campbell appeared before it a few weeks ago.

This important question has been the subject of many newspaper editorials, among them one in the Tri-City Herald in Richland, Wash.

I ask unanimous consent of this body that the editorial of Friday, March 22, in the Tri-City Herald be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEASE, PURCHASE, AND LOSE

The lease-purchase plan by which Uncle Sam leases a post office or Federal building for a given number of years and then has the option to buy it, is a costly venture according to testimony in Washington, D. C.

This conclusion is important to the Tri-Cities which are currently seeking a new Federal building, particularly for a new Federal court, and new post offices in Kennewick and Pasco.

There has been talk locally of having some concern build a structure according to Government specifications and then lease it to Uncle Sam, who could purchase it in 20 years.

Here are some editorial comments on the plan recently carried by the St. Louis Post-Dispatch which may indicate Federal thinking on the idea:

Testimony from two branches of the Government about the administration's lease-purchase plan leads to an irresistible conclusion.

Under the lease-purchase plan, the Government, instead of appropriating funds for the construction of post offices, courthouses, and similar buildings, signs a contract with private interests which then construct the buildings and rent them to the Government. After 20 years the buildings become Government property; but in the meantime the Government has paid rentals large enough to cover not only construction costs, but the financing charges, and profits of the private enterprisers it has dealt with.

A House Public Works Subcommittee asked Comptroller Joseph Campbell how much these extra costs would run to. His answer: On 146 Federal buildings planned, the Government would pay $634,500,000 more than it would pay if the same structures were built directly under the direct appropriations. That is a lot of money.

The committee then heard Franklin G. Floete, head of the General Services Administration, explain why the lease-purchase program has bogged down. It can be made to work, he said, if the Treasury will allow higher interest payments than at present, and if construction cost estimates are increased 11 percent.

In other words, the Government is unable to get its building done by the lease-purchase method unless it is willing to pay a great deal more than the $634,500,000 in excess costs already in sight under the program as now set up.

Need there be any question about what irresistible conclusion it is which this testimony leads to? Surely the lease-purchase program should be abandoned and the old-fashioned way of direct appropriations restored.

A Program To Preserve Our National Parks

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD, an editorial from the Memphis Press Scimitar of April 3, 1957, describing a program known as mission 66, to preserve our national parks in their natural state, and to provide for more adequate facilities to take care of the growing number of visitors each year. I would like to invite the attention of my colleagues to this editorial on the importance of taking action on preserving our national parks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROGRAM TO PRESERVE OUR NATIONAL PARKS

A program known as Mission 66 is before this Congress. It was introduced in the previous Congress. It will be before every Congress through 1966, the year from which it gets its name. Part of it is to be carried out each year.

It is a program to prepare our national parks for the 80 million visitors expected in 1966, the golden anniversary of the National Park Service. The park facilities, which were planned to take care of only 25 million people, are being overtaxed as the result of the unexpected growth of America's population. Not only facilities, but personnel are inadequate to handle the crowds, and as a result our parks, museums of irreplaceable nature, are threatened with permanent damage.

This situation was revealed to the public in a series of articles by the New York Times and Christian Science Monitor.

It may seem ironical that it requires new buildings to preserve the primitive character of the parks, but truth is often ironical, and that's the way it is. You have to have buildings in which to put the crowds, and competent rangers to guide them, or they get out of hand and spoil what should remain unspoiled.

No one knows better than the experienced nonpolitical head of the National Park Service, Conrad L. Wirth, that scrupulous moderation must be used in making improvements in natural areas, for you cannot improve on nature. He is asking for—one might rather say, he is consenting to—only what a clamoring public will not be satisfied without. One of the finest things in the Mission 66 program, for instance, is its insistence on the preservation of the wilderness area of the Great Smoky Mountains National Park, where you find almost as many varieties of trees as you will find in all of Europe, and where wild animals roam under virgin trees as they did when the white man came. Half of the Nation's population lives within 500 miles of this park, it has 2,500,000 visitors a year, and conservative "Connie" points out how important it is to preserve for all time this glimpse into the past, this view of eternal nature.

The National Park Service is not a bureaucracy, but a group of dedicated men and women who care deeply, and work hard at less than they could get in private industry, to protect for all of us a treasure that would otherwise be lost.

In case you are wondering what relation this has to the current discussion of the budget: This program originated before the present inflated budget was conceived, it shares in none of the loose and irresponsible figuring that has rightly aroused the American people. It is truly conservative and truly economical.

Scott McLeod

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The McLeod Appointment," published in the New York Times of April 11, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MCLEOD APPOINTMENT

Scott McLeod is the symbol in the State Department of all that has happened in the last 4 years to lower morale so drastically and to drive from the diplomatic career some of the best officers we had. He entered the State Department in the security section in 1953 as the representative of Senators BRIDGES, MCCARTHY and the late Senator McCarran. No one man has represented in the public mind more than Scott McLeod all the evils of McCarthyism as applied to diplomacy. On Tuesday he was nominated as Ambassador to Ireland.

Is it any wonder that a storm of criticism has arisen throughout the country over diplomatic appointments when such things can happen? It would be unjust to make a blanket condemnation, for some fine appointments were made, but there have been bad appointments, and this one comes as a climax. It would be hard to imagine a worse blow to the diplomatic corps or a worse example of playing politics with the foreign affairs of the United States. Secretary Dulles must take the blame for Mr. McLeod's unfortunate work in the field of so-called security and the refugee problems, for he, after all, is the head of the department, and he must take the blame for this appointment.

Ireland deserved a better fate. She has been most fortunate since 1953 in having a first-rate envoy—Ambassador William Howard Taft III. Dublin is a post where the work is not arduous and life is wonderfully pleasant. The man who is named to Ireland is a fortunate man. If he is a career diplomat like Mr. Taft he is a lucky man. For the noncareer man it is a reward.

And now it is Scott McLeod who is going to get this reward if his nomination is rati-

fied. Whether he gets it or doesn't is not a personal matter. He is a well-intentioned if woefully misguided young man and no one begrudges him any happiness he can get. But the damage to the State Department and the United States diplomatic corps that will result from this appointment is public business. The Senate should block it.

Luncheon in Family Dining Room of United States Senate Preceding Opening Baseball Game

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. CARLSON. Mr. President, for more than 20 years Lowell Mason, a former member of the Federal Trade Commission, has entertained members of the executive, legislative, and judicial branches of the Government at a luncheon in the family dining room of the United States Senate preceding the opening baseball game of the season.

This is one of the outstanding luncheons of the year, and is appreciated and enjoyed by everyone who is privileged to attend.

Mr. Mason always opens this luncheon with grace. It is so meaningful and inspirational that I ask unanimous consent that the prayer of grace be printed in the Appendix of the RECORD and made a part of these remarks.

There being no objection, the prayer of grace was ordered to be printed in the RECORD, as follows:

LOWELL MASON'S GRACE

Oh Lord may we speak with Thee before partaking of Thy bounty?
No Lowell—you may not!
Mankind is so long on supplication and so short on endeavor—
Always asking for daily bread—always asking to be forgiven trespasses—
Always praying to Me for something.
Be silent!
For I would speak to thee;
To ministers preaching My gospel; to scientists groping for My truths;
To men of business rendering unto Caesar the things that are Caesar's.
And in this room and on this noon time I would speak to Legislators seeking My statutes and judges searching for My laws—
I speak not to puppets, void of dignity, tools of the state exiled from truth and incompetent to choose between good and evil.
I speak to you—and to you—and to you.
Son of man, stand upon thy feet!
You pray to Me?—Here's My prayer to you!
My children which are on earth, you have hallowed My name.
But My Kingdom has not come, nor My will been done, on earth as it is in Heaven.
Resist temptations, for I will not do for you what you must do for yourself.
It is not enough that you work for your daily bread,
Work also to end your trespasses against each other.
Then indeed My kingdom will be within you.
And you will glorify My name.
For ever and ever and ever.
Amen.

United States Warned To Guard Hemisphere Interests

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Warned To Guard Hemisphere Interests," written by Ernest B. Vaccaro, of the Associated Press, and published recently in the Washington Post. The article points out that, once again, we are beginning to lose some of the great stature which fortunately not long ago we held in the Latin American countries; and that if we do not do something about it promptly, we are likely to find ourselves in a worsening situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES WARNED TO GUARD HEMISPHERE INTERESTS

(By Ernest B. Vaccaro)

The United States was told yesterday that its vital interests in Central America and the Caribbean "are in danger of being overlooked" in its concentration on world-shaking events elsewhere.

A report was made public by a special Senate committee studying foreign aid.

It was prepared by James Minotto, Phoenix, Ariz., rancher and a former Mutual Security Agency chief in Portugal. He drafted it for the committee after a survey of Cuba, Haiti, the Dominican Republic, Panama, Costa Rica, Nicaragua, Honduras, El Salvador, Guatemala and Mexico.

While he said the threat of Communist subversion in those areas appears "negligible," he declared Guatemala showed "the ease with which some of these countries can be subverted to a base for mounting a Communist-led psychological offensive against the United States."

In urging continuation of military, economic development and technical assistance for the area, he declared:

"For example, the Castillo Armas government in Guatemala must convince most of the people that they are better off than they were in 1954 if the present trend toward more democratic government is to be maintained.

"If the Government is unable to demonstrate such improvement, very few observers are willing to predict the orientation of the new administration that will come to power in 1960.

"The great gap in incomes in several of these countries plus the lack of education presents a fertile field for Communist activities. The Communist Party is outlawed in almost every country in the area. Despite this fact, untoward events, or dramatized issues of the local government against the people in some countries, can result in a repeat in the unhappy history in Guatemala from 1950 to 1954."

Minotto said the United States must carry out its moral commitments to Guatemala, which cannot carry on necessary programs within the borrowing limits of its own economy.

"The availability to the United States of sites for naval and air operations and the denial of such sites for use against the United States by other countries are considered essential parts of our security interests," he said.

Minotto said the Defense Department should speed up machinery for arms deliveries about which there have been some disappointments. And he said the Government should relax its policy of restricting grants and loans to emergency conditions to provide help for construction of public facilities needed to stimulate private investment.

The Bermuda Conference

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. HENNINGS. Mr. President, in the Maryville (Mo.) Daily Forum for March 13, 1957, I came across an editorial entitled "The Weakening Wall," which, with particular reference to the British-American meeting at Bermuda, offers some very pertinent remarks concerning the strength of the Free World's defense front.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WEAKENING WALL

When Prime Minister Macmillan, of Britain, meets President Eisenhower at Bermuda later this month, the future of the North Atlantic Treaty Organization is bound to be batted about. Today that outlook is too cloudy for the free world to feel wholly safe.

Well advertised are the cutbacks that have been made in NATO forces, particularly those of Britain and France. And the example has not been lost on the West Germans, already slow in building their own NATO army.

All kinds of justification are given for the cutbacks. Troops are needed elsewhere. The emphasis is shifting more and more to atomic weapons which are said to lessen the need for big ground forces on the European defense arc.

Still, those who believe stoutly in NATO's value as a deterrent to aggression insist that adequate ground forces are an indispensable element. They fear that sharp reductions could destroy NATO's steel backbone and leave the West's eastern perimeter guarded by mere token forces.

There is little question that what has been happening to NATO reflects a steady easing of western fears that the Soviet Union will commit open aggression against Europe.

This relaxation has reached the point where participating nations feel safe in shifting forces to other fronts. Their leaders clearly believe these new fronts more important in the present world situation.

The real question is whether in fact they are more important. And that is one of the great matters Mr. Eisenhower and the new British Prime Minister must discuss at Bermuda.

Both are knowledgeable men fully aware that freemen twice in this century failed to grasp that their liberty had to be guarded ceaselessly against tyrants.

In the years since World War II, the free peoples have been more steadily at the alert.

But we are approaching what seems like a major crossroads, where we must decide

whether safeguards will be maintained at proper level or an increasing softness will be allowed to invest our efforts at defense.

If the trend is to be toward softness, then freemen may once more invite the holocaust that struck the globe in 1914 and again in 1939. Tyrants live for the moment when the guard is down.

Oregon Orchardist of the Year

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. NEUBERGER. Mr. President, a few weeks ago an event of importance and significance took place in Hood River, Oreg. Hood River lies in one of the most beautiful valleys in the world. At this season, the thousands of acres of fruit trees for which the valley is famous give it the very breath of life of a fairyland. Nature's eons may be credited for the valley; man himself cultivated the wonderland of blossoms. The event to which I refer was a Hood River Chamber of Commerce dinner at which, for the first time, an annual award was made for Orchardist of the Year. Four other awards were made for such categories as horticulture, orchard management, orchard soil management, and citizenship. The release issued by the chamber of commerce gives the details of the occasion.

Mr. President, I ask unanimous consent to have the release printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

HOOD RIVER COUNTY CHAMBER OF COMMERCE,
HOOD RIVER, OREG.

To Senator RICHARD L. NEUBERGER.

Five men representing the cream of the crop in the first annual "Orchardist of the Year" contest honored Wednesday night, February 27, were led by a person of long standing in public service, as well as in the fruitgrowing industry.

Riddell Lage is a Pine Grove orchardist in partnership with his father, E. E. Lage, and manages 217 acres of property, of which 154 acres are in apple, pear and cherry orchards. His major varieties are Anjou and Bartlett pears, Red Delicious and Newtown apples with limited acreage of Gravenstein and Winesap apples and Lambert cherries.

A long list of public services is connected with the name of Riddell Lage. For eight years he served in the State Legislature as Hood River County representative. He is president of the Mid-Columbia Credit Association, is a past president of Oregon State Horticulture Society, is a former member of the State Board of Agriculture, and is former president of the Hood River County Traffic Association.

Until recently, Lage was a member of the State Liquor Commission, and was a director of the Washington-Oregon Canning Pear Association. This month he has been on a tour, including a visit to Washington, D. C. as a state representative of the Employment Service.

Lage is also an independent packer, and is noted for keeping detailed records on his orchard and packinghouse operations. He is noted for his willingness to try out new equipment and innovations in the industry. He follows a permanent sod cover crop program. Among his horticultural practices are careful fertilization of trees based on size and vigor, and the careful training of young trees with special emphasis on selection of permanent scaffold limbs.

Joe Smullin, Jr., Parkdale orchardist, received the Horticulture award. He has 105 of his 150 acres in fruit and is recognized as following a good program of tree replacement for capacity orchard production.

Smullin has a large number of acres in new orchard of good commercial varieties for the Parkdale district, and raises 6 to 7 acres of strawberries in his young orchard to help pay expenses of bringing trees into bearing. He is a member of the Apple Growers Association and is a senior chamber director. He is high in citizenship. His sponsor notes that Smullin's orchard is well sprayed and crops are clean year after year, and that he uses land unfit for orchard as pasture and stockraising.

Richard Radliff, Barrett orchardist, received the orchard-management award. He has 55 of his 72 acres in orchard, and is in partnership with his father, Archie Radliff. He keeps outstanding farm records and has participated in fruit-production cost studies sponsored by Oregon State College. He has eliminated undesirable varieties of fruit, replacing them with those which are more popular.

Much of the equipment used by Radliff has been built by himself in a well-equipped machine shop. He is converting to more modern practices and has one of the best appearing cabin areas and facilities in the valley. The 1955–56 freeze claimed a large number of his Newton apple trees.

The orchard soil management trophy went to Roy Bisbee, who is in partnership with his brother, Ben, Oak Grove orchardists. They manage a 95-acre ranch of which 75 acres are planted in orchard. Roy, in addition to his outstanding soil-management program, has been noted for some other good orchard practices. He and his brother recently constructed a catch basin for water storage to supplement the sometimes short supply of irrigation water available in that district. Roy and Ben also discovered a sport of the Starking Red Delicious apple in their orchard in 1945 and patent is pending for the sport variety called Starkrimson.

Bruno Hukari is the recipient of the fifth award, that of citizenship. Among the public-services offices held by Hukari are membership in the West Side Fire Department, Hood River Ditch Co., County Community Agriculture Committee, and Memorial Hospital Board.

Hukari, who owns a 54-acre Oak Grove orchard, also assisted with the Memorial Hospital construction fund drive, and is a past board member of the Apple Growers Association.

Indiana Leads the Way

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Indiana Leads the Way," from the Hammond Times, of Hammond, Ind., in its issue of April 8, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDIANA LEADS THE WAY

Indiana has more than held its own in the matter of personal income as compared to several Midwest States.

Some startling facts along these lines are revealed in a comprehensive study just released by the United States Department of Commerce. The period from 1929 to 1955 is covered—a total of 26 years. Illinois, Wisconsin, and Iowa are included with Indiana in the report.

Indiana led the other 3 States with a 328 percent gain in total personal income. For the others the increases were: Wisconsin, 245 percent; Illinois, 212, and Iowa, 192. Illinois still has more than half the total personal income in the four-State area.

The sources of this income also were studied. For Indiana personal income from manufacturing more than quadrupled. This increase was 440 percent.

Indiana income from wholesale and retail trade went up 389 percent during this period. The smallest increase was farm income, 114 percent.

It is significant to note that Indiana led the other 3 States in all 3 categories.

It is evident, as pointed by the report, that Indiana has enjoyed steady, even spectacular, growth in the period covered. Hoosiers also will find satisfaction in the fact that their State has set the pace for the area.

Cuban Chief Restores All Civil Rights

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, which was published today in various newspapers, which notifies the people of the world that the President of Cuba has once again restored all constitutional and civil rights to the people of Cuba.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CUBAN CHIEF RESTORES ALL CIVIL RIGHTS

HABANA, CUBA, April 15.—President Fulgencio Batista announced today the restoration of full constitutional guaranties to Cuba's 6 million people, effective at midnight tonight.

The guaranties were suspended 45 days ago. Batista's government announced the action was intended to protect Cuba's vital sugar production from threats of sabotage by insurrectionists and Communists.

Batista declared he felt the internal situation had now eased sufficiently to permit return to the people of the rights of peaceful assembly, freedom from arrest without a warrant, and other constitutional rights.

The presidential palace remained under heavy guard. It was the scene of an attempt by revolutionaries to assassinate Batista on March 13.

Batista declared the restoration was ordered to protect the people against terrorism. Many leading Cubans and opposition political parties had accused Batista of a dictatorial act in suspending the guaranties.

The President made clear the restoration applied also to easternmost Oriente Province,

where Fidel Castro, 30-year-old former Habana University student, and a small band of followers have been attempting to wage guerrilla warfare against the Government.

The President's Budget

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. HENNINGS. Mr. President, on March 19, 1957, an editorial discussing the 1958 budget appeared in the Marysville (Mo.) Daily Forum, and because it is of general interest not only to Missourians but to Americans everywhere, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIFFICULT, PERILOUS TASK

At budget time in former years, Congress has resolutely set about cutting the President's money requests almost as a matter of course. But the lawmakers always assumed the White House had presented a budget it earnestly believed was essential in every detail.

They are not thus convinced in 1957.

When Mr. Eisenhower presented his figures for the coming year, he permitted his potent Treasury Secretary George Humphrey to assail them as too big.

Many legislators and a horde of others interested in the Federal budget took this as an unmistakable sign the President didn't really believe in his new figures. There has been widespread feeling that he either ducked the task of tight budget making, or didn't know how to bring it off.

Some observers have thought that Mr. Eisenhower was honestly torn between the desire for economy in government and the belief that many costly Federal programs are necessary to meet the problems of this expanding country in a troubled age.

Whatever is in his mind, whatever the facts of budget preparation within the administration, the President plainly doesn't intend to revise his requests. He has tossed the ball to Congress.

The lawmakers obviously do not like this. Even though in past years they have relished the job of budget slashing, they didn't like to undertake that part of it which they feel is properly the administration's responsibility.

The President says big savings aren't possible unless sizable projects like the farm or the veterans' program are trimmed. And he adds that since these are authorized by Congress, the latter must decide which if any must suffer.

It is true that these things have been authorized on Capitol Hill. But most legislative programs originate in the executive branch of government.

"The President proposes, the Congress disposes," they used to say.

The responsibility for Government programs generally is a joint one. If a major project is to be heavily slashed, the matter hardly seems one for congressional decision alone.

The budget situation this year is extremely puzzling. Probably there are not too many Americans who feel that up to now the administration has discharged its full responsibility toward the vital budget-making assignment.

Aluminum Production on the Columbia River

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. NEUBERGER. Mr. President, Oregon's paramount industry springs from its vast stands of timber, the greatest in any State. However, Oregon's metropolis, Portland, finds that metalworking outranks the giant lumber industry as the city's No. 1 employer. This information was offered in the December 13, 1956, issue of the Iron Age. The article goes on to point out that the "big factor in the area's industrial growth is aluminum-reduction plants." It should be noted in passing, Mr. President, that the initial development of the hydroelectric resources of the Columbia River, with the construction of such great multiple-purpose dams as Bonneville, Grand Coulee, and McNary, made this metalworking upsurge possible.

I ask unanimous consent, Mr. President, to have this material included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DON'T OVERLOOK PORTLAND AS METALS MARKET

(By R. R. Kay)

Metalworkers selling the west coast area can't afford to overlook Portland, Oreg. It's another fast-growing spot for metalworking products and services.

Metalworking outranks the giant lumber industry as Portland's No. 1 employer. So says the latest census of manufactures. In 1954 metalworking payroll was over $72 million, and value added by manufacture hit $140 million. The value added was 31 percent of that of all Portland manufacturing—a 73-percent increase over 1947. And today's figures are even higher.

ALL SORTS AND SIZES

Variety is the spice of Portland's metalworking life. The diversification trend, steady for several years, is now very strong. Made-in-Portland labels go on lots of products, from mechanics' handtools to special logging devices, from automobile license plates to furnace and heating equipment.

Big factor in the area's industrial growth: Aluminum reduction plants. Both Aluminum Company of America and Reynolds Metals Co. jacked up capacity in the past few years. The result is a healthy increase in Portland-area aluminum fabrication.

A SHOT IN THE ARM

World War II shipbuilding gave the Portland metalworking industry its big boost. When fighting stopped, subcontractors switched to other products, many never before made in the Pacific Northwest. And some shipbuilders, themselves, branched out.

Take Albina Engine & Machine Works and Gunderson Bros Engine Corp., both still in ship construction and repair. Today, Albina also makes a motorized painter's stage. And, through an affiliate, turns out stainless steel valves. Gunderson is readying a new automobile-parking unit called File-A-Way.

Williamette Iron & Steel Co., area's largest shipbuilder, is at work on a multi-million-dollar conversion job. Its Bingham pump division continues to grow, making large centrifugal pumps for the world market.

HUMMING ALONG

In fact, Portland's metalworking industry is humming on all fronts, expanding, diversifying, or both. Oregon Steel Mills, with three electric furnaces, recently expanded. The firm makes light structurals. Union Carbide & Carbon's electrometallurgical division, a ferroalloy producer, has doubled capacity.

Foundries are thriving. There are 15 gray iron, 20 nonferrous and 4 diecasting. Leaders include: Electric Steel Foundry Co., high alloy and electric steel castings; and Omark Industries, ferrous investment castings. Schmitt Steel, Inc., is one of three steel forging plants.

Iron Fireman Manufacturing Co. has a large plant subcontracting for the aircraft industry.

CLAIMS TO FAME

Portland is a leading producer of logging trucks, trailers, sawmill, and lumber manufacturing machinery. That figures, since woodworking is still Oregon's No. 1 employer.

Lift truck makers include Hyster Co. and Lamson Mobilift Corp. And tractor manufacturing is in for a big boost. Wagner Tractor Co., a Mixermobile Manufacturers affiliate, bought a 71-acre site.

United States Naval Academy Nutritional Foods for the Brigade of Midshipmen

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. LANKFORD. Mr. Speaker, as a member of the Board of Visitors to the United States Naval Academy, and as a Member of a Congress which constantly and properly has an ear attuned to economy, I feel that Congress should be apprised of a program now underway at the Naval Academy which is designed not only to contribute to the welfare of the midshipmen, but to do so without adding to the costs of operating the Academy.

It has often been said that an army marches on its stomach; the same holds true, and even more so, for a growing young man being developed into a naval officer.

Admiral Smedberg, Superintendent of the Naval Academy, long has been concerned with the many complex problems involved in providing 4,000 calories a day of nutritional foods for the 3,600-man brigade of midshipmen at a daily ration of $1.35.

To assist in this problem, General Foods Corp. was asked by the Academy to loan the services of one of its four institutional dietitians, Miss Gerry De Mauro, to create nutritional salads and desserts with sufficient eye appeal and taste appeal that the midshipmen would eat these dishes with the same relish they apply to steak.

According to Commissary Officer Louis W. LeForge, Jr., the result has been a contented brigade, a great reduction in the volume of food left on their plates—and lower costs. To cite only one exam-

ple, Miss De Mauro showed the Academy cooks how to reduce the cost of each lemon meringue pie by 7 cents, and since 700 pies are devoured at a single sitting, this represents a substantial saving.

The personnel of the Academy certainly deserve commendation for the foresight shown in improving the physical well-being of the midshipmen. Miss De Mauro and General Foods rate a hand for donating their services to make this accomplishment possible.

New United States Role in Africa

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "New United States Role in Africa," which appeared in the Indianapolis News on April 9, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW UNITED STATES ROLE IN AFRICA

Vice President Nixon is right in advocating that the United States give more attention to cultivating friendship with the Africans.

Large areas of Africa, as Mr. Nixon found on his recent tour, are emerging into civilization, culture, and self-assertion. And although, as he has reported, Communist domination there is not a "present" danger, "Communist leaders consider Africa today to be as important in their designs for world conquest as they considered China to be 25 years ago."

This country has paid little attention to African relations as such, leaving them up to the European powers. But Africans now are breaking away from their colonial ties. It is high time to quit dealing with them through the British foreign office and its counterparts.

Vice President Nixon recommends that the old-fashioned diplomacy which finds African affairs lumped with those of Asia and the Middle East be thrown out of the window. The Senate Foreign Relations Committee already has given its approval to the Nixon suggestion that a new bureau of African affairs be set up in the State Department.

The State Department itself should act affirmatively on his further advice to shake up some of our African foreign aid missions, "information" staffs and embassies and man them with persons "better capable of interpreting and explaining our policies."

A new interest in Africa should not mean that the Washington global do-gooders have another giveaway playground set up for their administration. Far from that. Whatever economic assistance this country should lend should be in the form of promoting mutual trade, providing a climate for American private investment projects and technical advice.

If we try to use in Africa the same old ideas of past foreign aid programs, they not only would stand to fail as they have elsewhere but could even bankrupt us.

From the United States, the Africans should have democratic encouragement, but no dollar diplomacy.

The Postmaster General Should Resign

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. PORTER. Mr. Speaker, the $41 million deficiency appropriation should be approved quickly by Congress so that full postal service can be restored throughout the Nation. We cannot abide ill-considered "meat-ax" cuts vitally affecting thousands of families whose breadwinners are postal employees, as well as the millions of postal patrons who are entitled to rely on the mail service which has been established.

However, the Postmaster General should resign. I said so at the outset of this hassle; I say so again now, as do the Detroit Times and other leading newspapers, along with a number of Congressmen, including my friend and distinguished colleague, JOHN LESINSKI, Democrat, Michigan, who is a senior member of the House Post Office and Civil Service Committee, of which committee I am also a member.

Now, did the Postmaster General violate the antideficiency law? Yes, says the Comptroller General in an opinion written April 12, 1957. He violated subparagraph (c) (1) which requires him to make the money appropriated to his Department last for the full year without the necessity of a deficiency appropriation.

The law provides no penalty for the violation of this section. I intend to introduce an amendment to provide for the same penalty applicable for violations of paragraph (a), (b), and (h) of the Antideficiency Act.

My considered opinion, as a lawyer, is that Mr. Summerfield violated paragraph (h), for which paragraph the penalty is, upon conviction, a fine of not more than $5,000 or imprisonment for not more than than 2 years, or both. His guilt, of course, must be determined by a court. Therefore, I am turning over a copy of this statement to the United States attorney for the District of Columbia with the request that he take appropriate action and in due course advise me. I personally do not believe Mr. Summerfield should be fined or imprisoned, in view of the fact that there have been previous unprosecuted violations of the Antideficiency Act although it appears that none was so gross, so flagrant, and so arrogantly carried out as the instance before us. In any event, if he were convicted, the matter of punishment would be for the court to decide.

All that I am saying as a lawyer is that there is a basis for prosecution for the following reasons:

Paragraph (h) of section 3679, Revised Statutes as amended—title 31, United States Code, section 665—commonly known as the Antideficiency Act, provides:

(h) Expenditures in excess of apportionment prohibited: penalties.

No officer or employee of the United States shall authorize or create any obligation or make any expenditure (A) in excess of an apportionment or reapportionment, or (B) in excess of the amount permitted by regulations prescribed pursuant to subsection (g) of this section.

It is plain that Mr. Summerfield did authorize and create obligations in excess of the amount permitted under subsection (g), which subsection, so far as important, reads as follows:

The head of each agency, subject to the approval of the Director of the Bureau of the Budget, shall prescribe, by regulation, a system of administrative control * * * designed to (A) restrict obligations or expenditures against each appropriation to the amount of apportionments or reapportionments made for each such appropriation.

A study of the reapportionments made by the Bureau of the Budget at the recommendation of the Postmaster General shows that the fourth quarter apportionments beginning with December 14, 1956, were $11 million below the "apportionment" made on July 13, 1956, and were $31 million below the July 13 "apportionment" by reason of a "reapportionment" accomplished on February 4, 1957. A study of the eight adjustments of the "apportionments" will show that the Postmaster General decreased the fourth quarter "apportionment" by three different "reapportionments," which resulted in the fourth quarter "apportionment" being $40,727,100 less than the third quarter "apportionment" which covered 2 days' less time.

I have put "apportionment" in quotation marks because the proper understanding of this word is central to an understanding of my contention that subsection (h) has been violated. My point is this: As used in this act, an "apportionment" is more than a mere division of the money appropriated for the whole year. It is, rather, the sum necessary for any particular quarter so that the usual services provided by the Department may be carried on as provided by law. It is plain that the reductions in the fourth quarter by the adjustments set forth in the Comptroller General's letter, No. B–131361, dated April 12, 1957, resulted in the amount allocated to the fourth quarter being far too little to maintain the usual services in the sense just described. This is further borne out by the fact that the Postmaster General is pressing for a $47 million deficiency appropriation so that he may maintain operations during this fourth quarter.

The whole matter boils down to the Postmaster General's willful and knowing violation of the Anti-Deficiency Act by purposefully refusing to apportion the appropriation money as required by law. It may be said that he did ask the Director of the Budget to approve supplemental appropriations and that the Director of the Bureau of the Budget, through inexcusable ignorance with respect to the use of postal revenues, refused to transmit this information to Congress.

However, the Postmaster General well knew the antideficiency law and had ample opportunity between July 10,

1956, and the adjournment of Congress that year, as well as during the remainder of 1956, to contact the appropriate committees of the House to inform them of any additional needs so that the drastic curtailment now put into effect would not be necessary and so that the antideficiency law would be obeyed instead of flagrantly flouted and violated.

Rise in Construction Spending in March

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Construction Spending Set Record in March, Rose 3 Percent Above Last Year," which appeared in the Wall Street Journal on April 11, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTRUCTION SPENDING SET RECORD IN MARCH, ROSE 3 PERCENT ABOVE LAST YEAR

WASHINGTON, The Government reported spending for new construction put in place expanded seasonally in March to nearly $3.2 billion—a record for the month.

This was a 9-percent climb over the $2.9 billion spent in February and 3 percent above the less than $3.1 billion of expenditures in March of last year.

March construction closed out the most active first quarter on record, the Commerce and Labor Departments said in a joint release. Spending for new construction totaled nearly $9.2 billion in the January-March period. This was a 4-percent increase over the previous first quarter high reached a year ago.

On a seasonally adjusted basis, the report said, new construction activity in this year's first quarter climbed to a record annual rate of $44.8 billion—compared with a $44.4 billion rate in the preceding quarter and actual expenditures of $44.3 billion for the full year 1956.

The departments said private construction outlays totaled nearly $2.3 billion in March. This was a 7 percent increase over February and about the same level as a year earlier. Spending for new houses climbed 10 percent in March to $890 million but still fell 11 percent shy of year-earlier outlays.

Spending for public construction in March amounted to $913 million, the report said. This was 14 percent above February and 13 percent higher than a year earlier.

Looking at the first quarter, the departments said private expenditures totaled nearly $6.6 billion—about 1 percent higher than the corresponding period of last year. Declines in housing, stores, and farm buildings, the report said, were offset by increases to record levels in construction of industrial buildings, office buildings, churches, schools, hospitals, and public utilities.

Public outlays for new construction amounted to nearly $2.6 billion during the first quarter, the report said. This was 11 percent above the like period of last year. All major types of public construction contributed to the climb with new highs being reached in expenditures for highways, schools, and sewer and water projects.

Construction outlays in the first quarter totaled nearly $9.2 billion, Government figures showed. This was 4 percent above the previous high for the period reached a year ago. On a seasonally adjusted basis, building expenditures climbed to a record annual rate of $44.8 billion. This compared with $44.3 billion spent in the full year 1956.

Private construction work in the first quarter was 1 percent above the like 1956 period. Declines in building of homes, stores, and farm structures were offset by record construction of industrial and office buildings, churches, schools, and hospitals.

Jury Rights and Civil Rights

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. HENNINGS. Mr. President, the St. Louis Post-Dispatch of March 31, 1957, contained an interesting editorial entitled "Jury Rights and Civil Rights." I commend the Post-Dispatch for a really excellent editorial, which will be of interest to all Senators. I ask that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JURY RIGHTS AND CIVIL RIGHTS

Southern opposition to civil-rights legislation is being led in the Senate this year by soft-spoken lawyers instead of shouting racists. Senator ERVIN, of North Carolina, has attracted attention, for example, by invoking against the administration's proposed bills the sanctity of the constitutional right to trial by jury. And he is reported to have made some headway.

The proposed legislation would indeed make it possible to bypass jury trials in some civil-rights cases. When a Negro was denied the right to vote, the bills would permit the United States Department of Justice to seek in Federal courts an injunction against the State's refusal to register the Negro as a voter. Violations of the injunction would be punished by actions for contempt, which could be heard without a jury.

Senator ERVIN argues that the effect would be to deprive Americans of a sacred right—the right to a jury trial. He may have a point. But he would be more persuasive if he were as zealous in protecting the disfranchised Negro's constitutional rights as he professes to be in protecting the rights of the white disfranchiser.

Everybody knows why the civil-rights legislation proposes to enforce the constitutional right to vote by use of injunction and contempt proceedings—which, incidentally, are constitutionally just as valid as criminal jury trials. The reason for this procedure is that in the areas where white officials habitually deny Negroes the right to vote, the juries also are white and would tend to refuse convictions.

Would Senator ERVIN agree that, as a condition of holding jury trials in civil rights cases, Negroes should be members of the jury? If so, his passion for juries might be regarded as sincere. Otherwise he will find it hard to prove that one man's right to a jury trial is a proper basis for denying another man's right to vote.

Rooster Feathers in Washington

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. SILER. Mr. Speaker, the word "cocktail" originally meant the rear end of a rooster. And the word's basic meaning right now could be expressed in the phrase, "Rooster feathers," according to the makeup of cocktail, rhetorically and in literal syllable.

Much has been said or written about the Washington cocktail party, or rooster feathers, as this function has been carried out during the past two decades, particularly after liquor became legalized and glamorized in President Roosevelt's first term. Now when a Congressman is invited out to rooster feathers in Washington and the function appears to be tied in with something he should rightly attend, he could always try to get there about the time rooster feathers is over. But if he gets in before the tail end of the rooster's tail, then he could very well hunt for some sparkling ginger ale or some good red tomato juice for a little honest nourishment while some of the remaining gigglers are closing up on rooster feathers with manifest evidence of drooping feathers and minus any remaining crow after too many ounces of Old Crow.

Sometimes a person may wonder about the historic background or early origin of rooster feathers. Did Nero start rooster feathers as he worked out his fiddling technique just before the occasion of the burning of Rome? Or did Pontius Pilate establish rooster feathers as he considered his final order of execution against the Saviour? Or did rooster feathers start much later, say when Benedict Arnold got some of his friends together during the last week before he carried out his predatory plot? Certainly George Washington had no rooster feathers party when he got ready to cross the Delaware in the hour of our country's great crisis. Neither did rooster feathers originate with Paul Revere in the early evening of the night of his famous midnight ride. It could never have been invented by Joan of Arc that evening before she rode out to deliver her people yonder in France in their time of great need. These last-named people were serious and effective patriots with sober and far-reaching objectives ahead of them. And none saw fit to have rooster feathers in the critical hours of those great undertakings and historic achievements.

Does a Representative or Senator or high governmental official really need rooster feathers to sustain him or entertain him in his times of wrestling with the problems of his day and age? The correct answer is no, of course.

Rooster feathers tends to make women silly and men belligerent.

Rooster feathers is a friend of frivolity and failure.

Rooster feathers is an enemy of all serious endeavor.

Rooster feathers has no ally in heaven but many good friends in hell.

Rooster feathers in Washington never gave America her greatness or strength or fame or continuity but is certainly an effective force to curtail all of these here at the very center of our country's heartbeat.

Looking Ahead in Southern Agriculture

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks, I include an interesting and informative speech delivered by Mr. J. W. Fanning, chairman of the division of agricultural economics, the University of Georgia College of Agriculture, Athens, Ga., to the Southern Regional Conference for Supervisors and Teacher Trainers of Agricultural Education, in Atlanta, on April 4, 1957.

The speech follows:

LOOKING AHEAD IN SOUTHERN AGRICULTURE

(By J. W. Fanning)

As one attempts to look forward to the South of the sixties, the agricultural pattern of the past and the transition of the present come into clear focus. This situation is confusing and somewhat frustrating. It's rather difficult to decide where to catch hold in a discussion of this kind, and what factors in our present dynamic economy one should hang his over-the-hill look onto. Everyone seems to agree that change is the order of the day—and will likely be so for many years yet. But it's not easy to reach agreement on what southern agriculture will look like in the years ahead—nor, for that matter, what the pattern of total community life will be. We seem to be expecting change—rather hoping it will come—but praying that it will not be too upsetting, and that the great value of our past rural culture can be retained. It doesn't hurt to hope for such things. However, we've seen enough change to know that things "ain't like they used to be and never 'wuz'."

With this brief introduction, I should like to call your attention to seven areas of great change and development. Within each I should like to make some observations that reflect a projection of present trends and opinions about the pattern of things to come. As in every projection, even though it's founded upon a base which one regards as sound, there's doubtless some reflection of sadness in leaving a pattern of life one has known so well and loved so much. But as the little poem expresses it so well:

"Change and change, and never rest,
Not what we are, but what we hope for is best."

1. A CHANGING POPULATION PATTERN

From 1940 to 1950 in the South:

Farm population down 28 percent (United States 18 percent down).

Rural nonfarm population up 45 percent.

Urban population up 40 percent.

Total population up 13 percent (United States up 15 percent).

Farm population declined from 43 to 27 percent of the total population. (For the United States the decline was from 22 to 16 percent.)

Rural population declined from 65 to 57 percent of the total population.

The South contributed 5,481,000 or 64 percent of the national net migration of 8,610,000 persons from the farms of the United States between 1940 and 1950. Of those migrating from the farms of the South, 68 percent were white and 32 percent were nonwhite. Males and females migrating were in about equal proportion. More than half (53 percent) of the net migration were persons in the age grouping 10 to 24.

Observations

Farm population will continue to decline in numbers and in relation to the total.

Large net migrations of young men and women will continue from our farms as birth rates remain high and replacement needs do not increase substantially.

A large rural population will be maintained with the likelihood, however, that it will drop to less than 50 percent of the total.

Developments that will stabilize and hold a substantial rural population should be encouraged.

The tendency to concentrate population in metropolitan centers seems destined to continue in the South.

Producing for the growing local markets will offer increasing opportunities for farms in the South. Dr. Marguerite Burk, of A. M. S., thinks it reasonable to assume that the major part of the one-third to one-half rise in food expenditures by 1975 will come in the South. Actually, we will likely need an increase of as much as 50 percent per head in the demand for food marketing services in the next 20 years in the South.

Holding onto the great values which have been an integral part of our rural culture becomes imminently important and challenging.

2. FEWER FARMERS AND A CHANGE IN TENURE

From 1940 to 1955 in the South.

The number of farmers declined 23 percent.

The number of white farmers declined 20 percent.

The number of Negro farmers declined 32 percent.

The number of white farmers increased from 76 to 80 percent of all farmers.

The number of tenants declined 52 percent.

The percentage of tenancy declined from 49 to 31 percent.

Sharecroppers, even though declining 36 percent in numbers, increased from 38 to 50 percent of all tenants.

Observations

The South is apparently destined to have even fewer farmers in the years ahead—with a smaller percentage of these being nonwhite.

There are evidences that the percentage of tenancy will decrease somewhat from present levels, but not significantly. Tenancy is the road to ownership. It must be used to an increasing extent as capital investments required to farm profitably rise. Great emphasis is needed on fair and workable rental arrangements between owner and tenant. And the social stigma of renting must be removed. Our youth must be taught that it is honorable and economically sound to climb the tenure ladder to ultimate ownership of their farms. In many respects a young couple is far better operating under a share rental arrangement (new type sharecropping) with adequate working capital than owning land with inadequate working capital. The first step to profitable farming today is the possession of adequate working capital and an excellent credit rating with a financial institution that looks with favor upon agricultural lending.

3. FEWER FULL-TIME FARMERS

In 1954 in the South:

Thirty-nine percent of all farms were part-time and residential, receiving more income from off-farm employment than from farm production.

Sixty-one percent of all farms were commercial depending upon farm production for most of their income. Half of these commercial farms had annual gross incomes of less than $2,500. The remaining 47 percent had yearly incomes exceeding $2,500.

Variations by States in the percentage of part-time and residential farms were from 48 percent in Virginia to 31 percent in Mississippi.

Observations

Industrial and other off-farm employment opportunities have been the means by which large numbers of small farmers have been able to remain on their farms and in rural communities. These opportunities will minimize full-time farming operations in areas where small farms predominate.

The maintenance of substantial numbers of people in our rural communities will largely depend upon how successful this system of farming can be made. As industrialization grows, farmers need criteria by which to decide between accepting off-farm employment and changing their basic farm organizations and methods to increase farm income. There is a great need by part-time and residential farmers for information on how best to use their land, labor and other available resources.

On of the great challenges of the South is found among the 730,000 commercial farmers selling less than $2,500 yearly. Studies show a smaller percentage of these persons with off-farm income. Also, they are older people. Many can move into nonfarm work. Others can change their farm setups for larger income. There will be others who find it practically impossible to make needed adjustments. They need help and encouragement to do the best with what they have and what they are.

4. LARGER FARMS WITH HIGH CAPITAL INVESTMENT

From 1950 to 1954 in the South:

Farms increased from an average size of 124 to 170 acres, a rise of 37 percent.

Capital invested in land, buildings, motor vehicles, machinery, equipment and all livestock in the January 1 inventory, increased from $11,304,186,000 to $31,526,640,000, a rise of 2.8 times.

Total capital investment per farm worker increased from an estimated $2,700 to $9,900.

Working capital increased from 19 to 33 percent of investments. Machinery and equipment increased from 8 to 25 percent of invested capital.

Observations

Larger commercial farms can reasonably be expected to provide more acres and larger gross incomes per family as well as a more efficient economic unit in the use of labor and capital. The size of business as related to efficiency will become more and more important. Size of farm will increase extensively and intensively.

Larger farms will require greater amounts of capital for maximum efficiency—and a growing expertness in the management of capital.

The question of "how big is too big" for sound farming should receive much attention in the years ahead. The release of the old system of 40 acres-and-a-mule must be completed. The acceptance of efficient family-sized farm units of upwards to 300 and more acres must be made. The building of new attitudes toward both the number and size of farms is a challenging undertaking.

Greater emphasis will be required on the efficient management of the farm business. Invested capital per man will continue to increase as our land values move upward and even more power and livestock and poultry come to the farms. Both opportunities and risks increase with this kind of farming. Better management is the only solid answer.

There are many burdensome inefficiencies in farm layout, building and field must be corrected. This will require greater investment of capital funds.

5. CASH OUT OF POCKET COSTS TO CONTINUE HIGH

In 1955 in the South:

Total production expenses ($5,595,000,000) were 68 percent of total cash receipts ($8,243,000,000).

Expenditures for feed, fertilizer, and hired labor were 41 percent of total production costs.

Repairs, operation, and depreciation of capital items amounted to 34 percent of total production expenses.

The costs of repairs, operation, and depreciation of capital items equaled the total sales of all farm products in 1940.

Expenditures for fertilizer in the South were 41 percent of those for the United States.

Expenditures for feed were 24 percent of those for the United States.

Expenditures for hired labor were 33 percent of those for the United States.

Observations

The purchasing power of farm people becomes of increasing significance as they commercialize to an even greater extent their farm operations and homes. Farmers and their families are now dealing largely in dollars—and the financal skills of the family become of tremendous importance.

As cash-out-of-pocket costs rise in the aggregate and in relation to the gross receipts, risks also increase. And price becomes of greater importance than heretofore. Farmers must therefore concern themselves more with price forecasting.

Efficiency has always been important in farming, but it takes on added significance today and in the future. Margins will be close. Full use of available resources is necessary. Producing to the market demand is quite important.

It seems inevitable that spending per unit in southern agriculture will rise. Attempts will be made to raise the level of yields per acre, per animal, per machine, and per hour of man labor. This will be a stronger movement toward intensification of production. New farm enterprises will receive considerable attention in the years ahead. This development will require close planning of operations and a finesse in management that will absorb the increased risks involved. Here is a great area of counseling with southern farmers.

6. FARM INCOME CREEPING UPWARD

From 1940 to 1955 in the South:

Total cash farm receipts rose four times.

Farm prices went up 2⅔ times.

Crop income rose four times.

Crop prices went up 2⅔ times.

Livestock and poultry income rose four times.

Livestock and poultry prices went up 2.1 times.

Cotton declined by 8 million acres, but production increased 2,200,000 bales.

Beef cows increased 40 percent from 1949 to 1955, but the South continued to hold 32 percent of the Nation's total.

Broiler production moved up from a negligible percentage of the total for the United States to 63 percent.

Observations

Spectacular increases in farm income are not probable for the next 10 years. For one thing, unusual rises in prices such as came during and immediately after World War II are not in prospect. Increases in the aggregate income of farmers must, therefore, come largely from a larger total production. The emphasis at present and for the next few years at least, will be upon checking total production. Within this framework, rates of overall adjustments will likely slow down. Opportunities to increase the acreages of cotton, peanuts, and tobacco, large income producers, are extremely limited. Controls appear certain in the years of the foreseeable future.

There appear to be certain basic changes in southern agriculture that will continue to go forward—more slowly for the next few years, but after then at an accelerated rate. Shifts in land use to include more small grains and forage crops are inevitable. Greater emphasis upon forest resources is certain—and this is moving forward at a rapid pace—so rapid in fact, until we need to think clearly on how much and what types of our land should be put in trees. The trend toward intensive livestock production will continue with emphasis upon milk, broilers, eggs, and pork. We shall try our hands at intensive production of beef cattle. It would appear logical that the South would develop an increasing percentage of the Nation's turnout of the higher valued and better quality foods such as dairy products, livestock, poultry, fruits, and vegetables. Our population and income patterns will provide this opportunity. Chances are that individual farm specialization will increase in a framework of great State and regionwide diversification. The drive for greater efficiency will force this.

It seems reasonable to expect income per farm and per farm person to increase in the years ahead. In fact, these will be much more significant than the moderate increases that may come in total farm income.

Vertical integration will probably increase in agriculture. The patterns for the broiler and canning industries will likely expand to eggs, hogs, beef cattle feeding, and possibly other enterprises. The approach to farmers is different with vertical integration.

7. PERSONAL INCOMES TO MOVE FORWARD

Total personal incomes from 1940 to 1954 increased 4½ times, from $13,163,000,000 to $57,356,000,000.

Total employment from 1940 to 1950 rose 20 percent, nonfarm employment 43 percent, but farm employment declined 25 percent.

Industries associated with large capital per worker are increasing, even though those requiring low capital per worker still employ 60 percent of the manufacturing workers in the South.

The South in relation to the United States as a whole has made rapid progress in the accumulation of financial resources, production of electric power, per capita income and other basic developments in economic progress.

Observations

The purchasing power of the people of the South is destined to increase sharply in the years ahead. Industrialization will continue and with it other types of businesses and services will grow. Many changes will be imposed upon farm families as they seek to live with these adjustments within our cities, towns and communities. It is significant that if incomes of the South and non-South were equal now, the United States food market might be 10 percent larger.

As we look to the future, there are five developments growing from the changes outlined above to which we need to direct our attention.

1. NEW COMMUNITY PATTERNS ARE DEVELOPING

The homogeneous self-contained rural community is being rapidly replaced with a community of heterogeneous interests and commercial interdependencies. Our methods of working with and motivating communities must undergo a great deal of change—particularly those in which many small part-time farmers live.

2. COMMUNITY INTERDEPENDENCIES ARE BECOMING INCREASINGLY SIGNIFICANT

Into rural communities are coming factories, shopping centers and many kinds of municipal facilities. Even the still somewhat remote farm community is fast becoming an integral part of this larger more industrialized community. The line between urban and rural is becoming thinner—and the need for recognising and respecting interdependencies is becoming greater. Farm people must continuously look to the larger community in which they live, operate their farms and sell their products.

3. COMMUNITY POTENTIALS ARE REQUIRING CLOSE STUDY

Communities now have the very real problem of answering the question "What kind of a community do we wish to be?" Shall we remain agricultural or become industrialized? These questions must be intelligently answered by both rural and urban people in across-the-table study and discussions. Farm people must take an active and strong position in this planning. They need a lot of information and encouragement in this dertaking. They must have adequate and earnest representation on city-county planning boards, citizens' planning and other groups.

4. APPRAISING OCCUPATIONAL OPPORTUNITIES

The dignity of farming along with all occupations open to our rural people needs careful appraisal. Young people should be given the opportunity to appraise the occupations of their communities, State, and region. There will be fewer farmers, but agriculturae is more than farming. This broader understanding of opportunities in agriculture is a great need of our rural and urban people.

5. OUR UNDERSTANDINGS MUST BROADEN

To live and operate successfully in the present world, it takes a lot of knowledge and understanding. Economic and social forces of tremendous scope are at work effecting our profits and living standards. These must be appraised and their possible effects understood as well as possible. Somehow, we must broaden our horizons of understanding. We must become students of world affairs.

The South will be confronted with many other great changes in the years ahead. To understand the forces behind these changes will mean that they can be given guidance. To guide the changes means the South will move forward to a stronger position in national and world affairs, and will become an even better place in which to bring our children into maturity as capable, progressive, independent-thinking self-acting, Godfearing young men and women.

Everyone who will be associated in any manner whatsoever with southern agriculture in the years ahead faces a magnificent opportunity for service.

Home Building

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. HENNINGS. Mr. President, on April 4, 1957, an editorial discussing home building appeared in the Joplin (Mo.) Globe, and because it is of general interest not only to Missourians but all

Americans, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Government action in relaxing credit terms on home loans, and in extending the area in which insured loans may be made is interpreted in many quarters as the first break in more than a year in a somewhat rigid tight-money policy.

It is seen also as indicating that Federal economists believe inflation has been brought under control. Investor and financial markets will watch closely in the period immediately ahead for signs of any further relaxation of loan controls.

One reason the Government moved to make it a bit easier to buy a home, it is felt, is the continued drag in new-home construction. February reports showed new housing starts had dropped below an annual rate of 1 million, generally considered to be the desirable number to keep up with the growth of the Nation.

Trying to keep the national economy in balance in this period is a highly intricate and complex job. The economists feel that they should watch out for and guard against deflation as well as inflation. So far they have done a commendable job because we still have prosperity without any runaway inflation, and there are no alarming signs of deflation.

Last week's order merely makes it easier for people to finance homes by lowering the downpayment schedule 2 points to the 1955 level. The hope will be that it brings 1957 home building back up to or above the million-a-year rate.

The Late Honorable Fred L. Crawford

SPEECH
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. JENSEN. Mr. Speaker, the passing of my esteemed friend and former colleague, the Honorable Fred Crawford, grieves me.

No Member of Congress was more devoted to duty nor took his responsibilities more seriously as a servant of the people.

From early youth, Fred Crawford studied the intricate workings and problems of national and international trade and finance, and being schooled in that art he became a most valuable member of the House Banking and Currency Committee. He served on that committee for many years with great distinction.

I dare say that Fred's good services both in and out of Congress have and will be a benefit to every American for generations to come. On many, many occasions while Fred was in Congress and since, yes, to the very last he took time to counsel and advise with me on our United States fiscal conditions which as time went on became a greater worry to him, and without a doubt that worry contributed to the untimely death of this good man.

If being a conservative with the people's money is a virtue, and I believe it is, I must give the late Honorable Fred Crawford much credit for my conservative record in Congress.

Goodby, Fred. God rest your soul.

I extend my deepest sympathy to his family and to his multitude of friends everywhere.

The Chamber and the Budget

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Lancaster (S. C.) News of April 11, 1957:

THE CHAMBER AND THE BUDGET

For a grassroots reaction to the ever mounting total of the Federal budget, we can offer the resolution adopted last week by the Lancaster Chamber of Commerce. Taken alone such a resolution is worth about as much as the paper on which it was written. Added to the weight of a growing protest over irresponsibility in governmental expenditures, it is an important action.

President Eisenhower is a strong personality who has, in his long public career, said or done a few things that are out of character. One of those moments came recently when he conceded the budget was out of hand by inviting Congress to slash it wherever savings could be made. Treasury Secretary Humphrey had already boggled at the $71-billion plus request in an unprecedented public repudiation of an important administration document.

While it may have been the President's intention to shift the burden of forced economy onto Congress, his attitude of helplessness in the face of rising governmental costs produced a shocked reaction in the United States. There is ample evidence that the strength of this reaction was miscalculated. President Eisenhower is now defensive of every item in the budget, but the reaction is growing.

Taxpayers, groups, and organizations all over the United States are joining in a chorus of questions. They want to know why Federal expenditures can no longer be controlled; why every desire and whim of the outgrown bureaucracy must be met; why Uncle Sam's billions must be poured into foreign and often unfriendly nations in ever-mounting totals, and why the richest nation on earth has a public debt which has passed all human comprehension.

When the Lancaster Chamber of Commerce says: "We will always need more than we can afford and it's about time we started spending according to our ability to pay," it is letting the light of reason in on a situation which, for all its magnitude, must be resolved on just such a homely basis.

The United States, buying world position on the installment plan, is no different from spending according to our ability to pay." ments outrunning his ability to pay. Our national ability to pay is tremendous but it would appear that our present commitments have finally reached that point where the taxpayers are genuinely worried lest someone appear with claim and delivery papers.

Blackmail or Incompetence?

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. LANHAM. Mr. Speaker, in the Wall Street Journal for Monday, April 15, 1957, the lead editorial is headed "Blackmail or Incompetence?" The reference is, of course, to Postmaster General Summerfield. In my opinion, the answer to the question "Blackmail or Incompetence?" is "Both."

Included with my own remarks is the editorial referred to:

BLACKMAIL OR INCOMPETENCE?

So Postmaster General Summerfield has informed Congress that if it doesn't promptly give him the money he wants for the post office he will take a meat ax to the postal service.

The general's ultimatum was handed to the Congressmen a week ago and when they didn't fall all over themselves in a rush to put up the money he got out the cleaver. In New York and many other cities the post office windows were shuttered on Saturday and there were no mail deliveries. Further cutbacks in service are scheduled for this morning.

The general's operation plan calls for cutting daily mail deliveries to business today. If that doesn't speed up Congress he will suspend money order sales at first and second class post offices on April 29; on that last date there will also be an embargo on all third-class mail—we suppose you will have to send it by dog sled.

Now none of this, you understand, has anything to do with the regular Post Office appropriation. Congress appropriated the 1957 money last year; the 1958 appropriation is not due until June 30. This is extra money—known technically as a deficiency appropriation—that Mr. Summerfield is asking for to tide him over until the next payday.

And he says, "Gimme quick, or else."

If this strikes you as pretty arrogant behavior for a public servant—a sort of blackmail of the body politic—Mr. Summerfield's defense is that he can't help it. He has just plain run out of money. And how can he be expected to run the Post Office, or anything else, without any money?

The trouble with this reply is that it raises as many questions as it answers.

It is certainly not amiss to inquire why this emergency came so suddenly. Mr. Summerfield knew last summer how much money he had to run the Post Office for 12 months. Dividing a given sum of money by 12 doesn't require advanced mathematics. If it is true, as alleged, that the money provided last summer was too penurious to keep service up to par for the full year, one still wonders why small adjustments were not made during the year. No sensible post office clerk, however unhappily underpaid, would unconcernedly spend his year's salary in 9 months.

The difference may well be that a post office clerk is not habituated to deficiency appropriations. With Government departments they are so usual as to seem an almost unquestioned right and Mr. Summerfield may be honestly surprised to find himself now out of money and none promptly provided. It's a temptation to forego frugality in November when the Appropriations Committees will be in session in April.

To suppose that this sudden crisis was deliberately developed for its dramatic effect on

Congress may be very unfair. It could be that the Post Office Department was simply lulled into not counting its pennies carefully. But if this is not a calculated kind of political blackmail, then somebody in Congress ought to find out who goofed.

Jury Trial Position Defended by Labor

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a news report from the Memphis Commercial Appeal for April 13, indicating that labor leaders in Tennessee are concerned about any proposal which would deny right of trial by jury for persons charged with contempt. The newspaper articles by Morris Cunningham referred to in the story were printed in the Appendix of the CONGRESSIONAL RECORD for Monday, April 15, on page A2958.

I hope that when the Congress makes a decision as to whether jury trials will be provided in the cases of citations for contempt under the proposed civil rights legislation, that American labor will again support the principle of trial by jury.

The news report follows:

JURY TRIAL POSITION DEFENDED BY LABOR—STATE UNION LEADERS OBJECT TO NEWSPAPER ARTICLES—LEGISLATURE IS RAPPED

NASHVILLE, April 12.—State labor leaders took issue Friday with articles in the Commercial Appeal which they said left the impression that labor was opposing trial by jury.

They referred to a series of articles by Morris Cunningham, chief of this newspaper's Washington bureau.

Matthew Lynch, legislative representative of the Tennessee State Labor Council (AFL–CIO), issued a statement which he said had been read and approved by Stanton Smith, president, and Charles Houk, director of political activities of the council.

EFFORTS POINTED OUT

"We must take issue with the writer and take this opportunity to point out our efforts to secure the right of trial by jury for all persons charged with contempt for offenses committed outside the presence of the court," Mr. Lynch said.

The articles pointed out that the Norris-LaGuardia Act and other measures to assure jury trials in contempt cases arising from labor disputes drew almost unanimous southern support 25 years ago. Southern leaders say that today, with the same arguments being presented on civil-rights matters, labor leaders have taken the other side.

Questioned concerning activities by national labor leaders in behalf of the proposed civil-rights legislation, Mr. Lynch contented that the national AFL–CIO did not take a position against trial by jury in such cases as charged and neither does labor have the right to trial by jury in such cases except for a few rare instances under the Taft-Hartley law.

The national organization, he said, "took the position that if trial by jury is to become an issue, that the proposal should cover all Government contempt actions and not just as a rider to one bill."

To those advocating trial by jury "as a matter of principle, this will be sound and acceptable," he said, "but, of course, it will not satisfy those who are pursuing this cause as a political expedient."

LABOR BILL DRAWN

Mr. Lynch said labor had a bill drawn during the recent Tennessee legislative session to guarantee a trial by jury in all contempt cases where the offense committed was out of the presence of the court.

"The bill was not introduced," he said, "because another was before the legislature that said 'the party charged with such contempt shall be entitled to a trial by jury on the question of guilt or innocence.'"

Legislative records show that the bill, which was sponsored by Senator Clifford Allen of Nashville, passed the senate. It was defeated in the house after representative Harry Lester of Nashville pointed out it would mean many cases affecting labor would have to be tried before juries instead of by judges.

Mr. Lynch said the bill received one of the most overwhelming defeats of the entire session when it was sent to the table by a vote of 51 to 14. He added that "not a single legislator from Shelby County was among the 14 who were willing to stand up and be counted for the right of trial by jury in the house."

Records show that Representatives James J. Bertucci of the Shelby delegation was absent the day the bill was tabled.

The labor leader assailed "the silence on the above by the press and others who claim to be for this basic right."

Mr. Smith was asked how he reconciled the position taken by Andrew J. Biemiller, chief lobbyist for the AFL–CIO, and other top leaders of the organization in supporting the civil rights bill.

SEPARATE LEGISLATION

He said labor's position is that the subject of trial by jury should be considered in separate legislation and should cover all fields, including labor, and not simply civil rights legislation.

Mr. Smith and Mr. Lynch said the question of trial by jury will come up for consideration by the State Labor Council at its annual convention here in October and both predicted adoption of a resolution asking for such guaranties "for everyone" in all contempt cases away from a courtroom.

The State labor spokesman concluded:

"There is a second part to this issue at the national level and that is a preinjunction hearing such as is provided in the Norris-Laguardia Act. Let's take a look at the record on this issue.

"Labor secured the introduction of this measure in the 1955 session of the Tennessee Legislature and upon its introduction it was almost unanimously greeted with howls of anguish from the press.

"It was characterized as 'destructive * * * slanted * * * biased,' 'a dangerous shenanigan,' 'indictment of our whole judicial system,' 'breeds violence,' 'whittles away the injunctive protection' and scores of other abusive remarks."

Real Leadership

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and most complimentary article on the sound leadership of Speaker RAYBURN, which appeared in the Boston Evening American, on April 13, 1957:

REAL LEADERSHIP

Speaker RAYBURN of the House of Representatives has given new and substantial impetus to the movement in Congress for lower Federal spending and ultimate tax reduction.

He has also brightened prospects for the eventual success of the movement considerably.

His ability to get such a vital matter as tax reduction above the level of partisanship, and his willingness to do so, give him high stature as a statesman.

Mr. RAYBURN goes a long way in this instance toward fulfillment of what the late William Randolph Hearst once called a great need of the country in the field of taxes, spending, and debt.

"What is needed in Washington," Mr. Hearst wrote in a letter to his editors on December 20, 1933, "is some clearness of vision and some sound American commonsense; some realization that taxation means national exhaustion; some understanding that what the Government spends the people must pay; and that whatever is paid to the Government must be deducted from the purchasing power of the community, from the consumption of goods, from the manufacture of products and consequently from the expansion of busines, and from the employment of labor."

This was said 24 years ago, but it applies equally to the present problems and burdens of the country. Mr. RAYBURN'S support of the same views gives new force to the sound words of Mr. Hearst.

William Grove Skelly

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. BELCHER. Mr. Speaker, Mr. Tulsa, Mr. Republican, great American, great civic leader, wonderful friend, Bill Skelly, has gone from our midst. His loss to me personally is irreplaceable. I was associated with him in politics for 33 years. I was his supporter in his races for Republican national committeeman, he was my supporter in my races for Congress. I learned a lot from him. To extol his virtues would take more space than the CONGRESSIONAL RECORD affords. I am, therefore, inserting in the RECORD two editorials; one from the Tulsa Tribune, of Tulsa, Okla., dated Friday, April 12, 1957, and one from the Tulsa Daily World, of Tulsa, Okla., dated Saturday, April 13, 1957. These two editorials set forth his record better than I can, but they do not attempt to give the complete record of Bill Skelly, only the history of Tulsa with all its progress can give this. He is gone, but will never be forgotten.

The editorials follow:

[From the Tulsa Tribune of April 12, 1957]

BILL SKELLY

William G. Skelly is dead at 78. For many years he has shared with Waite Phillips the sweepstake honors for good works for Tulsa. He was proud of Tulsa, and Tulsa will always be proud of him.

Bill Skelly gloried in his humble youth, and told the stories of his failures and his set-

backs with gusto. He admired education and contributed liberally to it, but he never pretended to education that he didn't have. Sycophants who love millionaires because they are millionaires never impressed him, but to him a good tool pusher or an honest horse wrangler—well, those were men worth knowing.

Bill Skelly spent his life being sure everything was going to come out all right if people would only sell, build, promote, and stand upon their own feet. He had little faith that a citizenry, coddled by an overprotective government, could make a strong nation.

"Root, hog, or die," he would say.

This sprang from conviction, not callousness. He had an absorbing interest in helping people who suffered from poverty or bad luck in getting under way again. And he was a born reformer who was not above trying guile when direct methods failed.

Once he observed with dismay that a hill family tenanting one of his farms was living on an unhealthy diet of pork and cornmeal. He talked up the virtues of fresh vegetables without success. One day the farmer remarked that he and his wife had always been sad because, while they had strapping sons, they had never had a daughter.

"And carrots haven't been working?" asked Skelly.

"What have carrots got to do with it?"

"Why," exploded Skelly, "I thought that everyone knew if you want a baby girl you have to eat carrots."

On his next visit carrots were growing all over the yard and were being served for breakfast, lunch, and dinner. The next year the farmer and his wife had a daughter.

He was a gifted salesman. Once, while we were driving across Kansas with him, we stopped at a Skelly gas station and he blew up at the untidy condition of the restroom. Then, after the filling station operator was sufficiently flustered, Skelly sat down with him for half an hour and figured how the operator could increase his profits.

During the Madison oil trials, when the presidents of the leading American oil companies were indicted in an abortive effort to prove price fixing, most of the executives moved glumly between the courtroom and their hotels. But Skelly toured all over Wisconsin rallying his dealers and talking up bottled gas.

Once, his optimism almost ruined him. When the stock market crashed in 1929 he was already deeply involved in investments. After the market had slipped for a couple of weeks he was convinced the upturn was near and he bought stocks heavily. When the market continued down he lost stock control of the Skelly Oil Co. to the Mission Corp., but he continued to manage it. When the upturn finally came he became a heavy investor once more and rebuilt his fortunes.

This same optimism was the secret of his success as a civic leader. He believed Tulsa was the greatest city on earth and he promoted civic improvements with force and fire. In 10 minutes in his prime he could turn a roomful of timid men into bold ones.

At the moment Tulsa badly needs the leadership of the Skelly-Waite Phillips era. We are overcommitted and underinspired. We have a lot of fine people who are all for Tulsa, but we squabble about details and ride off in oppsite directions until when becomes how, and how becomes if, and if becomes can't.

Bill Skelly was sure that when good people put their heads together and bend their backs together the mountains move.

And the mountains did move.

[From the Tulsa World of April 13, 1957]

WILLIAM GROVE SKELLY: GREAT CITIZEN

Citizens the stature of William Grove Skelly don't come along too often. Their magnificent contributions to local, State, and national affairs are seldom duplicated. That is why the death of such men creates a sense of loss, a feeling of emptiness, that is all too difficult to assimilate.

As a Tulsan and Oklahoman Bill Skelly was without peer. From the day in 1912 when he settled with his fledgling oil business in muddy, bristling, and brawling Tulsa, he launched upon a lifetime of effort, with others of his individualistic fervor, to build Tulsa civically, culturally, and economically—rightly earning in the process the tag, "Mr. Tulsa."

He disliked the label; yet no other man who has trod the boards of life in young Oklahoma's headlong rush to greatness so deserved it.

To reflect in mere words the life and times of Bill Skelly—who preferred to be known as an "ex-muleskinner" rather than an oil magnate—would command a tome. Suffice it to say here that he was an individualist in all that he represented and accomplished, a fighter from the drop of the hat, a public-spirited human whose varied economic interests at no time deterred him from a chosen path of good citizenship.

Bill Skelly's works didn't stop with Tulsa, or Oklahoma. His intense concern with all that went on about him led him, through good times and bad, into the rugged field of politics and onto the stage of national affairs. It was in the political field where he gave vivid demonstration of his penchant for positive, direct, and vigorous leadership. Just as there was never a question as to who held the reins of the great Skelly Oil Co., so there was never a doubt of where Bill Skelly stood on a political issue.

Yet in all his years of business and political activity, who can point to the man who held bitterness in his heart against Bill Skelly? He became, in a State that can claim all too few men of his political morals and persuasion, "Mr. Republican." Still, no Democrat or Republican scorned the man or the beliefs which he held.

Nobody can say how many thousands of people of good will passed through Bill Skelly's office in the championship of a good cause. And few were the times when they were turned away. It is sufficient to say that if Bill Skelly couldn't see the good in a project, it probably had little to commend it.

What Tulsa can claim to be today bears the indelible brand of Bill Skelly, and many other Tulsans with whom he was associated, in an unselfish and wholesome job of community building.

The lives of these men and the history of Tulsa—1912–1957—are irrevocably linked together. If there is a civic or cultural or athletic project that has bloomed to full flower without Bill Skelly's cooperation and active help, it has not come to our attention. That Tulsa and Oklahoma will miss Bill Skelly should go without saying. We say it anyway. For the real merit of the man, the full measure of his contributions to fellow citizens and the Nation, are for time and history to record. In the shadow of his rugged personality and good works, few are equal to the task of chronicling the life and inherent greatness of William Grove Skelly.

A vital part of Tulsa and Oklahoma is gone, but never to be forgotten.

Jesse James and His Stepbrothers

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by H. I. Phillips entitled "Jesse James and His Stepbrothers:

JESSE JAMES AND HIS STEPBROTHERS—SHERIFF FINDS BOOT AND TV MELON HELPS GODMOTHER BRING GOOD LUCK

(By H. I. Phillips)

With Hollywood and TV going in heavily for westerns, Cinderella stories and jackpot programs, it would seem possible to merge all these elements in one stirring screen story. We don't see why not and are at work on such an offering. Synopsis:

1. Story opens in a hideout occupied by a handsome Jesse James type and two stepbrothers. The stepbrothers are a pair of meanies who have a wonderful time as outlaws but never let Jesse come along. They make him stay at home and mind the store while they go to all the high-class train robberies, etc.

2. The stepbrothers are about to leave on another of their many bigtime holdups, all decked out in the finest Hollywood costumes, replete with 6-shooters. Jesse begs to go along. They order him to stay in the shack and slave away at dusting off alibis, repairing rifles, etc.

3. Jesse is in despair when a fairy godmother appears and asks what's wrong. Jesse sobs that his stepbrothers are off on their ponies shooting things up again and have left him behind to do the dirty work of just behaving himself.

Jesse: "I wish I could go to the big train robbery they are attending tonight. I never have any fun."

Fairy Godmother: "Have you a pumpkin?"

Jesse (weeping): "Don't rub it in by asking me to bake a pie."

WINS MELON

4. The godmother explains the situation. Jesse says he has no pumpkin. The godmother replies, "I know where you can get a melon." He asks where. She whips out a magic wand. Instantly he is on a TV show against people like Charlie Van Doren. He wins and gets the biggest melon in TV history.

5. The godmother changes the melon into an Arabian horse, 1 year's supply of black masks, and a gun autographed by Hugh O'Brien.

6. "How about white mice?" asks the godmother. He is fresh out of mice but says he has a stepmother who is a rat. The godmother transforms the rat into four horses and a stagecoach in which a beautiful schoolma'am is riding across the desert.

7. Jesse asks, "Why the stagecoach and the schoolma'am?" The godmother replies, "On your ride to join your wicked stepbrothers in the great train-robbery routine the old scene where you fall in love with the schoolma'am is always good."

OBVIOUS

The rest is obvious. Jesse goes to the wonderful stickup, makes a bigger hit than his stepbrothers, and gets home safely. It turns out that the sheriff has found a shoe dropped in the flight from the robbery. He laughs heartily; the boot was dropped by one of his stepbrothers. (Moral: With a fairy godmother you can have all the luck.)

PILLS

America is a pill-taking nation. You could almost switch the old anthem lines to read, "I love thy rocks and pills. A noise rising above all others from coast to coast is that of people shaking bottles to get tablets out of them. Americans once based hopes on life, liberty, and the pursuit of happiness, but today aspirin is on the list. Headache pills are in such demand they are thrown instead of rice at weddings and considered a household necessity all through the happy couple's life, especially when the grocery bills are totaled up.

Automation

EXTENSION OF REMARKS
OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. SHEEHAN. Mr. Speaker, I recommend to the attention of our colleagues the following summary of a recent address by Mr. H. F. Dever, president of Brown Instruments Division of Minneapolis-Honeywell Regulator Co., before the Metal Manufacturers' Association of Philadelphia. It is an understandable and informative discussion of the much-misunderstood project of automation, and Mr. Dever's remarks will, I am sure, serve as an introduction to the marvels of modern industrial techniques to many small-business men.

Reprints of the text of Mr. Dever's talk are available through the National Small Business Association, 801 19th Street, Washington, D. C.

SMALL BUSINESS AUTOMATION

(Summary of an address by H. F. Dever, president, Brown Instruments division, Minneapolis-Honeywell Regulator Co., before the Metal Manufacturers Association of Philadelphia)

Modern technology is so fast-paced it sometimes outruns even those who take part in its creation. The industrial wizardry with which we deal today ofttimes seem familiar and understandable on the surface, yet becomes almost bewildering in its complexity on close study. In short, development of techniques and products has become such a rapid process that the language of communication between those involved cannot keep pace.

There still exists, for instance, a semantic curtain between the scientists and engineers on the one hand, and the ultimate users—the businessmen—on the other. The very fact that businessmen devote frequent meetings to better understanding of the developments mapped for their use by the scientists is proof that attempts are being made constantly to keep the channels of intellectual communication open and up to date.

In this talk, I would like to make a contribution toward dispelling some of the semantic fog surrounding one of the newest trends in American industry—automation. I believe it not only desirable but necessary to separate automation's fact from fancy; to attempt to translate the generalities of this captivating technological trend into practical, down-to-earth terms familiar and meaningful to businessmen. In particular, I'd like to discuss one phase of this thing called automation—instrumentation. And I'd like to let my comments on the instrument phases of automation be based on the understanding that this whole activity is merely an extension of the process of making things automatic that has been going on for many years.

For every multi-million-dollar electromechanical machine, for every new, man-made brain development that threatens to obsolete even pushbutton devices, there are literally hundreds of more prosaic, less expensive, off-the-shelf automatic instruments that daily function as the sinews of this trend toward factory or process automation. My own firm has been involved in this field since 1859. Honeywell has its stake in those fields of automation that I call office automation and machine tool or Detroit automation, as well as in my own field, instrumentation.

I think we will be wiser to consider automation as an acceleration and expansion of much that we have been doing, rather than some wholly new glamour concept that is beyond our comprehension or our pocketbooks.

I also think you will find it purposeful to study briefly what limitations there are, if any, to the size of rims that can profitably harness automation's techniques and products. It is our firm belief at Honeywell that America's small businesses will be big investors in automation in the future; that it is not something of interest only to the mammoth industrial firms.

First let us look at what the engineers call instrumentation.

The products of our particular industry, as many of you are well aware, are mechanical, electric, and electronic devices that indicate, record, and control a variety of physical and chemical conditions vital to production. These include temperature, pressure, flow, dimension, speed viscosity, and chemical composition, among others. By measuring these factors and exposing them to automatic control, American industry has been able to bring down the cost of production, to minimize waste, and, in general, improve the quality of product.

There are many typical applications, and there can be and are many custom-engineered applications—each differing from the next. As to the products, they may range from thermostats or millivoltmeters costing, say, $50 to $200, to elaborate electronic recorder-controllers costing $2,500 to $3,000. A single unit may serve some purposes adequately, but, in others, complete integrated control systems are needed to harness large numbers of instruments of a wide variety, and such systems may cost from $100,000 to $500,000.

The major advantages of instrumentation are, of course, economic. Intelligently and appropriately applied, instrumentation will result in a better quality product, with fewer rejects, less waste of men and machinery (or in other words, increased productivity), which can't help but bring an overall reduction in manufacturing costs. If the use of instrumentation is not economically sound—if the instruments do not reduce costs, improve the product or accomplish some needed result—they will not be bought by the hard-headed operators of our manufacturing industries, big or little. There is ample evidence that instruments are filling a true economic need.

Let me cite a few specific examples:

A brick company, Macon, Ga.: Installation of continuous kilns with automatic control increased production and quality. Temperature controls alone upped brick production 10 percent. Approximate cost of temperature controls, $5,000.

A textile mill, Startex, S. C.: The addition of 1 slasher cylinder plus automatic controls on a textile slasher increased slasher production of 50 percent. Approximate cost of controls, $2,000.

An office building, Omaha, Nebr.: Installation of a single instrument plus switches and measuring elements enabled one man to read temperatures in 144 different locations throughout a 5-story-and-basement office building. System paid for itself in 2 years. Approximate cost of measuring system, $6,000.

A cooperative farmers dairy, Allentown, Pa.: Automatically controlled pasteurizing equipment at this dairy upped production from 3,400 pounds of milk per hour to 100,000 pounds per hour. Approximate cost of automatic controls, $4,000.

A manufacturing company, Dayton, Ohio: Installation of automatic temperature controls on plastic molding presses reduced rejects 38 percent. Approximate cost of controls for each press, $1,000.

But the full potential of automatic control is still very far from being realized. Estimates for 1956 by McGraw-Hill have put instrument sales at $345 million, as contrasted to a mere $157 million in 1947. But we are still probably only some 10 to 15 percent along the way to realizing its full potential.

Because of the tendency of many commentators to superlatives on automation—to say nothing of the more glamorous equipment's stiff price tags—there is a persistent inclination to consider automation the "privileged pasture" of today's industrial giants. It is our feeling that this is another of the foundationless notions growing up around this technology.

You don't need two or three million dollars for plant and equipment purchases to get your feet wet in automation. Much automation—more, probably, than many of you realize—can be brought at conventional equipment costs.

The hundreds of thousands of small- and medium-size companies with less than 1,000 employees can best profit from automation. It can be the common denominator to meet your requirements to remain competitive.

It's a plain fact of business life that the small business has only two alternatives as regards automation. It can ignore it and subsequently be forced on the defensive to meet competitive pressures, or it can look at it realistically and plan a sensible course of adoption—thereby gaining the advantage of action and minimizing the inroads of competition.

The smaller firms have one notable advantage: The companies that produce automation equipment are interested in volume markets, and plants with less than 1,000 employees constitute such a market. According to the latest figures, there were 308,000 manufacturing firms in operation at the start of this year. Of this number, only 1,850 were in the 1,000-employees-and-up bracket; the greater bulk—306,150 to be specific—employed fewer than 1,000. It therefore seems logical that the manufacturer of automatic equipment and devices will, so far as possible, design his products to fit the needs of the more numerous small businesses. And he will furnish much help, aid, and assistance in the adaption of it to the specific requirements of each plant.

Now you might logically ask, "How does a firm go about automation? How can we take advantage of it?"

First, I urge you to think of automation as something you can and should check in on. It is not a fad—it is economic and is here to stay. Actually much automation is now as close as your nearest master mechanic or instrument engineer. The same holds true for much of the technology—it, too, is just waiting to be applied.

I also suggest that you visit plants in comparable industries; use consultants; apply incentives within your organization for improved methods work; get together with the qualified manufacturers—they can help you select the proper equipment; do not overlook the better magazine and trade publication articles and textbooks on the subject, and, finally, your trade association may be of help.

If your standard of living is to continue rising at the rate it has for the past 15 years, and if we Americans are going to have all of the goods which most of the experts see in store for us, and at the same time gain the additional leisure we're all seeking, then instrumentation and automatic control, as well as other forms of automation, will inevitably have to be part of the scheme of things.

Automation is a complicated technical subject but it can be a realistic, progressive, and constructive force in your business or industry right now also. It is a subject—

and includes a program—that alert management can use to advantage beginning now and which laggard managements may well wish they had considered sooner.

The Federal Budget

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. NEAL. Mr. Speaker, when the people of America in a nationwide movement spontaneously disapprove a Federal budget involving heretofore unheard of expenditures, Government administrators can draw but one conclusion. The hard-pressed taxpayer is out to get relief.

What the average American does not realize is how the Congress and executive departments have over the years, partly at the request of the people and largely through their indifference, legalized far-reaching Government functions calling for annual increases in employees and salaries as well as facilities for administration.

Now that the people have demanded the Congress reduce the budget, the Congress in turn is face to face with the embarrassing problem of trying to reduce expenditures for services and agencies created by its own ill-considered legislation. To cut out established agencies, even though they serve a small minority of our citizens, would severely test the judgment of members who directly represent these favored constituents and must look to them for reelection.

So when Government has become so all-embracing that social and welfare benefits, all regularly distributed to such a large percent of the population, get so numerous and so large, congressional efforts to cut the budget are severely limited, leaving only two approaches: first, cease hiring more employees, and second, postpone the authorization of agencies and projects until they can safely be executed—after our defense and overseas operations become less indispensable.

This plan, strictly adhered to, can bring about sufficient budget requirements to provide a tax cut for all our people.

But the big reductions, the ones that count, can come only through a judicious reappraisal of our commitments for national defense and foreign economic aid. In all these years if foreign-aid programs had succeeded in accomplishing what we expected, our present relations with nations of the world should be far more satisfactory and with much less danger to world peace than now appears.

We have seen former world powers, our allies, reduced to dependencies. We have witnessed formerly impotent nations, rising to the point of self-expression, assume the attitude of threatening nations, resorting to blackmail methods to throw their self-styled neutralism to the Communist cause unless we outdo their material demands, and we have seen the only other major world power successfully infiltrating smaller struggling nations which, by their very economic position, can never hope to become self-supporting and capable of resisting aggression.

In much of our foreign economic aid we are succeeding temporarily only because we have insisted on "upping the ante" and even there, because of the preponderance of have-nots, Communist infiltraters promising better things are steadily laying the groundwork for the eventful day when they can assume dominant control.

In areas such as these we cannot reject the possibility that aid in the form of armaments insufficient in amount and incapable of resisting aggression may in the end be turned against us in the final test of strength.

The time has come when the United States must look well to her own survival. Continued spending of our money and substance, accompanied by increasing inflation with its cheapening monetary system and a breakdown of Federal and industrial pension systems, can place the unsuspecting people of the United States in the position of the have-nots, when we, too, may fall to the communistic theory that only the state can successfully provide for us.

We cannot reasonably advocate scrapping either our defense budget of our foreign aid economic programs. But there is must waste in our defense operations which can be recovered. There are savings to be accomplished by elimination of duplications. There are untold economies to be made by application of commonsense and frugality in the administration of each branch of our Defense Establishment.

As to foreign economic aid, many important missions have practically completed the work originally assigned them. Instead of using downright pressure for new projects in governments to which they have been assigned, they should be ordered home. Aid of this nature should be well placed with every assurance on part of the recipient area that their own contributions will be faithfully complied with. The estimated cost of many of these projects is often increased manyfold by failure of the contract nation to fulfill its pledge.

How unrealistic can a people become? How far must fundamental rules of human behavior be sidestepped before truth and sanity reassert themselves to turn the tide of riotous, self-destroying conduct of our national affairs leading blindly into dissolution and bankruptcy?

The sprawling, spendthrift Federal Government for the first time in a generation is reading in no uncertain terms clear evidence that a major proportion of thinking Americans aroused over the questionable stability of their future welfare, are voluntarily proclaiming their conviction that as a nation we have reached the point beyond which it is dangerous to tread.

Never before has public criticism of a peacetime budget been so volatile, and never before have Members of Congress and department heads been more conscious of reactionary critics among their constituents. It is the most fortunate public demonstration of a democratic society this Nation has experienced in many decades. It is a solemn reminder to legislators and executives alike that overmanned Government, reckless spending, huge national debt, and a confiscatory tax system have reached the point of intolerance by the people whose substance is being confiscated without consent and dissipated with little or no accounting.

Little wonder—less than 30 years ago the total cost of Federal Government was less than the yearly interest payment on the national debt today. Our total debt, less than $20 billion, is now $275 billion, nearly $2,000 for every man, woman, and child. Social welfare has become costly, sure enough, but it takes only about 15 percent of our taxes. It is the military and foreign aid expenditures that create the real burden. And the deeper we become involved the less national security against Communist aggression and the nearer we seem to approach dangers of military involvement. The program is so big, so unwieldly, so devoid of permanent policy.

Only now are we beginning to realize how futile are our highly humanitarian dreams that young America can make over the world in its own likeness or that permanent allies and stanch friends are developed by bolstering bankrupt, tottering ruling cliques in lands where suppressed individuals have never been harmless to the world save when under strong dictatorial governments.

Let us ease away from sentiment and turn back to reality. Let us begin now to curtail our foreign aid.

The Gerry Murphy Case—Time for Action

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manchester Union Leader which appeared on Wednesday, April 3, 1957:

This newspaper would be the last to suggest that this Nation become involved in those endless Latin American political intrigues, but certainly there comes a time when America must take a stand. That time is now, when the Dominican Republic's dictator, Trujillo, has not confined his vicious machinations to his own people or even within his own borders, but has apparently had a hand in the murder of an American citizen and a guest of our country who thought he was safe here.

On December 3, 1956, Gerald Lester Murphy vanished in the Dominican Republic after he had talked in public of piloting a sick man from Amityville, Long Island, to the Dominican Republic. Murphy apparently thought he had flown Dr. Jesus de Galindez and, after reading about the Galindez kidnaping-murder in the newspapers, had begun

to ask too many questions. That was his big mistake. The other aspects of the case—the murders of Murphy and Galindez, the phony suicide and even more phony note of confession of a Dominican pilot, and the run-around given Murphy's father and fiance and Representative CHARLES O. PORTER of Oregon—are all past history. But still the case remains unsolved, and no action has been taken against those responsible.

Galindez, of course, had been writing searing but factual denunciations of the Trujillo dictatorship, thinking he was safe here in America. Possibly he should have taken further precautions, bearing in mind the thousands of Americans who just disappear from the streets of New York City.

The United States State Department, as usual, submitted its standard protest, but if past performance is any criterion this protest will mean nothing. The note asked the Dominican Government to "reopen and vigorously pursue its investigation." Maybe the State Department thinks they'll investigate and implicate themselves. At the very least, America should retaliate by halting the flow of tax dollars in military and other aid to Trujillo. This, of course, would be contrary to current policy which calls for subsidizing dictators the world over.

In the words of Thomas Jefferson: "Resistance to tyranny is obedience to God."

Roosevelt and Eisenhower in Agreement

EXTENSION OF REMARKS
OF
HON. J. L. PILCHER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. PILCHER. Mr. Speaker, under leave to extend my remarks, I am inserting the following article from the Atlanta Journal of April 10, London dateline, and written by Sterling Slappey. In the following story, the writer informs his readers what we in Thomas County, Ga., have known for a long time. Miss Kate Roosevelt, daughter of my esteemed colleague, JIMMY ROOSEVELT, and granddaughter of our late President Franklin D. Roosevelt, is quoted as having said during an interview in London that—

Of course I like London, but I like Thomasville, Ga., better. That is my favorite place. The hunting is wonderful. I like the weather and a lot of the people down there.

John Hay Whitney, our Ambassador to England, is Miss Roosevelt's stepfather and owns a large plantation at Thomasville.

It is most gratifying, Mr. Speaker, for us Thomas County residents to have brought home to us in such a nice fashion that Thomasville and its hospitality can have so great a tranquilizing effect upon wonderful people who represent both of our great political parties, because almost everyone in America knows how much our President Dwight Eisenhower enjoys Thomasville and its environs. I, therefore, cordially invite each Member of this body, along with his family and friends, to visit Thomasville at his earliest convenience. If you will do this, I am convinced that you will not only be able to throw away your medicinal props, but will conclude, as has President Eisenhower and Miss Roosevelt, that we have fine weather and a lot of mighty nice folks down there.

LIKES THOMASVILLE—"I'M KATE," GREETING AT UNITED STATES EMBASSY

(By Sterling Slappey)

LONDON, April 10.—The reserved and frosty representative of the Queen who calls at the United States Embassy is apt to be met by a lovely young girl who says:

"Hi; I'm Kate."

From that point on British-American relations are on the upgrade, for the man hardly exists who wouldn't like Kate Roosevelt.

Miss Roosevelt is ambassador John Hay Whitney's stepdaughter. She is 21, brown haired, and wears blue jeans 3 or 4 days a week. Recently she has been serving as Embassy hostess while her mother, the former Betsey Cushing, of Boston, recovered from an operation.

She is sure of herself in greeting either a diplomat or the dustman, and she's fast becoming one of London's favorite people.

Whitney is "Daddy" to her and Franklin D. Roosevelt is remembered as "Granddaddy." Her father is James Roosevelt, Mrs. Whitney's first husband.

The Whitneys took Kate along recently for luncheon at Clarence House with Queen Mother Elizabeth and Princess Margaret. She hasn't met the Queen and Prince Philip yet but "hopes to."

When she calls herself Kate, or Katie, she gives the English a pleasant shock.

Most English people are congenitally unable to be so informal themselves, but they like to see it when it is well done.

"I'm afraid sometimes I may be too informal for these people. They always are asking you 'how do you like London?'

"I tell them, of course I like London and that I'm going to stay over here with mother and daddy for at least 6 months.

"But, I like Thomasville, Ga., better.

"That is my favorite place. The shooting (bird) is wonderful. I like the weather and a lot of the people down there."

The Whitneys have a large plantation at Thomasville.

Kate was asked if telling the English that she likes Thomasville better than London was the kind of diplomacy taught by Ambassador Whitney.

"Daddy hasn't given me any special lessons in diplomacy," she says.

Check This Vertical Flight

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Cheraw, S. C., Chronicle of April 11, 1957:

CHECK THIS VERTICAL FLIGHT

An edgy President Eisenhower, who assured his press conference he was feeling very much better, also decried futile and fatuous talk about serious budget cutting, defended foreign aid as mutual security, and froze a reporter who asked if he would be willing to do without that pair of helicopters that have been proposed for getting you out to the golf course.

"Well, I don't think much of the question," said the President with unusual asperity, "because no helicopters have been procured for me to go to the golf course." He shut off further questioning with an icy "Thank you, that is all."

But there's something symbolic about those helicopters. After the first golf-transport announcement, it was said they were to take him to the airport, and the latest explanation is they are to take him to the secret White House in case of a genuine air-raid alert. In view of the fact that most of the Cabinet were helicoptered to Camp David for a meeting about a year ago, it would seem that the Air Force might be able to take care of the President without all this hullabaloo. On the other hand, he also told his press conference that saving a few millions here and a few millions there was poor economy.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following essay entitled "Patriotism in Modern America," written by Miss Susan McGrath, 220 East Livingston Street, Celina, Ohio.

Susan, a senior in Immaculate Conception High School, Celina, Ohio, was one of 12 State winners in the annual Ohio American Legion essay contest.

Mr. Fred J. Strohl, Jr., commander of Celina Post No. 210, American Legion and the post members are to be commended for encouraging the young people of their community to participate in this worthwhile program. The Celina Post has had 3 State winners in the past 7 years.

The following essay won statewide recognition for Miss McGrath:

PATRIOTISM IN MODERN AMERICA

(By Susan McGrath, Celina, Ohio)

Patriotism means love and loyal support of one's country, yet it is too often thought of only in terms of battle. Modern American patriotism covers a much greater field than this. Although defense of one's nation is a heroic example of love and support, patriotism extends to our churches, to our schools, and to our scientific and business organizations. The common man can and does practice this virtue in his everyday life.

The scientists who devote their time at low salaries to the discovery of modern techniques and methods that make up a strong nation; the manufacturers, and satisfied peoples; the Government workers who give up big money making positions to serve their country; the teachers who dedicate themselves in youth the love of, loyalty to, and pride in their country—these are examples of persons truly as patriotic as the men and women who exhibit patriotism under the stress of war and fighting.

In spite of the fact that the United States is a young country, it stands among the leading nations of the world today. Why? There are many reasons, chief among which might be mentioned, her great natural resources; but if it were not for the love and loyal support of her citizens, America would not be the prosperous country it is. Our land got its start from freedom-loving patriots and it continues in its path of glory

only through the efforts of its modern patriots.

Modern America gives its citizens a high standard of living, security, happiness, freedom of every kind, and an all-around better way of life. The citizens of the United States must give their land stanch patriotism in return.

To give loyal support to America, it is necessary to fulfill all the duties of a good citizen. Patriotism must be shown in our spiritual life as well as in our family life, working life, and in our school life.

Young people in school owe it to America to obtain the best education they can, so that, when the time comes, they can give intelligent participation in civic affairs. Giving aid in civic projects, taking active part in patriotic organizations—these are the marks of a truly patriotic modern American.

Patriotism in modern America is an everyday thing, inseparable from every citizen of this great land. It stands out as one of the leading virtues that the people as a whole possess. It seems to be just as natural as breathing, for how could anyone help loving a country as wonderful as our own United States of America?

Views From the Districts

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. MINSHALL. Mr. Speaker, Philip W. Porter is one of this country's outstanding journalists. His daily columns appearing in the Cleveland Plain Dealer are widely read and quoted. Phil Porter's columns are characterized not only by their astute analysis of current problems, but reflect throughout the discerning qualities of the writer. One of his most recent and timely articles follows:

PORTER ON CUTTING TAXES—YOUR VOICE AS A TAXPAYER APPARENTLY IS MUCH STRONGER THAN YOU MIGHT THINK

(By Philip W. Porter)

Amazing, isn't it, what a passion for economy has suddenly swept Congress. Well, not exactly. As the man once said, congressmen don't see the light; they feel the heat. And they're feeling heat today from us taxpayers. High time, too.

Of course, economy has always been a fine thing to talk about before election and forget later. And there have been successful feeders at the public trough who have pretended to be great economizers, but who have simply followed the unbeatable pattern of underestimating their revenues, then sitting on the surplus.

They pretend to be saving money; actually they save nothing, because the taxes are being collected anyway.

But this year apparently is different. A long time ago, a wise owl said that if you got enough people paying steep income taxes, they'd squawk sufficiently to bring them down. This seems to be what is happening today. The income level is now up so high that thousands of horny-handed sons of toil are bleeding from the checks they are sending to the internal revenue office.

President Eisenhower is catching it because is budget was higher instead of lower. Both parties in Congress are trying to figure out a way to make a tax cut before the next congressional elections, beginning a little more than a year from now. Meanwhile, appropriations committee members are swinging the ax mightily at the Ike budget and already have got a billion or so out? That ain't hay, chums. Ever figure how much a billion is?

LONG WAY TO GO

Of course, it would be wise not to spend your tax cut (projected) yet, or even to count on the budget cuts staying in the bill when it passes both Houses and then is agreed on by the conference committee. An old legislative trick is to cut in the House and restore in the Senate, then split the difference in conference.

But you can bet your boots that sentiment among citizens is overwhelming right now for a cut in spending, and a corresponding cut in taxes. The first tipoff came when our new Senator, FRANK LAUSCHE, who keeps not only one, but both ears to the ground (a neat trick, but he's full of good ones) sounded off boldly against the pan-American games appropriation, after the $5 million already had been stricken from the bill. Other Congressmen made a quick check back home, and finding majority sentiment strongly in favor of cuts, took a similar brave position. It's completely safe to go with a sure majority.

I believe the Ike administration by now realizes it made a mistake by not asking for a cut to begin with. They darned well should. They would make a big hit, and recoup lost ground, by submitting a revised budget, with some real cuts—and in the Defense Department, too. It has become almost a cliché to say, when you're talking cuts, "Oh, but you can't cut defense."

Well, I'm not suggesting they cut expensive big aircraft or guided missiles or research or tanks or supercarriers. But I am suggesting we can sell a lot of useless real estate, eliminate duplicate purchasing systems, modernize the military payroll system, desist in filing so much junk paper on the pretense it's really secret, and finally unify the armed services. The way they are today, they've triplicated their overhead, and expense, instead of economizing, which was the original objective.

NO WEAKENING THERE

These soft spots are all in the Defense Department, and most of them were recommended for extinction by the Hoover Commission report. To cut this fat wouldn't weaken us a bit; it would simply eliminate some useless jobs and improve overall efficiency.

Whole departments and projects could be abandoned in other executive departments. Sure, the jobholders and the promoters would squawk, for they are dedicated public servants and sincerely think their own project is all important. But many are strictly luxuries. And these folks don't pay the bill. We do.

Economy would raise the very devil with Federal employees and they'd be lobbying their heads off (probably are already) at the first cry of alarm. Well, let 'em; they've a right to be heard. But Congress has the semifinal word. You have the final one. And right now it's no.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BEAMER. Mr. Speaker, under unanimous consent I wish to include in the Appendix of the RECORD the following article which appeared in the April 1957 issue of the American Legion magazine:

FEDERAL AID TO EDUCATION

May I compliment the American Legion on its stand for sound Americanism. It is apparent that veterans, as a group who fought to retain freedom, stand ready to fight against any principles that would lose those freedoms. This is the reason that I am proud to have been a continuous member of the American Legion since our local post was chartered.

A symbol of this freedom fight is your continuous opposition to Federal aid to education. With many others I have been concerned about the excessive growth of our Federal Government and its attempts to assume too many functions that rightfully belong to the States and to local governments.

One such attempted usurpation of authority is this repeated effort to authorize the Federal Government to assume control of the public-school system. If this movement is permitted to grow, then too soon we can expect government schools with thought control instead of public schools with freedom of thought.

Equally important would be the effect on the several States and on local initiative. Our home State of Indiana (and I understand this is true of all of the States) has been able to supply all of the necessary classrooms without Federal aid. In doing so, millions of dollars have been saved for the taxpayers. Whenever any of our tax dollars travel from our home State to Washington, and then are returned back to us, these same dollars have shrunk to a small fraction of the original amount.

There are justified complaints on the size of the present proposed Federal budget. The proposal to provide Federal aid to schools would add to this burden. Thus, savings to the taxpayers should be a serious consideration.

JOHN V. BEAMER,
Member of Congress From
Fifth District, Indiana.

Federal Handouts for Local Projects

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HERLONG. Mr. Speaker, I am in receipt of a letter from Dr. A. P. Black, research professor of chemistry at the University of Florida, which is refreshing in the very fact that it opposes Federal handouts for local projects. He also suggests that this is one way of cutting down the budget. I wish to insert Dr. Black's letter, dated April 5, at this point:

DEAR REPRESENTATIVE HERLONG: I should like to suggest that you cast your vote in the negative with respect to that part of the appropriations bill setting aside funds to be used in constructing sewage treatment facilities by local communities. Although the construction of sewage treatment plants does have public health significance, this is a matter which should be handled entirely at the local level without Federal participation.

In my considered opinion, elimination of items of this type constitutes one highly desirable method of reducing the tremendous proposed budget of the President.

Cordially,

A. P. BLACK.

Air Force Merits Praise

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. CRETELLA. Mr. Speaker, at this time, when the American public has indicated its interest and determination for economy in Government and careful scrutiny of Federal expenditures, the article submitted herewith by George Peck is refreshing and stimulating.

I invite the Members to take the time to read it because it is deserving of that attention. If more Federal agency heads were as careful as the dedicated Government people handling taxpayers' funds mentioned in this article, I think the budget could unquestionably be cut substantially, with the ultimate benefit of tax reduction for the overburdened American taxpayer.

The article follows:

AIR FORCE MERITS PRAISE

(By George Peck)

Over the years in this column I've had much to say about wasteful Government spending—have pointed out that many Government agencies are prone to vie with each other to spend as much of the taxpayers' money as possible. Their ideas of success seem to be predicated on how expensive they can make their procurements—the more expensive, the more successful.

Therefore, it is, indeed, a pleasure to have found a Government agency that is buying the most of the best for the least. What makes it really something to cheer about is that it is charged with purchasing the most of any Government agency. The Department making this enviable record is the Air Force, which during a fiscal year, purchases approximately $10 billion of materiel, consisting of about 1,250,000 different items. Nearly all these items are purchased through Air Materiel Command at Wright-Patterson Air Force Base. Testifying to the high moral standing and the patriotism of the men engaged in spending this huge sum is the fact that during the past 3 years only 1 employee has been convicted of dishonesty.

Gen. E. W. Rawlings, the commander of Air Materiel Command, with headquarters at Wright-Patterson Air Force Base, has under him in charge of both purchasing and production, Maj. Gen. D. H. Baker, a graduate of the Harvard Graduate School of Business Administration, and directly in charge of all purchasing is Brig. Gen. W. T. Thurman. In addition to his extensive procurement experience, General Thurman is an excellent lawyer, having formerly been general counsel of the Air Force.

In awarding an order for the purchase of airplanes costing several hundred million dollars, the entire organization works for many months and sometimes more than a year watching every detail to make certain that the best in quality is obtained at the lowest possible price. Everyone realizes that. But, because so few realize the meticulous care taken in purchasing small items, the procedure followed in purchasing transportation services is outlined.

Lt. Col. Arthur G. Frankel, Jr., who practiced law for 7 years before enlisting, is Chief of the Airlines Branch; his Deputy Chief is Oliver C. Brumm. Robert F. Hinger is contract specialist of this branch. These three men work as a team on many procurements.

Colonel Frankel's department prepares a Request for Proposal from contractors which becomes the basis for making bids. When the bids are received in Colonel Frankel's section, the entire organization goes into high gear to evaluate the thousands of technical details involved. After all the information has been laid out in the simplest possible form, these three men meet to determine who has offered the lowest price. Each bidder is required to list the cost of each item which represents a part of his total price. The buying officers soon become familiar with these figures and can spot instantly where and why a bidder may be too high. They sometimes question the lowest bidder as to his ability to furnish service at the price he quoted.

In this department one ten-thousandth of a dollar is important and frequently the difference between the rate offered by the lowest and the next lowest bidder is only two ten-thousandths of a dollar.

Before the lowest bidder is awarded the contract, his facilities are inspected to make certain that he can fulfill all the requirements. After passing this test, his bid is submitted for review by senior officers before the contractor is notified. Through these technical checks and balances, performance is assured and the buyers make certain that the penalties for nonperformance are heavy, to protect the Government in all cases.

Proof of the dedicated loyalty to the Government of these people who are handling the taxpayers' funds is that in most cases their salaries are about one-third as high as the industry personnel negotiating with them.

As an incentive, awards are offered to the buyers for developing new methods that result in lower costs. For example, in October 1953, Mr. Brumm received the Buyer of the Month Award; in December 1954, he received the Efficiency Award; and in March 1956, he again received the Buyer of the Month Award. These awards were given for developing new buying concepts in transportation services and for materially reducing costs in purchasing overseas air transportation.

Yes, indeed! It's a pleasure to have discovered and to be able to report a Government agency, the employees of which are handling the taxpayers' money as though it were their own.

Cut Waste, Not Muscle

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Rock Hill Evening Herald (S. C.) of April 10, 1957:

CUT WASTE, NOT MUSCLE

President Eisenhower has said the only really big cuts possible in the Federal budget would have to come from security items such as defense and foreign aid. The President declared cuts in these items would endanger national security.

We disagree. Cutting our defenses is one thing. Cutting waste out of the defense and foreign aid budgets is another.

The Defense Department ought to make a bigger effort to unify the services. It should trim out needless duplication and overlapping. The Official Airline Guide lists 563 military posts and camps in the United States, alone. Can't the Pentagon consolidate these operations without endangering security?

Pentagon chiefs ought to study ways to save on manpower, costs. One suggestion has been to stop industry from draining off the technicians that the armed services have trained at great expense to taxpayers. Some observers say this rapid turnover of trained technicians could be halted by giving merit raises to valuable technical people. They say it is far cheaper to pay salaries comparable to those paid for similar work in industry than to train a new force of technicians every few years.

Defense costs now amount to more than 10 percent of the gross national product—the value of all goods and services produced in the United States in a year. Military chiefs are talking in terms of new billions to convert the Armed Forces to an atomic footing.

If the military wants to keep pace with the atomic age it must find ways to cut out wasteful spending.

Washington Report by Bruce Alger

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. ALGER. Mr. Speaker, as a weekly service to my constituents I report most briefly the week's legislative and congressional activities in which I participate. The following is the current report:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The Department of Commerce and related agencies appropriation bill for 1958 was reduced $69 million (9½ percent) below 1957 expenditures and $218 million (25 percent) below the budget request. Savings thus far this year in six appropriations now total $1,039,000,000 (7.2 percent of $14,300,000,000). Really impressive savings—that is, cutting below 1957 expenses—are infinitesimally small. Government is still growing, more than the population increase, most discouraging. In the CAA portion of the bill air traffic safety will be increased with more radar control and personnel on the airways traffic lanes. The suggestion has been made that those aircraft using the airways could help pay the cost, thus relieving the taxpayer. We must decide soon—and the people are concerned—whether in many Government services we pay our way or charge it to Uncle Sam, and like the ostrich with head in sand, pretend it isn't costing us, all the while demanding budget cuts.

The House passed the Export-Import Bank Act extending the expiration date 5 years from 1958 to 1963. The bank, financed by United States dollars, has made loans of $5,277,000,000 to 68 countries as aid to United States trade in manufactured and agricultural products. Charging interest sufficient to repay the Treasury 2¼ percent, the Bank has lost only $500,000 with $9 million in loans past due, and has paid its own expenses, which are 1.7 percent of gross income, while building a reserve of $435 million. This program has been one of the Government's more businesslike arrangements.

The amendment of Anglo-American financial agreement, the British loan, posed a real question. The Great Britain loan of $4.472 million requires a 50-year annual payment of principle and interest of $138 million with

an option of canceling the interest portion (approximately $81 million) if certain trade and currency conditions prevail making repayment difficult. Now Britain wants to cancel this year's payment or work out a new agreement, hence this amendment. The amendment would set up a new formula permitting postponement of payment. Arguments for: (1) A better chance of our being repaid; (2) A needed ally needs help; (3) Secretary Humphrey favored it. Arguments against: (1) The $81 million interest payment was already in escrow in a United States bank, so Britain had the money; (2) a just-announced British tax cut of $280 million suggested they could pay (and we could cut our taxes); (3) over $8,000 million in economic aid plus untold billions in military aid had earlier gone to Britain; (4) we're in effect supporting Britain's welfare programs. The vote was divided without pattern, but it passed 218 to 167. I voted against it.

A trip by our Interstate Committee members through the United Aircraft plant building, the Pratt & Whitney aircraft engine and Sikorsky helicopter at Hartford and Bridgeport, Conn., added to our aircraft knowledge. The J-57 and J-75 jet engines being tested were regular infernos of power (a horsepower now roughly requires two ounces of engine weight, as blades whirl 11,000 revolutions per minute). The helicopter flights were magic carpet-like as we went almost straight up and down in traveling between airports. Shuttle services will soon be prevalent throughout the country. Igor Sikorsky was as interesting as his fabulous engineering reputation would suggest. He enthusiastically reminisced about his early helicopter, "A fine machine. Its only fault—it wouldn't fly." They fly now—all sizes and styles.

The CONGRESSIONAL RECORD of April 8 carries a Dallas constituent's letter to a fellow Texas Congressman (which he then put in the RECORD), commenting on and approving the courage of the Member who opposes Federal handouts when, most tempting of all, the Federal money is for his own district. To this constituent, and many other Dallas residents for recognizing the problem and commending me, my thanks. Yes, it is tough, and public understanding and approval are necessary.

General Twining, the new head of the Joint Chiefs of Staff, joined several of us for breakfact this week. We listened and questioned him concerning defense plans. He stressed the three roads we are simultaneously traveling in military preparedness developing (1) conventional weapons, (2) nuclear weapons, and (3) guided missiles of all types. No wonder the expense.

Several items suggesting further legislative squabbles: The Postal Department-Congress struggle over increased money needs versus reduced service; foreign-aid money to be partially put in the military and removed from congressional scrutiny; Walter Reuther's "less work for more pay" announcement, completely overlooking the need for "increased productivity" only making it all possible (not Federal law or the bargaining table.)

Annual Congressional Poll

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following press release dated April 15 regarding the results of my annual congressional poll taken among the residents of my district:

PRESS RELEASE FROM THE OFFICE OF CONGRESSMAN ALVIN M. BENTLEY, EIGHTH DISTRICT, MICHIGAN

Congressman ALVIN M. BENTLEY, Republican, of Michigan, today released the results of his annual congressional poll taken among residents of the Eighth Congressional District of Michigan. This year more than 13,000 questionnaires were answered and returned. Occupations of those replying were given as follows: Farmers, 2,296; workers, 3,292; business, 1,323; professional, 1,147; housewives, 88; office workers, 1,796; others, 3,070. The results of the poll are listed below:

1. I favor the following in a farm program:

(1) High price supports (9.3 percent)	1,213
(2) Flexible supports (37.6 percent)	4,896
(3) Soil bank program (32.6 percent)	4,241
(4) No supports (24.4 percent)	3,174
(5) Other (3 percent)	390

(Farmers voted 37 percent for a soil bank program and 30 percent for no supports as their first choices.)

2. The following items in our national budget could best be reduced for more economy:

(1) National defense (12 percent)	1,559
(2) Foreign aid (70.6 percent)	9,188
(3) Veterans' benefits (18 percent)	2,346
(4) Farm payments (31 percent)	4,037
(5) Health and welfare program (14.5 percent)	1,887
(6) Other (4.8 percent)	621

All groups put foreign aid first and farm payments second. Farmers voted 27.3 percent for cuts in their own payments.)

3. The Federal Government should help our schools as follows:

(1) Direct subsidies for teaching salaries (11.9 percent)	1,545
(2) Grants to States for school construction (27.3 percent)	3,556
(3) Loans to States for construction (33.0 percent)	4,295
(4) Scholarships for colleges and universities (15.4 percent)	1,999
(5) Assistance to lower interest rates on school bonds (41.3 percent)	5,379
(6) Nothing (11.6 percent)	1,514
(7) Other (2.6 percent)	332

(All groups listed numbers 5 and 3 in that order as their first two choices.)

4. We need the following improvements in our Social Security laws:

(1) Lower retirement age for men and women (46.1 percent)	5,997
(2) Allow increased outside earnings (59.8 percent)	7,784
(3) Increase minimum benefits (30.9 percent)	4,019
(4) Pay full benefits regardless of other pension income (38.9 percent)	5,059
(5) Other (3.8 percent)	499

(Workers voted 64 percent to lower retirement age but all other groups gave absolute majorities for increases outside earnings. Housewives voted for it 70.5 percent.)

5. Our immigration laws need the following changes:

(1) More immigrants permitted per year (4.2 percent)	543
(2) Revise quota system to take care of oversubscribed countries (16.1 percent)	2,093
(3) More liberal provisions for adopted children (31.3 percent)	4,078
(4) Other (6.2 percent)	812
(5) No change in present law (29.0 percent)	3,770

(For the most part, all groups voted evenly between numbers 3 and 5. Apparently the only change that receives any support is to facilitate entry of orphans and adopted children.)

6. The Post Office Department needs:

(1) Higher postal rates (27.8 percent)	3,618
(2) Increased salaries for postal workers (21.4 percent)	2,787
(3) To be run on a business basis (50.3 percent)	6,542
(4) To be operated only as a public service (27.4 percent)	3,566
(5) Other (3.5 percent)	451

(All groups substantially endorsed the principle that the Post Office Department should be run like any other business.)

7. In the field of labor legislation, I favor:

(1) Government-supervised secret strike ballots (38.1 percent)	4,959
(2) Permission for secondary boycotts (3.5 percent)	460
(3) Antimonopoly legislation against unions (39.9 percent)	5,186
(4) Investigation of union trust funds (58.0 percent)	7,542
(5) Repeal of Taft-Hartley Act (11.7 percent)	1,517
(6) Compulsory union shop in all States (7.2 percent)	931
(7) Other (3.3 percent)	430

(Workers voted as follows: (1) 35.3 percent; (2) 4.5 percent; (3) 31 percent; (4) 55.1 percent; (5) 19.7 percent; (6) 13.5 percent.

The vote for No. 4 might have been larger if answered after the recent teamster investigations in Washington.)

8. We should have helped the Hungarian uprising as follows:

(1) Send troops (3.7 percent)	480
(2) Send weapons (11.9 percent)	1,546
(3) Send food and clothing only (37.2 percent)	4,840
(4) Admit all refugees (5.1 percent)	664
(5) Press for U. N. police force or other U. N. action (60.4 percent)	7,861
(6) Nothing (6.5 percent)	849
(7) Other (2.1 percent)	278

(All groups appear to regard the Hungarian problem as strictly a United Nations affair and believe that our assistance should be confined to charity and relief supplies.)

9. Do you think we should have stronger civil rights legislation on a Federal basis or let the States handle their own problems?

(1) State (52.2 percent)	6,790
(2) Federal (30.7 percent)	3,996
(3) Other (2.4 percent)	317

(All groups gave a slim majority to the principle that the question of civil rights is primarily a State problem.)

10. If prices and wages continue to rise we should:

(1) Impose price and wage controls (43.5 percent)	5,665
(2) Investigate unions and corporations alike (63.8 percent)	8,307
(3) Have tighter credit controls (31.6 percent)	4,107
(4) Do nothing (2.1 percent)	279
(5) Other (2.7 percent)	357

(Almost all groups listed Nos. 2 and 1 in that order as their choices. Workers voted 66 percent for No. 2 and 48 percent for No. 1. Business voted 65 percent for No. 2 and 40 percent for No. 1. Only the professional people endorsed credit controls over price-wage controls.)

Congressman BENTLEY expressed his deep appreciation to all persons replying to his questionnaire and promised to reply personally to all letters and comments which accompanied the answers even though the number might mean a delay of several months for some.

Whither Bound America?

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the March 1957 issue of the Masonic Monthly and written by Dr. James A. Chandler, 32d degree, K. T.:

WHITHER BOUND AMERICA?

(By Dr. James A. Chandler)

Communism masquerades in many garbs to court favor, to deceive, to mislead, and to win the American people. Whatever its tactics or its pretentions may be at one time or another, its avowed purpose to dominate the whole world remains the same.

It is likely that some Americans will be lulled into complacency by the new propaganda that Stalin's successors are not like the murderous Stalin, but are men of peace and respectability. "Come into my parlor said the spider to the fly."

This is no time to let our guards down. All indices point to the fact that never before was there greater need of vigilance. Whatever the new face of communism today or tomorrow, it carries the same bloody bayonet.

The Communist manifesto, the creation of Karl Marx in 1848, said:

"Seizure of power and retention of power throughout the world by the proletariat is only a matter of time. The establishment of the dictatorship of the proletariat is inevitable. In a word, you reproach us with intending to do away with your property. Precisely so: that is just what we intend."

That purpose has remained the same for 108 years. Nikita Khrushchev, speaking recently to a group of Rangoon University students in India, said, "The days of capitalism in the world are approaching their end. Our system will win."

The national convention of the Communists in New York, May 27, 1928, began its fight to control legislation and governmental processes in the United States—a remolding of America according to Communist principles. A few of the revolutionary objectives outlined by the Communists at said convention were:

"Abolish the Senate, the Supreme Court, and the veto power of the President. Release all political prisoners immediately (and it was done). Withdraw all United States warships and Marines from China immediately. (This was so the Reds could eventually take over—which they did—with American aid.) Abolish all laws which disfranchise the Negroes on ground of color. (This is in process.) Abolish laws forbidding intermarriage of persons of different races. (This has been accomplished in some States, including the District of Columbia.) Abolish censorship over motion pictures, theaters, and radio. (The battle is still on.) Withdraw all troops from Latin America immediately. (Accomplished.) Repeal immigration laws immediately. (They are still working to that end.) Immediate recognition of the Soviet Government by the United States. (This was achieved.)" (William L. Roper.)

The Communists quickly gained the objective demanding immediate recognition of the Soviet Government by the United States, and there has been no end to the grief it has caused this country. President Franklin D. Roosevelt recognized Soviet Russia on November 16, 1933. Some of Mr. Roosevelt's close advisers urged him not to do so, and millions of Americans have considered it a dangerous mistake. When we consider the conduct of Russia since the organization of the United Nations, its long line of vetoes and broken promises, its supreme contempt for freedom and constitutional government, its brutal murdering of millions and its enslavement of many millions more, it becomes increasingly apparent that the recognition of Russia was a most grievous mistake. Particularly so, when we recall that "good old Joe" promised Roosevelt, in return for recognition, that Russia would cease all meddling in the internal affairs of this country, and that then Stalin began immediately setting up one of the most diabolical spy machines ever known to history. Gerhard Eisler, Julius and Ethel Rosenberg, David Greenglass, Alan Nunn May, Klaus Fuchs, Bruno Pontecarvo, Jacob Golos, Harry Dexter White, Alger Hiss, and many others had key roles in that great conspiracy against our Government.

Yet, be it said to our shame, "there is still a determined, well financed conspiracy in America to cover up the tracks of the Red stooges and their dupes. In many cases smear attacks have been made on patriotic, alert Americans who have dared expose the great conspiracy. In fact, a subtile, organized campaign is again underway to whitewash the conspiracy and belittle the menace of communism," (William L. Roper).

Space in these columns is inadequate to list the long line of crimes committed against humanity by the Soviet Union. The United Nations, particularly the United States, has manifested almost infinite patience toward the Kremlin, who, professing to believe there is no God, has lost all moral sense, all respect for the dignity of man and all faith in the moral order of the universe.

In the words of John Pichetto, published in the Mississippi Veteran, official American Legion publication:

"The time has arrived when the United States Government must break off diplomatic relations with the Soviet thugs and gangsters who hold power over the people of Russia. The justification for such a move is apparent. The Communist regime is not a government but a world-wide conspiracy. The trail of blood spilled by the Communist assassins extends all over the world. Facts brought to light by the Senate Internal Security Committee demonstrated that the Russian diplomatic missions and the Russian news service, Tass, are nothing but coverup agencies from which espionage activities are conducted in the United States. When a diplomatic mission ceases to be a diplomatic mission and becomes a focal center for spying, it no longer deserves the privilege of recognition. This is true of Soviet diplomatic and political organizations throughout the entire world. Yet the nation that commits atrocities and outrages against all human sensibilities is permitted to maintain in Washington a luxurious embassy, and its spies disguised as diplomats mingle with Washington society, sipping their vodka cocktails, smiling their false smiles and plotting their iniquitous plots right under the very shadow of the vital departments of our American Government."

It is believed by many of the electorate that if the issue were presented to the American people, they would vote overwhelmingly for the breaking off of all diplomatic relations with the Kremlin.

There are other conditions in our Government, considered abuses by countless millions of the electorate, against which they should like to register their protest, but how can they ever have that opportunity, if the international liberals, or collectivists, in both parties—a sort of third party—hold the balance of power, and thereby are able to block any corrective measure that might be presented by the constitutionalists or nationalists? No wonder there is need of new political parties with tightly drawn lines and clearly defined issues.

There are many national leaders and countless millions of the electorate who believe that the Government left us by our Founding Fathers has been greatly diluted and rendered ineffectual by the adoption of Socialist policies by both political parties, so much so that there is but little difference between them. They believe that the States and the people have been largely robbed of their sovereign rights and that the powers that rightfully belong to the States and the people are fast being concentrated in the Federal Government at Washington, D. C.

These columns have shown time and again by direct quotes from George Washington, Thomas Jefferson, and others that the establishment of an oligarchy at Washington by the Federal Government is the greatest of all dangers to our country and the most of all to be feared. In fact, the Bill of Rights grew out of the recognition of that danger. The States were very jealous of their sovereign rights to govern themselves in their internal affairs. Accordingly, they demanded the guarantees recorded in the Bill of Rights, and they would not have signed the Constitution without those guarantees.

Yet, the Federal Government has sought through long years to rob the States of their rights and consolidate all power in the Federal Government in Washington, D. C. From 1860 to 1938 the Supreme Court rendered 60 decisions to invalidate certain acts of the Federal Government as unconstitutional invasions of the States, but since 1938 the Supreme Court has not reversed one single act of the Federal Government in order to protect the rights of the States reserved to them in the 10th amendment. Worse still, the Supreme Court since 1938—18 years—has lost no opportunity to increase its authority by a usurpation of the powers belonging to the States and guaranteed to them in the 10th amendment. Several recent decisions of the present Supreme Court seem to indicate that it is determined to complete the job.

But how much do people care so long as they have access to the "gravy train" of the Government, grants-in-aid for one thing and another? Nothing could be more dangerous to our country. To the extent we make a Santa Claus or a papa out of our Government, it becomes paternalistic, and to the extent it becomes paternalistic we lose our freedom. The only money our Government handles comes from the tax-burdened people, and, by the time the more than 2 million bureaucrats at Washington get their rakeoff, the people find that their money has shrunk almost beyond recognition. It has been demonstrated that the States can accomplish vastly more when they handle their own money and attend to their own interests.

Benjamin Franklin was a sage when he said, "He who trades his freedom for security loses both." We may depend upon it that whatever our Government contributes to, it will finally control, and all such is destructive to our Republic, the result of which will be the loss of our freedom to an oligarchy at Washington, D. C.

The Republic of Greece became an oligarchy. The Age of Pericles in Greece, nearly 500 B. C., was followed by the Age of the Sophists, expert in counterfeit logic, who made the people believe that black is white. The people were given a sort of dole, and they were coddled and softened by it. Instead of the people controlling the government, they were controlled by it. The people sold their freedom for security, with the result that the great civilization of Greece, the cradle of liberty, swiftly ended in oblivion.

Rome was first a republic, but certain leaders sold to the people the idea of Utopia, a glorified state with a centralized government

that would care for them. It promised them all needed securities so that they need not worry about anything. In time, a triumvirate took over. Then a second—Caius Octavius, Mark Antony, and Lepidus. After the liquidation of Mark Antony and Lepidus, the strong Octavius seized the reins of government and became the Roman Emperor, under the name of Augustus Caesar, to whom all must bow or lose their heads. That centralization of power in a dictator was largely responsible for the downfall of Rome.

When any nation listens to its sophists, or its demagogues, in time it will crumble into dust and ashes. Liberty perishes and the people mourn their departed glory. Will the voice of history cry aloud in vain to this generation?

The demand for the enactment of the so-called civil rights bill is further evidence of a determined effort to rob the States of their rights to control their own internal affairs, which were guaranteed to them by the Bill of Rights. The Federal Government is already exercising a gestapo authority at Clinton, Tenn. But what became of the police power of Tennessee, and where was the Governor, when 18 men were arrested at the behest of a Federal judge, denied trial by jury and treated as common criminals? That judge usurped an authority that belonged to the sovereign State of Tennessee. As David Lawrence said:

"Is Tennessee still a State in the Union, or has it abdicated entirely to the Federal Government? Has it given up its exclusive right under the Constitution to maintain law and order, to insist upon trial by jury, and to punish through its own State courts all criminal cases of assault and battery and threats to the safety of an individual? * * * It means that the State of Tennessee and the county of Anderson, which have the primary duty to maintain law and order, have given way to a superior power—a Federal judge's arbitrary action. It is a tragic day in American history."

Senator HARRY F. BYRD says that this civil rights bill is "the most iniquitous" that has ever been offered to the Congress. Yet President Eisenhower calls it "must" legislation. Mr. Eisenhower in a speech at Fort Worth, Tex., before he was first elected to the Presidency, said:

"I believe that we should not forget that what the Founding Fathers of America strove for was the diffusion and decentralization of power—strove to keep power out of the hands of the central government to the detriment of individuals. If we can remember that, if we surrender responsibility we must surrender a comparable degree of authority—if we can remember this and solve our own problems our own way—then faith of our Founding Fathers that this Nation can govern itself will be justified."

Various quotes have been made in the Congress from speeches made by Mr. Eisenhower, when he first ran for the Presidency, that favored the preservation of the rights guaranteed to the States and the people by the Constitution, and that indicated he was against the centralization of power in the Federal Government. Certainly that is no more than should be expected of him or any other loyal American. The Constitution needs no concessions from any citizen. It demands respect.

According to reports, if this civil rights bill, now urged by Mr. Eisenhower becomes law, it will "create a national police force to supersede and sit in judgment upon the activities of local and State law enforcement officers in almost any kind of case they might handle." That simply means that the law enforcement agencies of the States would be puppets, or secondary and subservient to the Federal Government, and that means the usurpation of the rights reserved to the States by the Constitution.

It means that the Civil Rights Commission proposed by that bill would be a Kremlin-like executive branch in Washington and plenty of gestapo in the South, with power to arrest without warrant, arrest upon suspicion, false accusation, or hearsay of disloyalty to integration, voting privileges, or else, and be forced to go to Washington, D. C., for trial without jury and all at your own expense. The accused would have to pay for whatever legal talent he needed or go before this inquisition, called the Civil Rights Commission, without it.

Talk about some States denying Negroes the civil right to vote. The Supreme Court has already, without legal right, by unanimous vote denied the whites their divine right to freedom of choice, which is the basis of all freedom, so that they can no longer choose their own company, nor the company of their children. Talk about needing a law against lynching. The South has already been lynched and left hanging from a socialogical limb of a tree misnamed "modern science." Just what are we coming to in this "land of the free"?

Yet President Eisenhower says this civil-rights bill is must legislation. In the opinion of many national leaders and many of the electorate, it seems impossible to harmonize Mr. Eisenhower after the election with Mr. Eisenhower before the election. Could it be that Mr. Eisenhower has misinterpreted his popular vote to mean a mandate from the people that now the Federal Government must violate States rights by assuming the functions that belong to the States, and thereby consolidate the powers reserved to the States by the Constitution in an oligarchy at Washington? The Southern people believe that Mr. Eisenhower's popular vote was a mandate to keep our boys from becoming cannon-fodder in another war. Korea-like or other.

What is it in Washington that works so effectually against the rights reserved to the States and the people by the Constitution to control their own internal affairs? Countless millions of voters who care more for their country than they do for a party label think they know what it is, and what they want is just one chance to cut off its tail just behind its ears at a certain guillotine called the ballot box.

Our Republic has been imperiled ever since it was founded, and more so today than ever. When Benjamin Franklin was asked, in the year 1787, what the Constitutional Convention had given to the people, he replied, "We have given to you a Republic, if you can keep it." There are always complacent souls who sense no danger ever. Everything is always just fine and lovely. They look askance at anyone who voices a word of alarm.

Monday, September 17, 1787, was the final day of the Constitutional Convention, meeting in Philadelphia to form a new Government for the United States.

Benjamin Franklin arose to address the Convention for the last time. He said:

"This (new form of government for the United States) is likely to be well administered for a course of years and can only end in despotism, as other forms have done before it, when the people shall become so corrupt as to need despotic government, being incapable of any other."

Whither bound America?

The U. S. S. "Randolph"

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. SANTANGELO. Mr. Speaker, on April 11, 12, 13, 1957, in connection with congressional duties, I, together with 8 Congressmen, inspected the aircraft carrier U. S. S. *Randolph* and observed air operations. The trip was very informative, illuminating, and inspiring. It left us with the feeling that our naval defenses are in competent hands and that our future is being provided for.

The orientation cruise began on Thursday evening after Congress recessed when we were conducted by Capt. Robert McElroy and Comdr. F. A. Manson to the Anacostia Airport and traveled by convair to Jacksonville, Fla. After an inspection of the naval airbase there, we were flown on Friday morning by a COD aircraft to the U. S. S. *Randolph* about 70 miles off the coast. Landing on a carrier with a sudden stop was a new experience.

I believe that a history of one of our aircraft carriers, a description of what I observed and my reactions may give the same pleasure to my colleagues and our citizenry as I received.

The U. S. S. *Randolph* is a recently modernized 31,000-ton aircraft carrier with a new angled flight deck, enclosed hurricane bow, new deck-edge elevators and other improvements. The carrier possesses almost unlimited range and enormous striking power. Her air group is capable of seeking out and destroying any force which a potential enemy can muster in the air, on or under the sea. The chief function of the *Randolph* is to carry, launch, and handle aircraft quickly and effectively. Capable of achieving speeds in excess of 33 knots and carrying between 80 and 100 aircraft, the *Randolph* is a forceful argument against aggression of war.

The carrier with a length of 895 feet and breadth of 199 feet with its complement of 2,500 men and officers is under the experienced command of Capt. Daniel F. Smith, Jr., of Pittsburg, Tex. The officers are courteous, experienced, and efficient. The men, sailors, and mechanics with whom I had the opportunity to mingle and talk admire their captain and they enjoy good morale. Their only "beef" at this congressional inspection tour was the requirement to exercise extraordinary care to keep themselves and the ship spotless and neat. My talk with several of the enlisted men and officers revealed a high regard for their superiors and a satisfaction with their daily chow. What they missed most of all was their absence from their families and loved ones. In addition, they complained that to deny them the benefits of the GI bill upon separation from service was unfair.

This carrier bears a great name which dates back to the Continental Navy and

Revolutionary War. Named after Peyton Randolph, patriot and statesman from Virginia, this present flattop was constructed in Newport News, Va. She was launched in 1944. Her speed was the keynote. The *Randolph* was launching planes only 4 months after being commissioned, a feat believed to be without precedent in big carrier history. During World War II, the *Randolph* joined Adm. Marc Mitscher's famed task force in the Pacific and supported the landing of troops on Iwo Jima. The *Randolph* also saw action as a unit of Admiral Halsey's 3d Fleet in the final battle against the Japanese.

Since 1953, when she was modernized, she has conducted operations throughout the world, in Gibraltar, in Salonika, Greece, in Genoa and Naples, Italy, and in July of 1956 when the State of Israel was forced to invade Egypt to protect herself, the U. S. S. *Randolph* stood ready and her aircraft provided air cover and surface and air reconnaisance for the evacuation of United States nationals from Alexandria. She patrolled the area for 30 days to protect the United States interest.

Now the U. S. S. *Randolph* is off the Florida coast providing the training grounds for pilots of jetplanes, the Navy Cougars and of twin-engine A. J. Savage. To see these young cadets qualify by bringing down these fast and big planes on an angled deck of a moving carrier within a distance of 500 feet is breathtaking. If it is a difficult task in daylight, it is more so in darkness. The cadet fliers demonstrated their skill not only in the daytime but also at night. As a plane approaches the deck, hearts beat as fast as the moving jets. The question in the spectator's mind is will he land or will he overshoot? If he approaches too high or too low, the pilot is warned off by the signalman and the plane roars by. If he is within range and the landing hooks are down, the pilot makes his attempt to lay her down. Nerves of steel and pinpoint precision are needed. As the speedy Cougar or the twin-engined 50-foot-wide A. J. Savage settles on the angled deck, I breathed a sigh of relief and satisfaction. After the arresting cable brings the plane to a screeching halt, the plane is guided to the catapult, shot off into the blue and the process is repeated until the flier has completed at least 6 successful day landings. Upon completion of the final landing, everyone knows that another boy had become a man and joined the legion of qualified Navy pilots in America's defense. As night fell, these fliers were required to prove that they were skilled enough to land their planes on the angled deck under these conditions. No signalman was there to guide. The only help that these men had were the lights outlining the deck, their training, and their God. The only way to believe this performance is to see the operation. It baffles the imagination. Coordination and expert handling are required of the pilot, flight crew, and signalmen. A single mistake may bring disaster, death, or destruction. No serious accident took place and all cadets qualified except two who were overanxious and as a result were directed to fly back to Pensacola Airbase for further training and a new tomorrow.

As a safety measure in event of an accident, we had as a constant overseer a helicopter called " the Angel" and one destroyer. In the evening, two destroyers stood ready to do rescue work. They were almost called into action when one of the heavy planes after an apparently successful landing went a little too far and its left wheel toppled in the catwalk nets. A hundred Lilliputians tugging and pulling finally lifted the Gulliver onto the deck once again with very little damage to its structure. It was a close one.

Whatever questions we visiting Congressmen asked were supplied quickly and if not known, answers were obtained. To Lt. Comdr. Robert Reeve of New Jersey who spent numberless hours answering my naive questions and those of my colleagues and who pointed out the features of the angled deck, the arresting wires, the catapults, the twin-engine A. J. Savage, the Cougar, the control tower called the Pri-Fly, the radar system, and the "meatball," I can express only my appreciation and thanks. His attention and guidance will never be forgotten. With men like Lieutenant Commander Reeve, Captain McElroy, Commanders Manson and McNella who possess the practical, technical, and tactical knowledge, our country has very little to fear.

The work being done on the U. S. S. *Randolph* which thrilled me and earned my admiration is not unrecognized by the Navy. In 1955, this carrier won two of the Navy's highest honors; one, the Atlantic Fleet's coveted battle efficiency E, and the other the Chief of Naval Operations aviation safety award. The latter award was for the ship's outstanding safety record and commendable efforts in preventing aircraft accidents. This is a record that the *Randolph* can justly be proud of.

All I can say after this 3-day inspection tour is "Hail to the U. S. S. *Randolph*, its men, and its command."

The Horse and Buggy Days

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. HOFFMAN. Mr. Speaker, here is a letter from one of the ancients who lived in the "horse and buggy days"—to which no one wishes to return. It reads:

DEAR FRIEND: I received your letter yesterday.

I was raised in the country, walked over a mile to school, and did chores morning and night. We sat two in a seat. There would be room in the schools now if they would do that.

I went to school to study, and went home after 4 p. m. There were no swings or slides on the school grounds. They have taken a lot of school houses out of the country. I never figured on a vacation when school was out. I thought I was having one when I was in school.

I was 77 May 19, 1956. My dad never gave me a dollar in his life to spend nor left me one when he passed on. He hired me to the neighbors when I was 13 for 50 cents a day, if he didn't need me at home, and he didn't give it to me to spend either. I know what a dollar is worth.

If F. D. R. and Truman, and Ike, had had to earn that money themselves, they wouldn't have been so free with giving it away. We want the Townsend plan so the money will be spent where it is needed.

I never bought a horse or buggy or cutter, wagon or car or tire or gasoline, on the installment plan.

I only get $30 a month social security. I could use more. We burn wood and I cut it. I sawed wood yesterday with a bucksaw. It is too nasty to work outdoors now. It snowed and rained a little last night. It is 38 above now and cloudy at 10:19 a. m.

I wish you all good luck, success, happiness and contentment blessed with health. May God bless and keep us all now and forever.

Yours truly,

SAMUEL T. JORDAN.

The foregoing is just inserted as proof that, while "the good old days" were not everything that one could desire, an individual with courage could get along. And no doubt Jordan wouldn't even need the $30 a month social security, if the New Deal internationalists hadn't imposed such ruinous taxes, thus cutting down his chance of providing for his own old-age security.

There should be some way of retaining our independence, still making progress, and more of us "paddling our own canoes."

The Washington Pilgrimage—A Symbol of the Religious Heritage of America

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. REES of Kansas. Mr. Speaker, on April 26, 27, and 28 the Washington Pilgrimage, under its 7th annual program, will visit our Nation's Capital to pay tribute to our great American religious heritage.

During the weekend hundreds of men and women of all faiths, from all parts of America, will visit patriotic and historical shrines, religious centers, memorials, and various institutions of government. In the course of their program they will meet and hear personal messages from America's spiritual, cultural, and government leaders. One of the outstanding events of their program is an awards dinner on Saturday evening, April 27th. At that time, Dr. Louis H. Evans, former pastor of the Hollywood, Calif., Presbyterian Church, and who presently represents the Presbyterian Church on a nationwide basis, will be named Clergy-Churchman of 1957. The award will be made by Mr. Cecil

B. DeMille of Paramount Pictures, Hollywood, Calif.

The Washington Pilgrimage is an organized movement in America whose basic theme is "This Nation Under God," and whose purposes are:

To emphasize our national religious heritage.

To create a greater awareness of the spiritual vision and understanding of America's founders.

To rededicate ourselves to the spiritual origins of our country.

To strengthen our spirit of liberty under which Americans of all religious beliefs may prosper in unity.

To encourage vision, faith, and courage in order to revitalize our American faith in democracy and morality.

To recognize religious leadership by the only national awards in this field to the Clergy-Churchman, Lay-Churchman, Churchwoman of the Year, together with the Faith and Freedom Award in religious journalism.

Because of the importance of this occasion, and for the reason, in all probability, you will be visited by some of those participating in this important event, I take this opportunity to acquaint you with the purposes and activities of the Washington Pilgrimage.

The Father of All Good Roads in the United States

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an editorial on Thomas Harris MacDonald, former Commissioner of Public Roads, which was carried in the April 16 edition of the Washington Post and Times Herald. I had the distinct pleasure of knowing Mr. MacDonald for a number of years and the following article certainly is a worthy tribute to this great man:

THOMAS H. MACDONALD

Thomas H. MacDonald, who died in Texas the other day at the age of 76, left an inheritance to his fellow Americans which will stand enduringly as a monument to his memory. For 34 years—from 1919 until his retirement in 1954—he served as the head of the United States Bureau of Public Roads. The country had scarcely a quarter million miles of public roads when he took office—and very little of that mileage was hard-surfaced. There were few bridges adequate to carry heavy trucks, the highway system was unintegrated, road markings were haphazard, thruways existed only in the dreams of this extraordinary hard-headed, practical, and determined visionary. When he left office, there were 3,500,000 miles of interlocking, hard-surfaced highways criscrossing America, the foundation for a national network linking together all parts of this continental land.

It was Thomas MacDonald who persuaded Congress to pass the first Federal highway legislation under which the National Government shared costs and set specifications for major road construction. He administered the expenditure of these funds with uncompromising devotion to the public interest, and with an absolute avoidance of politics which kept him at his post under 7 Presidents and 17 Congresses. In 1950, he appealed to Congress for a vast program of highway modernization and development which at last took definite form in the 50-billion-dollar National Highway Act adopted last year. Everyone who drives a car or truck, for business or for pleasure, across the face of America stands indebted to this quiet, forceful public servant who earned the title, "the father of all good roads in the United States."

Summerfield's Arrogance

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HOLLAND. Mr. Speaker, I was very glad to read the editorial columns of the Pittsburgh Sun-Telegraph of yesterday, April 15, and learned that they, too, had requested the removal of the Postmaster General, Mr. Summerfield, for his arrogant disruption last week end, not only of the post office system but of American business as well. I had also made such a request and introduced a resolution to make it a reality.

Mr. Speaker, the inefficiency and low morale of the post office employees at this time can be traced to the lack of knowledge, the lack of ability, and the lack of experience of the present Postmaster General.

This breakdown of the post office was the first since its inception in 1789.

The entire blame does not lie with the Postmaster General since the Eisenhower administration must also take a share of the responsibility of this debacle.

It was the president of the United States who refused to carry on the precedent established by his predecessor in appointing an employee of the post office who had received his promotions through his ability and standing in competitive examination. The only yardstick used by Ike's administration was that Mr. Summerfield sold General Motors cars, was a Republican, and a heavy contributor to the Party.

These standards should not have been a criteria in appointing a man to run one of the country's biggest businesses, employing over half a million people, doing a business volume of $2½ billion and maintaining 39,000 post offices.

House Resolution 234, introduced by me in yesterday's session, would do precisely as expressed in the editorial of the Pittsburgh Sun-Telegraph. It would not only remove the present Postmaster General but requested that his successor be appointed from the ranks of the postal employees. This would assure the public of having a man of experience and knowledge.

The editorial follows:

SUMMERFIELD'S ARROGANCE

The arrogance of Postmaster General Arthur E. Summerfield has brought about a bureaucratic shakedown of Congress and American taxpayers.

His arrogance succeeded last Saturday in canceling all regular mail deliveries in the United States on a business day for the first time in history.

It has succeeded beginning today in curtailing deliveries and hours when post offices are open to the public.

Mr. Summerfield high-pressured a congressional committee into voting him $41 million extra to run his Department through the remainder of the fiscal year ending June 30.

But even this did not move him to call off his cutback of services. He demands the money in hand.

His arrogance has hampered the operations of business and gravely inconvenienced the American people.

The crack-of-doom methods he has used raised questions of his efficiency and competence.

Whatever bureaucratic victory he has gained, the Postmaster General has lost the confidence of the public.

He ought to resign.

Comprehensive Confusion on the Middle Snake, or Who's in Charge Here?

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. ULLMAN. Mr. Speaker, recently the Electric Consumers Information Committee released an excellent bulletin entitled "Comprehensive Confusion on the Middle Snake, or Who's in Charge Here?" This bulletin excels not only by having an apt title, but also by being highly informative in its summary of the untenable position which the administration presently occupies and which the Federal Power Commission submissively supports with regard to the Hells Canyon stretch on the Snake River.

I am sure this fine article will be of interest to my colleagues and under unanimous consent I am having it printed in the Appendix of the RECORD.

The article follows:

COMPREHENSIVE CONFUSION ON THE MIDDLE SNAKE, OR WHO'S IN CHARGE HERE?

With last week's recommendation by the Federal Power Commission staff that Pacific Northwest Power Co.'s Mountain Sheep-Pleasant Valley license application be denied because of the need for flood control storage at the Nez Perce site, the Middle Snake River is running even muddier than it was when it recently washed out the Idaho Power Co.'s coffer dam at Brownlee.

Last weekend Interior Secretary Seaton told a press conference he was "unalterably opposed" to the high Federal dam at Hells Canyon. Instead, Seaton has instructed the Bureau of Reclamation to restudy the Pleasant Valley site with the aim of determining feasibility of constructinng a higher, or a high-high storage project there.

During the recently concluded Senate Interior Subcommittee hearings on pending

Hells Canyon legislation (S. 555) the Corps of Army Engineers witness under questioning said that the corps would probably reopen the Middle Snake for restudy in connection with its review of the 308 comprehensive plan of 1948 now in progress. Earlier this year, Colonel Foote, in charge of the north Pacific division, had written James T. Marr, president of the National Hells Canyon Association, that the corps had no idea of including the Middle Snake in its review. Congressman DON MAGNUSON, Democrat, of Washington, received word from the Chief of Engineers that there would, indeed, be a restudy of the Nez Perce site.

These events have precipitated a situation of vast confusion on the Middle Snake. There are at present six different schemes calculated to develop this stretch of the river which extends from a point below Weiser, Idaho, at the upper end of the high Hells Canyon reservoir, downstream to Nez Perce site which is a short distance below the confluence of the Salmon with the Snake.

1. High Hells Canyon and Nez Perce: Hells Canyon was proposed by the Bureau of Reclamation in 1946 and by the corps in the main control plan, its 1948 comprehensive plan for the Columbia Basin. In 1949, it was assigned to the Bureau for construction when the corps and Bureau signed their joint comprehensive plan. Nez Perce was proposed by the corps for later construction because of the problem of high dams and migratory fish.

The corps' Middle Snake review of March 1952, found that the combination of Hells Canyon and Nez Perce would be the best possible for full development of the water resources of the Middle Snake. And the Bureau, in material made part of the record of the 1952 House hearings on the first separate Hells Canyon bill, had this to say about the two projects:

"The construction of Hells Canyon and Nez Perce develops most fully the potential water resources, since all available head, all available storage, and all available streamflows are fully utilized. Together they would develop 8.7 million acre-feet of storage and produce 2.5 million kilowatts of prime power capability. * * * The Hells Canyon plus Nez Perce combination is, therefore, the best plan for full resource development. * * * Since the Hells Canyon plus Nez Perce plan is the best, all comparisons of other plans are made to it.

"Hells Canyon is an essential part of this best plan. Also, Hells Canyon avoids the Salmon River fish problem."

2. Nez Perce plus the three Idaho Power Co. dams: This is the main part of what the Federal Power Commission staff calls its plan I, in its brief on the Pacific Northwest Power Co.'s Mountain Sheep-Pleasant Valley license application. It would provide about 5 million acre-feet of storage, and about 2 million kilowatts of prime power capability. It would prevent the construction of Secretary Seaton's proposed high or "high-high" Pleasant Valley projects, as it would the Mountain Sheep-Pleasant Valley scheme of Pacific Northwest Power Co.—all of which lie upstream in the Nez Perce reservoir area.

3. Secretary Seaton's proposed high Pleasant Valley Dam, plus two Idaho Power Co. dams: The Secretary's recent letter to Federal Power Commission Chairman Kuykendall, informed the latter that a restudy of Pleasant Valley site to obtain more needed storage on the Middle Snake was underway and as soon as the results were known, Kuykendall would hear from him. In 1953, the Bureau had plans for a large storage project at Mountain Sheep site as a substitute for Hells Canyon proposals. They went awry when it turned out that site conditions did not warrant this kind of structure.

In an April 1954 report, the Bureau proposed a low, run-of-river dam at Mountain Sheep and a medium-sized storage project upriver at Pleasant Valley. Subsequently, Pacific Northwest Power Co., composed of 4 of the largest private-power companies in the Pacific Northwest, filed license application to construct these 2 projects. Assistant Secretary Aandahl twice wrote to the FPC that the Bureau had no further interest in building the dams now that a license application was being considered by FPC. This was consistent with the backout from the Hells Canyon case by former Secretary of Interior McKay in May 1953.

In his press conference last week, Secretary Seaton expressed the pious hope that the FPC "will honor our request for a reasonable time within which to complete a study of the Pleasant Valley dam site." Evidently his letter to Kuykendall on this matter had been dictated but not read by Seaton, as there was no such request in it, unless it was written with invisible ink.

The high Pleasant Valley project, now under study by the Bureau, would both prevent construction of Nez Perce and Hells Canyon (Federal or Idaho Power) projects. It lies in the reservoir area of one and would inundate the other by its own reservoir. Total storage would amount to 1.3 million acre-feet, and in combination with Idaho Power's Brownlee and Oxbow Dams, would provide 2.3 million acre-feet of usable storage in the Middle Snake, and about 1.2 million kilowatts of prime power capability. It would also supersede the PNPC Pleasant Valley Dam.

4. Secretary Seaton's "high-high" Pleasant Valley Dam, plus Idaho Power's Brownlee project: This combination would eliminate Nez Perce and high Hells Canyon. It would supersede PNPC's Pleasant Valley Dam, and inundate Idaho Power's low Hells Canyon and Oxbow sites. If constructed, it would be the world's highest dam, at about 710 feet. The Bureau witness in the recently concluded Senate hearings on Hells Canyon legislation, said that there had been some discussion concerning the feasibility of such a dam, but no investigations or estimates have been made.

5. Pacific Northwest Power Co.'s Mountain Sheep-Pleasant Valley scheme, plus Idaho Power Co.'s three dams: This would prevent construction of Nez Perce and high Hells Canyon Dams. It would provide only 1 million acre-feet of usable storage for flood control (from Idaho Power's Brownlee reservoir) because the Pacific Northwest plan does not include flood-control valves on the outlet gates. Prime power capability would be about 1.2 million kilowatts.

6. Pacific Northwest Power Co.'s Mountain Sheep-Pleasant Valley Dams, plus High Hells Canyon: With a total of 3,880,000 acre-feet of flood-control storage (none from Pleasant Valley) this combination would provide prime power capability of about 1.7 million kilowatts. It would prevent construction of Nez Perce, high, or "high-high" Pleasant Valley, and the three Idaho Power Co. dams.

For the sake of adding to the confusion, the FPC staff's plan II in its recent Mountain Sheep-Pleasant Valley brief could be included. It consisted of storage on the Salmon River, low dams below Nez Perce at Asotin and China Gardens, PNPC Mountain Sheep-Pleasant Valley, and Idaho Power's three dams. It was discarded by the staff, however, as being inferior to its plan I discussed above.

It is obvious that November's election results have stirred the administration into a state of feverish activity to provide more storage on the Snake River, and thereby take the Hells Canyon monkey off its back by such a gesture. It is significant that the FPC staff brief recommended that no matter who builds Nez Perce to get the most storage in this sketch of the Middle Snake, that storage must be had. No recommendation was made by this same staff in the Hells Canyon proceedings that the High Dam be constructed in order to obtain nearly 4 million acre-feet of vitally needed storage.

Now the corps, the Bureau and Pacific Northwest Power can struggle for the go-ahead to develop the lower end of Hells Canyon, each proposing mutually exclusive projects, with no coordination, singleness of purpose, or broad plan. In the meantime, Idaho Power has asked the FPC for permission to borrow $44 million in unsecured promissory notes to keep its Brownlee project going.

If the general public can be kept sufficiently bewildered by this latest procession of plans for Middle Snake development, none of which include High Hells Canyon, and if a concerted effort in the Congress to pass Hells Canyon legislation is not made, Idaho Power can be so financially committed at its Brownlee project that Congress could well hesitate to pass the authorization when it considers the additional costs of clearing the company out of Hells Canyon.

But, with all this administration-contrived chaos to take the public's eye off the indispensibility of High Hells Canyon in any Middle Snake development plan, there should be one fact constantly in mind which was stated by the Bureau of Reclamation in the 1952 House hearings on Hells Canyon legislation:

"In short, if Hells Canyon storage capacity is wasted by construction of small dams, that loss will be permanent and cannot be recovered by any other combination of dams."

This is the haunting fact that Secretary Seaton, the Federal Power Commission, the Corps of Engineers and the Eisenhower administration is attempting to dodge by their unwillingness to admit a tragic error made in 1953. No matter where they turn, Hells Canyon stares at them like a skeleton at the feast.

Upper Fox River, Wisconsin

EXTENSION OF REMARKS
OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. LAIRD. Mr. Speaker, I ask unanimous consent to include in the RECORD today a joint resolution adopted by the Wisconsin State Legislature, memorializing Congress to enact H. R. 742, relating to the improvement of the upper Fox River in Wisconsin. The resolution follows:

Whereas the Honorable MELVIN R. LAIRD, Member of Congress from the Seventh Wisconsin Congressional District, has introduced H. R. 742, which provides that the State of Wisconsin shall take over the Federal property of the upper Fox River; and

Whereas this proposal contemplates that the Federal Government provide funds not to exceed $300,000 to place the facilities on the upper Fox River in suitable condition for public use; and

Whereas the upper Fox River is one of Wisconsin's oldest traditions, having been used by the earliest explorers in their voyages from the Great Lakes to the Mississippi River; and

Whereas the enactment of H. R. 742 is essential to the preservation of the upper Fox River as a waterway: Now, therefore, be it

Resolved by the assembly (the senate concurring), That the Wisconsin Legislature urge the Congress of the United States to take prompt and favorable action on H. R. 742; and be it further

Resolved, That a copy of this resolution be sent to the Honorable JOHN A. BLATNIK, chairman of the Subcommittee on Rivers and Harbors of the House Public Works Committee, and to each member of the Wisconsin delegation in Congress.

ROBERT G. MAROTZ,
Speaker of the Assembly.
ARTHUR L. MAY,
Chief Clerk of the Assembly.
W. P. KNOWLES,
President of the Senate,
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.

"Miracle" on the Potomac

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article which appeared in Time magazine, February 25, 1957:

"MIRACLE" ON THE POTOMAC

Of the big southern cities that have ended segregation in their public schools, none have attracted more attention, or produced more controversy, than the Nation's Capital. Last December a House subcommittee headed by Georgia's JAMES DAVIS declared that integration had "seriously damaged the public-school system," and recommended that it be stopped. Last week a more reasonable judgment came from Washington's Assistant School Superintendent Carl F. Hansen. Integration, says he in a study published by B'nai B'rith's Anti-Defamation League, has been nothing less than a "miracle of social adjustment."

INTRODUCTION VIA TV

When the United States Supreme Court handed down its decision in May 1954, Washington's tall (6 ft. 5 in.), intense Superintendent Hobart Corning lost not time in putting through a plan for wholesale desegration. "Transition," he told his teachers, "will not be easy," but he had already done much to pave the way. Among other things, the school system had produced a series of broadcasts that brought Negro teachers into white classrooms and white teachers into Negro classrooms via TV. In 1953, teachers began holding a series of interracial conferences on the problems that integration would produce. Finally, after opening day in September 1954, the Washington Daily News reported: School integration gets smooth start.

What effect has integration had since then? It is quite true, says Superintendent Hansen, that the number of white pupils in the schools dropped 10 percent in 1 year (67.9 percent were Negroes last year). But part of the reason for this could well be the nationwide migration of families into the suburbs. It is also true that the Negroes have, on the whole, scored below their white classmates in IQ tests, but the inferiority of the all-Negro schools, rather than the pupils themselves, is to blame. Between 1945 and 1953, a total of 45,000 pupils had been on a half-day schedule because of overcrowding; of these, 80 percent were Negroes. Now all but about 1,500 can go to school a full day. As for disciplinary problems, 11 integrated high schools reported 410 serious offenses last year, but these cases involved only 3.1 percent of the total high-school population. One school reported no cases, two others with a combined enrollment of 2,378 reported only 35.

"ONE OF US"

Many reported incidents of violence between Negro and white students have proved totally false. One irate grandmother, for instance, declared that a Negro boy had slashed her granddaughter's dress with a knife, had to back down when she found that the girl had torn her clothes while playing during recess, with no Negro boys around. Though there have been student fights and parental protests, says Hansen, none have amounted to much.

Perhaps the best illustration of how integration is working in Washington lies in dozens of anecdotes cited by Hansen. In September 1954 a white mother tried to transfer her child to another school because of the child's Negro teacher. Persuaded to postpone action for a 2- or 3-week trial period, the mother became so fond of the teacher—and so proud of her child's progress—that she happily decided to leave him where he was. In a junior high school, a group of boys decided to join an antiintegration demonstration going on in front of their school. But on the way outside the building, they passed a Negro classmate, and promptly proved that they had actually accepted integration without knowing it. "Hey, you," shouted a white boy at the Negro, "come on." Who—me?" asked the startled Negro. "Yes; you," said the white boy. "You're one of us, aren't you?"

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Republicanism at Work Today

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17, 1957

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Republicanism at Work Today, delivered by the senior Senator from Minnesota [Mr. THYE] before the Ramsey County Young Republican League annual convention in St. Paul, Minn., April 13, 1957.

I also submit for printing in the Appendix, to follow the address of the Senator from Minnesota, an editorial entitled "Modern Republicanism Judged by Its Results," from the St. Paul Pioneer Press of April 17, 1957.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

REPUBLICANISM AT WORK TODAY

(Address by EDWARD J. THYE, United States Senator from Minnesota, before the Ramsey County Young Republican League annual convention, Commodore Hotel, St. Paul, Minn., April 13, 1957)

My participation in the Ramsey County Young Republican League Convention is something I have looked forward to ever since I received the invitation from Mr. Butler. I have always maintained that no political party can long endure without the active participation at all levels of activity by those like yourselves who are dedicated to a keen interest and desire to serve in public and community affairs.

One topic which has assumed national importance in today's political life is that of modern Republicanism. Many Republicans have attempted to define it, while the Democrats maintain that it is a figment of imagination and that it does not exist.

I am one who believes that there is no easy definition for the term which President Eisenhower has created. I would like to believe that the term "modern Republicanism" can only be defined by example and by the record of the Republican administration and the Republicans in Congress.

If we quickly scan the record of the Republican Party in the past 4 years, we can begin to see that modern Republicanism is a very real thing which has won the support of the vast cross section of our people.

This record indicates that the Republican Party has met the fast-growing needs of our expanding economy without sacrificing the principles of our free-enterprise system. It has proved to be sensitive to the human needs of our Nation, and, at the same time, has maintained a fiscal stability which has allowed us to assume heights of prosperity which, 30 years ago, challenged man's imagination.

We might use the following examples in considering our definition:

1. One of the great problems of our day is that of providing school facilities for our expanding school population. It is interesting to note the approaches taken to this problem by the two major political parties. The administration has submitted a bill to the Congress which urges that funds should be made available for school construction only in those areas where a need is demonstrated. We know there are areas where the number of school-age children far exceeds the space available for classrooms. The administration would also require that the local units match the Federal funds. The Democratic Party proposed legislation for Federal aid to school construction without regard to need or the willingness on the part of the local units to match Federal funds. This represents a major difference in the approach to this highly controversial problem. The important thing to remember is that the Republican Party recognized the need for action and, at the same time, proposed a solution which would allow local units of government to participate and which limited Federal participation.

2. Ever since the Civil War, the issue of civil rights has been debated and discussed. Many office seekers have used this issue as part of a platform to enter high office. However, until 1953, very little in the way of action was taken to solve the problem. I have observed, firsthand, the situation which prevailed on civil rights in our Nation's Capital. For years and years, there were many promises made to the colored population of Washington, but not until the Republican administration came into power was any action taken. Today when you visit Washington, you will find segregation does not exist in the public schools, the public restaurants, the hotels, or the public parks and playgrounds. By Executive action, President Eisenhower has recognized the dignity of the individual and has lowered the bars of racial prejudice. If this present Congress passes civil rights legislation, it will be due largely to the patient and understanding approach taken by the President and the administration. Here we see modern Republicanism at work. It demonstrates a sensitive concern for a social problem and a willingness to take action.

3. For over 20 years, we witnessed the vigorous debate over the issue of public power versus private utilities. The two groups of contestants had become deadlocked to a point where suspicion, fear, and anger were the rule among those who had the responsibility of converting our natural resources for power. I have lived through that long debate, and I know that many of you have debated this question in high school and college debate tournaments. Shortly after the Republican administration assumed its duties in 1953, President Eisenhower advocated a partnership to develop our natural resources. The partners were to be the Federal Government, the private utilities, the State governments, and the local units of government. He said that each partner should share in the work which had to be done. Once again, we see the recognition of a need for action and alertness in developing a workable blueprint for success.

4. Modern Republicanism has been responsive to the human needs of our people in the area of research into diseases, extension of social security, unemployment compensation, and other related programs. The agency of Health, Education, and Welfare stands as a monument to this type of action and accomplishment. It means that our standard of living has advanced to an alltime high, that people are conscious of a commonsense approach to problems that affect them most directly, and that labor has advanced to a greater position of importance in our economy and society.

5. At the same time that the Republican Party has been writing this record of accomplishments, the fiscal and monetary system of the United States has been maintained at an even level. Inflation has been curtailed, and every person's dollar is more stable. This may seem strange to you at a time when so much talk is heard on the general subject of the $71.8 billion budget for fiscal 1958. However, let us analyze the budget for a moment.

In any discussion of the budget, we must remember that 60 percent is accounted for by defense and national security expenditures. If we could eliminate this huge expenditure and just consider the domestic budget, we would find that it is sustained by an alltime high in national per capita income and national gross productive output. We must never forget that our economy is constantly expanding and that we, as a nation, are going through a period of tremendous growth. This you can see in the cars you buy, the clothes you wear, the food processing in the supermarkets of today, the improvement in farm machinery, and the advanced methods which are now employed by business and agriculture.

Even if we include the huge outlays for national defense and security, we find that the percentage of our national income going to the Federal budget is not out of proportion compared to preceding years. Let me illustrate this point: in 1953 the Federal budget was almost 25 percent of the national income, in 1954 it was 22.7 percent, and in the following years it has been declining percentagewise until the 1957 budget represented 19 percent of the national income. The $71.8 billion budget estimate for fiscal 1958 approximates about the same percentage of a projected estimate of the national income for next year.

I would like to see this percentage of our total national income reduced if at all possible, but at the same time I realize that the 19 percent of our national income is considerably less than the 52 percent and 54 percent during the war years of 1944 and 1945. In this respect, I must emphasize the tremendous economic adjustment which has been accomplished since that time without the depression which was once predicted.

Unfortunately, as long as we must engage in the cold war with Communist Russia and her satellites, we must continue to spend much of our revenue on items of defense and national security.

At this particular period in our history, this represents an abnormally large expenditure. The United States is still in the initial stages of exploring and developing the modern instruments of defense. It was 40 years ago that I served in the United States Air Service, in World War I. At that time, the Air Force was in an early stage of development. However, we who were serving thought that our planes were far advanced in comparison with what other countries had.

World War II demonstrated how quickly research and development can change all weapons. Some of you probably flew the B–29 and B–17 bombers. Everyone thought

at that time that there could be little improvement in aircraft production.

Then the atomic age dawned, and we now see how obsolete the equipment we used in World War II has become. Today we talk in terms of missiles, atomic warheads, interceptor missiles, atomic-powered submarines, jet fighters, 'round-the-world bombers, advanced artillery, and pushbutton warfare.

As a member of the Senate Appropriations Committee, I have the opportunity to hear the Chiefs of Staff, the top military and civilian officials of our Navy, Army, and Air Force. These men all testify that in spite of the rapid advances we have already made, we are still involved in day-to-day research and development in the use and production of new weapons. This is another reason why our current budget for defense represents such a large share of the proposed budget for fiscal 1958.

We know that we must never yield our place of leadership to the Communists. To do that would be to seal the fate of freedom, peace, and our democratic way of life. So, we must always ask ourselves this question: How much shall we pay to defend our liberty, our Constitution, our God-given rights? I, for one, would not attempt to place a dollar value on those basic elements of our way of life.

This does not mean that we must go blindly ahead without challenging proposed expenditures. The administration and the Republican Members of Congress realize that every expenditure must be carefully weighed and considered. A conscientious effort will be made to reduce the present budget by an amount which will not place our national security in jeopardy.

At the same time, the administration and the Congress are working to implement the second Hoover Commission report, which will allow us to trim expenditures and save tax payers' money. The executive branch of our Government has already accepted wholly, or in part, 313 of the 479 recommendations made by the Commission. This represents 65.3 percent of the entire report. The 84th Congress enacted 39 public laws, House resolutions, and Senate resolutions which implement 55, or approximately one-third, of the 167 legislative recommendations that the Commission made.

I point these facts out to demonstrate that behind the scenes, there is much activity designed to increase efficiency in government and which will effect an economy. This will appear in future budget requests.

But, remember. When we discuss the large budget requested by the President, we must view that budget in the light of our present-day economy and our growth as a nation.

Now, I would like to discuss the handling of our foreign policy under the Republicans during the past 4 years. President Eisenhower and Secretary of State Dulles assumed a situation in 1953 which was not bright. There was the Korean War, the crisis in Indo-China, and rumblings in almost every part of the world.

The Korean hostilities were ended shortly after the President assumed office. We witnessed a release of tension in Indochina and saw the Red Chinese pull back from their threat of war against Formosa.

The United States truly assumed leadership of the free world under the guiding hand of the President and the Secretary of State. The Russians were placed off balance. No longer was the United States holding back and waiting to see what Russia would do next. The United States became the first to act and placed the Communist world on the defensive. This was accomplished through our leadership in the United Nations, at the Geneva Conference, with the establishment of SEATO and by the strengthening of NATO.

Modern Republicanism again recognized the need for concerted action and met the challenge. The most recent test in the Middle East was met with the same degree of patience and understanding. The job is not finished, but we are not at war, and Russia has not gained domination of that important area of the world.

We have now considered major examples of how the Republican Party is meeting the needs of the people and the responsibility of shaping policy—both domestic and foreign.

Through the past 4 years, we have seen our people advance in all aspects of everyday life. There has been no appeal in this philosophy to special-interest groups. There has been no use of the divide-and-conquer technique of former years. There has been no emotional attempt to pit labor against management, banker against farmer, small against large. Ours has been an appeal for unity—unity for a very real program of progress with benefit to all and discrimination for none. The Republican Party today is a party of heart, mind, and conscience. The heart has been demonstrated by the humanitarian approach to our people's problems. The mind has guided our financial and economic destiny. The conscience has been the balance wheel which recognizes that the Federal Government shall share responsibility with the States and not dominate and discourage local initiative.

This is the type of philosophy which challenges the imagination of adults and young people alike. You are present today to participate in the work of modern Republicanism. As we look ahead, petty differences must be eliminated so that we may pass on to future generations the heritage of a nation which, today, stands as a bulwark of hope, inspiration, and friendship to the entire world.

[From the St. Paul Pioneer Press of April 17, 1957]

MODERN REPUBLICANISM JUDGED BY ITS RESULTS

Senator EDWARD J. THYE adopted an effective and convincing way of explaining "modern Republicanism" in his talk before the Ramsey County Young Republican League.

Rather than emphasizing words and theories, he presented concrete examples of what has been done and what is proposed by the Eisenhower administration and Republicans in Congress.

The administration supports Federal aid for school construction, but only in areas where the need is proved and where local taxpayers are willing to match Federal funds. In contrast, the free-spending policy of the Democrats calls for Federal appropriations "without regard to need or the willingness to match Federal funds."

In civil rights, the Eisenhower administration actually brought about desegregation in Washington, which had persisted under Democratic administrations despite many promises. The Republican civil-rights program now before Congress would get at the root of discrimination in the South by assuring minority groups the right to vote and thus make their influence directly effective in local politics.

Commonsense partnership between public and private agencies and companies in development of power and water resources is part of modern Republicanism. Establishment of the new Department of Health, Education, and Welfare is an indication of the party's concern for human values and individual happiness and well-being.

In discussing the Eisenhower budget, Senator THYE pointed out that the $71.8-billion program for 1958 represents only about 19 percent of the anticipated national income. The 1953 budget was nearly 25 percent of national income, and in the war years the budgets took more than 50 percent of income. Of the total 1958 budget, 60 percent is required by defense and security measures to prevent war and protect the Nation. The foreign policy of the administration likewise has reduced the danger of another world war and has put Russia on the defensive.

Senator THYE has given an excellent summing up of the record of "modern Republicanism." Its results are the best proof of its soundness.

Address by Former Senator Lehman Before American Jewish Committee

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered on April 10, 1957, by a very distinguished former colleague of ours, one of the great Americans now living, in my judgment. I refer to an address by former Senator Herbert Lehman, of New York, at the 50th anniversary observance of the American Jewish Committee, in New York City, on April 10, 1957, on the subject the Pursuit of Equality.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PURSUIT OF EQUALITY

(By Herbert H. Lehman, honorary vice president, American Jewish Committee. American Jewish Committee's 50th anniversary observance, April 10, 1957, Waldorf-Astoria Hotel)

The pursuit of equality is part of the pursuit of freedom. It is the quest for the means of making freedom meaningful, by extending it to all and by eliminaing those contradictions in it which have developed in our social, political, and economic life.

The pursuit of equality in America is as old as the New World itself. The pursuit of equality led the Pilgrims to Plymouth Rock, led Roger Williams to Rhode Island, and William Penn to the banks of the Delaware and the Susquehanna.

The pursuit of equality, and the struggle for equality, animated Sam Adams, John Hancock, Benjamin Franklin, Thomas Paine, Thomas Jefferson, and James Madison. It inspired William Lloyd Garrison and John Brown. In fact, the story of the pursuit of equality in the United States is the history of the United States.

My purpose in referring to those heroes of our past is to indicate that the pursuit of equality is one of the most continuous and obvious threads in the American tradition.

This pursuit has been the crux of continuous struggle. Obstacles have bedeviled the way. Some phases of the struggle have been violent and bloody. Advances have been followed by retreats and victories by defeats.

But, in general, the direction of the march has been forward. Progress has been made.

As I have said, the pursuit of equality is part of the pursuit of freedom—an inseparable part. Freedom without equality is meaningless.

At this point let me try to clarify an area of some confusion in many minds—the confusion between civil rights and civil liberties.

Our civil liberties consist of the entire body of the inalienable individual rights guaranteed by the Bill of Rights—the right

freely to believe, to think, to express one's self, and to worship, without let or hindrance. Civil liberties are the basic freedoms: Free speech, free press, free assembly and free worship; and the right to individual privacy, security, and free trial.

Civil rights, on the other hand, are rights not granted but denied. Civil rights are those rights denied to some individuals because of their race, color, or national origin. The rights in civil rights is the right of all individuals to equal treatment under law, without restraint or discrimination based on race, color, national origin, or previous condition of servitude.

Civil rights are the right of the American Indian, the Mexican-American, the Filipino-American, the Japanese-American, the Italian-American, the Catholic, the Jew, and the Negro to equal opportunity and equal access to all public institutions and facilities, whether schools or buses. It is the right of all these individuals to unhindered and equal participation in the political life of community, State, and Nation.

It is the right of these individuals to be free of discrimination in employment, in housing, and in the Government service.

It is their right to be secure against physical attack or coercion based on their race, creed, color, or national origin.

These are the civil rights. They are the opposite side of the coin of civil liberties. The constitutional charter of civil liberties is the first 10 amendments. The basic charter of civil rights is the 13th, 14th, and 15th amendments.

Within the past 50 years, within the life of the American Jewish Committee, the struggle to defend our civil liberties has been won and lost and won again. We have had waves of danger and waves of repression.

Within very recent years, we had one such wave, of tidal proportions which threatened to wash away the very underpinnings of our democracy.

The worst of that wave is some 3 years past now. The forces of freedom prevailed, but much ground was lost.

I do not think we yet know how great and deep the damage was. Much of it is still in obvious evidence. The continuing and still dangerous vagaries of the House Un-American Activities Committee and of the Senate Internal Security Subcommittee are present backwash of the tidal wave that was so recently here.

We must not forget the recent struggle to defend our civil liberties. We must not forget the epidemic of fear which was deliberately and successfully spread to paralyze the efforts to defend civil liberties. There were many men of apparent good will who chose to look the other way and who retreated into what they thought were storm cellars but who, by their conduct, actually helped the forces of McCarthyism to hold full and almost unchallenged sway.

Today we are witnessing the same kind of a spectacle—the same kind of conduct—in the civil-rights struggle. It is the same story all over again. And this may well be the climactic chapter of the epic called the pursuit of equality.

Let us go back a moment and try to approach the subject of civil rights—this central phase of the pursuit of equality—with some perspective as to time and direction.

With respect to civil rights, as with civil liberties, the last 50 years have seen alternating and mixed periods of progress and retreat.

In general, the quarter century since 1932 has been a period of progress. The 25 years before that was a period of either stand still or of outright regression.

Because civil rights, by the definition already given, involves different kinds of discrimination, affecting many different groups, it is understandable that there have been different rates of both progress and regression for the different groups and the different types of discrimination.

Thus, within the last 25 years there has been steady and even spectacular progress with respect to discrimination on the basis of religious creed or national origin. This progress has been especially marked for Catholics and for Jews.

I believe that in America today there is less prejudice and discrimination against individuals on the basis of their religion or national origin than at any time in my memory.

The American Jewish Committee, among other organizations, can claim a share of the credit for this progress.

But let us never forget that all forms of prejudice, bigotry, and discrimination, against all minority groups, have a basic relationship. While any single group in the population is being discriminated against on grounds of color, creed, or national origin, all minority groups suffer or are endangered.

Progress for one group is progress for the other. Regression for any group, or with regard to any particular form of discrimination, is a defeat, and a threat, to all.

Today the chief focus of the civil-rights struggle is on our fellow Americans of Negro race. True victory in the pursuit of equality depends on victory in their cause. That struggle is in deep crisis.

Most of us have recognized for some time now that oppression of Negroes, by discrimination and segregation, not only saddles the Nation's conscience with the burden of injustice, and darkens it with the stain of hate, but also deprives the Nation of the total potential contribution which could otherwise be made by these Americans.

Discrimination and segregation are not only wrong and wicked in themselves; they are also costly to the country.

There is a body of studies and statistics to prove this observation beyond question or doubt. Each day new evidence accumulates that the practice of segregation and discrimination in America is not only unjustified and unjustifiable, but is uneconomic. It is also degrading, not only to its victims, but to its practitioners.

As Vice President NIXON, just back from Africa, is privately saying—and I hope he will say so publicly soon—the American practice of discrimination against Negroes is a crippling handicap in our relations with the increasingly influential peoples of Asia, and also with those in the new continent of the future—Africa.

These are facts. They need to be brought home, again and again, to every American, including and particularly those in the Deep South.

But I am afraid that there are many people in the South today, far too many, who are no longer interested in facts. They do not even wish to hear them. They vastly prefer not to think of them. They devoutly wish the civil-rights problem would somehow resolve itself and disappear.

I am afraid also that there is beginning to be something of a conspiracy of silence even in the North regarding the civil-rights problem. We are hearing less and less about it in the newspapers and magazines and over the air.

In fact the problem is growing heavier. Resistance to the law of the land has stiffened into total inflexibility.

The Supreme Court issued its unanimous ruling in the school segregation cases on May 17, 1954—3 years ago. Since that time there have been hundreds of actions by the Supreme Court, and by the lower courts in implementation of the original Supreme Court decision.

Moreover, the Supreme Court has plainly indicated, by its decision in the Montgomery bus case and others, that all forms of officially sanctioned segregation are unconstitutional and illegal.

In the period immediately following the original Supreme Court decision in the school cases, and the decrees implementing that decision, there was good basis for hoping that school districts in most parts of the South would, however grudgingly, accept the law of the land. It was widely felt that school integration and the abolition of segregation was now merely a matter of time—of when.

All the reports I get from the South these days fail to support the original optimism.

The real extremists—the Ku Klux Klan, the White Citizens Councils, the White Supremacists, the demagogues and rabble rousers—these have gained the upper hand in many if not most areas where moderates seemed to have been in charge 2 years ago.

State legislatures throughout the South are moving, if they have not already moved, to follow the Virginia model, not only in offering resistance to integration, but in absolutely outlawing it. Local school districts which might contemplate integration, are being absolutely forbidden and prevented from doing so. In some States, a school superintendent who permits integration is made a felon and imprisoned.

One State legislature after another is taking up arms against the NAACP, as if by outlawing the NAACP the institution of segregation can be preserved.

The words one hears coming out of the South these days are increasingly harsh and strident. The Supreme Court has become the common target of such vile calumny, from even the most responsible quarters, as to raise the question of how the damage being done to the necessary respect for law can ever be repaired in the South.

In most parts of the South, tensions are deepening. The worst calamity of all has been the almost absolute breakdown of lines of communication between the Negroes and the whites.

The whites are isolated from the Negroes and vice versa. Men of good will who would repair this situation fear to do so. Fear, indeed, is the chief force in the South today. Fear is everywhere, among the Negroes and among the whites.

They fear each other and they fear themselves.

The white liberals in the South have been silenced. All who had any doubts concerning the validity of white superiority, supremacy, and domination have had their lips effectively sealed.

I am deeply troubled and alarmed by this situation. I am afraid that we have passed the point where we can hope that time and the courts will take care of everything.

There was a time 2 years ago, and a year ago, and 6 months ago when Negro leaders and southern white leaders might have come together and begun to resolve the crisis.

There was a time when Cabinet officers and Federal officials at all levels could have encouraged and led the way for local officials to make reasonable plans for school integration and actually to start it.

There was a time when the concentrated influence and authority of the executive branch of the Government could have mobilized, on a neighborhood, community, State, and regional basis, all the forces of good will which were and still are plentiful in the South, both among Negroes and whites.

Nobody in high authority in the executive branch of the Federal Government made a single move in this direction.

One man could have and should have given the orders and set the moral tone for this undertaking.

I mean the President of the United States.

Some of his Cabinet officers might have taken the lead on their own initiative and that might have turned the trick at the time. But President Eisenhower would not make a move, and neither would any of his Cabinet officers.

Today, in my judgment, President Eisenhower is the only official who can halt the rapid, dangerous deterioration in the situation. He is the man who must now take the lead in resolving this most serious internal crisis which the United States has confronted for a century.

Should he continue to try to stand aloof from this crisis, he will, I predict, be subject to the very harsh judgment of history.

President Eisenhower must act now.

All of us, as private citizens, must urge and demand that he act.

I urge that President Eisenhower immediately convene a White House conference of white and Negro leaders from the South—educators, businessmen, lawyers, clergymen, and politicians—to reestablish the lines of communication by the white and Negroes.

I urge that President Eisenhower undertake a special tour in the South and meet with the local leaders in each area to discuss and advocate integration and the abolition of segregation.

I urge that President Eisenhower and Attorney General Brownell call together all the law-enforcement officers of the Nation and take counsel with them on how to restore the rule of law, and respect for law, in the South.

I urge that President Eisenhower call a meeting of all the Governors of the Nation and discuss with them the current crisis.

I urge that Secretary of Health Folsom do the same with the educators and the public welfare administrators of the Nation.

The entire executive branch of the Federal Government must show that it considers a national crisis to exist. It must appeal to all men of good will in the North and in the South, to help resolve this crisis.

It is an emergency; emergency action, on the part of the executive departments, is called for. Nothing short of that will do.

There are, of course, many other actions that need to be taken on the civil-rights front.

Congress must be urged to act on the civil-rights legislation now pending before it, including the measures that will provide Federal support for the constitutional right to vote, for the right to be free of the threat of physical violence, and the right to enjoy equality of opportunity in employment, education and other aspects of communal life.

It is an obvious, if lamentable fact that both the executive and the legislative branches of the Federal Government have been virtually paralized in this critical phase of the pursuit of equality. Only the judiciary branch has continued to enunciate the obvious—that segregation is discrimination, and discrimination is unconstitutional, illegal and against national policy.

The southern spokesmen—the spokesmen of the southern whites, that is—continue blandly to talk as though the southern Negroes had no right to rights, and that the inferior status forced on these American citizens is solely the concern of the States. These southern spokesmen assert the supremacy of local authority—White authority—to dispose of American Negroes as though they were still chattels, and not precious human lives with inalienable rights guaranteed by the Constitution. They speak always for the southern whites. Who will speak for the southern Negroes?

I repeat historic words that were said at a national political convention in 1948: "The time has arrived in America to get out of the shadow of States rights, and walk forthrightly into the bright sunshine of human rights."

My friends, there is no time left for further delay and procrastination. Both the executive and legislative branches of our Government must proceed to discharge their obligations regardless of the difficulties and possible political costs. Some of the leaders of the political party to which I happen to belong, have pleaded as an excuse for inaction on civil rights, that substantial action would split the party. Lately I have heard reports that leaders of the Republican Party are using the same argument against vigorous civil-rights action on the part of the administration. The Republican Party is developing a southern wing, too.

I believe that it would be much better to split the political parties of this country than to split the country. Actually I do not think that these splits that the political leaders are so afraid of would really develop. If the leadership of both parties acted on this problem in a bipartisan spirit, there would be no splits and no damages, political or otherwise.

In my judgment, all who believe in the cause of freedom, all who know that when the rights of any individual or group of individuals are violated, the rights of all are threatened, must now mobilize their supreme efforts for the struggle. The time is now. It is later than you think. All who would live in freedom and who would struggle for it must come forward now.

Lamartine G. Hardman, Jr.

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the recent news release issued by the American Cotton Manufacturers Institute, Inc., about one of Georgia's distinguished citizens, Lamartine G. Hardman, Jr., of Commerce, Ga., who is to become president of the ACMI at its annual convention at West Palm Beach, Fla., this month.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

BIOGRAPHICAL SKETCH OF L. G. HARDMAN, JR.

Lamartine Griffin Hardman, Jr., of Commerce, Ga., is destined to assume the presidency of the American Cotton Manufacturers Institute, at a time when the textile industry in the United States seems headed into an era of progress and renewed confidence.

Mr. Hardman, president of Harmony Grove Mills, who as vice president of ACMI, helped steer the organization through the critical period of uncertainty brought on by low-wage foreign imports, now is slated to help institute directors and officials formulate policies for a future that now seems filled with hope. If custom is followed Mr. Hardman will become president of ACMI at the institute's annual convention in April at West Palm Beach, Fla.

The incoming president of ACMI has served the textile industry in many capacities including that of president of the Cotton Manufacturers Association of Georgia, director of the Cotton Textile Institute, and at present second vice president, member of the executive committee, and a director of ACMI.

Mr. Hardman's coming elevation to the ACMI presidency has met with approval in the industry where he is widely known for his ability as an administrator and leader.

Popularly known as "Lam" throughout the industry, Mr. Hardman's family background is one of manufacturing, finance, medicine, agriculture, politics, and religion. His father, a prominent physician served as Governor of Georgia from 1927 to 1931.

Born at Commerce, Ga., on July 5, 1906, Mr. Hardman attended Georgia Military Academy and later the University of Georgia, where he received his B. S. degree in 1930.

His professional career led finally to the position of president and treasurer of Harmony Grove Mills at Commerce, positions which he holds today. He also is president of the First National Bank of Commerce and president of Frozen Food Lockers, Inc., of Commerce.

In addition to his distinguished work in various textile trade association positions, Mr. Hardman also is a former trustee of Mercer University at Macon, Ga., and of Truett-McConnell College, Cleveland, Ga.; chairman of the board of deacons of the First Baptist Church, Commerce, Ga.; member of Phi Delta Theta social fraternity; member of the Piedmont Driving Club, Atlanta, and the Capital City Club, Atlanta.

Married to the former Dorothy Shell of Bainbridge, Ga., Mr. Hardman is the father of two sons, L. G. Hardman III, 17, and John B. Hardman, 15, and a daughter, Shell Hardman, 12.

Where the Food Dollar Is Going

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles appearing in the April 15 and April 16 issues of the Washington Daily News entitled "Where's Food Dollar Going?" and "Are Marketing Profits Too High?" and written by Dickson J. Preston, Scripps-Howard staff writer. They contain some interesting comments on the consumer-farmer price situation.

Mr. Preston points up the fact that the American housewife is insisting that the food she buys contain "built-in maid service," including everything from pretopping of carrots to complete pre-cooking of TV meals. He recalls that 10 years ago the farmer got 51 cents out of each food dollar, while currently his share of the food dollar amounts to around 40 cents. Mr. Preston also comments that any decrease in farm prices is more than wiped out by the increased expense of delivering an item of food to the grocer's shelf. After pointing out that higher costs include labor, freight rates, and packaging, he refers to the fact that since 1947, wages paid food marketing workers of all types have risen from a 1947 average of $1.13 to $1.82, and during the same period freight rates have advanced 50 percent.

I am calling the attention of Senators to the articles by Mr. Preston for the reason that they constitute an interesting departure from the stories with regard to the agricultural picture usually carried by big-city newspapers. Too many big-city writers are inclined to assume that the farmer should be left to operate independently and without assistance from his Government in adapting his operations to our changing economy.

They are inclined to state that the farmer is getting rich; that he is obtaining additional income; and that, because of the high cost of living in the cities, the

farmer is not entitled to any subsidy or price support.

The articles point out that the high cost of food to the consumers who live in the cities is not the consequence of something that is benefiting the farmer, but is the result of the in-between costs—in other words, the food handling and packing costs—and that they are not of benefit to the farmer.

Mr. President, Mr. Preston is to be commended for the presentation he has made in specifically pointing out the type of problem which today confronts the farmer.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of April 15, 1957]

THE PRICES ARE UP, BUT WHY?—WHERE'S FOOD DOLLAR GOING?

(By Dickson J. Preston)

If yours is an average city family, you'll spend $500 more for food this year than you did 10 years ago.

The additional outlay will provide a little better diet—though not much—and a little more of it. You'll eat more meat and fresh vegetables, less bread and potatoes.

But only $45 of that extra $500 goes to the farmers who produce your food. Nearly all the rest will be absorbed by a host of transporters, packers, assemblers, processors, promoters, wholesalers, and retailers who are known collectively as middlemen.

POSERS GALORE

What are you getting in return? Is it worth the cost? And if not, what can you or your Government do about it?

Answers to these questions will be sought in hearings soon to be held by a subcommittee headed by Representative VICTOR L. ANFUSO, Democrat, of New York.

Here, according to Agriculture Department experts, are some of the things the subcommittee will discover:

American housewives today are spending billions a year at the grocery for work they used to do themselves. This is know in the food trade as built-in maid service. It includes everything from pretopping of carrots to complete precooking of TV meals.

The expense of delivering an item of food to the grocer's shelf has gone up so rapidly in recent years it has more than wiped out any decrease in farm prices. Higher costs include labor, freight rates, and packaging.

Food marketers' profits, percentagewise at least, are actually lower than they were 10 years ago. And in many cases the dollar profits are lower, too.

Some of the increase goes to pay for promotional gimmicks—trading stamps, premiums, and the like.

Outlook is that this price spread between farmer and consumer will rise, rather than drop, for the next few years. Ten years ago the farmer got 51 cents out of each food dollar. Today he gets 40 cents. By 1967 it may be 35 cents or even less.

Food industry spokesmen insist housewives have demanded the extra services.

POTATOES, ETC.

For instance, washed potatoes sell much faster than unwashed ones even though they cost 2 cents more per pound. That goes also for scraped carrots, washed spinach, cut-up chicken, sliced french fries, boned fish, and even ready-to-bake pie with the rust all crimped.

An Agriculture Department study sets the price of this maid service at only 45 cents an hour.

It estimates a day's meals, with mom doing all the work for the family of 4, would take 5½ hours to prepare and cost $4.90 at today's prices. Using ready-to-cook items, the same meals take only an hour and a half—but cost $6.70.

That's 4 hours less work for the housewife at an added cost of $1.80.

[From the Washington Daily News of April 16, 1957]

YOUR FOOD DOLLAR, WHERE IS IT—ARE MARKETING PROFITS TOO HIGH?

(By Dickson J. Preston)

In the last 10 years, a House agricultural subcommittee reports, the cost of the wheat in a loaf of bread has dropped nearly half a cent.

Yet the price of the loaf itself has gone up a nickel.

That's one sample of the many changes in modern food costs which the subcommittee, headed by Representative VICTOR L. ANFUSO, Democrat, of New York, plans to investigate. Here are some others:

The dairy farmer is getting 5 percent less for his products today than he did in 1947. But the consumer is paying 12 percent more for milk, butter, and cheese.

The grain in a 12-ounce box of corn flakes costs only 2.8 cents compared with 3.6 cents 10 years ago. The corn flakes themselves cost 7 cents more.

Altogether, the price of food has climbed 16 percent in 10 years while the farmer's share has dipped 14 percent. And if the farmer isn't getting it, where does the money go?

BREAKDOWN

Here is a breakdown of what happens to your food dollar today:

To the grocer: 18 cents. (Out of this, his net profit averages a little more than a penny. His United States taxes are about the same. He pays 9 cents for labor and about 7 cents for State and local taxes plus all other costs of doing business.)

To the wholesaler, assembler, and processor: 34 cents. (Profits to these middlemen run about 2½ cents all told, with an equal amount in taxes. Labor costs account for 17 cents. Canning, packaging, commissions, and other costs make up the remaining 12 cents.)

To the transporter: 8 cents. (This includes railway freight and trucking costs from the farmer to the processor as well as from the processor to the wholesaler and retail store.)

To the farmer: 40 cents. Thus half a dozen or more firms may make a small profit out of the food between the farmer's field and your table. Their net take adds up to nearly a dime out of each dollar you spend. And their local, State, and United States taxes come to even more.

PROFITS TOO HIGH?

Are profits in the food marketing industry too high? It all depends on the point of view.

Chain grocery profits in 1947 averaged about 1.5 percent of total sales. Today they're less than that—only 1 percent in 1955. But volume has increased, and most food chains are making more in dollars than they did 10 years ago.

(In terms of investment, grocery chains are netting 11 percent or more.)

Food processors in 1947 netted 2.5 percent on sales and more than 13 percent on stockholders' equity. Today both figures are down. So are wholesalers' profits.

Costs of all these firms, on the other hand, are sharply higher. Wages paid food marketing workers of all types have risen from a 1947 average of $1.13 to $1.82 last year. Freight rates are up 50 percent. The cost of everything from paper to meat cleavers has climbed.

Park Kennedy, President of the Brotherhood of Railway Trainmen

---

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio broadcast by Mr. Tris Coffin on April 3, 1957, in which he speaks of the excellent record and fine character of Mr. Park Kennedy, president of the Brotherhood of Railway Trainmen.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

A few days ago, while Dave Beck was roaring like a wounded lion in the Senate caucus room, another labor leader was testifying before another committee.

Here there were no floodlights, no banks of television cameras, no excited reporters dashing out with bulletins, no lines of spectators winding down the hall. Virtue, it seems, has no news value.

This witness was Park Kennedy, president of the Brotherhood of Railroad Trainmen, a modest, soft-spoken man who lives the arduous life of a missionary. He rarely has time to spend more than a few days at one sitting in his small Minneapolis home. He has no swimming pool, no Cadillac, no office to match the splendor of the Czars.

His union is run with the scrupulous attention of an old-line insurance company. All of the officers, including Kennedy, are bonded. All of the union's books are audited by independent auditors, and statements given to members. The union, in its investments, abides by the same rules as for savings banks.

The brotherhood was formed 74 years ago on a brisk September day in a caboose. It was Caboose No. 10 of the Delaware & Hudson Railroad yards where the 8 brakemen met. Today, the BRT has some 200,000 members in North America. It is regarded, generally, as a model of constructive unionism. It is respected by the men in overalls in the yards and by railroad presidents.

Park Kennedy looks like the dedicated president of a small college. He speaks softly and earnestly about economics, foreign policy, and politics. He looks steadily and tolerantly through horn-rimmed glasses.

Kennedy started railroading as a news butcher on trains running between Chicago and Des Moines when he was 17. A news butcher walked up and down the aisles of the train selling apples, candy, and newspapers from a basket. He slept, if at all, in a vacant seat.

Park Kennedy caught the romance of travel, moving through strange towns, seeing new faces, and hearing new dialects. So, at 18, he became a freight brakeman in the Dakotas. He saw the blizzards howl out of the north and cover the dark earth with blankets of snow. Later, he worked as a switchman in western Canada and our own Midwest.

Kennedy has lived much of his life among the men who plow the soil and plant the grain. This has given him an unusual sympathy for farmers, and he is a strong voice in labor demanding justice for the man on the tractor.

He looks on progress as a challenge, and even now is deep in a study of automation. He did not oppose the St. Lawrence Seaway,

although some saw it as a threat to railroad labor. To him, it was a new vein of commerce.

He has been through all of Western Europe and Israel, talking with labor people and making notes. More than a year before the Middle East flared up in a blaze of sparks, Kennedy wrote:

"I came to the conclusion that Israel, in order to be able to continue with its vital work, first and foremost requires security. It is the task of the free world and the free labor movements to do everything in their power to see to it that Israel is guaranteed against aggression, or infringement of its sovereignty and integrity."

But most of his time is spent with the trainmen, where they live and work.

As for Dave Beck, Park Kennedy says, "He is no more typical of the labor movement than the spoiled apple is of the orchard."

De-Icing of Great Lakes

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. WILEY. Mr. President, I have been interested for some time in reports which have been carried in the press concerning Sweden's successful experience in extending its program of de-icing considerable stretches of water which might otherwise be 100 percent frozen during the winter season.

Each year, with the onset of winter, we of the Great Lakes region experience the annual problem of the icing of the lake waters. And with the approach of spring, we impatiently await what has now once again come about, and that is the annual opening of the shipping season.

Last Friday I noted press reports that Lake Superior had been closed to shipping because of a tremendous icefield which locked Whitefish Bay just west of Sault Ste. Marie.

Six Great Lakes vessels were trapped in the ice. Three last Friday were freed by one of the Coast Guard breakers.

Naturally, the question has long intrigued us of the lakes: Can we not do something about de-icing, at least partial areas of lake water?

I do not mean simply by using icebreakers, for they obviously have limited effectiveness against the massive floes of ice.

I mean using man's inventiveness and ingenuity to come up with an underwater device such as our Swedish friends use.

In last Saturday's Milwaukee Journal there was a most interesting editorial entitled "Fighting Ice With Bubbles," which I believe is the sort of thought-provoking comment which well merits the most serious attention of our lake authorities.

I, for one, intend to take it up with Federal officials here to see what can be done about appropriating a small sum for experimental purposes to help overcome man's ancient foe—ice.

Obviously, as the Journal editorial points out, the de-icing of key areas, even for a matter of a week or two, could be of tremendous economic significance.

I ask unanimous consent that the Journal editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIGHTING ICE WITH BUBBLES

Western Great Lakes shippers have just sweated out once again the annual drama of opening the ice in the Straits of Mackinac and the approaches to the Soo locks—the St. Mary's River from the south and to the north Whitefish Bay in Lake Superior, which has been temporarily blocked again.

For this job the Coast Guard provides one of the world's most modern icebreaking ships, but even her accomplishments are a triumph more of brute force than of science. This spring she had an unusually rugged time of it, as strong winds replugged the straits with floe ice and stacked it 25 feet deep in Whitefish Bay.

Sweden has turned to science in the battle against ice. The Stockholm region is a vast maze of inland waterways, lined with ports and crowded with shipping when open. The principle of the Swedish device is as simple as that which keeps the Juneau Park lagoon open for the ducks on the Milwaukee lakefront.

Neoprene tubing full of tiny holes (like your lawn soaker) sends a constant stream of compressed air bubbles from the channel bottom to the surface, lifting the warm water. In experiments, even from a 50-foot depth under 2 feet of ice, a usable channel was opened up in 2 weeks. In regular use, of course, operation would begin before ice forms, to prevent it.

Now the Swedes plan a working installation the whole 60-mile length of the long estuary that extends past Stockholm to the Baltic. Only comment so far from Great Lakes-St. Lawrence seaway authorities is that the idea has been suggested to them.

The thing has limitations, of course. It wouldn't prevent or melt such windrows of flow ice as caused the jams in the Soo region this spring. But it might well have real practicality at least for keeping confined channels open longer at the onset of winter, in the St. Lawrence as well as the western lakes, and perhaps susceptible to earlier spring openings.

The key to our situation is the tremendous carrying capacity of the lake freighter. Just 1 inch of controlling depth more or less, or one round trip per season more or less, has an economic impact in the hundreds of thousands of dollars. If channel de-icing could keep the straits and the Soo open even a week or two longer, it might prove more than worthwhile.

A fantastic thought, possibly, but men have been called harebrained before and yet done greater miracles than this would be.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign-Aid Questions Getting a Needed, Thorough Going Over" and published in the Birmingham News of April 8, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID QUESTIONS GETTING A NEEDED THOROUGH GOING OVER

The Nation is taking a new extensive look at its foreign-aid programs.

It's time. We've been at that aid business for 10 years now. Something like $56 billion has been spent. That averages about $330 for each American.

Our national budget has kept getting higher and higher, though we are not at war, there is no active fighting on a large scale anywhere. The demand for economy is widespread and intense. More and more our people have come to realize that we had better watch out very carefully lest this trend lead us into disaster.

What can be done in the way of sound saving in our foreign-aid programs? President Eisenhower has asked for a total of $4,400,000,000 for the coming fiscal year. His position is that well-considered use of our money for aid to other peoples is an excellent, an urgently needed investment.

Critics have maintained that there is much waste and ineffectiveness in those programs. Some have urged that they be ended completely. Others contend that at least drastic cuts in expenditures can and should be made.

Advocates point to what they consider tremendous achievements: The Marshall plan's contribution to the remarkable recovery of Western Europe. The crucial aid to Greece and Turkey. The help to Korea and Formosa and free forces in Indochina. And now, of course, there are great dangers, military, political and economic in the Middle East and Africa, and President Eisenhower's plan for the Middle East has been advanced.

No one, of course, can prove what would have happened if such aid programs had not been carried. It is conceivable that Western Europe otherwise might have been run over by the Communists, that the situations in other places might be much more unfavorable, if help had not been extended. This paper shares that view. It also agrees, broadly speaking, that wisely planned and administered aid by our country probably will be needed for a good many years to come. The struggle between freedom and communism seems likely to continue in many places for a long time.

Military aid in the right places can be a contribution, of course, to our own defense.

Economic aid may be a big factor in developing or strengthening free ways of life in numerous areas, thus contributing substantially to the resistance to Communist lures and advances.

So we believe that President Eisenhower's proposals should be given careful, sympathetic consideration.

But we also hold that it is obvious that there is need for a very penetrating study and a very thorough consideration of all aid proposals. We don't believe real friendship can be bought and sold, of course. We do believe that aid in need on an intelligent, mutually cooperative basis can work to the advantage of those aided and those giving the aid. It is that kind of aid, within our means, that should be our objective.

Where military weakness of a nation desiring aid might mean great danger of a new Communist advance, whereas some help could be reasonably expected to end or at least reduce that danger, the answer as to the problem involved, generally speaking, seems clear.

Where urgently needed economic assistance could give real support to freedom, we certainly would not be indifferent.

But the strictest examination of the questions involved in foreign aid should be the invariable rule. There should be no loose throwing around of money. The dangers in our own financial position also should be given due consideration in making any decisions.

An incisive, comprehensive, down-to-earth, and down-to-dollar sense study of all pending foreign-aid proposals is imperative to sound continuation of these programs.

Memorial to Edgar Allen Poe

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. BEALL. Mr. President, although we Marylanders take pride in the tradition of positive action which has been established by the sons and daughters of our great Free State, we occasionally must admit that our work on certain worthy projects has been allowed to lag. Such a situation was recently discussed in the Baltimore Beacon, a newspaper which is edited and published by Mr. Maurice R. Shochatt. According to the Beacon, our efforts to provide a proper and lasting memorial to Edgar Allen Poe have not always received the prompt attention they so rightfully deserve. This matter is of importance, not only to Baltimore and the entire State of Maryland, but also to all parts of the world where Poe's works have been read and enjoyed. I therefore ask unanimous consent that the article published in the Beacon be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POE STATUE IN WYMAN PARK CAN MATCH POET IN TRAGIC NEGLECT

Baltimore is proud to be associated with Edgar Allan Poe and his deathless verse. But paradoxically, the Monumental City, through the years, has not treated the immortal bard too kindly.

Take, for example, the drive now being conducted by the Uptown Civic Association to obtain a more prominent position for a Poe statue located in Wyman Park.

Headed by Warren J. Weinberger, president; Reuben Fedderman, Eli Baer, and Bernard Potts, vice presidents; Albert L. Sklar, chairman of the board; and Max R. Israelson, consultant, the Uptown Civic Association is urging that this statue be placed in the spot formerly occupied by the General Samuel Smith statute in Wyman Park.

Officers of the group point out that this particular Poe statue has hitherto been overlooked because it now stands in an obscure triangle formed by 29th Street, Wyman Park, and North Howard Street.

The movement for the relocation of the statue has been endorsed by Traffic Director Henry A. Barnes; Arthur D. McVoy, director of the planning commission; the Evening Sun, and the Edgar Allan Poe Society. A number of years ago, 27 to be exact, this same Poe statue in Wyman Park was involved in a story that received headlines and stories from coast to coast and border to border. The Baltimore Sun reported the following story on May 30, 1930:

Unable longer to tolerate what he said was a misquotation from The Raven on the Poe Memorial in Wyman Park, Edmond Fontaine carried out his published intentions to chip off a superfluous letter "S." And, although he declared in a subsequent statement that there could be no real charge against him because he did nothing but good, he was lodged in Northern Police Station unable to furnish $101.45 collateral after his arrest on a charge of defacing the monument.

"Dreaming dreams
no mortals
ever dared
to dream before."

Thus read the inscription on the face of the monument while accepted editions of Poe's works have the word "mortal" instead of the plural form.

Fontaine had earlier noted in a letter to the Evening Sun Forum: "It has been 7 years since the piece was unveiled. And the error on the pedestal in the lettering of Poe's poem is still standing as a black mark against the taste and literary appreciation of Baltimore. I hereby serve notice on the powers that I will go and chisel out the offending letter S for the good of my soul." Mrs. Sally A. Bruce Kinsolving, president at the time of the Poetry Society of Maryland, stated at the time that at a meeting of the Edgar Allan Poe Society it was suggested that steps be taken by the Society to replace the present disintegrating base of the monument with a worthier one bearing the proper inscription. Nothing, incidentally, was ever done about that suggestion. A Baltimore Sun editorial published in June 1930 stated in part:

This much is true—that the quotation from Poe on the monument to Poe himself was wrong. It is preposterous for a city and its officials to profess the deepest reverence for the genius of the poet and claim him annually for the greater glory of Baltimore, and yet tolerate a gross and frequently cited error on a civic memorial to him. It is true that poetry suffers more from such mistakes than any other thing in the world. To add an extra syllable, to take away a single letter or tack one on is to do to poetry, especially to such poetry as Poe wrote with the greatest of intellectual precision, an astonishing and awful violence. There can be no doubt that as it stood, the quotation was an annoyance, a stupidity and a reflection upon the sense and taste of the city.

In case readers may wonder what happened to Mr. Fontaine, "Maryland: A Guide to the Old State Line," a WPA project published in 1940, reported in regard to Mr. Fontaine: "Admirers defended him and the case was dropped." But to date the Poe statue in Wyman Park is neglected and forgotten and treated just as shabbily as Edgar Allan Poe was doomed to be treated during his days on earth. Is it any wonder that, when arrested, Fontaine stated: "Poe himself would suffer agonies over the neglect of the Baltimore public for his monument."

Look Magazine Home Achievement Award to Little Rock, Ark.

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. FULBRIGHT. Mr. President, I was very pleased recently when I learned that the capital city of my State, Little Rock, had been selected this month as one of nine American cities chosen to receive a Look magazine community home achievement award. These awards are conferred to give recognition to outstanding citizen activity and accomplishment in improving homes and residential areas. The citizens of the nine cities selected to receive these awards can well be proud of their achievements in this field, and I am especially proud that the city of Little Rock was among those selected. I wish to take this opportunity to congratulate the energetic and civic-minded citizens of Little Rock, whose activities made this award possible.

Much of the credit for the progress which has been made by Little Rock in this field goes to Mr. R. Redding Stevenson, who recently resigned after serving for 16 years as chairman of the Little Rock Public Housing Authority. The Arkansas Gazette, in an editorial on March 11, 1957, summed up Mr. Stevenson's contribution to the community as follows:

His dedication and persistence have given Little Rock a housing and redevelopment program currently rated among the best in the Nation. Although municipal resources for matching Federal grants have been severely limited, the authority has brought into being such major projects as Granite Mountain, Dunbar, and Philander Smith, and has others of comparable magnitude in the works. In the process some of the worst of the city's slums have been cleared and the land put to new and constructive use for public, industrial and residential purposes.

But as important as the projects themselves has been their byproduct. Working closely with the city planners, the authority has used its resources to redirect the city's basic growth patterns. In recent years public housing has become secondary, and the emphasis has been on long-range redevelopment, the salvaging of changing neighborhoods before they slip into decay.

Mr. President, I ask unanimous consent that a letter I received from Jane Douglas of Look magazine, informing me of the selection of Little Rock for this honor, together with the article on this subject appearing in the April 30 issue of Look magazine, be printed in the Appendix of the RECORD.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

LOOK,
COWLES MAGAZINES, INC.,
New York, N. Y., April 11, 1957.

Senator J. WILLIAM FULBRIGHT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR FULBRIGHT: Little Rock, Ark., is the winner this month of a Look 1956 community home achievement award, an honor conferred for exceptional effort and achievement on the part of its citizens in improving the homes and residential areas of the city.

The community home achievement awards, given for the first time this year, were established by Look to confer nationwide recognition on those communities whose citizens have taken active steps, of major significance and proportion, to meet and overcome one of today's most urgent local civic problems, the problem of slums, blight and deterioration in the residential neighborhoods of an overwhelming number of the Nation's cities.

Little Rock is one of a total of nine cities on which Look is bestowing community home achievement awards for accomplishments during the calendar year of 1956, or for the culmination in 1956 of preceding efforts and achievements. The activities of the winners are described in an article on

the awards appearing in the April 30 issue of Look, on the newsstands April 16.

Because I am sure you will be happy to know of this honor that has come to your constituents, I am enclosing a set of advance tear sheets of the forthcoming Look article.

With kindest regards and good wishes.

Sincerely yours,

JANE DOUGLAS.

[From Look magazine of April 30, 1957]

THE LOOK COMMUNITY HOME ACHIEVEMENT AWARD—NINE CITIES LEAD DRIVE TO BETTER UNITED STATES HOUSING

(By Gereon Zimmerman)

Americans worked at record pace in 1956 to spruce up their homes and communities. Millions of do-it-yourself experts (with blistered palms) worked on their own homes. Professional city planners (with a sense of urgency) speeded billion-dollar housing projects and programs to renew and redevelop large urban areas.

In Chicago, wreckers' cranes demolished tenements to clear sites for new housing projects. In Seattle, Mrs. William Ryder camped at the telephone and urged neighbors to attend Queen Anne Hill improvement meetings. In Indianapolis, George Berry worked long hours under the Planner House program to help build his own home and earn the mortgage down payment during its construction period. The drive to conserve and enrich the $250 billion investment in United States dwelling units has never been so widespread or so productive. The effort to halt the deterioration of old dwelling units must be pushed, for even though 1 million new homes have been built each year since 1949, there is not enough good living space for the rapidly expanding United States population.

To give recognition to outstanding citizen activity and accomplishment in improving homes and residential areas, Look set up a program of community home achievement awards that is unique in the public-service field. A panel of experts chose nine cities for the awards and cited seven others for honorable mention. Albert M. Cole, administrator of the United States Housing and Home Finance Agency, was chairman. In evaluating each community's achievements, Cole and the other jurors laid particular stress on citizen participation.

The award-winning cities are: Baltimore, Md.; Chicago, Ill.; Indianapolis, Ind.; Little Rock, Ark.; Memphis, Tenn.; Norfolk, Va.; Rochester N. Y.; Seattle, Wash., and Shreveport, La.

These cities won honorable mention: Dayton, Ohio; Dallas, Tex.; Clarksville, Tenn.; Los Angeles, Calif.; Perth Amboy, N. J.; St. Louis, Mo., and Washington Terrace, Utah.

The winning cities will soon receive the bronze Look community home achievement award plaque shown above. Other awards will be made next year to cities whose improvement achievements are outstanding in 1957. A summary of the accomplishments of the nine winning communities follows.

Here is what communities did to win their home achievement awards:

BALTIMORE, MD.

Residents of the Bolton Hill district were devoted to the charm of their historic neighborhood and its handsome century-old houses. To check the deterioration of the area, more than 200 neighbors bought shares in Bolton Hill, Inc., a corporation that buys run-down properties, restores, and then resells or rents them. All profits revert to a revolving fund to continue the preservation of the neighborhood. George Thomas, executive vice president of Bolton Hills, Inc., says: "Our project is a permanent one."

CHICAGO, ILL.

The metropolis kept changing—for the better. It created a new planning department, to implement its plan Atlas, a master plan for future growth. It launched six new slum-clearance projects. The law department put the heat on slum landlords. (Result: a sixfold increase in convictions of housing-code violators.) Mayor Richard Daley proclaimed 1956 as Home Improvement Year. Greater Lawndale alone spent $1½ million on home betterment. The 35 community-conservation groups continued their work.

MEMPHIS, TENN.

The Bluff City accelerated slum clearance and individual home rehabilitation. Rigid inspections resulted in the demolition or repair of more than 5,200 units. Memphis put into effect a master plan for the repair or razing of all substandard housing and also filed plans for major urban redevelopment and renewal projects with the Federal Government. Memphians spent more than $6 million for home improvements last year. Their belief: You can get more done through citizen cooperation than by court order.

NORFOLK, VA.

The Redevelopment and Housing Authority completed razing of 4,300 hovels that once served as dwellings; 90 percent of a 3,000-unit public-housing project was completed and occupied. To beautify public-housing units, the authority operated its own nursery, planted shrubs and trees for tenants. Home-service advisers provided residents with information and aid on property maintenance. Norfolk also planned to level another 500 slum dwellings, tightened its zoning ordinances, enforced its housing codes.

INDIANAPOLIS, IND.

Planner House Homes, Inc., was a top achievement in a long-range, $25 million improvement program. The corporation enabled a buyer to earn his mortgage down payment by working on his own home. This unusual "sweat equity" method worked so well that about 150 attractive homes (appraised at $12,000 to $14,000) now occupy land once covered by shacks. Almost all the homes are owned by Negroes. Planner House, a social agency, proved that minority housing can be a financial and social success.

LITTLE ROCK, ARK.

The city completed its Dunbar Redevelopment Project, which demolished 142 slum dwellings. It began the Granite Mountain project, where a community of light industry and low-rent housing will replace a slum. The Philander Smith project will clear a blight of "shotgun shacks" and the land will be used by Philander Smith College. The Metropolitan Planning Commission moved ahead on the 25-year Metroplan. The women's chamber of commerce brought pressure on landlords who violated codes.

ROCHESTER, N. Y.

Citizens began the expansion of Cobbs Hill Village, which houses the aged in bright, modern individual apartments for approximately $46 per month, including all utilities. Cobbs Hill Village is an independent, nonprofit organization. A housing ordinance with teeth in it was passed. Local newspapers and other media cooperated in publicizing the programs of the Rochester Home Improvement Action Committee. The city also made progress on redevelopment plans for the Baden-Ormond area.

SHREVEPORT, LA.

Homeowners rehabilitated more than 1,000 dwelling units classified as substandard under the terms of the new minimum-housing ordinance. Shreveport also completed a master plan for future growth. As one feature of it, Mayor James C. Gardner directed successful municipal cooperation with private capital in the development of Hollywood Heights. This suburban residential community for Negroes is planned to have 1,000 one-story homes of striking contemporary design in the $10,000 price bracket.

SEATTLE, WASH.

Community teamwork brought a new look to the Queen Anne district. Neighbors formed the Queen Anne Civic Development Committee and worked with Operation Home Improvement. University of Washington experts devised a home-improvement questionnaire in which owners were asked to rate their homes. More than 2,000 homeowners took part and Seattle merchants promoted remodeling. The result was a flurry of improvement activity.

Economy Cars

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17, 1957

Mr. BUSH. Mr. President, a subject which is of increasing interest to travelers on our highways in the United States is the question of the number of automobiles and the kind and speed of the automobiles which are used on those highways.

One of the significant developments of the past 2 years, particularly, has been the large number of imported small automobiles which we find on our highways in the United States. Personally, I am very glad to see these small cars there, and I hope to see many more of them there.

The burden of my remarks today is to call to the attention of the motor industry in the United States, and those interested in it, including the labor organizations which are identified with it, the fact that that industry ought to get busy and supply consumers in the United States with small cars which are comparable in size, speed, price, and general utility to the various cars being imported from abroad.

My view is that the building and use of small cars should be encouraged, and not discouraged, by the automotive industry in the United States. In the long run, such encouragement will be for the benefit of all our people, and will represent a very healthy development.

If the automotive industry does not follow this course, I am very much afraid that the market will be preempted by other countries, and that, for the first time, we shall be finding the motor industry of the United States coming to Washington requesting that a tariff be placed on the importation of automobiles. That is something which the motor industry has always opposed. On the contrary, if has always been very much on the free-trade side of the argument.

I hold in my hand a very good article on this subject from the Wall Street Journal of April 10. The article is en-

titled "Economy Cars." I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMY CARS—EUROPE'S TINY AUTOS FACE BIG TEST AS MORE MAKERS INVADE UNITED STATES—HEINKEL AND BERKELEY JOIN VOLKSWAGEN; FIAT TO BOW SOON; DETROIT IS SKEPTICAL—SAVINGS FROM A "PONY CART"

(By Daniel M. Burnham)

A sleek, tan Renault Dauphine zips between two lanes of snarled city traffic, sneaks around a curve ahead of a turning taxi and whines off down the street.

"The way I figure it this pony cart will save me the equivalent of two dresses and a trip to the beauty parlor in lower fuel costs before the year is out," says the car's pert, green-eyed driver, a secretary for a Manhattan advertising executive.

The economy-minded secretary belongs to an avant-garde of American car owners who are showing more and more interest in Europe's low-cost, snub-nosed models. They're still a small minority, of course, compared with the army of consumers who remain loyal to Detroit's bigger, more powerful, and more expensive makes. But Detroit continues to keep an eye peeled to see just how far West Germany's Volkswagen and its beetle-like relatives can penetrate the American market.

THE ACID TEST

One thing seems certain: 1957 will be the year when Europe's so-called economy cars will get their acid test in the United States. A year ago only a half dozen manufacturers were peddling European models in the economy range—$1,700 and under. But with the recent United States introduction of such makes as the German Heinkel and the British Berkeley, and the debut of the Italian Fiat later this month, no less than 16 foreign producers will ply the American market this year.

This figure doesn't include at least six other European automakers who are testing the United States market with models retailing from about $2,000 to $12,000 or more. These include the sporty MG and Jaguar, and the stately Rolls-Royce, among others.

Why the sudden rush of low-price foreign cars? For one thing, post-Suez gasoline rationing and price boosts sharply curtailed European auto sales, releasing thousands of feet of production space for the manufacture of export models.

Moreover, the handsome sales performance of the Volkswagen here—soaring from a volume of 1,300 in 1953 to over 50,000 in 1956—has turned the attention of many an overseas economy car producer to the United States market.

SOME FADED OUT

Not all foreign-made economy cars have shared the Volkswagen's success in the United States.

The first Renault model, for example, the 4CV, which was introduced in the United States in 1946, fell from a sales peak of 1,700 in 1948 to 110 in 1953. By 1956, however, sales had jumped back to 2,100.

But now a spate of stylish makes in the $1,700 and under category is being shipped in from England, Germany, France, Czechoslovakia, and Italy to bid anew for United States dollars.

Take your choice: The Lloyd 600 from Germany boasts a 2-cylinder engine with a front-wheel drive; the Renault Dauphine from France offers a 4-cylinder engine with a rear-wheel drive. Six of the little models have air-cooled engines (motors in United States makes are water-cooled); five have engines putt-putting in the rear.

There are conventional sedans, sedans with sliding roofs, station wagons, and convertibles. There are bucket seats, full seats, and the yielding, hammock-type seats of the French Citroen 2CV. Some of the vehicles have 4 doors, others 2 doors. A pair of midgets—the Heinkel and Isetta of Germany—have only one door and that, oddly enough, is in the front. In size, they share one characteristic: They're smaller than the smallest Ford, Chevrolet, or Plymouth. The contrasts, in descending order, the Heinkel Cabin Cruiser (99.6 inches long), the Renault Dauphine (155 inches), and the Plymouth Savoy hardtop (204.6 inches).

Berkeley Coachwork, Ltd., of England now markets, in limited quantity, the first economy racing-type car in the United States. The tiny 2-seater has a 2-cycle, 2-cylinder engine. It sells for $1,595 in New York, the manufacturer says.

"It will be impossible to saturate the American economy car market before 1959 or 1960," Robert Lamaison, who holds the titles of vice president and North American manager of the French auto company, Regie Nationale des Usines Renault. This year, he foresees sales of 24,000 Renault Dauphines, introduced here last May to supplant the smaller 4CV. Two months ago, after protracted delays, the first large shipments of the new car began to arrive regularly. In 1956 combined sales of the 2 models were less than 3,000.

To back his sales plans, Mr. Lamaison says he has increased the number of distributors from 4 to 15 and has added 230 new dealers.

A. E. Birt, president of Hambro Importing Corp., forecasts 1957 sales of about 12,000 Morris 1000's, a remodeled British Motor Corp. car which his firm imports. Last year, the prototype of the 1000, the Morris Minor, had sales in the neighborhood of 500.

Meanwhile, Ford Motor, Ltd., which produces the Anglia and Prefect in Britain, is talking of a 300-percent sales jump over 1956 with its revamped models. The company won't give the 1956 sales figure. American Motors Corp., which last summer started importing a redesigned, English-built Metropolitan, predicts sales of 20,000 in 1957. But thus far its monthly volume has averaged under 50 percent of its goal.

Perhaps impressed by the success of the Volkswagen, President George Romney of American Motors and Louis E. Wolfson, a major stockholder, who are to confer this week, reportedly will discuss the possibility of placing more emphasis on the company's small cars. These include the Metropolitan and the Rambler.

Despite these rosy forecasts, American manufacturers remain skeptical. Harlow Curtice, president of General Motors Corp., recently called the performance characteristics of foreign economy cars substandard in comparison with Detroit automobiles. General Motors subsidiaries produce economy cars in England, West Germany, and Australia but, Mr. Curtice says, General Motors has no plans to offer them in the United States.

L. L. Colbert, president of Chrysler Corp., asked if his company had plans to introduce a low-priced car, said Chrysler has been "building and testing small cars since before World War II," and that the company's engineers have just returned from Europe after "studying small cars and plants that make small cars. But none of this activity is an indication Chrysler is going into the production of a small car in the foreseeable future."

Car dealers of Studebaker-Packard Corp. report they hear persistent rumors the company has several European cars under study in South Bend and is preparing to introduce an economy car. These rumors are flatly denied by Studebaker-Packard spokesman.

Auto fans are prone to argue interminably about the pros and cons of the European models.

The 2-door humpbacked Volkswagen, for example, stands belt high to a tall man standing on a curb. To slide into the bucket seat behind the steering wheel, the driver must jackknife his body, often knocking off his hat.

The Volkswagen interior is hardly spacious, with the windshield only a forearm's length from the driver's nose. The car is so close to the ground that the view from the oblong back window takes in only the lower grille work of a truck parked behind. "German purgatory," says a lanky New Yorker climbing out of the rear seat of a Volkswagen after a 2-hour ride.

The Volkswagen has luggage space for a pair of small suitcases between the back seat and the minute engine chugging under the rear hood. It has further luggage space between the gas tank and the fire wall under the front hood. But both spaces combined don't measure up to the 29.5 cubic feet of space in the Ford's luggage compartment.

This compactness, to be sure, has advantages. Overall, the Volkswagen is more than a yard shorter and roughly half a yard narrower than the Ford, making it a nimble competitor in heavy traffic and an easy car to park.

In weighing the Volkswagen's advantages and disadvantages, its supporters obviously believe economy and maneuverability are more important than luxurious comfort. One question likely to be answered this year and next, however, is whether these buyers will trade in their Volkswagen for another. For 30 years Detroit's auto men have been conditioning the consumer to annual changes in style. A Volkswagen owner trading in his 1955 model in 1957 will only get a replica of his old model.

"There's no way of telling how the buyer will react to this," shrugs one Manhattan Volkswagen dealer. "But we'll soon be finding out."

Another point of contention between boosters of foreign economy cars and backers of the bigger United States models: The horsepower race.

Horsepower of economy cars ranges from 9.2 in the lightweight Heinkel to 52 in American Motor's Metropolitan. While these seem rather meek when compared with the 200 thundering stallions advertised under hoods of some American cars, the economy autos aren't quite the feather pushers they appear to be.

Both European and Detroit engineers figure horsepower of an engine in the laboratories, but while the Americans adjust their horsepower to what it would be under ideal atmosphere conditions, the European figure represents what it would be under normal conditions.

Automotive engineers estimate that if the advertised 190 horsepower of the Ford V–8 engine were readjusted to actual driving conditions its power would be cut to about 150, depending on altitude and temperature.

In addition, American car manufacturers attach a long list of powersapping accessories to their engines—after they've determined the horsepower. These accessories are not available on many foreign cars.

"Start with the advertised horsepower in any Detroit car," says an automotive authority, "then subtract as follows: Two to three horses for the engine's fan, 3 to 5 horses for the generator, 5 to 10 horses for power steering (power brakes don't drain horsepower) and about 50 horsepower for less-than-ideal atmospheric conditions. Then throw away a few more horses for the automatic transmission depending on who's driving the car."

With all such deductions made from a Ford Custom, its boast of 190 horsepower melts to as low as 100 at the rear wheels on the highway, this authority declares. At the same time the Volkswagen, losing but

four of its 36 horsepower via a generator and attached blower, actually ends up with 32.

Nevertheless, on a tight race from a red light, a Detroit car will shoot by most any European car in the economy class.

On a still morning not long ago, a Volkswagen was raced with its gas pedal flush to the floor over a 20-mile stretch of parkway outside New York City. On the gentle down grades the little auto whistled up to a top speed of 72 miles an hour. On the upgrades, however, the speedometer drifted back to a low of 52 miles an hour. The Volkswagen's average speed for the 20 miles was a puffing 64 miles an hour.

"Where the lack of horsepower really hurts," says a University of Vermont undergraduate who owns a Volkswagen, "is when you need extra gumption to pass a car doing 45 miles an hour on mountain roads. It took me a couple of hair-raising weeks to figure out that I had to add a third again as much distance to make it around the car."

At least partly balancing this relatively timid performance, car savants say, are the economy factors offered by European makes. Many foreign producers, for example, advertise gas consumption of over 35 miles to the gallon of gas, while the Berkeley boasts "up to 70 miles a gallon."

Gas savings are difficult to pinpoint; how much a motorist saves in gas depends on how and where he drives. On recent road tests conducted by the Wall Street Journal covering close to 900 miles of city, suburban, and highway driving, a VW averaged 29 miles to the gallon. In similar tests a 1957 Ford custom averaged 13 miles to the gallon. VW dealers advertise a consumption rate of 32 miles per gallon, while Ford refuses to advance any such estimate. Some Fords will do better than 13 miles per gallon, but no standard Ford will approach the VW figure.

Using the road-test gasoline average, figure you drive you car 10,000 miles in the first year, and that gas is priced at 35 cents a gallon for high octane grades burned in the Ford, and at 33 cents a gallon for the "regular" gas used in a VW. The VW gas bill comes to $114; the Ford gas bill to $269. Savings: $155.

Also, figure both cars burn oil at the same rate, and that you change the crankcase oil every 2,000 miles as the companies suggest. Your bill for oil burned will be the same, but since the crankcase of the VW takes 3 quarts of oil per change as against Ford's 5 quarts, you save 2 quarts of oil at every change. At 50 cents a quart, the VW will cut another $5 off your bill.

Furthermore, the VW has an air-cooled engine, which obviously does not need antifreeze in the winter. The Ford, on the other hand, consumes about 10 quarts of antifreeze at 80 cents a quart.

Finally, there's the basic price differential between the VW, which retails for $1,540 in New York, and the Ford custom, which has a New York price of $2,012, according to one dealer. Tallying up the savings, car buyers have found that a VW can shave about $650 off the Ford custom in lower purchase price and cheaper operating expenses during the first year of ownership.

Long-term VW owners also have discovered that car parts for their make generally are cheaper than for Detroit models. However, the supply of parts for foreign autos is not always very dependable. Despite claims from dealers that any part can be flown to a dealer's garage within 4 or 5 days from Europe, production delays, shipping difficulties, and ordinary breakdowns in paper work have marooned many a midget auto in the garage. One Dallas Volkswagen owner found his car shopbound for 4 weeks while a new crank was located.

"If anything happened to my Volkswagen I'd be in a heck of a fix," frets Mrs. Bernivene L. Monner, of Hood, Oreg. "The nearest source of parts is Bend, Oreg., 160 miles away."

The Little Chamber Orchestra

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. NEUBERGER. Mr. President, on the evening of May 1, 1957, at the Department of Agriculture Thomas Jefferson Memorial Auditorium, Members of Congress, Government officials, and the people of Washington will have an opportunity to hear a concert by the Little Chamber Orchestra of Portland, Oreg., conducted by Dr. Boris Sirpo. The concert is sponsored by the Oregon State Society of Washington, D. C.

The Little Chamber Orchestra has won worldwide fame and acclaim, and is again embarking on its third international tour, sponsored by the Department of State and the Department of Defense. In past years the Little Chamber Orchestra has played before the royalty of Europe, and this year will play in the famed Bergen Music Festival. The Little Chamber Orchestra has received well-deserved praise from Time magazine following its international tour in 1955.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article about the Little Chamber Orchestra which appeared in Time magazine dated July 4, 1955, and the excellent article by Hilmar Grondahl, music editor of the Oregonian, which appeared in that newspaper under date of March 27, 1957, and describes this year's tour by the Little Chamber Orchestra of Portland, Oreg.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Time magazine of July 4, 1955]

VALUE RECEIVED

It was raining buckets in Paris' Boulevard Poissonnière one night last week as six taxi drivers shouted and gesticulated at the door of the Hotel Violet. "What kind of a circus is this?" cried one. "We'll get wet as pigs," complained another. "This calls for an extra tip." Eventually, the taxicabs got under way, carrying 16 American girls dressed in flowing silver-gray silk and toting violins, violas, cellos, and a string bass, their conductor, Boris Sirpo, and a few assistants. In sum total they were the Little Chamber Orchestra from Portland, Oreg., and their destination was the National French television studio in Rue Cognacq-Jay.

The orchestra's dampened debut before France's TV watchers was a cloud-high point of a 7-week European tour that had already won raves in Finland, Sweden, Norway, Denmark, and England. As the French cameras blinked on, Conductor Sirpo led the girls through a solemn, contemplative Corelli air, a Vivaldi piece (with violin solo by tall, blonde Claire Hodgkins), some modern variations by Alexander Tansman and an allegro by Stamitz. They played with fire and discipline that astonished their listeners—and played everything without a sheet of music. When they had done, the TV crew crowded around, and the studio audience burst into applause.

PART PAYMENT

The triumphal tour was the kind of stuff that winsome movies are made of. The girls themselves range in age from 15 to 28, have been rehearsing for their tour for the last 2 summers. Conductor Sirpo, 60, is a hard-driving, expatriate Finn who wants the old countries to understand the deep-down values he has found in the United States. "I felt the need to repay America for giving me so much," he explains, "and for a music teacher, music is the only way to repay something. I wanted to show Europeans what young Americans can do in music, to let them see something of the culture and spiritual power our country can produce."

Conductor Sirpo abandoned his own conservatory in Finland when the Russians invaded in 1939 and headed for the United States. Since 1945, he has been teaching at Portland's Presbyterian Lewis and Clark College, where as many as 70 students brave his celebrated sternness to play in his student orchestra. One reason: beneath the rigorous vigor lies a puckish streak that relieves the direst stress. For example, Sirpo was once felled on the podium by a minor stroke, and somebody shrieked that he had been shot. As the cops arrived, he regained his speech and muttered solemnly: "My wife did it." On another occasion, the Sirpos had just moved into a house that was supposed to be haunted. Sure enough, ghostly sounds wakened the couple, and Mrs. Sirpo suggested that he investigate. "No, my love," said he. "You go; your English is better."

MONEY BACK

The girls take their tour with all the seriousness that a dedicated Finn and a Presbyterian education can instill. "It's like a mission," said one. "We are here to represent the United States to foreign countries. We try to make a good impression everywhere." To make it better, they rehearse 2 or 3 hours after breakfast every day, and again after lunch and dinner. Even when sightseeing, they make an impression. One girl, faced with an untranslatable menu, left her table, buttonholed a Frenchman on the street, brought him back, and got him to translate the menu while other diners goggled.

Portland was hardly aware that it even had an all-girl orchestra before the girls departed, and managed to raise only a dismal $6,100 toward the tour expenses. As a result, each girl dug up—by borrowing, selling instruments, etc.—some $1,500 of her own, and stands to spend it all. But Portland knows better now, will parade the girls through downtown streets when they get home next week, already has scheduled a big fund-raising concern 2 days after homecoming. After that? "This is only the beginning," says Sirpo. "We still have to go to South America."

[From the Oregonian, Portland, Oreg., of March 27, 1957]

ORCHESTRA PREPARES FOR NEW TOUR OF EUROPE

(By Hilmar Grondahl)

An official folder of the international music festival of Bergen which came to our desk recently contains the information that "The Little Chamber Orchestra, United States of America," Boris Sirpo, conductor, will give concerts on May 29 and 30 in that Norwegian city.

We went to the Mt. Tabor school Tuesday night to hear Boris Sirpo and some of the young players who will make the trip with him as they rehearsed for their forthcoming concert at Lincoln High School auditorium the night of April 3.

The music they were working through as we came in was a group of four songs which Sirpo had composed in recent months and which are to be given their first public performance at the next concert with mezzo-soprano Josephine Albert Spaulding as soloist.

SCHEDULE EXTENSIVE

There are two numbers apiece from longer cycles entitled "Dreams" and "Death" which reveal a high quality of creative art on the composer's part, and seemed, as they were

sung at rehearsal, to have been written with this special singer in mind.

But what we were particularly interested in learning at this point was about this projected second tour of the Little Chamber Orchestra. Its original venture onto the European scene a year ago had stirred a rash of superlatives from writers abroad, but the schedule for this year's junket appears more extensive, varied, and interesting.

It starts off, officially, with a performance in Washington, D. C., on May 1, which is sponsored by the Oregon State Committee and will be heard in the Thomas Jefferson Memorial Hall.

GROUP TO FLY

A week later the band of 15 with their conductor, manager, chaperone, and a few more members of its entourage will climb into an Armed Forces plane and be flown over to Frankfurt. This is a part of the arrangement made with Uncle Sam's military personnel through the State Department, the culmination of lengthy correspondence. At a later date, from June 15 to July 15, the local ensemble will be taken by the Armed Forces through its mid-European and Mediterranean theaters. The scheduled itinerary includes Germany, Italy, Turkey, Greece, and Morocco.

OTHER CONCERTS SET

Prior to this Army tour there is to be an intensive catalog of 11 dates in Finland and concerts in Norway, England, Belgium, and France. Subsequently there are July engagements in Sweden and Denmark, and then the trek back to Frankfurt for the hop back across the Atlantic.

Of the 15 players who will comprise this season's Little Chamber Orchestra, 9 will be making the trip for the second time. These are Claire Hodgkins, Ann Tremaine, Pat Kalberger, Susan Lathrop, Joann Kaden, Kay Hardwick, Pat Olson, Eunice Watson, and Jean Nesbitt. First timers include Marilyn Gardner, Sharon McCabe, Layne Stramler, Merna Eastman, Carol Critelli, Janette Foxton, and Lois Elsnor.

Parental Perspective

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article of interest to parents, which appeared in the Chelsea Record, Chelsea, Mass., on April 15, 1957:

PARENTAL PERSPECTIVE

One of the quieter agencies of the Federal Government is the Children's Bureau. Its undemonstrative ways do not prevent it from doing well at its appointed task of helping to provide a better life and future for America's children.

The rash of talk about juvenile delinquency in recent times has focused great attention, perhaps greater than ever before, on the problems of bringing children to useful manhood. This growing interest tends to heighten the importance of the Children's Bureau, one of whose famous pamphlets is called The Adolescent in Your Family.

It is in this time of heightened interest that Katherine Brownell Oettinger will take over as President Eisenhower's choice to be head of the Children's Bureau. Without stressing the point overmuch, one may note a certain symbolism in the fact that Mrs. Oettinger will be the first mother to head the Children's Bureau since its founding 45 years ago. Previous chiefs of the Bureau have been spinsters.

Mrs. Oettinger's experience as a parent may serve her especially well at this time, since there is a growing inclination to blame parents for the shortcomings of their teenage offsprings. Having been through the mill herself, Mrs. Oettinger may be better equipped than some other observers to keep the role of the parent in proper perspective alongside such influences as the school, the church, and other social institutions. She is undertaking an important and interesting task. We wish her well.

Need for a Scholarship Loan Program

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 17, 1957

Mr. JAVITS. Mr. President, on March 27, on behalf of myself and Senators BEALL, COOPER, IVES, and PAYNE, I introduced the Education Loan Act of 1957, S. 1727, to establish a $1 billion program of Federal loans and loan insurance over a period of 8 years up to 1965 to encourage and assist individuals needing financial support in obtaining a college or university education. Many of the 200,000 young men and women of college caliber who are graduating from high school this year will be unable to go on to college for financial education. In addition some 350,000—about half—of the college freshmen will have varying degrees of financial difficulty in meeting college expenses and many of these young people will be thus forced to discontinue their education.

The program envisioned by this bill is based on loans rather than outright grants thus avoiding an added strain on the Federal budget. A recent report by the New York Education Department, for example, has shown a significant increase in demand for loans of this type.

I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the mother of a prospective medical student in Lockland, Ohio, together with an editorial on the same subject from the Cincinnati Times-Star. Her letter forcefully points up the need for adoption of a scholarship loan program.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

LOCKLAND, OHIO,
April 9, 1957.

DEAR SENATOR JAVITS: My son will graduate from Miami University, Oxford, Ohio, June 10, and has been accepted to Ohio State Medical School, but there it may stop or end for him, as I don't see how he can make medical school without a loan of some kind. If he could get a loan without it seeming like charity or worrying how to get through, his grades would be better.

This boy has worked his way through college and with what help we could give him, as my husband is a factory worker, and the only way I could help him is remortgage our home, and we aren't getting any younger, with two other children to raise.

This boy is married, and his wife, a wonderful girl, is teaching first grade at Finneytown School, Ohio, and she seems determined that he be a doctor, but so many sacrifices to make on her salary of $186 per month. My boy has dug ditches, shoveled coal in factories, and never has had a vacation in 16 years of schooling. He's always managed to work, and save for college. I say there should be a place a student can go to borrow the money on a good scholar standing and not always give the scholarships to the "A" pupils. I know my son would pay every cent to the Government if he could get a loan to finish his schooling.

He is so determined to be a doctor, and when he was accepted in medical school, 1 of 5 from a class of 40 or 50, it made me feel proud, but I wonder all the time if he can go on. Will there be a way?

He brought three South American students from Bogotá and they ate with us, and the conversation about government loans came up. They graduate, go back to South America, and pay the government back.

My son has inquired about a loan, but no satisfaction so far has come from it.

In closing, I only hope this bill goes through, as I know he could work and pay back all he borrows. He has an outstanding character in this community.

[From the Cincinnati Times-Star of March 27, 1957]

JAVITS PUSHES STUDENT PLAN

Five Republican Senators joined Wednesday in sponsoring legislation setting up an 8-year billion-dollar colege student loan program.

Senator JACOB J. JAVITS, Republican, New York, was introducing the bill which would permit loans of up to $1,000 a year for 5 years, repayable over a 10-year period, to needy students.

Five percent of the direct loans could go to foreign students, who could make repayments in local currency.

In addition, the measure provides a program of Government insurance on loans made by private sources, including colleges and universities.

Cosponsors of the bill are Senators IRVING IVES, Republican, New York; JOHN S. COOPER, Republican, Kentucky; FREDERICK PAYNE, Republican, Maine, and J. GLENN BEALL, Republican, Maryland.

The Plight of the Individual in a Big-Business Economy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. HUMPHREY. Mr. President, a distinguished former Member of this body, Hon. Herbert H. Lehman, delivered an address on Tuesday, April 2, which is worthy of the closest attention of the Senate and the country. He spoke before an audience at the City College Baruch School of Business in New York on the subject The Plight of the Individual in a Big-Business Economy. I ask unanimous consent that the text of Senator Lehman's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Plight of the Individual in a Big Business Economy

(Remarks of Herbert H. Lehman at the City College Baruch School of Business, Tuesday, April 2, 1957)

As I am sure you are frequently told, you are the trustees of tomorrow. And tomorrow is not very far away. I do not know what judgment will be finally passed on today's trustees—today's leaders of action, enterprise, and ideology in our country and in the world—but I doubt whether that judgment will consist wholly of praise.

I do not think the current trustees—and I am referring to the leadership in every field, in every land—have done very well with our country or our world. But I am an incurable optimist. I think we can and will yet solve our problems, at home and abroad, if we will only recognize that they exist, and set out, with total energy, dedication, and resources to resolve them.

I am going to talk to you today about just one of these problems, but one which I believe particularly concerns you young men and women about to begin your careers beyond the limits of the college campus.

Thsi problem concerns the growing concentrations in our national economy, the development of big business into giant business, and the significance of this development for the individuals involved in business.

I want especially to discuss the significance of this development for the individuals who are in the ranks, or who are yet to join the ranks of big business itself—the individuals who work for, with, and through big business and giant business.

Of course the growth of vast business concentrations has many aspects—economic, sociological, political, cultural, and even international. Each of these aspects is critically important and extremely complex. This whole subject, in all of its aspects, calls for our immediate attention and urgent concern.

We are traveling a road from which, after a while, there may be no turning off or turning back—the road toward bigger and bigger business, toward greater and greater concentration of economic power in fewer and fewer hands.

Recently, Fortune magazine published a study of the 50 largest firms in each of the major fields of the American economy, with figures for their 1955 sales, assets, and net profits.

It is, of course, an old story that in steel, in automobiles, and in oil production, for instance, a few giant firms are clearly dominant.

It is less generally understood, however, that economic concentration is growing in almost every sector of our economy. Today, almost every line of business is dominated by the giants.

The 50 largest insurance companies have 90 percent of all the assets of all insurance companies in the country.

The 50 largest manufacturing companies made 27 percent of the sales made by all manufacturing companies—and there are 325,000 manufacturing companies in the United States.

The 50 largest corporations in all fields, together, made sales of $86 billion, or about 28 percent of the total gross national product of the United States.

One company, General Motors, made a net profit, in 1955, of over $1 billion, on assets of $6 billion, with sales amounting to about $12½ billion.

Just think of that—one company had a sales turnover equivalent to 3 percent of the gross national product of the United States.

No wonder that thoughtful men in the business world are raising the question: "How big is too big?" A recent issue of the monthly publication of the American Institute of Management raised this question editorially and concluded that when one firm attains a sales volume that equals more than 1 percent of the gross national product, that firm is just too big for the health of the national economy.

I, myself, do not have the answer to the question of "How big is too big?" But I know it is a crucial question. Today, our entire economy is coming to consist of a few giants and swarms of ants, the ants consisting of small businesses. There are 4,250,000 separate businesses in America, of which perhaps a thousand are truly big business firms. Accordingly to a survey made by the United Press, there are 78 firms in the United States with assets of more than a billion dollars each. These I call the giants.

It is a fact that big businesses, on the average, are earning more and more profits every year, while on the average, the small businesses are earning less.

Indeed, the time has come to take a new look at the whole question of competition, and at what constitutes unfair competition and discrimination in business. There is a new dimension in our economy now, the dimension of giantism. If we want to retain an economic system based on competition, new rules must be written—and very soon—to protect the ants against the giants, and the consuming public against both.

We had better take a good long look at the loopholes in our antitrust laws.

Something had better be done promptly about the mergers.

The Federal Trade Commission reports that there were 905 mergers in 1956, 846 mergers in 1955, and 617 mergers in 1954. The number has been going up steadily. Moreover, many of the mergers have been spectacular ones, the merging of two already large corporations to make one giant—and to eliminate one further source of competition.

I have been especially interested—and concerned—over bank mergers. Once I was a banker myself.

During 1955, 225 banks, with total assets of $9,616,000,000 were merged, consolidated, or acquired by other banks. During the 6-year period from 1950 to 1956, 830 banks, with assets of $18,600,000,000, were merged, consolidated, or acquired.

Moreover, these mergers took place, for the most part, in the key industrial areas of the country; these mergers were part of the process whereby big banks grew even larger, and smaller banks were swallowed up.

Today there are about 14,000 commercial banks in America. Twenty-four of these are giants, with a billion dollars or more of assets each. In California there is, of course, the fabulous Bank of America, with resources of over $9 billion. Here in New York City, we have two giants, Chase-Manhattan and First National City, each with resources of over seven billion; ranking below them in size, New York has 4 $3-billion banks, and 2 $2-billion banks. Together, these eight banks hvae perhaps 75 or 85 percent of all the deposits in New York City.

It is strange that these huge banks should be trying to expand, through merger and consolidation, when as a matter of fact—and I say this on the basis of my experience as a banker—a $500-million bank, and certainly a billion-dollar bank, can do everything in the public interest which a $4, $7, or $10-billion bank can do. In other words there is no economic justification for the expansion.

Within the last 6 years alone 137 banks in New York State have been merged, consolidated, or acquired by other banks. The resources of the banks which have thus disappeared were $10 billion, almost one-sixth of the total resources of all the banks in all of New York State.

The story is the same in California, in Oregon, in Washington, in Pennsylvania, in Rhode Island, and in numerous other States.

California, for instance, had long been the scene of bank mergers and consolidations. By 1950, California had only 149 banks (compared to over 600 in Kansas). But between 1950 and the end of 1955, 86 of these 149 California banks were merged, consolidated, or otherwise taken over * * * a reduction of over 60 percent in the number of banking institutions in this huge and growing State.

The story is the same in many other parts of the country.

The end result is not only a decreased number of banks and less competition, but a more highly centralized control of the Nation's financial system, with mounting danger to the entire national economy if a relatively few individuals should decide, for whatever reason, to misuse their control over the lifeblood of our economy.

* * * * *

The development of bigness, and of monopoly control, in banking has been parallel to that in many other lines of economic endeavor. In almost every field, big business has gotten bigger, and giants have grown to dominate the field and to dwarf all others.

The giants and the big business firms not only dominate our economy to an increasing extent; they are, in fact, beginning seriously to affect our culture, our education, and the intellectual climate of our times. Certainly they have the greatest access to what are called the mass media—television, radio, and the press.

Their actual and potential effect on the political life of our times is, in itself, a vital question which requires sober study, thought and consideration, of possible countervailing measure.

The whole range of the possible effects of economic concentration—the economic, the social and the political effects—need to be carefully analyzed and publicly discussed. The people of this country need to be alerted to the actual and potential dangers of giantism and monopoly. There must be a call to action, on this front as on so many others.

* * * * *

Today, I want to concentrate on just one aspect of this situation, a somewhat subtle aspect, but not the less important or deadly on that account.

I refer to that strange and growing impact of giant business on the pattern of the lives of those who work in business and for business.

Of course, the growth of big business makes life harder for those engaged in little business. But that is not my central thesis today.

The danger I want to emphasize today arises from the fact that big business has become the major employer in the United States. Big business, itself, has been building up a series of collectivist bureaucracies which, in my judgment, are far more dangerous for the future of our country than the Government bureaucracies against which the spokesmen for big business have complained for so many years.

In referring to corporate bureaucracies, I am not thinking of the production workers, pocessors, handles, and haulers of the commodities produced by big business. Most of these workers, organized into labor unions, constitute a separate problem, or a separate phase of the whole problem. These workers feel the impact of the corporate ideology, but do not constitute a part of what I have called the corporate bureaucracy.

In today's discussion, my main concern is for these employees involved in the administrative, technical, technological, professional, and managerial functions of big enterprise. These are the bureaucracy; and it is a growing bureaucracy.

A new professional class is developing in America, alongside the educators, doctors, lawyers, engineers, and scientists. They are the sales engineers, the industrial relations experts, the public relations counsellors, the program planners, and the communications advisers—to name but a few of the new categories.

These are the bright young men and women who occupy the desks in the great corporate headquarters buildings. They spend their days in conferences, and their nights in writing memos and reports, or in reading those that others have written.

They are staff people, some of whom hope, of course, to be graduated to command posts.

These are the individuals who receive the main impact of the corporate ideology, and transmit and reflect it. They represent the new soul and spirit of big business.

They are increasingly today among the brightest and ablest of our college-trained output. Nowadays, as all of you know, the big-business enterprises actively recruit the brightest graduates, and do, in fact, get a major share of them.

Recent surveys have shown, moreover, that most of the graduating seniors today want to work for the big corporations. A smaller number are willing to work for small companies. Only a very small percentage of college graduates seem to want to start their own businesses, or to hang up their own shingles, or to start up their own practices, in the case of the professions.

The big corporations offer good pay, security, and good prospects for advancement. But what is more—and this is not clearly understood—they offer a way of life.

In return for the relatively good pay, job security, and job opportunity which the big corporations afford, the employee is expected to give not only his talents and devotion, but also his conformity.

A typical training pamphlet of the General Electric Corp., which came to my attention recently, advised all professional employees, as part of their basic code of conduct, to avoid taking an interest in "controversial" questions.

And there is some evidence that many college students who aspire to work for these corporations are taking this advice in advance. Some members of some faculties in some colleges and universities have suggested this attitude as the correct one for those who want to "get on" in the great bureaucracies which have grown up in the corporate world.

In these new bureaucracies, there has developed the same faults and failings which usually characterize collectivist bureaucracies—the modeling of thought as well as action on the attitude of the "boss," the pressure for conformity, the redtape, the centralization of authority, and the reluctance to go out on a limb or take a chance.

The engineers, the scientists and technologists, the lawyers, the statisticians, the public relations experts, the advertising experts, the merchandisers • • • all those working for Big Business and making up the corporate bureaucracies, are being pressed into a single mold. The individual is supposed to disappear, becoming instead a unit on a "team" and a cog in a wheel. The individual is induced to fuse his identity into that of the corporation. He becomes what William H. Whyte has called "The Organization Man."

I am worried about this. I am concerned that today Big Business is doing just what it used to accuse the New Deal of doing—it is trying to destroy individualism in favor of regimentation and conformity.

Of course, I do not believe that Big Business, or any other force, will actually succeed in stamping out all individualism in the younger generation. Not even the Communists have succeeded in doing that in the Communist countries.

The fact is, however, that we should be encouraging individualism and individual enterprise. We are not. Today the leaders of big business, and of government, are only paying lip service to these values. Actual encouragement is being given to orthodoxy and to the false litanies of sloganising and merchandising. All official support is being given the new philosophy of action identified with Madison Avenue, with the emphasis on form and approach, rather than on content and substance.

Against this background, there is little incentive for young men and women to go to work for small business, or to start up new businesses.

Today, according to a report of the Bureau of Labor Statistics, less than 10 percent of the research engineers and scientists employed by commercial and non-profit organizations work for small businesses. Over 90 percent work for big businesses.

Of course, the Government—particularly the Defense Department and the Atomic Energy Commission—are supporting most of the outside research and development work that is being done today. Of seven billion dollars being spent annually for research and development in the United States, four billion is being contributed in one form or another by the Government.

These four billion dollars, moreover, are being expended almost entirely through the big corporations of America. According to a report of the Defense Department, 95 percent of the Federal funds being spent through commercial companies to promote scientific research and development is being paid out to corporations having more than 500 employees—in other words, to big business.

Thus, the Government, through its research and development program, is helping to attract the engineers, scientists, and technologists to the ranks of Big Business, and thus to promote economic concentration—making big business bigger.

This, in turn, helps to build up the corporate bureaucracies I have been talking about; it helps to make a career as a member of one of these bureaucracies attractive to young professional graduates.

More and more individuals are becoming part of these collectivist conglomerations. More and more individuals are feeling the pressures—and the inducements—to conform their lives and their thinking to the patterns laid down by these corporate organizations.

I can hardly tell you how deeply this problem concerns me. I consider its manifestations to be at least partly responsible for the feeling of complacency and of aimlessness to be found in the general public—in a world which lies momentarily exposed to atomic destruction and in a country in which every day there arise new problems of ever-greater complexity.

I am in the twilight of my active public life. But I am not complacent. I see the dangers and the problems. I wish more of my countrymen did, with me.

I think the problems posed by big business, by the economic giants in our country, and by the growing concentration of economic power in a few hands, must be frankly confronted and resolved.

I, myself, do not pretend to know many of the answers. I know you can't turn back the clock or unscramble the egg. I am not positive how big is too big. I believe that some Government controls over bigness are necessary. But I am not sure what new controls we need. We need some. And perhaps we need to enforce some of the antitrust laws we already have.

I am convinced that beyond a certain point, continued growth in the size of a business does not necessarily result in benefits for the consumer. Because of the many dangers which economic giantism presents to the general welfare, I believe that the continued expansion of giant firms must, in every case, be carefully studied and judged from the viewpoint of the general welfare.

One of my chief worries as far as big business is concerned is the lack of democratic controls, or of any controls. The huge corporations, with their tremendous power over so many phases of our national and individual lives, are responsible only to the balance sheet and to the profit and loss statement. This is the only responsibility which management has even to the stockholders, who are the theoretical owners of the corporations in question.

Of course, in these huge corporations there is no real relationship between management and ownership. In most cases management is self-perpetuating and has no real constituency at all.

Perhaps one of the answers to this situation lies in requiring the management of publicly held corporations to show some measure of democratic responsibility both to the stockholders, and to the general public.

My real point is that we need some new and original thinking on this subject.

And while the thinkers are at it, let them study the particular aspect of the problem I have outlined today—the problem of corporate bureaucracy, and what it does to those who become a part of it. And what that does to the pattern of national thought and life.

I am sure that there are answers to these problems, just as I am sure that all our public problems can be resolved. As I remarked earlier, I am an incurable optimist.

I believe in the strength and resources of freedom. I believe that with the good use of freedom, all obstacles can eventually be overcome.

During a long life I have sometimes seen my worst fears realized. But I have seen my high hopes for the American people always fulfilled in the end.

I believe in the American people, in their courage and their resourcefulness.

I believe in you, the young men and women of America.

I have faith that my faith in you, in America, and in freedom, will be justified.

So Long as Oil and Gas Interests Are the Recipients of Special Privileges Other Business Corporations Will Go on Paying 52 Percent in Taxes and Individuals up to 90 Percent, Says the Trentonian

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, there is a great deal of talk these days about reducing the budget and reducing taxes. A lot of it is good talk, informed talk and some very important and able suggestions are being put forward for consideration.

One of the most interesting and worthwhile plans which I have seen would reduce the depletion allowance given oil and gas interests from the present 27½ percent to 20 percent in some cases, in others to 15 percent.

The Trentonian, a leading newspaper in the Fourth New Jersey District which I have the privilege of representing, has commented on this editorially. The Trentonian says that "In 1952 it was the late Senator Taft, of Ohio, who said the depletion allowance was 'to a large extent a gift.'"

I include here the trenchant editorial from the Trentonian of April 15, 1957:

READ THIS AND WEEP

We have held off on this dissertation until today, which is the deadline for filing

income-tax returns. We are assuming that all good citizens either have filed said returns or will do so today. And we are assuming that most corporations have their affairs with Uncle Sam in tidy condition.

The reason why we say we have held back on this editorial is because it will burn you up. In fact, if published earlier, it might have burned you to such a crisp that you would have rebelled and not filed an income-tax return. Then you'd either wind up in jail or have to pay a big fine, and it would be all our fault. We couldn't run any such risk.

Anyhow, let's take a look at the record—the CONGRESSIONAL RECORD, that is, of March 27, 1957, in which is detailed certain deliberations of the Senate.

In the RECORD is revealed:

1. That over a period of 7 years an oil company which shall be called "Z" made $7,368,000 in net income before taxes and legally did not pay a single penny in taxes.

2. Over a period of 6 years, company T realized combined profits of $1,832,000 and legally paid $7,500—four-tenths of 1 percent.

3. Company W, one of the largest if not the largest, in 10 years had profits of $95,119,340, yet legally paid only $5,750,000, or 6.05 percent.

Now let it be said that these companies are not located in the East. They are down in Texas and out in Oklahoma, Wyoming, and California. They are the companies who came mighty close to being on the carpet as a result of the natural-gas fiasco in the august United States Senate.

And they are the companies—they and some 2 dozen others—who prosper because they are allowed a 27½-percent depletion allowance.

For the 10-year period from 1945 to 1954, according to the RECORD, 27 domestic oil companies had a total net income before taxes of $3,265,289,925, yet paid total Federal corporate income taxes of $561,916,554, or 17.21 percent.

Compare that with the 52 percent paid by other businesses.

This depletion allowance was originally set up as a wartime measure back in World War I days—but then it was 5 percent.

The purpose was to permit oil companies to recover their initial investment and to provide funds for exploration—drilling more wells.

In the short space of 8 years or so, sympathetic Congresses had hiked the depletion allowance to its present level of 27½ percent.

And there it has remained, despite some assaults on it by right-thinking legislators.

One of them is Senator WILLIAMS, of Delaware. Another is Senator DOUGLAS, of Illinois. In 1942 it was the late Senator La Follette. In 1952 it was the late Senator Taft, of Ohio, who said the depletion allowance was "to a large extent a gift."

Senator WILLIAMS on March 27 of this year pointed out that the "deduction goes on year after year without regard to the original investment, with the result that their original investment can be recovered under this tax-free formula many, many times."

The domestic situation is bad enough, but the foreign situation involving American companies is even worse. Senator CARROLL reveals that a combine of 4 huge companies owns the complete oil concession in Saudi Arabia. They are taking the 27½ percent allowance, yet, according to CARROLL, there is "no great need for exploration there. We already know that three-quarters of the world's oil is there." He pointed out that of the $700 million gross earnings of the combine, only $7 million went for exploration.

In any event, the RECORD makes interesting reading on an amendment offered by Senator DOUGLAS which would have reduced the depletion allowance in some cases to 20 percent, in others to 15. It was rejected.

And so long as oil and gas interests are the recipients of special privileges from a benevolent Congress any such amendments will be defeated. And other business corporations will go on paying 52 percent in taxes and individuals up to 90 percent.

"Mike" O'Leary

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HÉBERT. Mr. Speaker, every so often somebody moves into a section of the country from another area whom you feel has lived among you all his life. Captain John J. "Mike" O'Leary was that sort of person.

Mike died the other day.

He was known by many Members of the House during his long years as manager of the St. Charles Hotel in New Orleans. The historic hotel he managed was frequently the headquarters for congressional committees which went to New Orleans. Many were the times that Members, on a pleasure trip to New Orleans, made the St. Charles Hotel their home during their stay in New Orleans.

Mike was my friend for more than 20 years. I was one of the first people he met when he came to New Orleans and I was among his first permanent guests. I lived at the St. Charles Hotel until I came to Congress 17 years ago.

My old high school and college classmate, "Pie" Dufour, of the New Orleans States, has written a piece about "Mike" which just about says everything about him that any of his friends would liked to have said had they been given the opportunity. Since "Mike" had so many friends in Congress I am passing along "Pie" Dufour's tribute in order that we may all share in his appreciation and evaluation of a really great guy.

The article follows:

MIKE O'LEARY MUST HAVE HAD MORE FRIENDS THAN ANYONE ELSE IN UNITED STATES

Did anybody in the United States have more friends than Mike O'Leary?

He knew more people than anybody I ever saw and more people knew him.

And in all the years I've known him—since the 1930's—I've never heard anybody say an unkind word about John J. O'Leary.

I never heard anybody call him John. And I don't have the slightest idea what the "J" in the middle stood for. To everyone, he was either "Captain O'Leary," a title won in World War I, or "Mike," but how he got that nickname I don't know.

Mike O'Leary was a man of the highest business and personal integrity. A wit and a raconteur, he had an engaging, friendly personality. In directing the St. Charles Hotel, of which he was manager for almost a quarter of a century, Mike operated with a quiet efficiency, which included an almost personal touch to the services given the guests.

I repeat that Mike's friends were legion. They were the bigwigs in sports, in politics, in the newspaper game, in the Army and the Navy, in the theatrical world. They were also the little fellows in these and other walks of life.

Mike was one of the founders of the Quarterback Club, one of the most successful of the Monday morning second guessing groups in America. He used to enjoy being needled about the food served at the lunches.

Hardly a meeting, over the nearly two decades of the Quarterback Club's existence, that questions didn't come up to the head table, directed at Mike. Such laugh-provokers as:

"Captain O'Leary, what is this?"

"Mike, did the chef cut this meat with an invisible ray?"

"Cap O'Leary: Where do you eat?"

Mike enjoyed the weekly jesting, and as Chairman Lester Lautenschlaeger read the messages, he'd stand in one of the doorways, grinning his wonderful Irish grin.

Once, at the weekly meeting of a luncheon club of which he was a member, Captain O'Leary came with a lunch box and a thermos bottle. "Think I'd eat that stuff I serve you fellows?" he asked, as he opened the lunch box and unwrapped a sandwich.

Mike was a great booster for sports in New Orleans—Tulane football, the Pelicans and the Sugar Bowl game, especially. The annual buffet which he spread for the Sugar Bowl teams and guests after the game was the most fabulous I've ever seen.

It was seldom that I've been out of town that someone, in a hotel lobby, at a theater or at a sports event didn't ask to be remembered to Mike O'Leary.

Mike was a great story teller and he had a fund of true tales. Frequently, Mike was in the know on important matter and knew the news behind the news.

O'Leary served in the United States Army in World War I, in both the Cavalry and Signal Corps. He saw battle action in France and I suspect that he performed with distinction, for he never spoke about his war days, at least I never heard talk about them. In World War II, Captain O'Leary served on a draft board here.

One of Captain O'Leary's chief characteristics was his courage. He received a terrific one-two punch in the last half dozen years of his life. The first was the loss of his lovely little daughter, after harrowing months of doubt as to whether the little girl would win or lose the batle for life. This broke Mike's heart, but not his spirit. And then, a year or so later, Mike was stricken with a serious illness which incapacitated him for months.

He rallied, returned to the job, physically beaten down, but remained the same genial soul. He was stricken again, complications set in and he became enfeebled, but in due time he returned to his desk once more, with his fighting spirit unbroken.

Mike O'Leary's death was a great loss to this community, and to his thousands of friends it was a personal tragedy.

Salute to Jamestown

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to point out that we citizens of Virginia are particularly pleased that the Boston Daily Globe recently printed a fine article, signed by the writer known as Uncle Dudley, describing the wonderful festival now underway at Jamestown, Va. Commissions established by both our Federal Government and the State

of Virginia are now commemorating the 350th anniversary of the establishment of the first permanent English colony in the New World, at Jamestown, with a magnificent, inspiring, and educational display.

The two most famous permanent English colonies in the New World, from which our present United States of America is descended, were established at Jamestown in 1607, and at Plymouth Rock, in Massachusetts, a few years later, in 1620.

This fine article from the Boston Daily Globe, describing the similarities between the voyages of the Virginia and Massachusetts colonists, and their later tribulations, was reprinted in the Richmond Times-Dispatch on Friday, April 12. For the benefit of the Members of the House, I take very great pleasure in including this article in the Appendix of the RECORD.

The article follows:

SALUTE TO JAMESTOWN

The two Commonwealths of Massachusetts and Virginia, which have shared so richly in the building of our Nation's heritage of pioneering, tradition, and government, are finding occasions this spring for renewal of memories closely similar.

Bay Staters look to the approach of summer which will bring the *Mayflower II* to Plymouth in careful reduplication of the Pilgrim voyage that wrote one of the seminal chapter of the American legend. Meantime, down in the Old Dominion, our southern neighbors have this week opened the 350th birthday festival of Jamestown—the first permanent English settlement established on this continent.

The similarities of experience between these two precarious ventures of the early 17th century were numerous and close. Both the Virginia Company of London and the Virginia Company of Plymouth were chartered the same year: 1606. The resolute little group of voyagers on the *Susan Constant*, the *Godspeed*, and the *Discovery* accosted the same perils from unknown seas, knew the same wavering hopes and tasted the same exultation when at long last they made landfall, as did the Pilgrims.

The first Virginians, however, were more fortunate. Though their voyage was one of the longest transatlantic passages on record—close to 4 months—the promised land where they finally found haven greeted them with the warm breezes of April, murmerous with bees and fragrant with blossoming plum and wild strawberry. New England's rock-bound coast in that bleak November, a few years later, offered grimmer welcome to Elder Brewster and his companions.

And if the tribulations of the little band that set about building its fort on the shady peninsula well up the James River provided a preview of what was soon thereafter to befall their compatriots at Plymouth, including a starving time, tenacity of purpose displayed was common to both.

Jamestown's birthday celebration has opened on an elaborate scale and will continue through 8 months. The primitive atmosphere of the settlement has been reconjured. It is sustained not only by replicas of the famous fort, Indian lodges, and other features of the first colony, but with exact copies of the *Susan Constant*, the *Godspeed*, and the *Discovery* as well.

With colonial Williamsburg and Yorktown summoned from close by to lend support to the observances, the Jamestown birthday party will surely garner the attention it so well deserves. Massachusetts extends felicitations to its sister State and to Plymouth's pace setter in American history.

Such reemphasis as this on our Nation's yesterdays fulfills a dual service. It provides a reminder of the humbleness of our beginnings, at a moment of power in Time's forward march when such a corrective can prove sanative.

Of equal if not, indeed, greater consequence, such revitalization of interest in shrines commemorating common national experience help clarify in a time of confusion and doubt the principles from which our democratic institutions have evolved.

Despite the fact that the meager group who debarked from the *Susan Constant*, the *Godspeed*, and the *Discovery* differed in many ways in their outlook upon life and religion from the even smaller company of the *Mayflower*, *Jamestown*, and *Plymouth* had and still have one significant fusion point.

In the first charter of the Virginia Company of London it was set down that the inhabitants of the colony and their children should "have and enjoy all liberties, franchises, and immunities * * * as if they were abiding and born within this realm." The planting of that seed and its subsequent growth are Virginia's and the Nation's history. Like the Mayflower compact, and the creation of the New England town meeting which followed a few decades thereafter, it meant that the beginnings of free, representative, democratic institutions and Government had been made.

Dedication Exercises of the East Coast Facilities of Tracerlab

SPEECH

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

The SPEAKER. Under previous order of the House, the gentlewoman from Massachusetts [Mrs. ROGERS] is recognized for 5 minutes.

(Mrs. ROGERS of Massachusetts asked and was given permission to revise and extend her remarks.)

Mrs. ROGERS of Massachusetts. Mr. Speaker, on Thursday I am attending the dedication exercises of the East Coast facilities of Tracerlab, Inc. They have a very interesting facility in the Speaker's State of Texas. The principal speaker will be the Honorable STERLING COLE, an expert member of the Joint Committee on Atomic Energy, who has done an enormous amount of work on this subject. I will be delighted to be there, and also because the laboratories are in the district of the distinguished gentleman from Massachusetts [Mr. DONOHUE].

I would like to tell the Members, Mr. Speaker, of the work played by the women in the nuclear instrument industry. The following is part of a letter sent to me by Tracerlab, Inc., and also there is a release from the corporation:

TRACERLAB, INC.,
Waltham, Mass., April 12, 1957.

Hon. EDITH NORSE ROGERS,
House Office Building,
Washington, D. C.

DEAR MRS. ROGERS: It is an honor indeed to have you present at our dedication ceremony.

* * * * *

The nuclear instrument industry, like so many others, is shorthanded, so women have come to play an important role here to help fill the gap, and many of them are doing jobs which would otherwise be done by men. Since the atomic-energy field is hardly 10 years old, it does not suffer from the rigid hiring-patterns of older industries and, as a result, women who can take responsibility and carry it out have been given a free hand. Much of our work in radiochemistry is done by women—women Ph.D.'s, women technicians, women laboratory assistants, women chemists. Our Industrial Relations Director is a woman. Our crystal-growing laboratory, one of a handful of such operations in the whole world, is in charge of women. Much of our Geiger tube glass work is done by women. In addition, of course, the more traditional jobs of clerks, secretaries and others are filled by women. (I am sure you will be able to make comparisons with women in industry 10 years ago, or, drawing on your own experiences, show how today's situation is different from that of yesteryear.)

In a rapidly growing company such as ours, women have probably been offered more unique opportunities to achieve positions of leadership than in other companies. Our rapid growth has resulted in more promotions, but at the same time has made greater demands on the individual. A number of successful instances in which women have risen to the top here and are at the same time raising families or enjoying successful marriages is conclusive proof that today's woman is enjoying the freedom and equality she has long sought and has the full acceptance of management as a dependable reliable worker.

As I said above, I can only offer these as suggestions. If you would like additional thoughts, I would be glad to give them to you on the telephone or Thursday morning when you get here.

I might suggest that you may want to get here around 12:30 p. m., although the dedication ceremony does not begin until 1 p. m., in order to give the press time to talk briefly with you.

Sincerely yours,

W. A. STENZEL,
Public Relations Manager.

[Tracerlab, Inc., press release of April 17, 1957]

Peaceful applications for atomic energy are taking another giant step forward in the United States with the completion of the world's most modern plant devoted entirely to peaceful uses of atomic energy for Tracerlab, Inc., pioneer in this field. The $1,900,000 plant in Waltham, Mass., with 4 acres of floor space, confirms United States leadership in the world race to harness the atom. It will house Tracerlab's east coast laboratory, research and manufacturing facilities, and will be dedicated April 18 in brief ceremonies to be attended by National, State, and local officials, and many of the people who have contributed to the peaceful uses of the atom.

Formerly housed in seven separate locations in downtown Boston, where the company was established only 10 years ago with a half dozen employees, the new facilities house operations which last year turned out almost $12 million worth of X-ray and nuclear products to the world's medical, research, industrial, and chemical centers. Tracerlab, with some 800 employees, operates the world's largest commercial radiochemical facilities, has the broadest product line in its field—ranging from simple lead bricks for radiation shielding to complex process control systems using radioisotopes—and a complete X-ray equipment line, produced by its X-ray subsidiary, Keleket X-ray Corp.

President W. O. Faxon, commenting on the new plant, said: "It is predicted that the nuclear instrumentation market alone will rise to a total of $135 million by 1963 (compared to $10 million in 1955) in response to an accelerated reactor building program as well as to new applications for atomic energy uncovered by research now in progress. This building gives us under one roof the facilities we need to continue to keep pace with this tremendous growth.

"This one building will provide complete facilities for a number of varied working groups. Besides manufacturing and administration, 11 separate major chemical laboratories, many designed exclusively for radioisotope work, can be used for research and synthesis. In another part of the building engineering facilities have been set up for the special needs of industrial, X-ray and instrument groups whose work may be in textiles one day, rubber the next, medicine the third and so on through an ever-broadening range of applications."

To tell the story of how the peaceful atom has been put to work to save industry some $200 million last year, and to show some of the operations of this unique New England firm, product displays, plant tours and demonstrations of isotope applications will be held at the time of the dedication which will be witnessed by the invited guests, and representatives of radio, television, newspapers, and the trade press.

A highlight of the program will be an address by the Honorable STERLING COLE, Representative from the State of New York and member of the Joint Committee on Atomic Energy, who will carry out the ribbon-cutting ceremonies by remote control using isotopes in a Traceriab beta gage.

Civil Rights and Trial by Jury

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Herman Edelsberg and David Brody, of the Antidefamation League of B'nai B'rith, and Francis Pohlhaus, of the Washington bureau, NAACP, which I commend to the attention of my colleagues. The opponents of H. R. 6127, which I trust will shortly be reported out of the Rules Committee, are claiming that this bill will deprive citizens of their right to trial by jury, and this statement is a refutation of that argument:

CIVIL RIGHTS BILL AND TRIAL BY JURY

One of the persistent arguments devised by the opponents of civil rights legislation is the claim that the present bill would deprive a man of his right to a jury trial. This argument is wrong in theory and wrong in fact.

1. Existing Federal laws, long on the statute books, make it a crime for any person to violate the constitutional rights of another in certain circumstances. In any prosecution under these statutes the defendant gets a jury trial. In no way is this existing law changed by the proposed bill. Nor would the bill make criminal any act which is not already criminal.

2. What the bill does is to add a civil remedy—as distinguished from the existing criminal remedy—in cases of civil rights violations. It would give the Government the same choice between criminal or civil remedies that the Government now has in some 28 fields—for example, antitrust, wage-hour, Atomic Energy Act violations. It would give to the Attorney General the right to go to a Federal court and get an order directing a State official or some other person to do that which may be necessary to give another citizen his constitutional rights. This is a time-honored equitable remedy—already available to individual citizens in civil rights cases; but because of the intimidation practiced against individuals sometimes, it is necessary to give this right to the Attorney General, too.

3. Opponents of civil rights argue that this procedure would deprive a man of his right to a jury trial. There is no constitutional right to a trial by jury in contempt cases. It is a long-standing rule of law that when a person violates a valid court order—whether it involves the payment of alimony, a labor relations decree, or an antitrust order—he lays himself open to conviction of contempt of court and punishment without a jury trial. You do not therefore deprive a man of something, when he is not entitled to it to begin with.

4. The opponents of civil rights have never been heard before to complain about their own State laws which permit judges to send defendants to jail for contempt of court without a jury trial. No member of the southern bloc in Congress has raised his voice over the fine and jail sentence imposed by an Atlanta judge on the leader of the NAACP in that community for contempt of court—without a jury trial. Nor did they complain when an Alabama judge fined the NAACP $100,000 for contempt of court—again without a jury trial. Other southern States are setting up so-called "sovereignty commissions" and investigative committees to discourage integration. Failure to comply with orders of these commissions or committees subjects a person to a contempt citation and punishment—without a jury trial. Yet no southern Member of Congress has protested this punitive State legislation. It should be clear to any fairminded person that what these people are trying to do is to protect violators of Federal court orders and defend the segregation status quo in the South—and not the jury system.

5. It is true that in a case of contempt where the act done in violation of the court's decree is of a criminal nature, the defendant has been given a jury trial by act of Congress, if he demands it. But for many years it has also been the unchallenged rule written into the law by Congress—no jury trial where the Government itself is a party to the contempt action. Now for the first time, and only for the sake of encouraging resistance to valid court orders, it is being suggested that a special exception be given to violators of civil rights so that they may get jury trials when other violators of court decrees do not. If this claim has any validity whatsoever, it should be fought out in a general debate on Government contempt actions and not as an extraneous and emasculating rider to a civil-rights bill.

6. Consider the kind of cases in which the new civil remedies would be used. The bulk of them would involve denials of the right to vote. The order of the court would direct a jury commissioner to register a qualified voter, or in some cases would direct a sheriff not to interfere with a man's right to register and vote. If such a simple order is disobeyed, there is no reason why the court should not be able to enforce it by fine or jail sentence, as it does in hundreds of other cases of the same nature and simplicity. For example, a husband who refuses to pay his wife alimony can be fined and sentenced to jail without a jury trial, and the world accepts this as being perfectly fair.

7. Moreover, the great bulk of crimes are misdemeanors rather than the more serious felonies, and in nearly all the State courts misdemeanors are tried and jail sentences imposed by courts acting without a jury. Surely there is no greater need for a jury trial in case of a violation of a court order designed to protect Constitutional rights, particularly since the moral stigma of a criminal conviction does not attach to a conviction for contempt. Nor does the convicted man lose any of his civil rights—right to vote, for example—which follows in the case of a conviction for a serious crime.

8. The most troublesome aspect of the hollow jury trial argument is that it seems to be a move designed to encourage resistance to valid court order. If the bill is passed in its present form, it is expected that in virtually every case a State official ordered by the court to do the rightful thing to protect a person's Constitutional rights, will obey. However, if the opponents of civil rights can add the jury-trial rider to this bill, it will be a signal to some State officials or lawless elements to defy the Federal court's order. They would count on a jury that would share the community's prejudices against Negro Constitutional rights to nullify the court's order by voting to acquit regardless of the clear evidence of guilt.

Columbus Day: A Spiritual Symbol to the Americas

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. RODINO. Mr. Speaker, as the author of H. R. 387 which seeks to declare October 12 a legal holiday, I am pleased to submit the following report issued by the executive committee of the National Citizens Committee for Columbus Day for printing in the RECORD.

I take this opportunity to commend the membership of the executive committee for the fine work which is being done in bringing to the attention of the people of the Americas the significance of Christopher Columbus.

COLUMBUS DAY: A SPIRITUAL SYMBOL OF THE AMERICAS—THEME: AMERICANS ALL

(A report on the 1956 Columbus Day observances in the United States issued by the executive committee, the National Citizens Committee for Columbus Day, Washington, D. C.)

"In fourteen hundred and ninety-two
Columbus sailed the ocean blue."

These words have helped many a youngster through an examination. But how many youngsters or oldsters for that matter stop to think of the spiritual significance of the great discovery of October 12, 1492.

We are told by Samuel Eliot Morison, our most eminent biographer of Columbus, that the discovery of the New World was the most spectacular and most far-reaching discovery in recorded human history.

The American continent has indeed become the symbol of a new way of life—of freedom—of opportunity—for people the world over. The Charter of the Organization of American States, the oldest, the strongest, and most influential regional organization in the world, proclaims that the historic mission of America is to offer man a land of liberty.

And yet, we in the United States know very little about the people in the other 20 American republics—their problems, their needs, their aspirations.

On February 23, 1957, His Excellency Victor Andrade, the Bolivian Ambassador to the United States, in an address before the Cosmopolitan Club of Pennsylvania State College said:

"The average citizen in the United States is only vaguely aware of Latin America. He has, on the whole, a kindly feeling toward his southern neighbors and believes they will stand beside the United States in the event of a crisis—as, indeed has been true in the past. But he knows comparatively little about Latin America and hears comparatively little. Many Latin Americans feel they are taken for granted by the United States, and, perhaps, there is something in that feeling."

COLUMBUS DAY CELEBRATIONS—AN OCCASION FOR LEARNING MORE ABOUT OUR LATIN AMERICAN NEIGHBORS

The National Citizens Committee for Columbus Day agrees with the observations of Ambassador Andrade. The national committee was organized from a Washington, D. C., community committee in 1955 to help our citizens in all sections of the country learn more about their Latin American neighbors.

In 1955 and in 1956, nationwide Columbus Day observances commemorated two great ideas:

The discovery of the Western Hemisphere.

The historic brotherhood of the Americas.

Reports from the 1956 Columbus Day participants—governors, mayors, teachers, businessmen, labor leaders, and community leaders—urge the national committee to make Columbus Day observances another occasion for promoting inter-American solidarity and to set up a permanent organization to that end.

A permanent Columbus Day organization is one of our 1957 goals.

AMERICANS ALL—THEME OF COLUMBUS DAY OBSERVANCES

The national committee has chosen as its Columbus Day theme—Americans All. This is a spiritual symbol uniting over 340 million Americans of many creeds, languages, and cultures in a manner without procedent the world over.

The national committee is a voluntary citizens group working through such established channels as schools and colleges, national and community organizations. Our 1956 chairman was the young and able managing director of Time-Life International, Mr. Edgar R. Baker. Participants in Columbus Day observances are rewarded only through the success of their efforts in achieving stronger bonds of inter-American solidarity.

Since 1955, hundreds of thousands of Americans—adults and young people—have learned more about the spiritual significance of the Great Discovery as well as the historic bonds of the 21 American Republics.

Before 1955, Columbus Day in the United States was kept alive by the distinguished leaders of the Knights of Columbus and the various Italian-American societies. Since 1955, these same leaders have given their fullest cooperation to the efforts of the national committee. In hundreds of instances, they have assumed the responsibility of bringing all schools and colleges, and all organizations into both statewide and communitywide Columbus Day celebrations.

While Columbus Day has long been celebrated by many of our Latin American neighbors, the national committee is hoping that they, too, will use their celebrations as an opportunity to strengthen their bonds with us in the United States.

THE 1956 COLUMBUS DAY PLANNING COMMITTEE REPRESENTATIVE OF "AMERICANS ALL" THEME

The 56 leaders who so willingly served on the 1956 Columbus Day planning committee and helped to carry out the Columbus Day program to a succesaful end were indeed representative of the "Americans All" theme. Citizens of the United States worked in cooperative harmony with representatives of the Latin American Republics, and Italy and Spain.

The United States representatives were:

Mr. Miguel Aranguren, Organization of American States.

Dr. George E. Arnstein, Journal of the National Education Association.

Mr. Edgar R. Baker, managing director, Time-Life International.

Miss Nora Beust, United States Office of Education.

Miss Edna Bowles, the Americas Daily.

Mr. Howard H. Cummings, National Council for the Social Studies.

Mr. G. Edward Damon, National Association of Secondary School Principals.

Mr. Zachary T. Del Giorno, Italian American Societies.

Mr. William E. Dunn, Inter-American Schools Service, American Council on Education.

Mr. Thomas F. Gately, chairman, World Trade Committee, Washington Board of Trade.

Miss Mary Anne Gibson, National Catholic Education Association.

Dr. Delia Goetz, United States Office of Education.

Mr. A. B. Kapplin, National Americanism Commission, B'nai B'rith.

Dr. Merrill F. Hartshorn, National Council for the Social Studies.

Dr. David Heft, Organization of American States.

Dr. Wilhelmina Hill, United States Office of Education.

Dr. J. Dan Hull, United States Office of Education.

Sister Mary Janet, S. C., Commission on American Citizenship, Catholic University of America.

Dr. Arno Jewett, United States Office of Education.

Dr. Marjorie C. Johnston, United States Office of Education.

Mrs. Ruth E. Kaiser, Department of Elementary School Principals, National Education Association.

Mr. Omar B. Ketchum, Veterans of Foreign Wars.

Dr. John R. Ludington, United States Office of Education.

Mr. E. W. H. Lamsden, Time-Life International.

Rev. Thomas D. Martin, Commission on American Citizenship, Catholic University of America.

Dr. S. V. Martorana, United States Office of Education.

Rev. Frederick A. McGuire, C. M., Mission Secretariat, National Catholic Welfare Conference.

Dr. Virginia Neal Mills, Department of Rural Education, National Education Association.

Hon. George D. Neilson, judge of the Municipal Court for the District of Columbia.

Mr. John T. O'Brien, public relations consultant.

Dr. Alejandro Orfila, director of public relations, Organization of American States.

Dr. Paul E. Smith, International Relations Committee of the National Education Association.

Lt. Col. James B. Sweeney, United States Air Force.

Rev. Joseph F. Thorning, St. Joseph's-on-Carrollton Manor.

Miss Kathleen Walker, Editor, Americas, Organization of American States.

Mr. Vincent Wilber, Department of State.

Mr. John W. White, United States Inter-American Council.

Mr. George Winstead, United States Information Agency.

Mrs. Constance Zarbo, the Americas Daily.

The Embassy representatives were:

Argentina: Mr. Alberto J. Prando, counselor.

Bolivia: Mr. Luis F. Ramirez, alternate delegate of Bolivia to the OAS.

Chile: Mr. Ricardo Lira, third secretary.

Colombia: Dr. Francisco Gnecco, cultural counselor.

Costa Rica: Mrs. Mirtha Virginia de Perea, first secretary.

Cuba: Dr. Mario Nunez, first secretary.

Dominican Republic: Mr. Victor L. Aybar, first secretary.

Ecuador: Dr. Luis R. Salazar, first secretary.

El Salvador: Miss Grace McDougald, secretary to the Ambassador.

Guatemala: Mr. Julio Sandoval, cultural attaché.

Haiti: Mr. Jean Dauphin, minister counselor.

Honduras: Mr. Jose Llado de Cosso, press attaché.

Italy: Mr. Salvatore Porcari Li Destri, third secretary.

Nicaragua: Dr. Aristides Somarriba, second secretary.

Panama: Miss Anita Ramirez-Duque, counselor.

Peru: Mr. Jose Urdanivia, second secretary.

Spain: Mr. Angel Segaz, first secretary.

Uruguay: Mr. Albert Rodriguez-Nin, embassy secretary.

It was through these leaders that our story of Columbus Day was told throughout the Western Hemisphere and in Spain and Italy. It was this committee which helped to distribute the 2,500 copies of the 1956 Columbus Day Leaders' Guide so ably prepared under the direction of Dr. John R. Ludington of the United States Office of Education.

Actually, Dr. Paul E. Smith distributed 750 guides through the international relations committee of the National Education Association. Msgr. Frederick G. Hochwalt distributed 600 to the Catholic schools. Dr. William E. Dunn sent materials to the three-hundred-odd American-sponsored schools in the Latin American countries. The Latin American representatives carried the Columbus Day story to their ambassadors who in turn informed their governments of United States activities.

THE 1956 SPONSORS OF COLUMBUS DAY

Business sponsors

The 1956 Columbus Day chairman, Mr. Edgar R. Baker, managing director, Time-Life International, not only gave splendid leadership to the nationwide celebrations, but he was also generous in his financial support of the national committee's work. Other business sponsors contributing were:

H. W. Balgooyen, executive vice president, American & Foreign Power Co., Inc.

William E. Barlow, president, Vision, Inc.

W. W. Faw, president, the Faw Hotels.

Lewis B. Harder, president, South American Gold & Platinum Co.

W. M. Miller, vice president, Singer Sewing Machine Co.

John D. J. Moore, vice president, W. R. Grace & Co.

A. Thomas Taylor, chairman of the board, International Packers, Ltd.

Andrew B. Shea, president, Pan American-Grace Airways, Inc.

Malcolm C. Stewart, treasurer, the Gillette Co.

A large contribution was also made by the National Forum for Good Government, an educational foundation.

Honorary sponsors

From the Congress of the United States came honorary sponsorship from Members of the Senate and the House of Representatives. In spite of their heavy 1956 political campaign duties, many of these eminent leaders gave direction and guidance to the Columbus Day programs.

From the United States Senate: Hon. J. Glenn Beall, Maryland; Hon. George H. Bender, Ohio; Hon. Styles Bridges, New Hampshire; Hon. Harry Flood Byrd, Virginia; Hon. Earle C. Clements, Kentucky; Hon. Ralph E. Flanders, Vermont; Hon. Theodore Francis

Green, Rhode Island; Hon. Thomas C. Hennings, Jr., Missouri; Hon. Spessard L. Holland, Florida; Hon. Hubert H. Humphrey, Minnesota; Hon. Estes Kefauver, Tennessee; Hon. John F. Kennedy, Massachusetts; Hon. Thomas H. Kuchel, California; Hon. William Langer, North Dakota; Hon. Warren G. Magnuson, Washington; Hon. Mike Mansfield, Montana; Hon. Edward Martin, Pennsylvania; Hon. Wayne Morse, Oregon; Hon. Karl E. Mundt, South Dakota; Hon. Frederick G. Payne, Maine; Hon. A. Willis Robertson, Virginia; Hon. H. Alexander Smith, New Jersey; Hon. John J. Williams, Delaware; Hon. Milton R. Young, North Dakota.

From the United States House of Representatives: Hon. Marguerite Stitt Church, Illinois; Hon. James J. Delaney, New York; Hon. Thomas J. Dodd, Connecticut; Hon. John E. Fogarty, Rhode Island; Hon. James J. Fulton, Pennsylvania; Hon. Brooks Hays, Arkansas; Hon. Lester Holtzman, New York; Hon. Donald L. Jackson, California; Hon. Walter H. Judd, Minnesota; Hon. Edna F. Kelly, New York; Hon. Michael J. Kirwan, Ohio; Hon. Earl M. LeCompte, Iowa; Hon. John W. McCormack, Massachusetts; Hon. Joseph W. Martin, Jr., Massachusetts; Hon. Chester E. Merrow, New Hampshire; Hon. Thomas E. Morgan, Pennsylvania; Hon. Thomas P. O'Neill, Jr., Massachusetts; Hon. Carl D. Perkins, Kentucky; Hon. Melvin Price, Illinois; Hon. Sam Rayburn, Texas, Speaker of the House of Representatives; Hon. Peter W. Rodino, Jr., New Jersey; Hon. Lawrence H. Smith, Wisconsin; Hon. Leonor K. Sullivan, Misouri; Hon. Harrison A. Williams, Jr., New Jersey; Hon. Clement J. Zablocki, Wisconsin.

From the religious world came honorary sponsorship from Protestant ministers, Catholic priests, and Jewish rabbis:

Dr. Leonard P. Aries, the National Conference of Christians and Jews.

Rabbi A. Balfour Bricker, Temple Sinai, Washington, D. C.

Rev. Edward L. R. Elson, minister, the National Presbyterian Church, Washington, D. C.

Msgr. Luigi Ligutti, director, National Catholic Rural Life Conference, Des Moines, Iowa.

Rev. Frederick A. McGuire, C. M., executive secretary, mission secretariat, National Catholic Welfare Conference, Washington, D. C.

Rabbi David H. Panitz, Congregation Adas Israel, Washington, D. C.

Dr. Frederick E. Reissig, executive secretary, Washington Federation of Churches, Washington, D. C.

Rabbi Henry Segal, Congregation B'nai Israel, Washington, D. C.

Dr. Albert P. Shirkey, Mount Vernon Place Methodist Church, Washington, D. C.

Rev. Joseph F. Thorning, St. Joseph's-on-Carrollton Manor, Frederick, Md.

From the Latin American countries came cooperation and honorary sponsorship from the ambassadors to the United States and to the Organization of American States:

His Excellency Ambassador Adolfo A. Vicchi, of Argentina.

His Excellency Ambassador Representative Eduardo Augusto Garcia, of Argentina.

His Excellency Ambassador Victor Andrade, of Bolivia.

His Excellency Ambassador Representative Fernando Lobo of Brazil.

His Excellency Ambassador Mario Rodriguez Altamirano of Chile.

His Excellency Ambassador Representative Alberto Sepulveda Contreras of Chile.

His Excellency Ambassador Francisco Urrutia of Colombia.

His Excellency Ambassador Representative Cesar Tulio Delgado of Colombia, Chairman of the Council of the Organization of American States.

His Excellency Ambassador Gonzalo J. Facio of Costa Rica.

His Excellency Ambassador Miguel Angel Campa of Cuba.

His Excellency Ambassador Representative Jose T. Baron of Cuba.

His Excellency Ambassador Joaquin E. Salazar of the Dominican Republic.

His Excellency Ambassador Representative Jose R. Rodriguez of the Dominican Republic.

The Honorable Dr. Benjamin Peralta, chargé d'affaires of Ecuador.

His Excellency Ambassador Hector David Castro of El Salvador.

His Excellency Ambassador Jose Luis Cruz-Salazar of Guatemala.

His Excellency Ambassador Mauclair Zephirin of Haiti.

His Excellency Ambassador Representative Love Leger of Haiti.

The Honorable Dr. Policarpo Callejas B., chargé d'affaires of Honduras.

His Excellency Ambassador Manuel Tello of Mexico.

His Excellency Ambassador Representative Luis A. Quintanilla of Mexico.

His Excellency Ambassador Guillermo Sevilla-Sacasa of Nicaragua.

His Excellency Ambassador Joaquin Jose Vallarino of Panama.

His Excellency Ambassador Guillermo Enciso-Velloso of Paraguay.

His Excellency Ambassador Fernando Berckemeyer of Peru.

His Excellency Ambassador Representative Juan Bautista de Lavalle of Peru.

His Excellency Ambassador Julio A. Lacarte of Uruguay.

His Excellency Ambassador Cesar Gonzales of Venezuela.

The Honorable Nelson Himiob, Interim Representative, of Venezuela.

In addition to the splendid cooperation from the Latin American ambassadors, the cooperation from the staff of the Organization of American States was perhaps our greatest asset. The National Committee wishes to pay special tribute to Dr. Jose A. Mora, Secretary General, and Dr. Alejandro Orfila, Director of Public Relations, for their efforts in making this splendid cooperation possible.

WHAT THE GOVERNORS AND THEIR STATE COLUMBUS DAY CHAIRMEN DID IN 1956

Thirty-eight governors issued Columbus Day proclamations urging schools, colleges, churches, and organizations to observe Columbus Day in commemoration of the great discoverer and the historic brotherhood of the Americas. Here is the list of the distinguished governors participating: Hon. James E. Folsom, Alabama; Hon. Orval Faubus, Arkansas; Hon. Goodwin J. Knight, California; Hon. Edwin C. Johnson, Colorado; Hon. Abraham A. Ribicoff, Connecticut; Hon. J. Caleb Boggs, Delaware; the Board of Commissioners, District of Columbia; Hon. LeRoy Collins, Florida; Hon. Marvin Griffin, Georgia; Hon. Robert E. Smylie, Idaho; Hon. William G. Stratton, Illinois; Hon. George N. Craig, Indiana; Hon. Fred Hall, Kansas; Hon. Albert Benjamin Chandler, Kentucky; Hon. Edmund S. Muskie, Maine; Hon. Theodore R. McKeldin, Maryland; Hon. Christian A. Herter, Massachusetts; Hon. G. Mennen Williams, Michigan; Hon. Orville L. Freeman, Minnesota; Hon. Phil M. Donnelly, Missouri; Hon. Victor E. Anderson, Nebraska; Hon. Charles H. Russell, Nevada; Hon. Lane Dwinell, New Hampshire; Hon. Robert B. Meyner, New Jersey; Hon. John F. Simms, Jr., New Mexico; Hon. Averell Harriman, New York; Hon. Norman Brunsdale, North Dakota; Hon. Frank J. Lausche, Ohio; Hon. Raymond Gary, Oklahoma; Hon. Elmo Smith, Oregon; Hon. George M. Leader, Pennsylvania; Hon. Dennis J. Roberts, Rhode Island; Hon. Joe J. Foss, South Dakota; Hon. Frank G. Clement, Tennessee; Hon. J. Bracken Lee, Utah; Hon. Arthur B. Langlie, Washington; Hon. William C. Marland, West Virginia; Hon. Walter J. Kohler, Wisconsin; Hon. Milward L. Simpson, Wyoming.

Fourteen governors appointed State chairmen who organized statewide Columbus Day observances:

California: Mr. Peter Bertoglio, Pittsburgh.
Colorado: Mayor Frank Ciancio, Welby.
Florida: Mr. E. D. Henry Palermo, Tampa.
Idaho: Dr. Alton B. Jones, Boise.
Indiana: Mr. Edward J. Dowd, Indianapolis.
Kentucky: Rt. Rev. Msgr. Alfred F. Horrigan, Louisville.
Michigan: Mr. Walter H. Graveline, Bay City and Mr. Ralph Mancini, Detroit.
Missouri: Mr. John J. Griffin, St. Louis.
New Jersey: Mr. Ovid Colalillo, Orange.
Oregon: Mr. Ernest R. Jachetta, Portland.
Pennsylvania: Senator John Dent, Jeannette.
South Dakota: Dr. Harold Freeman, Pierre.
Utah: Dr. E. Allen Bateman, Salt Lake City.
Wisconsin: Mr. John R. DiCello, Sr., Kenosha.

WHAT SOME OF THE STATE CHAIRMAN DID

Missouri: Mr. John J. Griffin, banker and civic leader.

In the State of Missouri, Mr. John J. Griffin, vice president of the First National Bank in St. Louis, served as the able State chairman for the second consecutive year. Here is the composition of his State committee which organized parades, essay contests in the schools and provided speakers.

Chairman and county or town

Mrs. Richard H. Walsh, chairman of Women's Division for State.
Dr. J. B. Wedge, chairman, Knights of Columbus.
Sam Shaikewitz, Jewish representative of St. Louis and St. Louis County.
Mr. C. Rouss Gallopp, Audrain County.
Mr. Henry Garvey, Buchanan County.
Col. W. Ed Jameson, Callaway County.
Mr. John S. Williamson, Boone County.
Dr. D. G. Ruopp, Cape Girardeau, Mo.
Mr. Stuart Keckley, Fulton, Mo.
Mr. Oren Lamb, Macon, Mo.
Mr. Francis H. Hess, Jasper County.
Mr. Dave Bush, Fenton, Mo.
Mr. J. Voss, Fenton, Mo.

Mr. Griffin's description of what happened in Fenton, Mo., on Columbus Day is a good example of how Americans all work together for a common goal.

Mr. Dave Bush represented the Civic group and Mr. J. Voss represented the Knights of Columbus group.

The committee did a very fine and wonderful job. They enlisted the support of all merchants in thir immediate vicinity, including Fenton, High Ridge, Valley Park, House Springs—in St. Louis County and Jefferson County. In this, they were able to solicit sufficient funds from the merchants to give prizes to the following participants in the essay contest—which was participated in by 5 public and 5 parochial schools:

First prize: Jim Downing, Valley Park Public School, Kodak and projector.

Second prize: Miss Hope Hraz, St. Catherine LaBaure, Sappington, typewriter.

Third prize: Miss Johnell Gessler, Arnold Public School, record player.

Fourth prize: Miss Patricia Kowert, Fenton, Mo., St. Paul School, fountain pen and pencil.

The additional money which was left over was distributed equally to the Cardinal Glennon Hospital for Crippled Children and the Shriners Hospital for Crippled Children. Each hospital received $50.

This committee did a very fine job in arranging a parade which extended over one-half mile. This parade consisted of walking units, riding units and floats.

The parties participating in this parade were the American Legion, Lions Club, Knights of Columbus Zouaves, the National Guard, the Valley Mount Ranch riding unit, and the Big River dancing unit. Open cars were provided for the participants, all of which assembled at the reviewing stand in the public school grounds in Fenton, Mo. There, the meeting was opened with a prayer by the Catholic priest of the town and closed with a prayer by the Protestant minister.

The principal speaker for the day was the Honorable Jerome F. Duggan, one of the founders of the American Legion and at present time legal adviser to the American Legion.

Indiana: Mr. Edward J. Dowd, Knights of Columbus leader.

In Indiana, Gov. George N. Craig appointed Mr. Edward J. Dowd, a noted leader of the Knights of Columbus, and past State deputy of the Indiana State council. Mr. Dowd reports that there were proclamations by the mayors of about 70 communities as well as the proclamation by the Governor.

The Knights of Columbus assumed the responsibility under Mr. Dowd's direction in organizing Columbus Day celebrations in some 100 Indiana communities, public and parochial schools, community organizations, and mayors along with the press, radio, and TV joined the Knights in making Indiana's observance of Columbus Day a truly historic occasion.

In Evansville, Ind., Mr. Edwin C. Kempf, grand knight, brought the story of Columbus to the people of southern Indiana through well-organized radio and televison programs on October 12. The television program over WFIE-TV was an unusual one. Says Mr. Kempf: "Knights of Columbus State Secretary Jack Griffin reported from this station from 4:45 p. m. to 5 o'clock. I would like to explain Brother Griffin's activities. The television station arranged their studio to appear as a living room with a fireplace. Brother Griffin, along with three of his children, spent the 15 minutes reading about Columbus' voyage, and as Brother Griffin read, the children interspersed the reading with questions about Columbus, his ships, the Indians, and the route from Spain to America. The latter was the highlight as Brother Griffin used pictures and explanations to dramatically point out the entire route of Columbus."

New Jersey: Mr. Ovid J. Colalillo, leader in Italian-American organizations.

For the second consecutive year, Governor Meyner appointed one of New Jersey's most able Italian-American leaders as State Columbus Day chairman. Mr. Ovid J. Colalillo has again done a magnificent job. He reports:

"Under the inspirational leadership of our Governor, Robert B. Meyner, a statewide program was developed. The mayors of all the cities, towns, and villages, etc., numbering 566, received letters containing the message of Columbus Day. We urged them to appoint municipal committees to arrange programs for the celebration and to issue proclamations. In order to assist, we furnished sample proclamations upon request.

"In addition to the above, television time was given to our committee by our Governor. I appeared on his weekly program to give a report to the people of the State concerning the celebration. Governor Meyner also issued a statewide proclamation urging the people of the State of New Jersey to observe Columbus Day with appropriate ceremonies in their homes, houses of worship, and other suitable places. He also directed that the flag of the United States be displayed on all State buildings and requested school authorities and civic leaders throughout the State to hold appropriate exercises for the commemoration of this day.

"By virtue of the above activities, our celebration of Columbus Day was one to be remembered. The responses to our appeal were many and widespread. I can say that almost every large city in our State observed Columbus Day by having some form of activity arranged. A very high percentage of the mayors of the towns and villages issued proclamations, and several cities have established permanent Columbus Day committees.

"From the activities reported to me throughout the State, I feel deeply honored and gratified and can state without equivocation that the observance with the theme 'Americans All' is now felt in the entire State."

WHAT MAYORS AND THEIR COMMUNITY CHAIRMEN DID IN 1956

The national committee believes from reports that well over 300 mayors of cities with over 25,000 population issued Columbus Day proclamations. We received proclamations from 164 mayors, and we know that in seventy-odd cities and towns in Indiana, and in most cities and towns in Missouri, Colorado, and New Jersey, the mayors did issue proclamations according to State reports.

The majority of the 164 mayors reporting directly appointed community chairmen who actually organized communitywide celebrations. The successful community celebrations were organized by His Honor John B. Hynes, mayor of Boston, and president of the United States Conference of Mayors: Here are typical reports:

The city of Baton Rouge, La., and parish of East Baton Rouge. The Honorable Jesse L. Webb, Jr., mayor, president

Mayor Webb, one of our Nation's few but distinguished women mayors appointed Mr. Robert S. Boeker, her assistant, as Baton Rouge's Columbus Day chairman. Mr. Boeker writes:

"Mr. Guy Dicharry, a local businessman, acted as assistant chairman of our committee. Special club programs as well as radio and television publicity and programs were held in our city. Speakers were assigned to these activities and to the schools where requests for them had been made.

"It is the opinion of the undersigned that this annual observance could be built up in Baton Rouge to a very worthwhile project. Since the Louisiana State University has many Latin American students on the campus, we have an ideal location for joint activities in such an observance as a gesture of friendship to our Latin American neighbors."

Sacramento, Calif., the Honorable Clarence L. Azeuedo, mayor

Mayor Azeuedo appointed as Sacramento's Columbus Day chairman, Mr. Lawrence F. Girolami, an attorney. Mr. Girolami gives an interesting report of Sacramento's big celebration:

"My committee organized a community celebration in which the Sacramento chapters of the Sons of Italy in America and the Knights of Columbus held ceremonies in the rotunda of the State Capitol Building in Sacramento. In the rotunda there is a statue of Columbus pleading his case to Queen Isabella. Following these ceremonies at noon, the Knights of Columbus held a luncheon. The following evening the Sons of Italy in America held their Columbus Day dinner.

"The mayor has asked me to advise you that next year he intends to organize a larger community program in this city for the celebration of Columbus Day."

Denver, Colo., the Honorable W. F. Nicholson, mayor

Mr. Marshall M. Reddish, United States Mint Service, Treasury Department, set an enviable record as Denver's Columbus Day chairman. Mr. Reddish makes an interesting report and some important observations, too:

"The Denver Citizens Committee had considerable success in calling attention to the two great ideas which are endorsed by the national committee. We were thus able to make notable headway beyond the traditional Columbus Day celebrations. Many clubs, such as the American Legion, Knights of Columbus, and World Trade Clubs devoted their programs during the week of October 8 to 13 to the Columbus Day theme. Many others paid at least a passing salute to Columbus during that week. Both the Denver public schools and Catholic schools endorsed the Columbus Day theme and many of them had special assemblies, special work in art classes, and panel discussions on pan-American culture. Among the window displays was one by Braniff Airlines and a Latin-American importer.

"Due to the lack of time the local committee was not able to arrange major radio or TV programs. However, spot announcements and news coverage were conducted both by radio and television stations.

"Considerable interest was expressed in setting up a continuous organization for the yearly celebration. I would like to do what I can to help. Please send me any advice or comments you have for establishing such a continuing group.

"I have found the encouragement of Columbus Day observances a rich experience in brotherhood. The observances promote cooperation between groups of all kinds and are very much in line with our country's good-neighbor policy."

Hoboken, N. J., the Honorable John J. Grogan, mayor

Mr. Charles De Fazio, member of a distinguished Hoboken law firm, and a leader of UNICO National, joined hands with the National Citizens Committee in Hoboken's outstanding 1956 Columbus Day celebration. Under the sponsorship of UNICO chapter over 300 Hoboken residents celebrated at a banquet attended by State and local officials.

COLUMBUS DAY PROGRAMS IN COLLEGES AND UNIVERSITIES

From 37 States and the District of Columbia, 113 colleges and universities reported Columbus Day observances and conferences on the Latin American countries. The national committee presents herein three types of programs.

Dr. Curtis A. Wilgus, director, School of Inter-American Studies, University of Florida, Gainesville, sent a copy of his seventh annual conference program on the Caribbean, organized in cooperation with the United Fruit Co. This School of Inter-American Studies conducts one of the Nation's outstanding programs in inter-American affairs. The May 1956 bulletin gives an interesting account of what the University of Florida is doing.

Dr. Richard C. Todd tells us how many departments of East Carolina College, Greenville, N. C., cooperated in making the great discoverer and our Latin American neighbors more real to the students, the community, and the state. Here is the story of what they did:

The East Carolina College Columbus Day committee participated in the national program in the following manner:

1. East Carolina College Band played, sang, and danced Latin American compositions as half-time show of the E. C. C.-Catawba football game, September 29.

2. Three televised programs:

(a) October 12, over channel 9, at 4 p. m., George Perry in his Music Appreciation Course featured 30 minutes of Latin American compositions, techniques, and composers.

(b) October 13, over channel 9, at 4:30 p. m., Claud Garren narrated the discovery of America, etc.

(c) October 14, over channel 7, at 1 p. m., Dr. Martha Pingle featured our Latin Ameri-

can students and Francis Neel in a cultural program.

3. A forum entitled "Americans All" was tape recorded for radio and used throughout North Carolina—Dr. Richard C. Todd, moderator, with panel consisting of F. Stanley Moore, John Gordon, Rachel Cordiero, and Mona Farge.

4. United States Navy Band in concert at East Carolina College, Monday, October 15, 8 p. m., played a medley of Latin American compositions at request of committee.

5. Dr. Elmer Lawson directed the Social Studies Student Teachers to feature "Americans All" theme in their work in the various high schools. This was done by use of book and picture displays, films, class discussions, map projects, assembly programs, etc.

6. Pan American flag display, Latin American painting exhibit, and Latin American book display; October 8–20, Joyner Library lobby, arranged by Dr. Mildred Southwick, Francis Neel, and James Butler.

7. Latin American Artifact Display, student union, October 5–19, arranged by Francis Neel: Dr. Richard C. Todd, chairman; Dr. Kenneth Cuthbert, music; Dr. Martha Pingel, American literature; Dr. Mildred Southwick, library; Mr. Francis Neel, art; Miss Mary Greene, publicity; Miss Rosalind Rouiston, radio and TV; Mr. James Butler, alumni secretary.

At Harvard University:

A special exhibition of works by and about Christopher Columbus were on view at Harvard's Widener Library from Monday, October 8 through Columbus Day, October 12.

Its key piece was a rare early printing of the letter Columbus wrote to the treasurer of Spain on his return from the New World, describing his discoveries.

This letter was printed in Paris in 1493. It was presented to Harvard by the Bodleian Library in 1936 during the Harvard Tercentenary celebration. The only other known copy of this edition is owned by the Bodleian.

Other materials on display have been chosen to suggest the range of Harvard's collections dealing with the great navigator.

There are, for example, Samuel Eliot Morison's Admiral of the Ocean Sea, the first study of Columbus' journeys from the viewpoint of navigation and seamanship; the memorial volume from the city of Boston's Columbus celebration in 1892, the 400th anniversary; a copy of Fernand Colomb which the author Henry Harisse, one of the great 19th century students of Columbus, presented to Francis Parkman in 1872; and various literature, some in manuscript, dealing with the navigator's death, burial, and remains.

The library has one of the most extensive collections of books and documents relating to Columbus. Its thousands of items include notarial manuscripts, many facsimiles of original Columbus documents preserved in European libraries, and a virtually complete collection of secondary works on the explorer.

EXAMPLES OF WHAT PUBLIC AND PAROCHIAL SCHOOLS DID ON COLUMBUS DAY

Through the cooperation of the national and State education association journal editors, State department of education bulletins, and the National Catholic Educational Association, thousands of schools learned about Columbus Day and did something about it, too.

The story of what schools did is a thrilling one. Here are some examples of how schools in 32 states observed Columbus Day as a taking-off point for study of our Latin American neighbors.

Miss Cora M. Leamy, director of curriculum, Gardner, Mass., public schools, wrote:

"Gardner's observance of Columbus Day in its schools this year proved to be outstanding and included many unusual and unique ideas. In grades 1 to 6 in the elementary grades and in the junior high school, units of work were carried on, observing the discovery of the Western Hemisphere and the brotherhood of the American Republics.

"Newspaper publicity sent in from the various schools was excellent.

"Activities carried on included:

"Songs of the American Republics; poems, stories, plays, dramatizations, and pantomimes (some of these original); choral reading; bulletin board displays and exhibits; filmstrips; recordings; motion pictures; picture study; assembly programs; models of boats; map work, tracing routes, locating countries, etc.; scrapbooks, notebook covers; round table, panel discussions, individual and group reports; creative arts; clay modeling; chalk drawing; water color and crayon illustrations; murals and built-up posters."

Miss Eda Williams, a primary teacher in the Thompson School, Bend, Oreg., says:

"Ours is a primary school, having only the first three grades. However, in every room there were stories of Columbus, songs, art work, and in my room and loaned to the other rooms, a large pop-up poster of Columbus and his three boats.

"I very much like the idea of using Columbus Day to build better relations between the countries of the Americas."

Mr. Anthony F. Musso, supervisor of foreign languages, Scranton, Pa., public schools, says:

"We have had a citywide coordinated program for the observance of Columbus Day in the Scranton public schools. In the State of Pennsylvania Columbus Day is one of the holidays selected for special observances by the public schools and the department of public instruction requires that an appropriate program be conducted. We have always observed Columbus Day suitably in the public schools of Scranton, but this year, due to your committee's work we had an increase in Columbus Day activities.

"A brochure of suggested activities was sent out to each elementary and secondary school. At the same time a newspaper article and a discussion during a principals' meeting emphasize the importance of properly observing Columbus Day with the theme Americans All.

"As a result, several school PTA's conducted Columbus Day meetings and programs, most social studies classes focused their attention on the Americas, and each of the five secondary schools held lovely Columbus Day assemblies in their respective school auditoriums.

"The newspapers cooperated with their publicity on our activities and the activities of the Columbus Day Association of Lackawanna County, who held an annual banquet on that day."

In the Syracuse, N. Y., public schools, Miss Gertrude M. Burke, head, department of citizenship education, developed and sent out to each citizenship education teacher an excellent Columbus quiz. Teachers used bulletin-board displays and scrapbooks to help tell the Columbus story.

Sister M. Anthony, principal, St. Joseph's Academy, Crookston, Minn., tells us how hard the whole school worked to make Columbus Day a success.

Columbus Day was observed by the entire school with a program presenting skits and songs:

1. National Anthem, entire school. The Pledge of Allegiance, entire school.

2. Columbus Sailed the Ocean Blue, song, first and second grades.

3. Salute to Columbus, choral reading, composed by the third and fourth grades.

4. A medley of American music, instrumental ensemble.

5. A skit on Columbus composed by the seventh and eighth grades.

6. Columbus, choral reading, fifth and sixth grades.

7. Dramatization of significant parts of Columbus' life, 12th grade.

8. America, the Beautiful, entire school.

The first and last number on the program were accompanied by the instrumental ensemble.

The bulletin boards were decorated by the history students from the 10th and 11th grades. Their decorations and illustrations carried out the theme "Americans All."

A large map of the 21 American Republics was made by the ninth grade. Each different country was represented by their flag.

At St. Mary's Academy, Leonardtown, Md., a Columbus Day Telecast was sponsored by the student council. The Columbus Day guide committee will be pleased to see how effectively the students used the material in the guide. Sister Frances Clare, principal, gives us an outline of this attractive program:

Master of ceremonies: Jane Eckenrode.

Star-Spangled Banner: Chorus.

America on Columbus Day, 1956: Louise Burch, 1958.

Columbia, the Gem of the Ocean: Chorus.

The Americas' Contribution to the World: Barbara Burch, 1959.

America the Beautiful: Chorus.

Columbus and World Trade: Rose Marie Longmore, 1957.

Commercials.

Columbus, by Joaquin Miller: Choral reading.

Columbus Day and You: Linda Yates, 1960.

God Bless America: Chorus.

COOPERATING ORGANIZATIONS IN COLUMBUS DAY ACTIVITIES

The national committee cites the following organizations and agencies because they have taken great responsibility in getting cooperation from Americans, young and old, across the United States and in Latin America:

American Library Association.
The Americas Daily.
B'nai B'rith.
Civic Education Service, Inc.
Commission on American Citizenship, Catholic University of America.
Cooperative League of the United States of America.
Inter-American School Service of the American Council on Education.
International relations committee of the National Education Association.
The Instructor.
Knights of Columbus.
Girl Scouts of the United States of America.
Mission Secretariat, National Catholic Welfare Conference.
National Catholic Education Association.
National Council for Italian-American Friendship.
Organization of American States.
Pan American Medical Association.
Pan American Societies.
Sons of Italy.
State departments of education.
State education associations.
UNICO.
United States Information Agency.
United States Conference of Mayors.
United States Office of Education, Department of Health, Education, and Welfare.
World trade committee on the Washington Board of Trade.
Young Catholic Messenger.

THE NATIONAL COLUMBUS DAY CELEBRATION, PAN AMERICAN UNION, HALL OF THE AMERICAS

The National Columbus Day Celebration, held in the Hall of the Americas, Pan American Union Building, was sponsored by the Western Hemisphere committee of the world trade committee of the Washington Board of Trade. Active leaders were:

Mr. Thomas F. Gately, chairman, world trade committee.

Mr. Evan H. Baker, W. R. Grace & Co.

Mr. Henry W. Beardsley, Pan American Airways.

Mr. John I. Bott, Asiatic Petroleum Corp.

Mr. Henry F. Grady, Bank of America.

Mr. Stephen S. Halsey, American Express Co.

Mr. Ronald McVickar, Northwest Orient Airlines.

The Honorable George D. Neilson, judge of the Municipal Court for the District of Columbia, chairman, Western Hemisphere committee.

Mr. John T. O'Brien, public relations consultant.

Over 500 Washington, D. C., leaders attended the Pan American Union celebration, at which the Honorable George D. Neilson acted as the master of ceremonies, and Mr. John I. Bott, Asiatic Petroleum Corp., as official host.

Special features of the celebration were:

Musical prelude: Headquarters Command Band, United States Air Force, under the direction of Capt. Harold L. Copenhaver.

Presentation of President Dwight D. Eisenhower's 1956 Columbus Proclamation: Mr. Philip M. Talbott, president, Washington Board of Trade, now the incoming president of the Chamber of Commerce of the United States.

Presentation of the 1956 Columbus Day Proclamation of the Board of Commissioners, District of Columbia: President Robert E. McLaughlin.

Latin American dance fiesta: under the direction of Rafael Sarda.

Columbus Day, 1956: Mr. John T. O'Brien, executive vice chairman, National Citizens Committee for Columbus Day.

Presentation of citations for their efforts in promoting Inter-American friendship by the National Citizens Committee for Columbus Day:

Mr. John W. White, secretary-treasurer, National Citizens Committee for Columbus Day.

Dr. Horacio Aguirre, editor, the Americas Daily.

The late Mr. Rudolf S. Hecht, formerly chairman, International Trade Mart, New Orleans, and cochairman, New Orleans Inter-American Investment Conference.

The Honorable Henry F. Holland, formerly Assistant Secretary of State for Inter-American Affairs.

Dr. Jose A. Mora, Secretary General of the Organization of American States.

Monsignor Jose Joaquin Salcedo, Secretary General, Acción Cultural Popular, Bogotá, Colombia, South America.

Coffee: The courtesy of the John H. Wilkins Co.

Cuban punch: The courtesy of His Excellency Miguel Angel Campa, Ambassador of Cuba.

COOPERATION—THE PRESS, RADIO, AND TV

The 1957 Columbus Day programs were given more press coverage than heretofore. The National Committee is indebted to Dr. Alejandro Orpila of the Organization of American States for the splendid press coverage given by the Latin American press. Stories about Monsignor Jose Joaquin Salcedo, Secretary General, Acción Cultural Popular, Bogotá, Colombia, a recipient of a Columbus Day citation, were carried as front-page picture stories in around 40 Latin American newspapers.

Miss Edna Bowles, the Americas Daily headed the publicity program for the United States, with special information to the press, radio, and TV outlets.

Reports from around the Nation reveal the excellent cooperation given by the press, radio, and TV in the States and in the communities.

GOALS OF THE 1957 COLUMBUS DAY OBSERVANCES

From our experiences in the 1955 and 1956 Columbus Day campaigns, the National Committee has discovered a great untapped reservoir of friendship in the United States for our neighbors to the south. United States leaders and plain citizens have eagerly cooperated in our Columbus Day efforts.

The National Committee, therefore, believes that the following goals should be adopted for our 1957 Columbus Day activities:

1. The organization of a permanent nonprofit Columbus Day Committee with a charter to do the ever expanding job that must be done in the United States and the Western Hemisphere to build inter-American understanding and solidarity.

2. The development of adequate Columbus Day materials to tell more effectively the story of Columbus and the relationship of the people of the United States to the people of Latin America.

3. The organization of a fund-raising drive for scholarships, training, and exchange programs for Latin Americans in the United States.

4. The selection of United States and Latin American citizens who excel in their contributions to inter-American solidarity for citation awards to be appropriately designed by a noted sculptor.

As we pay tribute to the great mariner on this October 12, 1957, and review our accomplishments in the 4½ centuries since America was discovered, why not join hands with our neighbors throughout the Continent and raise our voices in a song of tribute to this great land of ours:

"America, both North and South, God shed
His grace on thee,
And crown Thy good with brotherhood,
from sea to shining sea."

Let America be proud of itself. Let 21 nations stand together as one. The Continent of America.

Where Money Isn't Tight

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. WHARTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit an article on the subject of public versus private power, by Mr. Raymond Moley and published in a recent issue of Newsweek:

WHERE MONEY ISN'T TIGHT

(By Raymond Moley)

On a tree near my place of residence I recently saw a notice obviously printed by a youngster in pencil. It said: "Lost! A black cat with white spots. Reward for return to——"

Then appeared the name and address. Below, the owner had added the following: "P. S. If you want to keep it, all right. But let me know so I will stop looking."

This reminded me of the feeling taxpayers must have about politicans who promise less spending and tax reductions and then, after election, dash all hopes. Perhaps we might all adjust ourselves better if we knew the worst and stopped looking.

I don't want to discuss the budget seriously this week but merely to tell of a few clippings I have collected over the past few weeks.

Item: In December it was announced by the Rural Electrification Administration that it had approved an $8,883,000 loan to the Sacramento Municipal Utility District to construct new facilities for serving "outlying regions" in that part of California. The rate is 2 percent. The Government of which the REA is an agent pays 3¼ percent for the money. The REA has made $3 billion in such loans. No Federal income taxes are paid by REA.

Item: The Gore bill would appropriate $400 million to build Federal nuclear-fueled powerplants. Private companies are building such plants in considerable numbers and sizes.

Item: Debate is still going on, after 7 years, about who will build additional power facilities at Niagara—the Federal Government, the New York State Power Authority, or five investor-owned companies that are able and willing to put $525 million into the project. This installation would pay $23 million annually in Federal, State, and local taxes.

Item: 27 Senators have sponsored Wayne Morse's bill to oust the Idaho Power Co. from the Hells Canyon site where that investor-owned company is building the first of 3 dams authorized by the Federal Power Commission. The Federal dam would cost the Government some hundreds of millions of dollars.

Item: But the Idaho Power plan would not only save the Federal Government the cost of the dam but pay millions in taxes to the Federal, State, and local governments. This is shown by another clipping from an Idaho paper, which was sent to me by a lady in that State. It says that the Washington Water Power Co. delivered checks for taxes to nine Idaho counties amounting in all to $1,122,215. This was only the first installment for 1956. No wonder the people of Idaho prefer the development of their water resources by investor-owned companies.

Item: The Southwestern Power Administration, hailed when it was created as a monument to social progress, is deeply in the red. The Comptroller General of the United States points out that the SWPA rolled up a loss of $12,425,000 for the years 1943–55, and that the Southeastern Power Administration showed a loss of $12,096,000 for the years 1950–55. Uncle Sam must bail ou these children of his.

Item: Our old friend, the collectivists' delight, the TVA, has used up $2 billion of taxpayers' money to date. Of this, less than 10 percent has been repaid. No interest is paid on the remainder, and only a token amount is paid in lieu of Federal and State taxes. The Hoover Commission Task Force under the chairmanship of Ben Moreell found that TVA had escaped nearly $172 million in Federal taxes and more than $76 million in State and local taxes.

Item: My final clipping is a Wall Street Journal signed article saying that the Eisenhower administration is trying to figure out how to spend the cash it expects to get from Congress. High on the list are the creation of a TVA in the Nile Valley, something like the upper Colorado project for the Tigris-Euphrates Valley, and another for the Jordan. With the rich experience gained in the valleys of the Tennessee, the Columbia, the Colorado, and other American streams we should be quite equal to the task. What a blessing it is that in this moment of international peril we have learned so well how to spend money.

Small-Business Tax Relief

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. OSMERS. Mr. Speaker, tax relief for small business is so urgent that it is quite properly receiving nationwide attention. The increasing number of bankruptcies among small-business con-

cerns has focused attention on the problem. My bill, H. R. 6027, is one of several that would bring the relief so greatly needed. In its issue of April 15, 1957, Time magazine has published a very fine statement in connection with small-business tax relief and, under unanimous consent, I include it in the Appendix of the RECORD:

SMALL-BUSINESS TAX RELIEF IS THE NO. 1 NEED

The backbone of the United States economy is made up of small businesses—they account for some 4 million of the 4,250,000 United States firms. Yet small business is in deep trouble. While big businesses are getting bigger and taking a fatter share of the market, small companies are shackled in their attempt to grow by heavy—and often discriminating—taxes. Wrote Florida's Democratic Senator GEORGE SMATHERS to President Eisenhower last week, in pleading for the creation of a Cabinet-ranking Secretary of Small Business: "Every single barometer indicates a general worsening of conditions for smaller firms. Time is running out for the small-business man."

The Small Business Administration defines a small business as a retailer with annual sales of not more than $1 million, or a wholesaler with sales of $5 million or less; Washington wags describe it as one that cannot afford to keep a lobbyist in the capital. Actually, the facts speak more eloquently on behalf of the troubled small-business man than any lobbyist could. More small concerns went out of business last year than in any year since 1940; bankruptcies this year are running higher than in 1956. Small business's share of total manufacturing sales slipped from 18.9 percent in 1947 to 12.3 percent in 1956.

The mortality rate for new businesses has always been high—largely because of mismanagement and inexperience. But the fact that business failures since 1947 have doubled among firms 10 years old and older indicates that taxes are now the real trouble. After paying the Government 30 percent of earnings under $25,000 and 52 percent over it small firms have proportionately far less than bigger companies to use for expansion. To escape extinction, more and more smaller firms are forced to merge with bigger companies, thus accelerating the trend toward monopoly. Faced with these facts, almost everyone in Washington agrees that small-business men deserve a better break.

The most direct help would be an overall tax cut. Both Democratic and Republican Congressmen have introduced measures to aid smaller firms either by raising the profit point at which the 52-percent corporate-tax rate becomes effective or lowering the tax rate for profits under $25,000. A Cabinet committee appointed by the President recommended a cut from 30 to 20 percent for corporations with earnings of less than $25,000. But the administration, harking to Treasury Secretary George Humphrey's firm opposition to tax changes involving more than a minimum revenue loss, has so far regarded direct tax cuts as too expensive. Moreover, corporate-tax cuts would not benefit some 85 percent of small concerns that are not incorporated, who now pay their taxes on a steeply graduated individual tax scale.

Corporate and individual income taxes are only part of a small-business man's tax troubles. There are many other taxes that often discriminate against him in favor of big business. For example, many small companies with limited capital are forced to buy used equipment or old buildings, but must depreciate their investment for tax purposes at a less-favorable rate than permitted for the new equipment big companies can afford to buy. Worst of all, inheritance taxes are so stiff that the heirs of many small family-owned businesses are often forced to sell off their holdings at distress prices or are left without sufficient capital to continue operating.

Since an overall tax cut seems out of the question, members of both parties in Congress, and the administration itself, are backing measures to give the small-business man tax relief in at least these areas. The administration hopes to present its proposals to Congress shortly. Among the remedies: (1) Spread the payment of estate taxes over a 10-year period for all small firms; (2) give small firms the right to depreciate used equipment for tax purposes at the more rapid rate allowed for new equipment; (3) permit closely held corporations with no more than 10 stockholders to be taxed at the partnership rate when it is less than the corporate rate, while continuing to take advantage of the corporation's limited liability features.

Such relief measures are probably the most that the small-business man can hope for in the near future. Congressional experts calculate that they would cost the Government some $200 million in tax revenues, but the Treasury puts the loss much higher—at $500 million. In any case, the tax loss would probably not be permanent; many of the payments, such as on inheritance taxes, would only be deferred. Actually, cutting the taxes on small business might well increase the overall tax take, since it would give small-business men cash to expand. Thus, as the President's Cabinet Committee pointed out, the measures would "tend to enlarge the national income, which is the ultimate source of all tax revenues."

United States Welfare Aid Cuts Alarm State Leaders

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article and a letter from Gov. James T. Blair, Jr., of Missouri:

[From the St. Louis Globe-Democrat]

MISSOURI CAPITAL COMMENT: UNITED STATES WELFARE AID CUTS ALARM STATE LEADERS

(By Hume Duval)

JEFFERSON CITY, Mo., April 13.—Governor Blair, legislative leaders, and department heads are showing no little concern over the threatened cut in Federal matching funds for welfare administration in fear it may be the beginning of a policy to force the States to assume a greater share of the cost of jointly financed programs.

Under pending legislation in Congress, Missouri stands to lose in the current quarter $150,000 in Federal matching funds for welfare administration.

This would be a crippling blow to the jointly financed program. The State does not have the money available to make up the loss in such a short time and, as the Governor has informed Missouri Congressmen, the only alternative would be drastic reductions in personnel and other administrative expenses.

PRESSING PROBLEM

While the immediate problem is pressing, the question is being raised here as to whether this legislation is as far as Congress intends to go, or would it be eventually followed by cuts in Federal funds for old-age assistance, highways, public health and other jointly financed undertakings.

If Congress can cut Federal matching funds in one field, State officials point out, it can reduce them in other fields and turn back to the States a greater share of the responsibility for maintaining programs on their present and expanding levels.

In Missouri, this would be disastrous to the budget and would obviously force an increase in State taxes or a sharp curtailment in services.

Governor Blair has pointed out that the Federal Social Security Act provides that welfare administration costs be financed by the Federal and State governments on a 50-50 basis. However, this can be nullified by Congress, as now proposed, by simply placing a limit on the Federal funds available.

The Federal act sets up a formula for matching old-age assistance, aid to dependent children, aid to the blind and to the disabled. Roughly speaking, a $60 monthly grant to a recipient, for example, is financed to the extent of $39 in Federal funds and $21 in State funds.

ADMINISTRATIVE COSTS

Percentagewise, the Federal Government pays 64 percent of old-age assistance, aid to the blind and to the disabled and 75 percent of aid to dependent children costs. It pays 50 percent of administrative costs under present law.

When the State division of welfare makes out its budget for submission to the legislature, it determines the needs for a 2-year period, allocates the Federal Government's share in expectation that it will be paid and asks the assembly to provide the State's share. Any change in the Federal policy throws the entire budget out of line.

Governor Blair takes the position that under the Federal Social Security Act, the Federal Government has a contract with the States to pay 50 percent of the administrative costs of the welfare program. He believes this contract should be lived up to, not nullified through the simple expedient of refusing to appropriate sufficient Federal funds to finance it.

According to information received by State officials, Congress is attempting to strike at States which have a high welfare administration cost, some running as much as 27 percent of the cost of the entire program. Missouri has a 4.5 percent administration cost.

Proctor N. Carter, director of the Division of Welfare, points out that a percentage cut across the board will penalize States like Missouri which operate their programs at low cost while States with higher costs would not feel the pinch so keenly.

ATTACK BASIC LAW

Blair has proposed that if Congress wants to cut administrative cost participation, it should attack the basic law rather than lop off appropriations in the manner now under consideration.

He has suggested as an alternative that Congress establish a definite percentage beyond which it would not go in joint financing. The States would then know exactly how much of the total cost the Federal Government would pay in dollars and would be in a position to lay out a program limited only by how far they would be willing to go on their own beyond matching Federal allotments.

EXECUTIVE OFFICE,
STATE OF MISSOURI,
Jefferson City, April 15, 1957.

HON. MORGAN M. MOULDER,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR BLUE: I enclose an article written by Hume Duval, chief of the St. Louis Globe Democrat Jefferson City Bureau, which appeared in the paper on April 14.

This article sets forth in a very clear and understandable manner the present problem we are having in connection with Federal appropriations for administrative expenses for the State welfare program included in the Urgent Supplementary Appropriation Act of 1957, H. R. 4249, chapter 4.

I sincerely hope that this matter will be promptly resolved favorably to the States and we will be assured that we will receive full Federal participation in the administrative costs of the welfare program on a 50–50 basis, as provided in the Federal Social Security Act.

With personal good wishes, I am,

Sincerely yours,

JAMES T. BLAIR, Jr.,
Governor.

Postal Subsidy

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. MADDEN. Mr. Speaker, the following editorial sets out some constructive ideas on where our Post Office Department could pick up approximately $100 million toward its operational expenses.

This is only one of several leaks and subsidies which includes bulky magazines which could help defray expenses of our Post Office Department:

[From the Monahans (Tex.) News of March 28, 1957]

WHERE TO FIND $100 MILLION

There's a quiet $100-million-a-year subsidy leak of post office money to the railroads, we are told. Forty years ago it began as only a trickle, it seems, but the loss has grown and grown though the department has striven manfully to plug the leak. It is time now, with taxpayers militantly aroused over Government extravagance and a huge national budget, to bring to the attention of every Senator and Congressman this unwarranted $100-million-a-year overpayment to the railroads for hauling second-, third-, and fourth-class mail.

Away back in 1916 Congress ruled: "The Postmaster General shall, from time to time, request information from the Interstate Commerce Commission as to the revenue received by railroad companies from express companies for service rendered in the transportation of express matter, and may, in his discretion, arrange for the transportation of mail matter other than of the first class at rates not exceeding those so ascertained and reported to him, and it shall be the duty of the railroad companies to carry such mail matter at such rates fixed by the Postmaster General."

Congress made that part of the Mail Pay Act of 1916. That law seems straight—forward and simple enough. The United States Government, logically, should not pay more than anyone else for a similar service. But for 40 years the ICC apparently hasn't been able or willing to do what Congress told it to do. In 1947, 1948, and 1949 the Postmaster General asked ICC to provide express rate information required under this law. He got no help. In 1949 the ICC opined that the law "does not place upon us a duty or mandate" to supply such data. Further, said the Commission, the railroads did not employ "any rates or system of rates" in hauling express shipments.

The Citizens Advisory Council of the Senate Post Office Committee has just published its report bringing to light this $100 million-a-year overpayment to the railroads. There is evidence that, in 1955 the Post Office Department, in "round figures", paid the railroads 80 cents per equated car-mile to carry second, third, and fourth class mail. At the same time, the express company (owned by the railroads) paid just half as much—only 40 cents for similar service. The total overpayment in 1955 to the railroads by the Post Office Department is estimated at $121,041,950!

Perhaps this is mere small change in terms of a $71 billion national budget. But that $100 million is a good-sized hunk of the year's postal deficit. And it takes a lot of us citizens a lot of hours to earn $100 million! Is this unenforced 40-year-old Mail Pay Act toothless? Or are our Congressmen feckless? We ought to find out.

North Dakota Legislature Sees Need for Limitation on Petroleum Imports

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks, I would like to include the contents of Senate Concurrent Resolution EE of the 35th Legislative Assembly of North Dakota. The resolution follows:

Senate Concurrent Resolution EE

Concurrent resolution relating to the need to protect the national security by imposing a limitation on petroleum imports

Whereas expanding development of petroleum resources, dependent upon the incentives of increasing markets, is of primary importance to the economy of North Dakota and is essential in maintaining the financial requirements of our State government;

Whereas the security of the United States and the national economy are dependent upon continued discovery and availablity of increasing petroleum supplies in North Dakota and her sister States;

Whereas the incentives to search for, find, and develop new petroleum reserves have been and are now undermined by excessive imports of petroleum and its products, as illustrated by the increasing encroachment of Canadian petroleum competing for North Dakota oil markets in the North Central United States;

Whereas this growing economic threat to needed and essential expansion of our petroleum resources has been recognized by all branches of government as an impairment to the security of the United States and her allies in the free world;

Whereas the Congress of the United States provided in the 1955 extension of the Trade Agreements Act authority for a limitation on petroleum imports when they threaten to impair the national security, and the administration, having ascertained that such impairment did exist, has acted without success to obtain voluntary limitations of petroleum imports in consonance with national-defense standards enunciated by a Presidential Cabinet Fuels Committee and by the Congress;

Whereas the failure of oil importing companies to limit petroleum imports as urged by Government in the name of national security, and the continued increase in these imports in defiance of such Government requests, now requires positive mandatory Government actions to restrict petroleum imports in conformance with accepted defense standards;

Whereas this action must and should be taken immediately if the Nation is to avoid increasing imports and ultimate dependence on unreliable foreign sources of petroleum supply, the dangers of which are now illustrated by conditions in Western Europe, dependent for vital petroleum fuels on the Suez lifeline which is now disrupted; and

Whereas an effective limitation on petroleum imports is made more essential by worldwide expansion of oil tanker fleets and capacities which will enable the importation of unprecedented quantities of oil from the vast Middle East field when normal movements of oil are restored in the eastern Mediterranean: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That this legislature hereby urges immediate measures by the President of the United States to limit petroleum imports to levels recommended by his Cabinet Fuels Committee in February 1955, and that North Dakota Representatives in the United States Congress are herewith urged to pursue whatever action they deem essential to assist in accomplishing this objective; be it further

Resolved, That copies of this resolution be immediately dispatched by the secretary of state to the President of the United States, to the members of his Cabinet Fuels Committee, and to North Dakota Members of the United States Senate and the House of Representatives.

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD at this point an editorial from the Bellingham Herald, a daily newspaper published in the Second Congressional District of the State of Washington.

This editorial goes into the arguments for and against the admittance of Alaska as a State. As a member of the Interior and Insular Affairs Committee of the House, it has been my opportunity to hear lengthy testimony on both sides of the statehood question.

The question has evolved around the financial aspects of Alaska's qualification for statehood. It is true certain revenues would be lost, and others gained, in the switch from standing as a territory to that of the forty-ninth State. I do not think it fair that Alaska and Hawaii be considered in the same breath as far as statehood goes. Each has its own economic and other problems concerning qualification for statehood.

As this editorial points out, the Territory has gone ahead with elections and selected "representatives" under the Tennessee plan. This would indicate there is a great deal of interest in Alaska on the statehood question.

I do not believe we should defer the decision on statehood for Alaska at present for consideration of alternate plans. These people are not a foreign nation, most of the population came from other States in the Union. They are not a backward economic unit. They have the apparatus of government. They have vast resources and the potential for a great development. It has been suggested we must offer exceptional tax advantages to encourage investment capital to come in and harvest the natural resources of Alaska.

I believe with today's transportation conditions and with the world market for metals, fuels, and other resources which Alaska has in abundance, industries are going to be attracted to the source of these rich deposits.

The Bellingham Herald editorial, I believe weighs the advantages and disadvantages of immediate statehood, and interjects the idea that perhaps some compromise will be worked out. I believe, one way or another, this Congress should look the Alaskan statehood issue squarely in the eye and decide what qualifications are there, and what lacking, for Alaska to become the forty-ninth State of the Union.

Text of the Herald editorial is as follows:

ALASKA STATEHOOD GETS ATTENTION OF CONGRESS

With the support of President Eisenhower—making allowance for some reservations—and the State Department, Alaska's chances of statehood in the relatively near future appear to be improving.

In the background, however, is the high cost of going it alone, in a high cost era, and it is not impossible that admission will be achieved gradually, in conformity with the suggestion of Representative THOMAS M. PELLY of Seattle, that Alaska "would fare much better under commonwealth status than actual statehood."

The President has indicated approval of statehood with the stipulation that certain Federal military reservations be set up first in western and northern Alaska and excluded from State jurisdiction.

Speaking for Secretary of State John Foster Dulles, the Assistant Secretary for Congressional Relations, Robert C. Hill, favored statehood at a congressional committee hearing. "Statehood for Alaska and Hawaii, particularly in view of the concrete expressions of public opinion in its favor in these Territories," Hill said, "would seem to constitute a clear example of self-government referred to in the Charter of the United Nations, and as such should be viewed in a favorable light by the great majority of U. N. members."

However, statehood is not a one-way street. While Alaska may be a "colony," as some statehood advocates say, as a Territory it benefits from Federal bounties. Statehood, according to "Representative" Ralph J. Rivers, of Fairbanks, would cost Alaskans an extra $2,500,000 a year, including new tax revenues of $987,287. Mr. Rivers estimated that $1,162,713 of this "extra burden" would be offset by nontax revenues which would accrue to Alaskans as a State which are not received by the Territory. The $987,287 of estimated tax revenues required under statehood, he added, could be raised "by a 1-percent tax on property outside incorporated areas, or other levies."

Further, Edward J. Rusing, prominent Alaska banker, said Alaska is trying to develop an economic atmosphere that will attract more people. The Territory's resources, he testified, can be developed "only when risk capital is attracted to the Territory."

That qualification goes to the heart of the problem. Complete self-government is desirable, but Alaska is under some handicaps. Its resources are fabulous and its area is larger than that of Texas and California combined, which qualifies it as potentially our largest State; yet its population, 128,643 (in 1950), is relatively small. While this total is larger than the population of some Western States at statehood, times—and costs—are different today.

In suggesting a Commonwealth status, similar to that of Puerto Rico, Congressman PELLY told a House subcommittee that this would permit Alaskans to elect their own Governor and enjoy most of the rights now denied them, but at the same time they would be exempt from Federal income taxes as an encouragement to the development of Alaskan resources. The Seattle Congressman continued:

"Then, after an agreed period, industrialized and with an economy built up during the interval by tax incentives to attract industry, Alaska eventually would become a great and wealthy and self-sustaining State.

"Except for such procedure, I am convinced Alaska will be forced to overtax private enterprise in her borders, and yet her resources neither will be properly exploited nor properly conserved, which will result in unsound State management and continued vast Federal expenditures. * * *

"A 20-year period with tax incentive under Commonwealth status could result in the end in Alaska's becoming one of the richest States in the Union."

Alaska's confidence—or hope—in statehood is revealed in its adoption of a State constitution and its election of 2 "Senators" and 1 "Representative"—under the so-called Tennessee plan—who have been in the Nation's Capital knocking for admission. These officials will qualify if and when statehood is granted.

Apparently a majority of the people favor statehood. Some opposition is on economic grounds, some of it is political. For instance, the South long has resisted the admission of new States because it would be further handicapped on the State-rights issue. Some partisan opposition has been based on the political complexion of the Territory. That is why Hawaii and Alaska, which generally have been on opposite sides of the political fence, have been bracketed together in Congress as candidates for statehood.

In effect, Congressman PELLY's compromise solution would resolve the valid opposition to Alaska's admission under current conditions and at the same time promote the development of its economic self-sufficiency.

The Late Honorable Fred L. Crawford

SPEECH
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. BARTLETT. Mr. Speaker, it was with deep regret on a personal basis that I learned of the unexpected death of Fred L. Crawford on April 13. He had been in my office on several occasions the very week of his death. Then he appeared to be in wonderful health, and was his usual cheerful and energetic self.

I had known Fred Crawford since I first came to Congress. He led the first congressional committee to Alaska to hold hearings on statehood. Fred Crawford did a terrific job then. From that time on he was a leading advocate of statehood for Alaska. His help was given to us Alaskans in ever so many other ways. Of course, I am aware that the other Territories and possessions also benefited from his wise advice and counsel and leadership. It is interesting to note that this Member of Congress from Michigan was possessed of the vision which led to so many changed concepts in reference to American areas beyond the seas. During the years since he left Congress we Alaskans have missed Fred Crawford in his official capacity; but his enthusiasm was such that even since then he has guided us, counseled us, and helped us.

Hundreds of Alaskans knew Fred Crawford; some of us knew him well. We treasured his friendship. We grieve now because we have lost a friend. We grieve because the Nation has lost a man who served it well. We grieve most of all because Betty Crawford and their son have lost husband and father. To them I should like to extend deepest sympathy on behalf of the people of Alaska, and for Mrs. Bartlett and myself personally.

Hawaii's People—A Needed Resource

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. BURNS of Hawaii. Mr. Speaker, Hawaii's Americanization is exemplified in a very special way by the recognition given Hawaii's citizens in many varied fields. Last year one of Hawaii's distinguished young Americans of oriental ancestry was honored as one of the 10 outstanding young men of the year. This selection was made by a singularly qualified board.

I am pleased to insert into the RECORD today an announcement of the selection of America's four outstanding young farmers, one of whom is an American of Japanese ancestry from Hawaii. It is particularly noteworthy that his recognition was accorded to him for his work in growing coffee. I believe I am right in saying that Hawaii is the only place in America where the coffee is grown.

The recognition accorded Hawaii's citizens by their being selected as in this instance and in other instances points up the total integration of Hawaii's population into the American way of life. These selections also illustrate the fact that Hawaii offers to the United States a most valuable human resource which can only reach its full potential by the admission of Hawaii to statehood so that the exceptional qualifications and inherent abilities of the great American citizens of Hawaii may be given the political climate to realize their maximum potentials.

ANNOUNCING AMERICA'S FOUR OUTSTANDING YOUNG FARMERS OF 1956—HAWAIIAN NAMED AMONG AMERICA'S FOUR TOP FARMERS

DURHAM, N. C., April 16.—The annual search for America's four outstanding young farmers went beyond the Nation's boundaries this year to honor a man from Hawaii along with farmers from Texas, Arkansas, and Utah.

Fifty outstanding farmers, 21 to 36 years of age, representing each of the 48 States, Hawaii, and Alaska, were all honored today, April 16, at a banquet in Durham, N. C., where the names of the top four men were announced.

The special recognition went to:

Takeshi Kudo, 34, Kona, T. H., utilized submarginal lava land to develop new methods in growing coffee.

Russel Mayer, 36, Milford, Utah, through soil and water conservation planning produced cash crops on more than 1,000 acres of what was once Utah desert wasteland.

John P. Tufts, 31, Dallas, Tex., in 6 years in spite of rugged drought conditions, built a dairy herd from 7 to 205 cows that outproduced every herd in Texas of more than 50 head.

Alex S. Curtis, 31, Manila, Ark., a graduate electrical engineer with a love of the soil, purchased a run-down acreage in 1949, and last year had 200 visitors tour what has now become a model farm.

Each of the 50 young farmers at the banquet were sought out by a Junior Chamber of Commerce chapter and nominated with others for, first, community and then State outstanding young farmer awards. The Jaycees and the American Petroleum Institute Committee on Agriculture are national sponsors of the program now in its third year.

Judging of the 50 finalists was done by a panel of 5 agricultural experts: Mr. W. B. Camp, Bakersfield, Calif.; Dr. W. H. Martin, dean of agriculture, State University of New Jersey; Dean Harry J. Reed, Purdue University; Dr. J. Wayne Reitz, president, University of Florida; Dr. A. D. Weber, dean of agriculture, Kansas State College of Agriculture.

The awards were presented in Durham by Wendell H. Ford, Owensboro, Ky., national Jaycee president. Gov. Frank Clement, of Tennessee, was the main speaker. Also present was Chester Lauck, known to millions as Lum Edwards of the former Lum and Abner radio team.

Adding to the pageantry of the surprise announcement of the four most outstanding farmers was the 140-voice Duke University Men's Glee Club which each year tours the Nation.

What Price Culture

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. WESTLAND. Mr. Speaker, I would like to make some observations on the activities of the State Department and their cultural exchange program to date.

Since I believe that an exchange of ideas between nations is a good thing, I suggested to the State Department that perhaps it would be interested in helping to send four youngsters who won the championship to the world championships in England in June. I received a North American dairy cattle judging great big "No."

These four youngsters are typical, wholesome, fine American farm young people, who are the youngest judging team ever to win the United States national judging contest, held at Waterloo, Iowa, this year, and to go on to win the North American continent championships. Since they reside in my congressional district, I have had the opportunity of meeting them. I can tell you they are fine young Americans, teenagers we can view with pride. They come from farm families of modest means, and have earned their award through hard work on the farm.

The proposed trip would enable them to be in England for about a week. Private dairy people are attempting to raise enough money for their expenses on the trip. I was interested in procuring travel arrangements through the State Department's exchange program. Cattle experts say these outstanding 4-H judgers have an excellent chance to win the world championship in England if they are able to compete.

I would like to refer to the remarks made yesterday by the gentleman from Arkansas [Mr. TRIMBLE] who pointed out the fine impression made by two young farm girls from India who came to visit in his district under the exchange program. I believe we could expect favorable results from sending these four American farm young people to England to exhibit their skills against judging teams from around the world.

Now, I do not believe that every project of this nature should be financed by the Government. However, since we have approved vast sums to be spent on the cultural exchange program between our Nation and others, I thought that this would certainly reflect good will toward our Nation, and would be a project that we could be proud of.

The State Department has informed me that they cannot spend the small sum of $3,000 or so to help send this team to England. I was interested in finding out just what kind of talent it takes to be financed by the State Department.

A look at the record is most revealing. The State Department found it could afford a sum of $133,000 so that Band Leader Dizzie Gillespie could reflect glory and honor on the United States by riding down the streets of Buenos Aires dressed as a gaucho. It appears that we are interested in spreading be-bop before we spread good farming practices. Gillespie drew $2,100 per week while teaching the Latin Americans to be cool cats.

Looking further into the record we find the Jose Limon Dance Co. received $43,801 to tour South America and teach the natives there to tango and mambo. Then there is the globetrotting Tom Two Arrows, who this year had his listing changed to Tom Dorsey. This veteran State Department cultural exhibit just returned from a tour of Japan, Korea, Formosa, Cambodia, Vietnam, Thailand, Burma, and Malaya where he demonstrated American culture, and the State Department reports glowing reports.

The list of professional acts includes many famous names in our field of entertainment, sent at a cost of $3 million. Now, I believe that we should also have a few amateur attractions to show that we have hard-working people in this country who excel without selling their talents.

The State Department has sent a few amateur groups abroad. Included are an amateur hockey team, distance runners to Finland, a track team to Rumania, the San Francisco Chinese-American basketball team, and also the world-famous professional hoop squad, the Harlem Globe Trotters.

I do not believe that all of these groups did us good. Many of them were probably of great value in spreading our culture to foreign lands. I question strenuously the value of the State Department spending $133,000 to send a jazz band to South America. I am not altogether certain that jazz is the type of culture we need to be spending that kind of money to spread.

I believe the State Department could do more toward cementing relations with the youth of other nations of the world by spending about $3,000 to send our judging team to England to compete in the world championships. Prejudices have less foothold in children than in adults. These youngsters could do a real job of spreading American good will to farm youths from many nations where our motives and system of government are misunderstood.

The State Department is also requesting $810,000 to generate enthusiasm among the American people to attend an international fair in Brussels, Belgium. The object is to send American musicals to Brussels at great cost to the State Department, and then persuade Americans to go overseas to see them, by spending $810,000 on a promotion campaign for the trade fair.

This is big money, a grandiose type of promotion designed to dazzle. I think we can do more good by sending plain American citizens to exchange everyday ideas.

I believe this Congress could well spend more time looking into what kind of people we have directing these programs. Who is choosing for us the people and the types of culture to be sent overseas to impress the foreign population with American ideals? It is obvious that sending fine young farm people is not being given consideration, but sending bebop artists from our smoky dives is considered hep international relations.

Extension of Lease Purchase

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. CRAMER. Mr. Speaker, I intend to introduce immediately a bill extending the life of the Lease Purchase and extended lease program until June 30, 1960, with amendments designed to make the program more workable. The program otherwise expires July 22, 1957.

Fundamentally, I believe the program to be the most reasonable and acceptable

approach to the ever-increasing problem of keeping up with Federal public building needs, General Services and Post Office programs.

It is essential that the extended lease authority given the Postmaster under the Lease Purchase Act be continued. This has proven to be a most effective weapon in meeting the needs of the small communities throughout the country. This is provided for in section 203 of Public Law 519, the Lease purchase Act and empowers the Postmaster General to enter into lease agreements for periods not exceeding 30 years and to do other things required to cary out the purposes of this provision. This extended lease authority is not available to the Post Office Department under the basic law and if this act is not extended, then, this most effective method of meeting the problem of post-office needs in the smaller communities will not be available.

There have been hundreds of post offices constructed under this program that could not have been built without long term lease arrangements. In my district as well as throughout the State of Florida and the United States many urgent local needs have been met.

Using my district as an example, the following construction has in the last 2 years been completed; or is underway:

Dade City; 9,000 feet, estimated construction cost $50,000.

Zephyrhills, 4,200 feet, estimated construction cost $20,000.

St. Petersburg, 142,000 square feet, estimated construction cost $1,300,000.

Interbay Branch, Tampa, 4,500 square feet, estimated construction cost $30,000.

The following construction has been approved and is being advertised or processed and thus the estimated cost is not available;

West Tampa Branch, 6,000 square feet.

Dale Mabry Branch, Tampa, 6,000 square feet.

Newport Richey, approximately 6,000 square feet.

The following construction is being cosnidered when the present lease terms expire, size and cost is thus not yet estimated: Ybor City, Tampa branch; Tampa, mail-handling facility; Tarpon Springs, St. Petersburg and Gulf Beaches, two branches; Clearwater, additional branch; Ruskin.

I hope this gives an idea as to how important this extended lease program is in meeting the problems of smaller post offices, branch offices and expansion of existing facilities.

Aside from any considerations of merit or demerit as they relate to lease purchase as such, there can be no argument advanced that convinces me that this extended lease program is unsound, unworkable or unwise. It has proven itself to the contrary.

Considering the lease-purchase aspects of the bill I shall introduce, the following reasons seem to necessitate its extension for a reasonable period:

First. It is obvious and has been for some time that Congress is not going to meet this responsibility of Federal building and post office needs in the local communities through direct appropriations. This is true despite the fact that authorized building in the District of Columbia for Federal purposes is jumping to an alltime high, to some $130 million, not including the new House Office Building. This is true despite the fact that the needs in the local areas, in the congressional districts, become ever more acute. This is especially true with the new economy wave that is sweeping the Nation and Congress—with which I concur—and which in itself justifies the lease-purchase approach to meeting this problem. This is further true because our backlog of public building needs is so great that the direct appropriations needed to bring the program up to date and give the type of service to the people at home to which they are entitled would be in the billions.

Second. This is the most economical method of financing these projects over the long run without having to make large construction appropriations at a time when the people are demanding economy in government.

Third. The additional cost of rent as the result of moving to larger quarters is self-liquidating by the additional business turnover resulting from the additional space and accommodations to patrons.

Fourth. The entire program is based upon the merits of the given projects and the greatest needs, rather than political considerations, and this will continue to be true so long as the GSA and the Bureau of the Budget continue to handle the program of recommending projects. Should Congress attempt to return to only the direct appropriation program it would result in district vying against district for priority and favored treatment rather than meritorious consideration alone.

Fifth. This lease-purchase program is only an alternative approach, additional to the basic law and the direct appropriations approach. Congress can still, where and when the facts justify it, authorize and appropriate for construction. This alternative is available to Congress at all times. This lease-purchase program and extended lease program provides for an additional way of meeting the need on a planned, methodical and merit basis.

Sixth. The Lease-Purchase Act has not had adequate chance to operate to prove its true value. Admittedly, there are some shortcomings of the act, and the amendments contained in my amendment are directed at trying to rectify some of these problems. The basic reason for the philosophy behind the bill remain as commanding as ever, and it is a mistake, in my judgment, to kill at this time a program that is so badly needed.

Seventh. Much money and time and effort has been already expended in planning a well-rounded program on a national basis under this act and this should not be lost or destroyed at this time.

Eighth. This is the only way, through financing, that the multi-million-dollar financing deficit can be met soon enough to provide adequate services where needed.

St. Louis Consumer Federation Urges Stricter Supervision of Trade Practices in Meatpacking

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mrs. SULLIVAN. Mr. Speaker, the spring bulletin of the St. Louis Consumer Federation, an outstanding organization of alert, public-spirited, consumer-minded people in my city, has urged support for a proposal by Senator WATKINS of Utah to transfer jurisdiction over trade practices in the meatpacking industry from the United States Department of Agriculture to the Federal Trade Commission.

The Packer and Stockyards Act lodges jurisdiction in the Department of Agriculture over trade practices in livestock buying and meat merchandising, with a result, according to the St. Louis Consumer Federation, that consumers and small packers have been left virtually unprotected from false advertising, deceptive practices, price discrimination, and monopolies, declaring that the Department of Agriculture has done practically nothing to carry out its responsibilities in this field.

Because of the language of the present statute, the St. Louis Consumer Federation points out, the Federal Trade Commission has refused to handle complaints against big packers involving nonmeat items such as ice cream and oleomargarine.

In view of this situation, the St. Louis Consumer Federation, headed by my good friend Mrs. Frederick A. Faust, has written to Senator WATKINS urging enactment of the kind of legislation he has proposed to give the Federal Trade Commission authority to handle complaints against the meatpacking industry in the same manner it does against other industries.

It is my understanding that many of the smaller meatpacking firms, and the Western States Meat Packing Association, support such a change in the law.

Under permission of the House of Representatives, I submit herewith the portion of the spring bulletin of the St. Louis Consumer Federation which discusses this matter, as follows:

FEDERAL TRADE COMMISSION

The FTC was established, 1914, to prevent unfair competition, deceptive practices, false advertising, price discrimination and monopolies. It is one of the independent agencies of Government in the service of the general public.

Since its establishment in 1914, many changes have come about; take one, take packaging. With modern packaging the old adage "let the buyer beware" has lost all its meaning. It is impossible to examine the content of hermetically sealed packages to evaluate quality before buying. Sellers therefore have to be policed, and the FTC is a policeman to protect consumers.

But it is not clear why the FTC should not have police power over the meat packing industry. At present, the Packers and Stock-

yards Act places trade practices in livestock buying and meat merchandizing in the USDA.

Some, if not all ice cream and oleomargarine seems to come under the Packers and Stockyards Act also. We refer here to a report in the Wall Street Journal that the FTC has refused to handle complaints against Swift & Co. involving ice cream, and against Armour & Co. involving oleomargarine, but it did act against Blanton Co. of St. Louis involving Creamo Margarine.

Logically it seems that jurisdiction over packers in the field of price discrimination, restraint of trade, and over their stockyard activities belong with the FTC and not to the USDA. The latter was established to conduct comprehensive research and educational programs relating to farming; provide crop reports, commodity standards, meat inspection, marketing services, aid in flood control, administer price supports and production adjustment programs, and make loans to farmers.

According to the WSJ, USDA officials conceded that their agency has done very little in the antitrust field. In fact, the USDA has not kept a close watch on trade practices of companies engaged in slaughter, packing, and sale of meat products.

We find ourselves in full agreement with the Western States meat packers and other small packers who would like to see jurisdiction over the meatpacking industry as it relates to trade practices, returned to the FTC where it belongs. The big packers are opposed. No public good is to be expected from mixing up the functions of the FTC and the USDA. It leaves consumers and small packers quite unprotected.

Question: How may the St. Louis Consumer Federation and our elected Senators and Representatives in Congress help the Federal Trade Commission to regain its lost domain and clean up this particular mess?

"Not in the Public Interest"—Comments by St. Louis Consumer Federation on Proposed Natural Gas Legislation

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mrs. SULLIVAN. Mr. Speaker, now that new legislation has been introduced to seek once again to overturn the Supreme Court decision on regulation of natural gas rates in the field, I believe many of the Members—particularly those from the consumer areas—will be interested in a thoughtful discussion of this issue by an outstanding St. Louis consumer leader.

Mrs. Zonja Wallen-Lawrence, a member of the Executive Committee of the St. Louis Consumer Federation, and a lady who is an intense fighter for the consumer in all instances, has written me the views of the Federation on the natural gas controversy, and her letter is a clear, straightforward, convincing exposition of the issues involved.

As this letter points out, only 7 States produce enough gas to export more than they import, and these 7 accounted for 94 percent of the total interstate shipments of natural gas in 1953. I think that helps to put this matter into perspective, as does the rest of her excellent letter.

Under permission granted me by the House of Representatives, I herewith submit for the Appendix of the CONGRESSIONAL RECORD and for the attention of the membership the letter from Mrs. Zonja Wallen-Lawrence of the St. Louis Consumer Federation, as follows:

ST. LOUIS CONSUMER FEDERATION,
MRS. FREDERICK A. FAUST, PRESIDENT,
1823 HICKORY STREET,
St. Louis, Mo., April 1, 1957.

Re natural gas.
Hon. Mrs. JOHN B. SULLIVAN,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN SULLIVAN: The executive committee of the St. Louis Consumer Federation wishes to go on record as opposed to any bill or bills before Congress that would remove from Federal regulation the sale in interstate commerce of natural gas for resale, and the transportation of natural gas in interstate commerce.

The Natural Gas Act of 1938 was passed by Congress because of the necessity to protect consumers against unreasonable increases in the price of gas. Need was father of the act. The need for protection of consumers has not lessened.

Giants of the oil and gas industry have made repeated attacks on the Natural Gas Act hoping that they may charge whatever the traffic will bear rather than abide by price based on costs plus profits.

In the 80th Congress, the Moore-Rizley bill created so much public indignation that it never got out of committee. The Kerr bill (1949–50) was vetoed by President Truman and Congress did not attempt to override the veto. Its sibling, the Harris-Fulbright bill of 1956 was vetoed by President Eisenhower on the basis of objectionable tactics by the oil companies; not on the basis of the issue.

The issue is: Shall the price of gas, when there is conflict of interest among States, be fixed by an interested party or by a disinterested umpire?

There is conflict of interest among States because of the disparity in the distribution of natural gas in nature. Only 7 States produce enough gas to export more gas than they import. These 7 accounted for 94 percent of the total interstate shipments of natural gas in 1953. There are 16 gas-producing States importing more natural gas than they export. Illinois is one. Lastly, there are 26 States and the District of Columbia which export no natural gas. Missouri is one. This disparity in a noncompetitive industry creates conflict of interest among States. The Constitution of the United States gives Congress power to regulate commerce among the several States and the need for regulation exists and is provided for by the Natural Gas Act of 1938 which is now under attack.

Furthermore, because the natural-gas industry is essentially noncompetitive, regulation is necessary to protect ultimate consumers of gas. Well over 21 million households (approximately 80 million persons) use natural gas for heating, cooking, etc. In Missouri alone there are over 650,000 consumers of gas who would be hurt by removal of Federal control over the sale in interstate commerce of gas for resale. In the wonderful State of Texas, where the median per capita income is well below the national average, consumers are going to be hurt too—unless local State laws offer them local protection.

When consumers' gas appliances have been purchased and connected to the gas mains, and then the price of gas goes up and up, consumers have no alternative but to pay and pay. They are captive. There is no other gas distributor who can sell them gas for less. Competition is nil. However, at this point the State protects us.

When the distributor—Laclede Gas Co., for instance—has laid its network of pipes and has been connected to the pipeline at the "city gate" and then the price of gas goes up and up, the distributor has no alternative but to pay and pay, and pass the increased cost on to the consumer. There is no alternative pipeline that will sell gas for less. There is no competition.

The interstate transmission of natural gas is almost completely dominated by 17 pipeline companies according to testimony presented before the Senate, 1956.

The effective supply of natural gas sold to pipelines is in the hands of a few corporations who also own the bulk of the Nation's reserves of natural gas. In 1953, 70 percent of all natural gas for resale in interstate commerce was sold by 35 companies. And 54 percent was sold by 22 companies among whom were the biggest and most profitable corporations in America. Because the supply is concentrated in the grasp of so few, competition in the sale of natural gas can be said to exist not at all—from a consumer's point of view.

Benefits from relinquishing Federal control over prices charged at the points where natural gas enters the pipelines for later resale in interstate commerce would accrue to a few large corporations and would hurt millions of American families. This is not saying that consumers do not want the oil and gas producers to make fair returns on the actual capital they have invested.

Because the natural gas industry is in effect noncompetitive, because gas is a public utility, because demand exceeds supply, and because there is a conflict of interests among States, regulation is necessary, and the Supreme Court as recently as 1954 upheld the authority of the Federal Power Commission to protect consumers by regulating interstate sales of natural gas for resale. The Natural Gas Act of 1938 in fact imposes on the Federal Power Commission the duty of protecting consumers from unfair gas prices.

Because we believe the changes proposed by the oil and gas industry—freeing natural gas prices from Federal regulation—is not in the public interest, the executive committee of the St. Louis Consumer Federation wishes to go on record in Congress as opposed to any bill or bills which would remove from Federal regulation the sale of gas for resale in interstate commerce.

Respectfully yours,
ZONJA WALLEN-LAWRENCE,
Member of the Executive Committee,
St. Louis Consumer Federation.

A Better Deal for Commuters

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. OSMERS. Mr. Speaker, the problems of commuters living in the suburbs of our great American cities grow more acute each day. Those commuting by rail form northeastern New Jersey to New York City are having a particularly difficult time due to the gradual deterioration of rail and ferry facilities between the States of New York and New Jersey.

George Alpert, president of the New Haven Railroad, has written an intelligent, provocative article, "A Better Deal for Commuters," in the April 1957 issue of Harper's magazine. While I do not necessarily agree with all of Mr. Alpert's conclusions, under unanimous consent I include the article in the Appendix of the RECORD because of the national interest in this subject:

A BETTER DEAL FOR COMMUTERS

(By George Alpert)

In the dozen years since World War II, American cities have spent large sums of money to relieve traffic congestion, only to find their streets remaining as congested as before. Many circumstances have combined to bring about this exasperating result. One of the most important, it seems to me, is the mistake that was made in building nearly all new metropolitan-area transportation facilities around the private automobile and the motortruck. As we shall see, it is an outright physical impossibility to provide space in the center of town for all those who must come in, if they come by car. Downtown traffic congestion can be eased only by making it possible for people to come in without cars.

Actually, cities like New York and Chicago already have railroad networks which could provide a practical, comfortable, efficient system of doing just that. A two-track commuter rail line, occupying no more space than an ordinary city street, can carry at least five times as many people per hour as a four-lane superhighway—and there are no cars to be parked on arrival.

A complex of financial and other problems has prevented rail commuter services, for all their inherent advantages, from growing enough to play their part in metropolitan transport. I believe, however, that the difficulties can be cut through and that we can make it possible for many more people to come to town by train. I would like to make two simple proposals to that end. The first is that rail commuter lines be given, where necessary, a public subsidy in return for guaranteed, low-cost, frequent service. Already most other forms of transportation in the United States require and get a subsidy. Since the public is demanding better commuter services, it would make sense to provide the necessary subsidies here as well.

The second proposal is that new trackage needed to complete and extend present commuter networks should be built by a public authority and leased to the railroads—again on a firm guaranty of frequent, low-cost service. We have toll highways. Why not toll railroad tracks?

Lest I be accused of proposing an unlimited giveaway to the railroads, I hasten to add that I am confident the overall cost of these measures can be kept within bounds—and will, indeed, prove much cheaper than providing highways of equivalent carrying capacity. Parkways cost several million dollars a mile—in heavily built-up areas, land acquisition, and bridging run the cost far over $10 million a mile—and their carrying capacity is limited.

THE DAY TRAFFIC STOPPED

Neither of my proposals is wholly new. Somewhat similar suggestions have occasionally been made in the past. But the time has come to examine them seriously and see how they can contribute to relieving the urban transportation problem.

It will be useful to set some limits to the discussion. The urban-area transportation question has bewildering ramifications. It involves local habit and custom; the form of government organization in the area; the changing location of factories, stores, and homes; the movement of goods and people to and from points entirely outside the metropolitan district (long-haul traffic); the distribution of goods within the area and within the neighborhood; the movement of people within the neighborhood. It even touches upon such seemingly unrelated matters as the financial structure of the companies furnishing transportation service; thus, for a variety of reasons, airline and trucking companies carry nothing like the railroads' onerous burdens of bonded indebtedness. (Unlike the railroads, airlines and trucking companies did not have to provide their own right-of-way; in some cases, they enjoyed fast defense-tax writeoffs for equipment; and, being newer, they were organized in an era of greater financial prudence.)

We will not have room to go into any of these matters. We are discussing only one phase of urban transportation, the movement of people between the outer edge of the city area—the so-called commuter zone, rather than the inner rapid-transit zone—and the center. It will be difficult enough to deal concretely with this alone, for each city's situation is different.

The Saturday Evening Post recently printed a short story called The Day All Traffic Stopped, about a woman who brought every vehicle in Chicago to a standstill for weeks by abandoning her car when it stalled at a downtown intersection on a busy afternoon. The story was fiction, but it could happen in a score of American cities. I sometimes feel as though it happens in my own city of Boston twice a day—at the morning and evening rush hours.

A little calculation quickly shows why incredible traffic jams are inevitable in our great cities. According to counts made by the Greater Boston Chamber of Commerce, approximately 900,000 people come into Boston daily by private automobile. They ride, at an average of 1.6 persons per vehicle, in some 575,00 vehicles. Standing bumper to bumper, 575,000 of today's mammoth cars would occupy more than 2,000 miles of traffic lane; to keep them moving, at least several times as much traffic space must be provided.

Of course, large cities furnish respectable mileages of street. But no city does or can provide street mileage, let alone parking space, on such a scale; there would scarcely be room for the city if it did. Moreover, cars are not uniformly distributed throughout the city; they congregate in particular sections and, at the rush hours especially, on a small proportion of the streets.

Up to now, attempts to improve matters have proceeded chiefly along two lines: the construction of arterial roadways, and (on a smaller scale) of off-street parking facilities. Everyday experience and numerous formal studies agree on the outcome. In nearly all cases, the completion of a new vehicular traffic facility results in an immediate rise in the number of cars entering the city streets.

The Boston Chamber of Commerce, for example, recently checked what happened in one downtown area after the opening of a convenient new parking garage. Within 3 days, 2 additional cars were coming into the area for every 3 accommodated in the garage. In 2 weeks, the street parking places were once again full, and the streets were more congested than ever, for there were now many more cars in the area than before.

Someone remarked not long ago that Bob Moses, the high-powered New York public works man, had made it possible to dump more cars into 34th Street. The comment would make a fitting epitaph for nearly all metropolitan parkway-building programs. Unfortunately, if steps are not taken to limit the increase in cars entering the city, it may serve as an epitaph for the core of our cities as well.

After all, why do so many people still choose to buck all that traffic and drive into the city? Though it is often said that Americans just like cars, the fact is that, in too many parts of too many metropolitan areas, there is no other convenient way to go.

The streetcar and its variants, such as the interurban car, are all but dead, killed as much by failure to modernize in time as by their inherent limitations. Buses, which have largely taken the streetcar's place, are uncomfortable and do not by any means go everywhere. Bus schedules, moreover, are often highly irregular, and the street corner is hardly an all-weather waiting room.

Trains are faster and more comfortable, and much more nearly weatherproof than road vehicles of any description. But several of our largest cities have little rail-commuter service, and even the New York area has major suburban districts without a direct rail connection to mid-Manhattan. Furthermore, outside the rush hour, trains are often few and far between; this makes things difficult for those who cannot be certain of always catching the 5:15.

So millions drive to work. It is doubtful that any significant proportion of car riders can be inducted to switch to buses. In fact, bus patronage is steadily declining throughout the country.

I believe, however—and there is solid evidence for my view—that many car riders would go by train, if train service were frequent, cheap, and available. For where service is good, the great majority of commuters do go by rail; and metropolitan area rail services are holding their own or better.

This is true of Chicago, where daily passenger traffic is again increasing, after a postwar decline, on both the main rail lines and the Chicago rapid-transit system. It is also true in Boston, where the number of passengers carried daily has increased consistently, at least on the commuter lines of my own railroad, the New Haven. And it is true for those parts of the New York area with direct rail service to Manhattan; the main commuter lines in Long Island and Westchester are either gaining or holding their own. On the other hand, the New Jersey railroads without a direct link to Manhattan are slowly but inexorably losing traffic.

A few months ago, a close study of commuters from Westchester County and nearby sections of Connecticut was carried out for the Metropolitan Rapid Transit Commission, an agency set up jointly by New York and New Jersey to investigate transportation problems in the New York area. The study found that 77 percent of Westchester and Connecticut commuters enter the city by train. Only 23 percent commute by car, and at least half of those have destinations that are outside Manhattan or not easily reached from Grand Central Terminal. An earlier study, conducted under different auspices, showed that over 90 percent of the commuters in the Westchester area served by the New Haven go by rail.

Despite the differences between commuter railroads and rapid-transit systems, I think I may cite the experience of Cleveland and Toronto. Cleveland has a new rapid-transit line parallel to the lake front, and Toronto a new subway, a single double-track line, beneath its main street. In both cities, the new rail transit facilities have already led to a substantial reduction in the number of cars entering the downtown area. In Toronto, the reduction is reported as more than 10 percent—enough to make the difference between jammed and open streets.

WHY RAILROADS LOSE MONEY

The effectiveness of rail transportation in minimizing traffic congestion argues persuasively for expansion of rail service in metropolitan areas. Unfortunately, these lines carrying hundreds of thousands of passengers daily—and keeping hundreds of

thousands of private cars out of downtown streets—are in danger of going under. For many commuter lines are losing money, often a great deal of it. The railroads concerned cannot continue to absorb these losses indefinitely.

It is possible for reasonable men to differ over methods of determining whether a particular rail service is making or losing money. I think myself that the system of allocating costs enforced by the Interstate Commerce Commission (the Federal agency that regulates the railroads) exaggerates the share of general railroad costs chargeable to passenger services, some of which are really earning money for the road. But many commuter services are losing money by any method of accounting.

The basic difficulty is the short work week and the decline in non-rush-hour travel. Thirty years ago, the commuter rode the railroad 6 days a week and there was a sizable volume of off-peak travel, too—wives coming into the city to shop, couples spending an evening in town, and so forth. Today, commuters ride only 5 days a week; their families shop in suburban shopping centers or by car; and many of them stay home evenings to watch TV (a circumstance that has brought woe to other industries besides the railroads).

As a result of these changes in working and living habits, much of the equipment and many of the men employed in commuter service work but 20 hours a week. Car builders, however, give no rebates for lightly used equipment; and a railway employee receives a day's pay, whether he mans a train 1 or 8 hours a day.

A number of commuter lines are also burdened with other difficulties. Many are on branch lines with little or no other business; the commuter service must bear the entire cost of maintaining the right-of-way. Traffic on other lines is highly seasonal. But it is the rush-hour service demand which is chiefly responsible for the deficits of commuter service and, incidentally, of all forms of rapid transit.

I see only one solution for this problem—short of complete abandonment of commuter service or a revolutionary change in work patterns (spreading out the hours at which employees have to report to work): public support of commuter services.

Such support might take any of several forms—including, conceivably, public ownership and operation of the commuter lines. The latter would be awkward as well as expensive, though; for while many commuter services run on branch lines, many operate over main-line tracks, heavily used for freight and long-distance passenger service.

The best arrangement, in my opinion, is to pay railroads the difference between the revenue and the cost of good service at reasonable fares on vital commuter lines. I think there should be explicit agreements between the railroads and appropriate public agencies, spelling out the bargain, commuter line by commuter line: (1) services to be provided (including enough off-peak service to make it easy to use the train); (2) fares to be charged; (3) the method of computing costs (what part of general railroad costs each service is to bear, etc.); and (4) provision for needed improvements.

I am unable to say how much such a program might cost, because the cost would depend on how widely it is applied. But I am certain it would cost a very small fraction of the scores of millions large cities are now spending in a vain effort to cope with traffic congestion by other means. And I am sure arrangements that give adequate protection to the public interest, yet are flexible enough to meet changing conditions, can be worked out.

Spokesmen for several railroads have on occasion suggested relief from local taxes (in States where railroads are subject to local taxes) as a means of offsetting commuting deficits. I think tax relief and its effect on both community budgets and commuter-train losses should be explored. But I think a direct payment to the railroads, in return for specified services, is likely to prove better.

WHAT CITIES CAN TRY

An integral part of any plan for supporting rail commuter services must be a careful weeding out of lines with little real traffic potential. It is no more more sensible for the public than for the railroads to carry the losses incurred by lines serving areas of limited population. It might be more economical all around to let commuters from those areas contribute to urban auto traffic.

At the same time, the need is urgent for additional rail commuting facilities in every large city. The need is so great, in fact, that several cities (San Francisco and Chicago, to name two) are giving serious consideration to the construction of regional rapid-transit networks.

It seems to me that much can be done in many cities without going that far. The construction of new commuting facilities by the railroads themselves is, however, out of the question; the dismal financial record of existing commuting services makes it utterly impossible for the railroads to raise the money. The new facilities should be built by local public authorities; and, where it would be advantageous to integrate them into existing rail networks, the new facilities should be leased to the railroads, as toll highways are now "leased" to trucks and private automobiles. The leases can and should contain guaranties of the train service to be provided with the aid of the new facility.

Here are a few examples of the facilities that should be provided in this way. In New York, the first need is for additional railroad trackage under the Hudson River between New York and New Jersey. At present, the only tracks under the Hudson are those of the Hudson Tubes (whose tunnels are too small for standard railway cars or rapid-transit cars of adequate size) and the Pennsylvania Railroad. The other lines serving northern New Jersey and nearby sections of New York State end on the Jersey side; to reach Manhattan, their riders must take the ferries or the Hudson Tubes—or commute by bus or train. Increasing numbers of Jersey commuters have chosen the automobile, to the despair of New York officials, who must cope with the daily flood of cars from across the river. The solution is to provide new rail trackage to carry trains from Jersey directly into the city.

In northeastern Westchester—an area due for rapid growth over the next two decades as part of the New York dormitory belt—many communities are miles from the nearest existing railroads, the Harlem division of the New York Central and the main line of the New Haven. A spur to the New Haven would not only help these communities grow, but prevent them from adding still more cars to New York streets.

Philadelphia is another city with a New Jersey problem. The Pennsylvania and Reading railroads serve many suburbs to the southwest, west, and north. But only one rail line crosses the Delaware into New Jersey, where many Philadelphia workers live. Additional lines into New Jersey would help reduce congestion in downtown Philadelphia and might well be included in the program of transportation improvements under consideration in Philadelphia.

Boston and its suburbs are served by a score of commuter lines operated by three railroads—one of the most complete commuter networks in the country. Trains from the south of Boston stop in one part of downtown Boston, and trains from the north in another. A tunnel between South and North Stations—originally proposed by a New Haven Railroad president more than 45 years ago—would double the usefulness of the Boston commuter lines by allowing all of them to serve the entire downtown area.

For Chicago, Stanley Berge, professor of transportation at Northwestern University, recently proposed a highly imaginative suburban redevelopment scheme. Its main features are:

1. Substantial addition to the extensive network of suburban rail lines Chicago already enjoys as the world's greatest rail center.

2. Passenger conveyors across the downtown business district.

3. Two tunnels to close gaps between the main railroad stations and thus allow commuter trains to run around a downtown loop (the way the Chicago "el" now goes).

The full plan would cost $500 million and take many years to complete. But some parts of it—such as the tunnels—could be started right away.

There are cities, of course, like Los Angeles, where traffic and transportation problems seem hopeless. On the other hand, the large cities of the Midwest—like St. Louis, Kansas City, Minneapolis—have rail lines radiating out in every direction. With new signals and other modest alterations, many of these lines could be utilized for traffic-relieving commutation service. The needed improvements could be financed either through the commuter-service subsidy or through a public-ownership, lease-to-the-railroads arrangement.

As with the service subsidy, I cannot say just how much a rail-facility program of this kind would cost, since the price would also depend on how widely it was employed. Again, however, the cost would certainly be far less than the outlay required for vehicular-traffic facilities of equivalent carrying capacity.

Of course, neither of the measures I propose will finally "solve" the urban traffic problem. In a country that is still growing as swiftly as the United States, there will be no final solution to any major transportation problem. But with suitable public support, the railroads can provide frequent, low-cost, all-weather rail commuter service that will certainly take a lot of the pressure off the crowded streets.

New England Irishman Gave Navy Its First Sub

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which presents the question of who invented the submarine, as it appeared in the Boston Traveler on April 10, 1957:

NEW ENGLAND IRISHMAN GAVE NAVY ITS FIRST SUB—WEAPON BORN OF GRUDGE

(By Bill Schofield)

You can always get an argument on the question of who invented the submarine.

The classicists favor Alexander the Great, who had himself dunked into the Mediterranean in a glass barrel back in 330 B. C.

Or maybe it was the Yankee inventor David Bushnell, who produced an undersea something-or-other named the Turtle back in 1776.

Or it could have been Leonardo DaVinci, or Simon Lake.

Leave it up to the United State Navy, though, and you'll find they settle for John P. Holland, who came from Ireland as a frustrated school teacher and settled in New England.

With that in mind, the Navy points out that this week brings another birthday for its submarine force. For it was 57 years ago tomorrow that the Navy finally accepted the Irishman's invention, the U. S. S. *Holland*, and promptly ordered six more undersea boats just like it.

That was the beginning of our present submarine fleet, and the start of the path that led to the atom-powered U. S. S. *Nautilus*.

It was also the signal for other nations to start building submarine fleets, thereby creating a chain of international headaches and war perils.

The wispy bespectacled little Irishman, who came from County Clare, had a special purpose in developing his submarine. His original goal was to sink as much as he could of Britain's Royal Navy.

However, he was never able to get the weapon built until 18 years after he came to this country in 1872. By that time, the Royal Navy was safely beyond his range.

Not until May 17, 1897, did he finally launch his craft successfully in the waters off Staten Island. And it was almost 3 full years more before the Navy came along with a purchase order.

No doubt it would have jolted Holland sharply if he could have realized what he was starting. Actually he was pointing the way to one of warfare's most deadly and economical weapons.

The record proves the value. In World War II, for example, United States submarine crews comprised only 1.6 percent of the Navy's personnel. Yet this small group of men destroyed 214 Japanese naval ships and accounted for 55 percent of all enemy shipping destroyed.

Today the submarine weapon has been so highly developed in the hands of the Soviets that our Navy is placing its peak emphasis on training for antisubmarine warfare.

And in New England, much of that ASW training is centered on Naval Reserve activities. Naval Reserve submarine divisions are conducting drills each week on the U. S. S. *Greenling* in Boston, the *Shad* in Salem, the *Haddock* in Portsmouth, and the *Kingfish* in Providence.

And this month they're celebrating the birthday of John Holland's success by putting on a recruiting drive, aimed at bringing more members into the silent service.

It all goes back to the moods of the one-time Irish schoolteacher. And it's our good fortune that he hated the British so thoroughly that he developed a special weapon to use against them—even though he never was able to reach them.

Our National Defense in the Atomic Age

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. VAN ZANDT. Mr. Speaker, on April 16, 1957, it was my privilege to address the Pennsylvania State Society, Daughters of the American Revolution, at the Shoreham Hotel, Washington, D. C., on the subject Our National Defense in the Atomic Age.

The address follows:

It is a pleasure to have this opportunity to appear before so noteworthy an audience representing as it does the best and most enduring ideals of American womanhood and citizenship.

During my years in public life I have developed admiration for your activities on a national scale as reflected in your annual continental congress here in Washington.

Your endeavors to restore and mark places of great historic importance and your intense interest in the great problems facing our country are among your laudable objectives.

I am especially happy to speak to you as my neighbors in Pennsylvania on a subject which has been of vital importance to the Daughters of the American Revolution since its founding.

I share your conviction that continued public interest in an adequate national defense is vital if we are to maintain our world position and strength in order to preserve our liberty and freedom.

In discussing the subject of our national defense in the atomic age, it is of interest that Congress is currently considering the administration's request for a $38.5 billion defense budget, the largest in 2 years.

These funds are required for the maintenance of our Armed Forces at their present strength and for the development of a wide range of new powerful weapons.

In examining this request many of us ask ourselves whether or not such enormous expenditure is really necessary for our national security.

We wonder if this huge and expensive Defense Establishment is becoming an unbearable drain on our national economy.

Some critics contend that it is a waste to continue our national defense program at its present level, now that Stalin is dead.

They further state the present Soviet leadership has no intention of attacking the United States.

In addition, they argue that the Russians have altered their doctrine and strategy and, hence, are no longer determined to communize the world.

Fellow Americans, let me assure you that this is not true.

Today the Soviet Union and Communist China maintain the largest military force in history.

Excluding the armies of North Korea and Viet minh, the Russian and Chinese Communists forces number well over 11 million men.

The Russians alone have an army of 2½ million ground troops.

The security of Western Europe is continually threatened by 31 Soviet divisions stationed on satellite territory.

Since World War II the Soviets have reequipped their armed forces with a complete new family of powerful small arms, artillery, armor, and transportation equipment.

They have constructed a fleet of over 450 submarines and are aiding Red China in modernizing the huge Chinese army.

The Communist bloc is also pushing ahead rapidly in the development of guided missiles and in the buildup of their atomic and hydrogen stockpiles.

For example, since the first of this year we have learned of a series of atomic bomb tests by Russia.

They are training scientific and technical personnel at a rate which will seriously threaten the lead of the West in scientific skill within a few years.

If the Soviets have changed their nature since Stalin's death there are few signs of it.

Witness their sly maneuvering in the Middle East, where they are fanning fanatical nationalism through antiwestern propaganda.

Certainly the Communist ideology has not changed since Stalin's death.

The Soviet leaders still preach the incompatibility of the Communist system and western society.

Mr. Khrushchev, after having labeled Stalin a murderer and a tyrant, recently stated that he was nontheless a great Marxist and "fighter of imperialism in the class war."

Khrushchev said quite openly that in this respect the present Kremlin leadership is Stalinist in its attitude.

With this attitude on the part of Soviet leaders the quest for peace remains increasingly difficult.

No one realizes more than I do the folly of an arms race.

Certainly every effort should be made to reach a sound agreement with the Soviet Union on the reduction of armaments.

But sound agreement involves international control and inspection.

It, therefore, follows that until such an effective system can be established for the entire world we must remain constantly alert in our defense and push ahead with our weapons development.

We cannot afford to take a chance on any weak disarmament plan based solely on the good faith of the Soviets.

A mistake in judgment on this crucial issue could mean our destruction.

Confronted as we are with Soviet hostility and with their refusal to cooperate on a sound disarmament system it is horrifying to imagine what might happen to us if we do not maintain and develop our defense.

We must remain vigilant.

We must be prepared at all costs to oppose Communist aggression in any form.

Therefore, let us now consider what we need to defend the United States adequately.

We cannot forget the impact of atomic-hydrogen weapons on our defense system.

Surely we have all been made aware of the new scientific age in which we are living.

In this connection, the President's plan for the peaceful uses of the atom has provided some indication of the revolution in living which he will experience when the effects of nuclear power are fully felt.

Until now, however, primary emphasis on nuclear research has stressed the destructive aspect of the atom in the weapons field.

The effect of the atom on military strategy has completely altered former concepts of defense and war.

Today we cannot think of an adequate defense system without first taking into full consideration the destructive force of atomic-hydrogen weapons.

I believe that there are two major requirements for a sound defense policy in this atomic age.

First, we must maintain and develop our capacity to retaliate massively against any power that launches a thermonuclear attack on the continental United States.

Second, we must maintain and develop our capacity to fight small or limited wars with the use of either tactical atomic weapons or of conventional arms as the circumstances may require.

Let me further develop these points.

We are living today under the shadow of atomic and hydrogen bombs.

In testimony before the Senate during its inquiry into airpower last year the Nation's top military experts pointed out that the Soviet Union now has the capability of striking a devastating blow at the United States.

Gen. Nathan Twining, chief of the Air Force, said in part:

"In looking to the future our plans and programs must be orientated toward countering the Soviet capability.

"As the Soviet war potential increases, particularly in intercontinental striking capability, this becomes even more valid.

"Such a potential will give the Soviet a continuing ability to attempt to deliver at

any time of his choosing, with or without warning, a crucial blow against us.

"Thus for the foreseeable future we must maintain in constant protected readiness a retaliatory force of sufficient strength to deter an attack, or to insure ultimate victory if general war occurs."

Therefore, it is evident the maintenance of atomic-hydrogen power, as a deterrent force, requires the stockpiling of sufficient quantities of fissionable material and the development of airpower as a means of delivery.

From information released to the public it appears that both the United States and the Soviet Union have reached the position of being able ot wage atomic warfare.

Working from published evidence and his own special knowledge, a British physicist recently estimated that the United States probably has stockpiled material for the manufacture of 35,000 atomic weapons as opposed to Soviet stockpiles for approximately 10,000.

Our Strategic Air Command today is the means of delivering our thermonuclear power.

From bases encircling the Soviet Union SAC can strike the Soviet Union within hours after an attack on the West.

To maintain and develop SAC as our first line of defense we must steadily push research and experimentation in weapons, piloted aircraft, and guided missiles.

Above all, we must keep pace with Soviet advances.

Bases circling the Communist bloc must be maintained.

Because it is upon this first line of defense our national survival may depend.

The second requirement of a sound national defense policy is the ability to cope with local aggression in small wars.

We must take into account the possibility that small tactical atomic weapons may be used in a local conflict rather than conventional arms.

This means that our Armed Forces must develop offensive and defensive tactics geared to the use of a variety of small atomic weapons.

At the same time we must also be prepared for local attacks that are confined to nonatomic weapons.

According to the estimates of military experts the Soviet Union will soon possess a capability for atomic destruction equal with the United States.

This will establish a nuclear stalemate.

In such a stalemate, the United States may find that it will be difficult to initiate the use of tactical atomic weapons if the Communists use only conventional-type weapons.

When the Soviet Union is able to bomb the United States with nuclear weapons the risk that a local atomic war might spiral into an all-out conflict would be too great.

This means that our Armed Forces must possess a dual capability, namely:

(a) The capability to fight with conventional arms, using conventional tactics for some types of conflict; and

(b) With atomic weapons using atomic tactics for other type of combat.

Therefore, it is necesary to maintain our Armed Forces at their present strength and continue to supply them with conventional equipment.

We must also train them in the use of tactical atomic weapons and supply them with the latest models in our small atomic-weapons system.

Let us now turn our attention to our existing Defense Establishment and the problem of its continued development.

Testimony by leading Defense Department authorities has given convincing evidence that we do have a balanced defense system, and at a cost which our national economy can support.

Secretary of Defense Charles Wilson recently pointed out that "the forces envisaged in the long-range program of the Department of Defense constitute by far the largest Military Establishment that this country has ever undertaken to maintain for an indefinite period of time."

Secretary Wilson continued by saying:

"With the incorporation into our Military Establishment of the new weapons that we have developed, they constitute a force of tremendous striking power which, in my opinion, adequately provide for our national security at this time."

He added:

"It is also my feeling that these powerful United States forces continue to make a major contribution to peace and stability in the international field."

Fellow Americans, as a member of the House Armed Services Committee and the Joint Congressional Committee on Atomic Energy, I agree with Secretary Wilson that our present retaliatory deterrent force is much more powerful than it was a year ago.

Under plans outlined in the President's 1958 budget this force will be strengthened in both power and effectiveness.

The present number of bomber wings in SAC—numbering 11 wings of B–52's with 45 bombers per wing—will be maintained.

Plans have been made to accelerate the fighter program.

Increased stockpiles of more powerful and more diversified nuclear weapons are being made available to SAC at bases all over the world.

Research in the ballistic missile program, now highly accelerated and on atomic-powered aircraft, holds great promise for the future capabilities of SAC.

It is our hope to be first in developing the intercontinental ballistic missile which will enable us to strike the enemy with pilotless craft, armed with atomic or hydrogen warheads.

The development of ground-to-air and air-to-air missiles for our continental defense system is also being accelerated.

The Air Force has developed the Falcon and the Navy the deadly Sidewinder, both of which are now in quantity production.

The Air Force is currently concentrating on the Bomarc, a long-range missile of supersonic speed, while the Army will further develop both Nike and Talos.

The Armed Forces of the United States have a total strength of over 2,800,000 men and women.

The Army, according to Secretary Wilbur Brucker, represents the most "thoroughly equipped and superbly trained army" that this Nation has ever put into the field.

These forces, together with our strategic Reserve, are ready to fight at any moment should the need arise.

This readiness constitutes an impressive deterrent against aggression.

In support of our mutual defense alliances, and other arrangements, 40 percent of our Army is stationed overseas in 73 countries.

Army missions in 44 nations in Europe, Asia, and Latin America are directly engaged in helping to train more than 200 allied foreign divisions—a large part of the free world's military strength.

Considerable progress is being made in matters of organization, research, and development in the Army.

Under plans now being implemented the major combat units of our ground force are being reorganized into the so-called pentomic divisions, which improve the ability of the Army to fight effectively under conditions of atomic warfare without losing their ability to conduct conventional war.

We are also organizing atomic support units, which are particularly suitable in providing atomic support for the forces of our allies in combat.

Research and experimentation are progressing in the development of new weapons systems.

As a result, we are stockpiling our arsenal with an adequate variety of atomic weapons precisely tailored to our needs, and which can be used accurately against close or distant targets.

At the same time, emphasis is being placed on the continued improvement of conventional weapons needed to accomplish many tasks for which atomic weapons would be wholly unsuitable.

The element of flexibility is similarly being stressed by the Navy.

The most important offensive weapon developed by the Navy is the mobile airbase—the new carrier *Forrestal*.

In the event of global war this type of ship will serve to defend the continental United States, and at the same time project our air striking power into the enemy's territory.

In case of local war it will supplement our land-based airpower, or supply airpower where land bases are limited or nonexistent.

The Navy is also pushing its aircraft and missile-development program.

Several types of advanced aircraft, operating from mobile carrier bases, have already been added to the fleet.

Of particular importance is the new *Skyhawk*, a light attack plane with high-speed and high-altitude performance, capable of carrying atomic weapons.

The development of sea-based ballistic missiles will prove to be immeasurably important by adding variety and dispersability to our deterrent capabilities.

The Navy is making the transition from guns to missiles very rapidly.

The cruisers *Boston* and *Canberra* have been converted and a third, *Galveston*, is being readied.

Under the present program the Navy envisages a total of 21 missile ships before the end of 1958.

The Navy is also making the transition to nuclear power as rapidly as possible.

The submarine *Nautilus*, the pioneer ship in this development, has now steamed more than 55,000 miles without a single disabling casualty.

Its reactor has now been refueled after 2 years of service.

The nuclear-powered submarine introduces a new weapon into naval warfare.

It can sink ships, it can serve as a radar picket ship, it can seek out and destroy enemy submarines, and most important of all, it can serve potentially as a base for the launching of ballistic missiles.

The present program of the Navy and Marine Corps serves to maintain a high state of immediate readiness, while instituting some very basic and revolutionary changes in naval weapons systems and strategy.

The readiness of the Navy was strikingly demonstrated during the recent Suez crisis by the rapid deployment of a large part of our fleet and by the evacuation of our nationals from Egypt.

Fellow Americans, in concluding my discussion of our national defense in the atomic age, I join millions of other American in accepting our Military Establishment, the projected program for the development of our military capabilities, as being adequate in meeting the requirements of our defense program for the maintenance of United States and free world security.

Ease Hardship on Handicapped Children of Veterans

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. ASHLEY. Mr. Speaker, I have today introduced legislation to correct

an inequity in the laws administered by the Veterans' Administration. In its simplest terms, the bill would define the term "child" include persons over 18 years old who become incapable of self-support and remain dependent on a veteran or a veteran's widow.

The following example serves to illustrate the benefits that would result from passage of this bill. A 19-year-old boy, the only child of a deceased veteran, takes his first job in industry. In his first week at work he becomes permanently disabled and incapable of earning his own way. His mother, the veteran's widow, is unable to claim her son as a dependent under present law, yet she must and will want to provide for her handicapped son. As the law stands, she would only be entitled to $1,044 annually in widow's compensation benefits from the Veterans' Administration. In addition, she would be allowed to earn up to $1,400 to supplement her meager income—a total of $2,444 to support herself and her crippled son. By redefining the word "child" for purposes of the Veterans' Administration laws, Mr. Speaker, the widow would collect $1,452 in compensation benefits and she would be allowed to earn up to $2,700 outside income without losing her Veterans' Administration payments—a total, in this case, of $4,152, and an increase of $1,708 over existing benefits.

I should like to inquire, Mr. Speaker, how many of my colleagues would look forward to spending their last years on an income of this size, while supporting a crippled son or daughter. I believe the time has come when Congress must act to correct this unnecessary hardship.

To complete the record, Mr. Speaker, I am including a brief summary of the legislative history of the term "child," and a table of benefits that would result from this legislation. Here again, let me point out that this bill does not propose to raise existing benefit payments—but, rather, it broadens the scope of the act to include a number of our unfortunate citizens forever denied the opportunity to earn their own way:

DEFINITION OF HELPLESS CHILD

General law: Compensation payable for child over 16 years of age only if insane, idiotic, or otherwise mentally or physically helpless at date of attaining age 16 years and at date of filing claim.

War Risk Insurance Act amendment of October 6, 1917: Compensation payable to a child of any age if insane, idiotic, or otherwise permanently helpless.

World War Veterans' Act, 1924: Compensation payable to a child of any age if permanently incapable of support by reason of mental or physical defect.

Public No. 2, 73d Congress, and Veterans Regulation No. 10: Compensation payable to a child over 18 years of age only if prior to reaching age 18 child becomes or has become permanently incapable of support by reason of mental or physical defect—or until 21 years of age, under certain conditions, if in school.

Public No. 484, 73d Congress, as amended: Pension is not payable to a child over 18 years of age unless prior to reaching the age of 18 the child becomes or has become permanently incapable of support by reason of mental or physical defect—also payable under certain conditions until 21 years of age if in school.

BENEFIT SCHEDULES

Mr. Speaker, benefits under laws currently administered by the Veterans' Administration are listed in the following chart. The legislation I have introduced today would increase benefits by increasing the total number of children in a family receiving these benefits. For example, a veteran's widow supporting a son or daughter newly defined as a "child" by this legislation would be entitled to the same benefits she would receive if her family were increased by one.

COMPENSATION, DEPENDENCY AND INDEMNITY COMPENSATION, OR PENSION TO VETERANS OR THEIR DEPENDENTS

RATE TABLES

The succeeding tables of rates are added for ready reference where information as to rates payable under existing laws is desired without a detailed analysis of the elements of entitlement. The brief table of rates for wartime and peacetime service-connection disabilities is restricted to the largest class of such rates, those payable under Public Law No. 2, 71st Congress, March 20, 1933, and Veterans regulations issued pursuant thereto, as modified and amended by subsequent legislation. It does not include rates payable for service-connected disabilities under the general pension law or Public Law No. 141, 73d Congress, March 28, 1934, as amended. For rates under Public Law No. 141 and for detailed information bearing on elements of entitlement, under such laws, references should be made to the pertinent tables set forth in the preceding part of this analysis. Dependency and indemnity compensation is payable under the Servicemen's and Veterans Survivor Benefit Act for service-connected deaths occurring on or after January 1, 1957, whether service was prior to or on and after that date and without distinction between wartime and peacetime service:

Rates of compensation for wartime and peacetime service-connected disabilities under Public Law 2, 73d Cong., as amended, and Veterans Regulations

	War service-connected rates, Veterans Regulation 1 (a), as amended, pt. I	Peacetime service-connected rates, Veterans Regulation 1 (a), as amended, pt. II
(a) 10 percent disability	$17.00	$14.00
(b) 20 percent disability	33.00	26.00
(c) 30 percent disability	50.00	40.00
(d) 40 percent disability	66.00	53.00
(e) 50 percent disability	91.00	73.00
(f) 60 percent disability	109.00	87.00
(g) 70 percent disability	127.00	102.00
(h) 80 percent disability	145.00	116.00
(i) 90 percent disability	163.00	130.00
(j) Total disability	181.00	145.00
(k) Anatomical loss, or loss of use of a creative organ, or 1 foot, or 1 hand, or both buttocks, or blindness of 1 eye having only light perception, rates (a) to (j) increased monthly by	47.00	37.60
Anatomical loss, or loss of use of a creative organ, or 1 foot, or 1 hand, or both buttocks, or blindness of 1 eye, having only light perception, in addition to requirement for any of rates in (i) to (n), rate increased monthly for each loss or loss of use by	[1] 47.00	[2] 37.60
(l) Anatomical loss, or loss of use of both hands, or both feet, or 1 hand and 1 foot, or blind both eyes with 5/200 visual acuity or less, or is permanently bedridden or so helpless as to be in need of regular aid and attendance, monthly compensation	270.00	223.00
(m) Anatomical loss, or loss of use of 2 extremities at a level, or with complications, preventing natural elbow or knee action with prosthesis in place, or suffered blindness in both eyes, rendering him so helpless as to be in need of regular aid and attendance, monthly compensation	329.00	263.00
(n) Anatomical loss of 2 extremities so near shoulder or hip as to prevent use of prosthetic appliance, or suffered anatomical loss of both eyes, monthly compensation	371.00	296.00
(o) Suffered disability under conditions which would entitle him to 2 or more rates in (j) to (n), no condition being considered twice, or suffered total deafness in combination with total blindness with 5/200 visual acuity or less, monthly compensation	420.00	336.00
(p) In event disabled person's service-incurred disabilities exceed requirements for any of rates prescribed, Administrator, in his discretion, may allow next higher rate, or intermediate rate, but in no event in excess of	420.00	336.00
(q) Minimum rate for arrested tuberculosis	67.00	53.50

[1] But in no event to exceed $420.
[2] But in no event to exceed $336.

Additional disability compensation because of dependents [1]

	Wife, no child	Wife, 1 child	Wife, 2 children	Wife, 3 or more children	No wife, 1 child	No wife, 2 children	No wife, 3 or more children	Dependent parent or parents
Korean conflict, World War II, World War I, Spanish-American War, Philippine Insurrection, Boxer Rebellion, Civil War, Indian wars, Peacetime service (under combat or extrahazardous conditions)	$21.00	$35.00	$45.50	$56.00	$14.00	$24.50	$35.00	$17.50 (1); 35.00 (2)
Regular peacetime service	16.80	28.00	36.40	44.80	11.20	19.60	28.00	14.00 (1); 28.00 (2)

[1] Above rates are for 100 percent disability. If and while rated partially disabled, but not less than 50 percent, additional compensation is authorized in an amount having the same ratio to the amount specified in the applicable table, above, as the degree of disability bears to the total disability; e. g., war service-connected disability of 50 percent, compensation rate $91.—if veteran has a wife, his compensation is increased as follows: $91.00+$10.50=$101.50.

Rates of compensation to widows, children, and parents of deceased veterans

For service-connected death prior to Jan. 1, 1957	Widow, no child	Widow, 1 child	Each additional child	No widow, 1 child	No widow, 2 children	No widow, 3 children	Each additional child	Dependent parents
Korean conflict, World War II, World War I, Spanish-American War, Philippine Insurrection, Boxer Rebellion, Civil War, Indian wars, Peacetime (Regular Establishment): Death result of armed conflict, extrahazardous service, including service under conditions simulating war, while United States engaged in war.	$87	$121	$29	$67	$94	$122	$23	1 parent, $75. 2 parents, $40 each.
Peacetime (Regular Establishment): Death not result of armed conflict, etc.	69.60	96.80	23.20	53.60	75.20	97.60	18.40	1 parent, $60. 2 parents, $32 each.

Rates of dependency and indemnity compensation to widows, children, and parents for service-connected death occurring on or after Jan. 1, 1957 [1]

Widows and children	Children, no widow
Widow alone: $112 per month, plus 12 percent of basic pay of deceased husband, with total amount adjusted to next highest dollar. Rates range from $122 in an E–1 case with less than 2 years' service to $242 in case of an O–8 with over 30 years' service. Slightly higher rates if deceased was lieutenant general, vice admiral, general, or admiral, with $266 top.	Children under age 18: 1 child, $70. 2 children, $100 (equally divided). 3 children, $130 (equally divided), plus $25 for each child in excess of 3 (equally divided).
Widow and 1 child under age 18: Same as amount payable to widow alone.	Child age 18 or above who became permanently incapable of self-support prior to that age: $95 (basic $70 rate increased by $25; total rate with $25 supplement variable where there are other children).
Widow and 2 or more children under age 18: Same rate as that payable to widow alone with following exception: Where total amount payable under the Railroad Retirement Act or Social Security Act, or under sec. 405 of the Servicemen's and Veterans' Survivor Benefits Act based upon an assumed fully and currently insured status, is less than $128, the compensation payable to widow by VA increased by $25 for each child in excess of 1, but the total increase may not exceed the difference between the amounts payable under the above and $128.	Child or children ages 18 to 21 attending school: Same as basic rate payable to children under age 18 where there is no widow. (Payment barred if child commences program under War Orphans' Educational Assistance Act of 1956.)
Widow and child or children age 18 and above permanently incapable of self-support where incapacity began under age 18: Regular widow's rate payable to widow, plus $70 for each such child payable to child.	
Widow and child or children age 18 but under 21 attending school: Regular widow's rate payable to widow, plus $35 payable to each such child. (Payment barred if child commences program under War Orphans' Educational Assistance Act of 1956.)	

1 parent only			2 parents living together			2 parents not living together		
Total annual income		Monthly rate	Combined annual income		Monthly rate to each	Total annual income of parent		Individual rate
More than—	But equal to or less than—		More than—	But equal to or less than—		More than—	But equal to or less than—	
	$750	$75		$1,000	$50		$750	$50
$750	$1,000	60	$1,000	$1,350	40	$750	$1,000	40
$1,000	$1,250	45	$1,350	$1,700	30	$1,000	$1,250	30
$1,250	$1,500	30	$1,700	$2,050	20	$1,250	$1,500	20
$1,500	$1,750	15	$2,050	$2,400	10	$1,500	$1,750	10
$1,750		0	$2,400		0	$1,750		0

[1] Persons eligible for death compensation based on death occurring prior to Jan. 1, 1957, may, under certain conditions, apply for and receive dependency and indemnity compensation.

Applies also to remarried parent living with spouse, with income of spouse counted.

Pension rates: Indian wars, Civil War, Spanish-American War, Philippine Insurrection, Boxer Rebellion, World War I, World War II, and Korean conflict

Indian wars	Civil War	Spanish-American War, Philippine Insurrection, and Boxer Rebellion		World War I, World War II, and Korean conflict [1]
		Service pension laws in effect Mar. 19, 1933, reenacted by Public Law 269, 74th Cong., Aug. 13, 1935, as modified or amended

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. GWINN. Mr. Speaker, under permission to extend and revise my remarks, I include the following address on Federal Aid to Education delivered today by my colleague, the Honorable AUGUST E. JOHANSEN, of Michigan, before the 66th Continental Congress of the Daughters of the American Revolution, meeting in Washington, D. C.:

Two weeks ago today, on April 3, the President of the United States held a White House news conference.

By way of opening my discussion of the subject of Federal aid to education, I quote a question asked at that news conference, and the President's reply.

A newspaper correspondent asked:

"Sir * * * you said earlier tax cuts would be possible because some of these programs are not permanent. They are temporary. Could you identify 1 or 2 of these?"

The transcript of the President's reply, verified at the White House, is as follows:

"For example, I recommend the school program for 4 years; I want 4 years, and I want it stopped, if necessary by a constitutional amendment. I just want it stopped there. I don't want to go into anything we can't continue, that we shouldn't continue."

The school program to which the President referred is, of course, the proposed Federal assistance to the States for school construction, again currently before the Congress.

I believe the President is completely sincere in saying that he wants this program only on a so-called emergency, onetime, one-shot, temporary, terminal basis. He has repeatedly so stated to the Congress, and he has indicated some of the very valid reasons why the program shouldn't continue on a permanent basis.

Heretofore I have also always believed that the President was completely convinced that it is possible to have the program on such a terminal basis—a view, incidentally, I have never shared.

Now, however, I am not so sure as to the President's own certainty on this point—in view of his amazing and enigmatic reference to stopping the program "if necessary by a constitutional amendment."

I will not speculate as to whether this statement was made by the President in complete seriousness or facetiously in an effort to discount the idea that terminating the program would involve a serious problem or difficulty.

In either case, it seems to me to suggest a definite misgiving on the part of the President, a doubt as to whether terminating the program is really going to be as easy and simple as a company commander ending a drill period with the order, "Fall out."

In either case, the President's reference to a constitutional amendment in this connection ought to be so effective a warning to the Congress and the American people that it will be the kiss of death for this or any similar proposal for Federal aid to education—and I earnestly hope it will be just that.

Furthermore, if adoption of this or any program of Federal aid to education does in fact involve the likelihood or possibility that we are starting something which will require a constitutional amendment to stop, now is the time to know it; now is the time to face up to the fact, and now is the time to stop such a program, once and for all.

Indeed, it would be well for Congress and the American people to earnestly consider adoption of a constitutional amendment now, spelling out definitely and decisively the proposition that the financing and control of education and educational policy in the United States shall hereafter be specifically reserved to the States, or to the people.

I intend, as a Member of Congress, to explore to the fullest the potentialities of such a step.

The temptation is strong to elaborate on the implications of such an amendment. Particularly, I would like to point out its potential effect in restoring to the States, the local units of government, and our citizens, an acute awareness of their rights, responsibilities, and capabilities in this area of activity so vital to progress, freedom, and constitutional self-government.

Such a step would, I believe, be a powerful antidote to the real opiate of a free people—the illusory doctrine and dogma that the solution of all problems, and of the problems of education in particular, must depend increasingly upon Federal action, Federal financing, and the exercise of Federal authority.

I resist that temptation because of the greater and more immediate urgency of discussing the proposal currently before Congress, in support of which both the Congress and the American people will be bombarded, by high-voltage propaganda, increasingly in the weeks just ahead.

With regard to this proposal for Federal assistance to the States for school construction, I wish to make just two points:

First, I should like to document the fact that there are numerous determined and powerful advocates of this specific legislation, both in education and in Government, whose avowed desire and design for America is all-out, all-type Federal aid to education on a permanent basis and on an ever-expanding scale—time-wise, dollar-wise and program-wise.

For them this particular legislation is useful and important primarily because it would successfully establish a principle; because it is, in the words of Adlai Stevenson to the National Education Association convention in July 1955, "just a beginning." And Mr. Stevenson urged, as an illustration of what he had in mind, that "over the longer run it may be best, it seems to me, not to tie Federal assistance to specific purposes, such as school construction, but rather to make unrestricted cash grants to the States on a per pupil basis. State governments would then have much greater flexibility to distribute these funds among local school districts for whatever purpose would most effectively advance education."

This year, as for several years past, the official platform of the NEA advocates, without reference to any temporary or terminal basis for the program "financial assistance from the Federal Government to the States

* * * for the support of public education."

As a further clarification of the permanent and expanding type of this Federal participation envisioned by the leadership of this organization, I call attention to the testimony of Dr. William G. Carr, executive secretary of the NEA, to a Senate committee in 1955:

"As long as our schools are cut off from the most powerful and efficient and productive form of taxation that we have (Federal taxation, of course) so long will they fail to receive a reasonable share of the great wealth and income of our country."

There is nothing terminal or temporary about that philosophy of Federal aid to education.

In February of last year, Dr. John K. Norton, head of the department of educational administration at Teachers College, Columbia University, declared:

"Even if $500 million a year were voted for school-building aid, it would represent only a first step toward adequate Federal participation in the financial support of education in the United States."

Dr. Edgar Fuller, executive secretary of the Council of Chief State School Officers, whose chief argument for Federal aid to education before congressional committees is that the Federal Government now discriminates against education by limiting its Federal-aid bribes ("incentives" is the gentler word he uses) to stimulate State spending to highway and other welfare programs, and that it must offer some competitive bribery in behalf of education, has urged that "Federal assistance for school facilities be at least one-third the amount of Federal assistance for highways during the next decade, in order that competition for State [matching] funds may be equitable."

Governor Williams, of Michigan, who has a known aversion for moderation, has proposed a 5-year program of $16 billion-plus—compared with the President's one-time-only program of $2 billion, spread over a 4-year period.

Finis E. Engleman, Connecticut commissioner of education, writing in the October 1955 NEA Journal, said:

"Since for many years funds [from Federal sources] will only be sufficient to supplement the State and local efforts, some safeguards must be erected to insure the continuance of local and State efforts to finance their schools."

I said last July that "the import of these words is that someday funds from Federal sources will do all—or, at least, the bulk—of the job." And I have been told that this was reading entirely too much into Dr. Engleman's statement.

Be that as it may, I defy you to read "too much" into the statements of the amazing trio of educators and economists who addressed the American Association of School Administrators at Atlantic City on February 18 of this year.

Economist Beardsley Ruml described Mr. Eisenhower's current proposal as a "harmless gesture of good intent," but "wholly inadequate," and evasive of what he termed "the central duty of Federal support for the public schools." Mr. Ruml proposed an immediate Federal grant of $750 million a year, which would increase until it reached $3½ billion in 1962. No termination of the program was suggested, so far as I can determine.

Prof. Seymour Harris, of Harvard, proposed a start of $600 million a year now, with $6 billion a year by 1965.

Prof. Lester V. Chandler, of Princeton, didn't bother with specific figures. He simply advocated that "financing education should be primarily a Federal responsibility," with local or State support only secondary.

One final example: Dr. Theodore Brameld, professor of educational philosophy at New York University—of whom more later—in his book Toward a Reconstructed Philosophy of Education, published in 1956, urges "* * * the United States should spend annually at least $35 billion on education, nationally and internationally, during the next quarter-century. * * * Moreover, not less than half of this amount should come from the Federal Treasury" (p. 295).

What a pity that the House Subcommittee on Education did not secure for its record the testimony of these determined and reckless advocates of transfer of the responsibility for public school financing to the Federal Government, thereby putting the Congress and the American people on full and fair notice as to how truly, compared with their desires and designs, current proposals are just a beginning.

To pooh-pooh these proposals for gargantuan expansion of Federal activity and financing in the field of public education as merely the harmless pipedreams of dwellers in ivory towers is to ignore the potential eagerness of powerful educational lobbyists, of a few socialist-minded and power-hungry labor leaders, and the would-be political beneficiaries of an all-powerful centralized Federal Government to join forces to give substance to the pipedreams.

Small wonder President Eisenhower suggests the possible necessity of recourse to a Constitutional amendment to set limits and call a halt to the relatively modest program of Federal assistance for school construction he has felt constrained to propose.

And now, briefly, my second point—the matter of Federal control of education.

It is absurd and, I think, an insult to your intelligence to suggest that any transfer of responsibility for public education to the Federal Government and Federal finances, on the scale envisioned in the statements I have cited, can be accomplished without a transfer of control over education.

Yet it is stoutly argued in recent testimony before the House subcommittee that there is no threat of Federal control.

And it is pointed out that the proposed current legislation includes provisions that there must not be any Federal control.

How, as a practical matter, may I ask, can there be a massive transfer of citizen, community and State dependence for financial support without a measure of transfer of control, regardless of these puny and temporary prohibitions.

One answer, of course, is that even to achieve the comparatively modest degree of participation in Federal aid proposed by the President's school building bill, many States must change their tax structure and their school district setup—or face the prospect of Federal taxation without participation.

To argue that because tomorrow, or next year, there may not be Federal interference in, or dictation of, curriculum, educational standards or administrative policies, and conclude that therefore there is no actual or potential Federal control of education, and no threat of such Federal interference and dictation subsequently, is to miss the whole point and meaning of control.

The unfortunate widow who signs over title to her home to a greedy relative in return for an ill-defined promise of financial support loses control of that home the moment she delivers the deed—not at some indefinite future when the new owner begins to dictate her activities or serves an eviction notice.

The ominous threat of Federal control of education, it seems to me, is clearly recognized and underscored by a statement of President Eisenhower in his special message of January 28 of this year:

President Eisenhower said:

"Once the accumulated shortage (of classrooms) is overcome, if State and local autonomy in education is to be maintained, the States and communities must meet their future needs with their own resources and the Federal-grant program must terminate."

The key words, in that statement, are: "If State and local autonomy in education is to be maintained."

That, in plainest possible language, means "if State and local control of education are not to be replaced and supplanted, albeit gradually and at the outset imperceptibly, by Federal control of education."

Unfortunately, most of the advocates of Federal aid to education on a permanent and expanding basis lack either the perception, or the honesty, or the courage to face squarely this inevitable corollary of Federal control.

One advocate who does unblinkingly face up to this reality—and for his own ideological background and associations or his current proposals I have neither sympathy nor respect—is Dr. Theodore Brameld, whom I have already quoted.

Dr. Brameld does not flinch at Federal control of education. He advocates establishment of a permanent Federal Educational Authority.

In that connection may I point out that the NEA and the American Association of School Administrators are on record as favoring creation of a National Board of Education as an independent agency, which would select a Commissioner of Education responsible to the Board.

Dr. Brameld asserts "the need for educational designs that * * * are parts of an organic whole embracing schools everywhere in the Nation and the world."

More specifically, he contends that educators "in agreeing to Federal aid * * * acknowledge that final responsibility for schooling can no longer rest so exclusively where it has rested in the past—with the localities or States."

And he further argues that those who "separate the questions of Federal aid and Federal control" take the position that "whereas they are willing that Congress, as the representatives of the people, should provide funds, they are not willing that the representatives of the people should control them."

This, Dr. Brameld concludes, "implies a distrust in representative government that Congressmen who hold genuinely democratic convictions should resent."

Finally he advocates an education system that is supported heavily by Federal taxation (supplemented by local resources) and controlled by the majority; that gears curriculums, teaching, guidance, and administration to the purposes of the economy of abundance, political order, scientific society, and esthetic pattern, and that brings newspapers, radio chains, and other instruments of public enlightenment into direct cooperation with education and under similar controls.

What, then, is the conclusion of this matter?

On the darker side, the warning of Dr. Leonard D. White, of the University of Chicago, national authority on State-Federal relationships, a warning of particular import with respect to education in these United States:

"If present trends continue for another quarter century, the States may be left hollow shells, operating primarily as the field districts of Federal departments and dependent upon the Federal Treasury for their support."

On the brighter side, the knowledge that if, beginning with the problem of current school-building shortages, we will patiently, painstakingly and persistently bring to bear the resources of leadership, finance, and organized effort available in our communities and States, we will meet the needs and successfully maintain State and local autonomy in education—an indispensable bulwark of freedom and progress.

God grant us the wisdom to recognize the task; the courage to accomplish it.

Aid To Distressed Areas

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. VAN ZANDT. Mr. Speaker, it is a well-known fact that many communities in the United States have not shared in the economic growth and prosperity that have generally prevailed throughout the country in recent years. The Federal Government to a great extent shares the responsibility of alleviating the economic distress in these areas. This is not a partisan view.

President Eisenhower recently spoke in support of a program to help labor surplus areas. Then, too, in the last election both major parties incorporated a solemn promise in their respective platforms supporting legislation to aid labor surplus areas.

There is evidence of strong support for such legislation since the Senate during the 84th Congress approved a bill on the subject by a 2 to 1 vote. At the same time, the House Banking and Currency Committee unanimously approved a bill similar to the measure that was passed by the Senate. Unfortunately, however, the House failed to act on the legislation because the majority and minority were divided on several administrative details and a few basic provisions with regard to the execution of the program.

NEED FOR COMPROMISE

As a result of the failure of the 84th Congress to take final action, we still do not have a program to help depressed areas. The administration has proposed one approach to the problem and the Democrats have taken a somewhat different approach. Frankly, it is time to stop squabbling over details and to unite in enacting a long-overdue program to help labor-surplus areas. I am not interested in who gets the credit for the enactment of the program. What I am interested in is that a workable and effective program should be enacted which would help alleviate the unfortunate economic conditions that exist in many of our communities.

With this purpose in mind, I have introduced today, H. R. 6975, "Area Redevelopment Act of 1957," which attempts to compromise between the several positions that have received major attention in the 84th and 85th Congresses. It is my belief that my bill, H. R. 6975, adopts the best provisions of the proposals of the administration bill, S. 1433, as well as the best that can be found in S. 964, the bill introduced by Senator PAUL DOUGLAS, of Illinois.

Like the administration bill, S. 1433, my proposal is intended to aid industrial labor-surplus areas only. This does not mean I am opposed to extending aid to low-income rural areas. I do not believe, however, that the two programs fit into the same bill.

You will recall that last year the Department of Agriculture initiated a rural-development program. I am informed that this program is a step in the right direction to help the low-income rural areas. The administration has already proposed to increase the budget for a rural-development program. If need be, Congress should appropriate additional funds to expand that program even further. With the exception of providing assistance to rural areas, therefore, my bill constitutes a compromise between the two approaches, as I have suggested earlier.

It is my opinion that the administration bill, S. 1433, does not go far enough to meet the needs of chronically depressed areas, which need Federal help in forms of grants, vocational training with compensation, and Federal loans. While on the other hand, the Douglas bill, S. 964, provides too liberal aid to areas whose economic decline is of recent duration. In this connection, such communities normally have sufficient resources and should not be entitled to the variety of programs offered in the Douglas bill.

AID SHOULD BE PROVIDED ON BASIS OF NEED

I believe that the solution to this difference lies in providing various types of aid that would be available to communities with labor surplus. The extent of the help would be based upon the duration and levels of unemployment. Under my proposal, as embodied in my bill, H. R. 6975, the neediest communities would get the most aid, while the help extended to the less needy communities would be more limited.

This approach would also make it possible to reduce the Federal expenditures, but still leaves sufficient funds for communities which meet the most rigid tests of chronic unemployment and economic distress.

My bill, H. R. 6975, provides for designation of three different levels of unemployment, such levels determining the eligibility of the areas for different types of programs.

The three levels of unemployment are as follows:

First level: The unemployment rate in the area is 6 percent or more, adjusted seasonally, and has been 8 percent or more at least 8 months in each of the preceding 2 years.

Second level: The unemployment rate in the area is 8 percent or more, adjusted seasonally, and either has been 8 percent or more for the major portion of each of the preceding 2 years or has averaged 12 percent or more during the preceding year.

Third level: The unemployment rate in this area is 6 percent or more, adjusted seasonally, and either has averaged 6 percent or more during the preceding 5 years, 8 percent or more during the preceding 3 years, or 12 percent or more during the preceding 2 years.

Here is how I would apply these criteria to the various types of programs offered in the administration and in the Spence bills.

I. TECHNICAL ASSISTANCE

I believe that all communities with labor surplus should be entitled to technical assistance from the Federal Government. But that does not mean that the community which has had just 6 percent unemployment for parts of the last 2 years should be entitled to receive the same aid as the community which has been subjected to chronic unemployment many years.

I would, therefore, limit the extent of technical assistance given by the Federal Government to communities in the first level, mentioned before, to only one-third of the total cost of the needed technical assistance, and would require that the other two-thirds of the needed funds should come from State or local sources.

However, for the most needy communities I would extend Federal assistance to provide as much as 3 out of every 4 dollars needed.

II. LOANS

The administration bill, S. 1433, now provides that Federal participation in loans to labor surplus areas should be limited to 35 percent of the cost of the proposed projects. The Douglas bill, S. 964, would go as high as three-fourths of the total cost of the project.

In this connection, I believe that the administration proposal is amply adequate for communities which meet the criteria of the first level of unemployment, but is certainly not sufficient for areas which have suffered from chronic unemployment for many years.

My bill, H. R. 6975, would extend Federal participation under the proposed loan program, as follows:

A. For the first level areas, up to one-third of the total cost of the project.

B. For the second level areas, up to 50 percent of the total cost of the project.

C. For the third level areas, as much as 75 percent of the total cost of the project.

In addition to providing loans to labor surplus areas, my bill, H. R. 6975, will amend section 207 (a) of the Small Business Act of 1953, by providing that in making and approving loans first preference be given to small business concerns which are otherwise qualified and which are located or about to locate in areas of substantial and persistent unemployment.

Section 207 (a) of the Small Business Act of 1953 is also amended by making eligible for loans local private nonprofit organizations, including industrial foundations, development corporations, and similar groups, formed to assist, develop, and expand the economy of areas of substantial and persistent unemployment, as certified under section 4 of the Area Redevelopment Act of 1957, but only where the purpose of the loan is to enable such organizations to provide supplementary assistance to one or more small-business concerns in such areas which have qualified for loans under the preceding provisions of this subsection.

In making and approving loans under this subsection, first preference at all times shall be granted to qualified small-business concerns certified as being located in areas of substantial and persistent unemployment or about to locate in such an area and to local nonprofit organizations previously described under this amendment to section 207 (a) of the Small Business Act of 1953.

III. GRANTS

The administration bill, S. 1433, makes no provision for grants except in the case of technical assistance, while the Douglas bill, S. 964, provides for Federal grants for public facility projects. I do not believe that all the communities that have some labor surplus should be entitled to this type of aid. Therefore, my bill, H. R. 6975, in addition to providing loans for public facility projects, would allow Federal grants up to one-third of the cost of the public facility project in level 2 areas and up to two-thirds of the cost of the project in level 3 areas.

IV. SUBSISTENCE PAYMENTS

The administration bill, S. 1433, does not allow any subsistence payments to persons undergoing training for new jobs in labor surplus areas. I believe that this type of program should be used sparingly and in extreme cases only. Therefore, my bill, H. R. 6975, extends Federal subsistence payments to people undergoing training only in areas with the most chronic unemployment; namely, those which are classified in level 3.

My bill, H. R. 6975, would assure that the neediest communities would get adequate aid and in addition, it encourages the several States to establish their own program of area redevelopment and by limiting some of the aid provided by the Douglas bill, S. 964, it would also be possible to reduce the total cost of these area redevelopment programs.

Mr. Speaker, it is my belief that my bill, H. R. 6975, constitutes a genuine compromise between the administration bill, S. 1433 and the Douglas bill, S. 964. This is especially true when you compare the cost of the three bills.

Recognizing the administration bill, S. 1433, as a conservative approach, it will cost about $55 million; while the Douglas bill, S. 964, represents an ultra-liberal approach to the subject and would cost in excess of $325 million. My compromise bill, H. R. 6975, would cost in the neighborhood of $200 million and would extend Federal aid to labor surplus areas in a reasonable yet realistic manner.

Mr. Speaker, I most earnestly beseech all those who would like to see Federal aid extended to alleviate unemployment conditions in depressed areas to unite behind this compromise bill, H. R. 6975.

Problems of Veterans

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks, I would like to include a letter from Mr. Helmer Twito, former North Dakota commander of the Veterans of Foreign Wars. I feel his constructive letter on the problems of veterans is worthy of the attention of Congress:

RANSOM COUNTY
VETERANS' SERVICE OFFICE,
Lisbon, N. Dak., April 4, 1957.

Hon. USHER L. BURDICK,
United States Representative from North Dakota, Washington, D. C.

DEAR FRIEND USHER: I have your comments badgering the foreign policy and the U. N. I also received your very encouraging telegram. Thank you for both. Many of us appreciate that you and our North Dakota officials in Washington will support matters of benefit proper for veterans. Would that other States were as well represented as is North Dakota.

I am at a loss to know just what Dulles and the administration is trying to accomplish by way of a long-range foreign policy program but just as soon as there is some disturbance which happens somewhere on the globe we get our nose into it and lose out. I see little reason, nor can I appreciate the President's request for his billions to be given to the many people who shot us veterans full of bullets. Paradoxically, however, he would approve of his Commission, headed by Omar N. Bradley and their report on veterans and do this in the name of an economy move; yes; cut down on these non-service-connected pensions or the veterans' social-security benefits for veterans between the ages of 50 and 65, in fact partially or en toto in cases, wipe out their status as veterans. (Re Public Law 880, signed by President, August 1, 1956, and also information given, pp. 30–31 in booklet Your Social Security, November 26, 1956.) Some will state veterans are not in a special group. Uncle Sam pointed his finger at them and because they happened to have the fitting birthdate he placed them in a special group. They are a special group, once they served in the Armed Forces of the United States. They deserve consideration of a grateful nation. They do not deserve clippings of their benefits, surely not in the name of economy, when our former enemies are given our hard-earned tax money.

Do you think, USHER, it is the intent of this Congress further to give the World War I non-service-connected veterans the rough time we already have to prove them disabling sufficiently to warrant that little pension check so many need so badly? The hurt to those between the ages of 50 and 65 is bad enough. Why should it be so difficult for these veterans to get their non-service-connected rating? Why this increasing paperwork and added needed efforts for this group? So often their disabilities are residuals or revert back to their World War I service, now almost impossible to get medical and lay evidence to prove them service connected. Why should nonservice mentally sick veterans be unable to benefit from admission to Fort Meade, S. Dak., or St. Cloud, Minn., when veterans' hospitals like these can do so much of benefit for these veterans? Why this new change of entrance requirement? Is this the intent of Congress? Is it rulings and orders at the behest of top VA officials or the President rather than the intent of Congress? Surely these World War I veterans are the forgotten men. More and more is their difficulty to prove themselves even for pauper status to qualify for their small pension, these veterans who pass away at the rate of 243 per day so that by the year 2000, or 43 years hence these now average veterans of 63 years at present will then all be pushing up flowers somewhere, their race in life finished. Four million seven hundred and forty-four thousand veterans who fought to make the world safe for democracy will have passed away. A million and three quarters have already passed away and the rest are all now in their sunset days of life.

Permit me to suggest for consideration and in behalf of this group of veterans the following:

1. Even an increase in amount of both pension and compensation of 10 or 15 percent is justifiable.

2. Permit veteran an increase of a few hundred income to qualify. Raise present low amount. Even an increase would keep him near pauper status were this desired by those opposed. One thousand four hundred dollars for single veterans and $2,700 for veterans with dependents is surely out of line now with increased costs of living over what it was at the time this amount was set.

3. Allow these non-service-connected veterans between the ages of 50 and 65 to keep their veterans' status, even getting social security. As a civilian the veteran is entitled to his social security. As a veteran he deserves retention of his status as a veteran and the consideration of a grateful Nation.

4. Grant non-service-connected mental cases privilege of good VA hospitals. It is very difficult to establish service connection, more especially with these World War I veterans.

5. Cut down on expense of new and changing forms and paperwork, increased personnel and work for personnel which can be lessened.

6. Grant a veterans' status for benefits and hospitalization to the forgotten men, the marines and those who served in the Central America and West Indies uprisings like San Domingo and Haiti, or who served on the U. S. S. *South Dakota, Pittsburg,* and *Colorado.* At least these veterans should be granted benefits comparable to the Korean conflict veterans, benefits of hospitalization and pensions and compensation. These veterans really are the forgotten and neglected veterans, the few yet living, many of them also in need. All six of these are corrective. All six are suggested for consideration. It would be most gratifying could justice also be given veterans referred to in this communication and proper action taken to bring this about.

This letter gets to be lengthy. Permit me in conclusion also to voice approval of H. R. 71, which prohibits payments of pensions to veterans who are imprisoned for periods of longer than 60 days, following their conviction for a felony or misdemeanor, but permits payment to the wife and family of the veteran, while he is imprisoned. Local case of a single, non-service-connected veteran, World War I, Tommy O. Berg, who attempted holdup at Rugby. He was unable to work. Depressed over his little pension, but naturally acts like these are not to be condoned.

Might I also suggest approval of H. R. 72, which I understand provides for the return to the Veterans' Administration of unexpended pension, retirement, and similar funds in the estate of incompetent veterans who are in the care of guardians at the time of their death, provided that the veteran does not have a surviving widow, child, or dependent father or mother. Probably the savings or the economy of these measures would be nominal only. Probably the added cost of paperwork and personnel would not justify favorable action in these measures. However, it would appear them worthy of approval were a saving to be made.

Cooper T. Holt, VFW national commander in chief; Francis Arnold, from national VFW headquarters office; local, district, and State officials of veterans visited our North Dakota Soldiers' Home here in Lisbon last fall, at which time I presented the facts given in the six statements above given. Assurances were given that these injustices ought not be, that an attempt would be made to have them corrected. Lately out of the hospital

from a 43-day stay, where for 21 days I lay at death's door with a most severe heart infarction, I am about my usual self now, but I hope I can live to see these aged veterans given more justice. I shall enclose a picture of this discussion at the soldiers' home, captioned on back side, taken at time of visit of our commander in chief.

Trust you will pardon me for personal references and lengthy letter, but in February at a Fargo meeting of delegates of the western conference, representing 22 States west of the Mississippi River, Hawaii, and Alaska, I was privileged the mike and also brought to the attention of this meeting these same facts concerning this group of veterans. Again assurance of action and attention to this matter was given.

I know that congressional action takes time. I also know, generally speaking, that the Congress is of good intent and purpose as far as the veterans are concerned also. National veterans organizations do much to assist. However, there are also those who are far more concerned to give our tax money away to those people who shot us veterans full of bullets, who bring or exert considerable pressure upon the Congress for what they want. However, as stated, I do believe Congress of good intent and purpose for us and trust you will bring to attention the status of these veterans referred to, veterans who have been hurt through both official omission and through commission, acts which should be corrected, before the rest of these World War I veterans will have passed away, possible correction of the six factors herein given. Your continued interest and effort in our behalf is indeed appreciated very much.

Cordially and sincerely,

HELMER TWITO,
Ransom County Veterans Service Officer.

Dr. Jozef Tiso: Christian Democrat

EXTENSION OF REMARKS
OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. MUMMA. Mr. Speaker, in Middletown, Pa., in the district I represent, a publication entitled "Bulletin of the Slovak National Council Abroad," is published by the executive committee of this organization. Some of the members of this group have settled in my district and have sent me an article by Dr. Jozef Pauco, from the April 1957, issue of this bulletin, with the request that it be placed in the CONGRESSIONAL RECORD on the 10th anniversary of the execution, on April 18, 1947, of Dr. Jozef Tiso, President of the Slovak Republic, 1939–45.

At the request of my constituents, and as a courtesy to them, I am having this article placed in the CONGRESSIONAL RECORD so they may in this way express their personal views. The article is as follows:

DR. JOZEF TISO: CHRISTIAN DEMOCRAT

(By Dr. Jozef Pauco)

The President of the Slovak Republic (1939–45) who was executed by a procommunist regime on April 18, 1947, ranks among the outstanding figures of the central European Christian Democratic movement. He was Dr. Jozef Tiso, the ideologist of the Slovak Populist Party, which fought for the independence of Slovakia and since 1925 represented the majority of Slovak voting power. The philosophy motivating the Slovak Populist Party was for God and nation and it was in the spirit of this principle that Dr. Tiso embodied all his Christian Democratic politics.

"Let no one pause to wonder," he wrote, "that we work with God for the nation. God does not need the nation. God will be God even without a nation whether we admit the fact or not, but without God there can be no nation * * * There is no sinful failing against God in allying the concepts 'For God, for nation.' It means the binding of human values to values that are eternal, that are divine." [1]

Dr. Tiso affirmed that this clarion call "for God, for nation" should intensify Christian idealism. His own words are: "Putting it in a practical way, this simply means that one (who cultivates Christian idealism) will not frustrate the influence of Christianity upon the life of a nation in its schools, its literature, its parliament; he will, on the contrary, use every opportunity to help Christianity enter more and more significantly into classrooms and lecture halls, into family life and into public life, for it is Christianity alone that can preserve the roots of idealism without which no nation can survive." [2]

Christianity imposes the obligation of love for one's nation. "Love for the nation is a religious precept, and anyone who does not foster a love for his nation violates the fourth commandment. He is branded not only as an earthly traitor but also as a transgressor who profanes the law of God." [3]

Chauvinism, on the other hand, he denounced as can be seen from these extracts: "A regulated love of self is the foundation of Christian charity. From this basic tenet there also evolves the proper concept of Christian nationalism. First comes love of one's own nation, then an extention of charity to others. Non-Christian nationalism is of an entirely different stock, loving self and hybridizing into chauvinism." [4]

One who is a believing Christian and a patriot works for the freedom of his nation because "the independence of a nation is a natural good which substantially affects not only the individual and his material and spiritual interests, but it concerns the entire national commonwealth. Since national freedom is then such a natural good that affects the individual, the family, and the entire national community, there can be nothing inappropriate in the gratitude which is shown to God in return for it. * * *

"For a nation to exist and yet not be independent means sentencing it to its extinction. If a nation is to exist, and there is proof of this in the fact that it now does exist, then that nation, by the will of God, must be free. * * *

"A nation must be granted its freedom, for without liberty it would in vain have the God-given gift of language; it would be unable to use it. In vain would it have a God-given territory; it would be unable to cultivate its land and make a living on it. Consequently, if a nation is to live according to its intellectual endowments and character, it must be free in order to fulfill its destiny. The divine will, therefore, is for a nation to be independent and free." [5]

The liberty of a nation is protected by the state. As Tiso sees it, "The state is an organized body established for the welfare of the citizens. It is founded on the natural law, therefore on the will of the Creator, Who so created man that he can live and develop his mental and moral faculties only in association with other men. The state is a means to an end and not the end of man. It is for the state to serve the welfare of man, not for man to serve the state. This is the original design of the Creator from which, however, the developmental periphery of human society has steadily departed more and more." [6]

It was only natural for Dr. Tiso as the ideologist of the Slovak Populist Party to conceive of the democratic structure of the state. "Just as it is an axiom for political activity to be concerned above all about the public good and about the common welfare," writes Dr. Tiso, "so it is likewise true that political activity of such a nature is carried on more successfully on a democratic basis than on any other kind of foundation. The very root of the word, demos—people, signifies the universality of all the members of a nation, incidentally of a State, who are to be not merely passive but truly active in this common functioning. A democratic system brings up people for universality, for it draws the widest possible public to share in the governing of the state and thereby more and more come to be identified with the state. Consequently there is not only an awakening of responsibility in wide circles, but there is also established a definite degree of confidence in the directives that are promulgated, for in them the citizens see an expression of their will and of their effort to attain a better future." [7]

"Democracy means putting into effective use every creative force in the state as well as appraising its every component unit according to its moral worth even in the event that the ruling power does not demand this." [8]

Dr. Tiso dedicated himself to service in a Christian democracy: "We uphold the principle of democracy because democracy is consonant with Christian teaching and we will not permit it to become corrupted with Marxist and socialistic appendages." [9] We Slovaks are from our very souls adherents to this Christian democracy and we condemn every form of dictatorship regardless of the label under which it may try to hide its true nature or identity. We pledge ourselves to stand for democracy but for democracy of the proper stamp." [10]

Dr. Tiso ardently promoted a Christian democracy which was supported by both of the Christian components of the Slovak nation, for he was convinced that "along with Catholic universality and Catholic idealism, Lutheran individualism and realism can be used beneficially in politics. When all these attributes are combined then not even the gates of hell can prevail against our common front. Catholic populists and Lutheran nationalists, we must cooperate and neither covet nor grasp. Let us not forget that we here ally ourselves in the cause of national politics and that there is here no possibility of joining with Catholics of other nationalities." [11]

Naturally, the Communists regarded a political leader of this caliber as their key enemy and consequently Msgr. Jozef Tiso was the first Catholic prelate from behind the Iron Curtain singled out to make the supreme sacrifice in the struggle with communism. However, "as a martyr to his love for the nation, Dr. Tiso will continue to live in the nation." [12] "Dr. Tiso is a martyr for the cause of freedom and fittingly he ranks with Washington and many great men of history." [13]

A Real Blow to Civil Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. CRAMER. Mr. Speaker, there recently appeared in a distinguished newspaper of the First District of Florida, the St. Petersburg Independent, an editorial expres[illegible] both my opinion and that of a great many people whom it is my honor to represent in this Congress. It is entitled the "Real Blow to Civil Rights" and expresses the fear of so many people throughout the country of the proposed civil rights legislation that would eliminate the inalienable right of every American under even civil charges to the equally important right of trial by jury in contempt proceedings. This analysis is sound and represents the concern of many people throughout the Nation. For the information of the House I would have this editorial included in the Appendix of the RECORD at this time.

The editorial follows:

[From the St. Petersburg Independent of April 10, 1957]

REAL BLOW TO CIVIL RIGHTS

Committees in both Houses of Congress this week failed to act on President Eisenhower's civil-rights program, and it now appears that the legislation will not be brought to the floor of either House for action until after the Easter recess. Meanwhile opponents of the bill—mostly southern Senators and Representatives—will continue to dwell on the more vicious aspects of the legislation in the hope of picking up support.

Certainly they have a good case; for in an effort to insure the civil rights of every American, the proponents of the measure would in fact destroy the civil rights of those who may run afoul of the law.

Under the bill, the United States Attorney General would be empowered to go into Federal district courts to seek injunctions against alleged violators of civil rights. Contempt cases arising from the injunctions would not carry the right of a jury trial for the accused.

Under the present United States Code persons accused of criminal contempt are entitled to a trial by jury except when the United States is specifically made a party to the action. The proposed bill provides that contempt actions will be brought by the Attorney General in the name of the United States. Thus, even though contempt is not committed in the court or so near thereto as to interfere with the administration of justice, the accused could be dragged before the court and fined or jailed without benefit of trial by jury.

In arguing against the provision on the floor of the House, Representative WILLIAM C. CRAMER pointed out that Congress in adopting the Norris-LaGuardia Labor Act provided that the defendant in contempt proceedings involving a labor dispute be guaranteed a trial by jury, even though the United States was a party to the litigation.

"Can it be said that Congress would not be equally vigilant and jealous of this basic right in the instant at hand than where labor was involved?" Representative CRAMER asked. "Should we deny to municipal and State officials, school officials, public servants the basic right we have taken cognizance of in labor legislation?"

The proponents of this vicious measure are quite frank in stating their reasons for it. They bluntly declare they want no jury trials because they fear southern juries will not convict in civil-rights cases.

This is a shocking display of cynicism not only toward the people of the South but in our revered system of justice. If we have reached a point where trial by jury is to be relegated to limbo to be replaced by one-man drumhead courts then the civil rights of every American are not only endangered, they are dead.

Dedication of a New Sanctuary of Temple Ezra

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. BOYLE. Mr. Speaker, on the occasion of the dedicatory services of a new sanctuary of Temple Ezra in my district, I was extended an invitation to attend and the opportunity to speak as their Representative in the Congress of the United States.

On that occasion which was March 17, 1957, the day was Purim, the day on which was read the Megillos Esther. The Jewish people have many Megillos like the scroll of Esther, commemorating similar events in their oftentimes sad and bloody, but glorious and triumphant history.

Even private experiences of some outstanding personalities, including rabbis, were written down in scrolls and were read on the day of their anniversaries. So they have various dates of Purim.

On this event, they added another date—March 17—corresponding with the Irish anniversary of their patron, St. Patrick. I was deeply impressed with the coincidence that saw the two great anniversaries commemorated on the same day, emphasizing and reiterating the great spirituality and religious freedom in the United States.

It is a special honor, under the permission granted me to revise and extend my remarks in the Appendix of the CONGRESSIONAL RECORD, to include the brilliant sermon of Rabbi Joseph Liberles of Temple Ezra, delivered on that occasion:

DEDICATION SERMON BY RABBI LIBERLES

Friends, for the last 6 weeks our torah portions dealt with the erection of the tabernacle with all the implements for the ritual in the minutest details. Yesterday's torah reading Tsav (Leviticus, ch. 6) reported that all the work was completed as if we would have chosen the date of our synagog's dedication according to our torah reading. It also speaks of the dedication ceremony which took place in the presence of the gathered congregation. The celebration lasted for 7 days. However, the way the ceremony had been held seems to us very odd and archaic. In what strange world do we find ourselves.

After Moses had sanctified the tabernacle and brought the sacrifice upon the altar, he took from its blood and put it upon the right ear, hand and foot of the priests.

What does this mean to us in the mid-twentieth century? To me it means a type of ordination. From now on ear, hand, and foot are to be dedicated to God's service. The ear bows down too often to gossip, or shuts itself to the cry of the needy and the oppressed. Therefore, the ear is sanctified to listen only to the words of truth, to the doctrines of wisdom and virtue, and to the fear of God. The hand should do noble deeds of righteousness, mercy, and love. For the hands can kill and also carry the gift of charity. The foot ought to walk steadfastly forward on the King's Highway and not the crooked path of slyness.

In the Sidra of this week, Shmini (Leviticus, ch. 9) which we started to read yesterday afternoon the 7-day celebration is over and for the first time the high priest takes over his functions. With outspread hands he says the benediction. At that moment a beautiful glimmer of light is shining through all the rooms of the holy place, a fire descends from heaven and devours the sacrifice upon the altar while the praying worshipers fall upon their knees. The fire symbolizes the good. It is the divine fire of enthusiasm within us all which will inspire us to do good deeds. The rabbi takes the place of the priest inspiring the worshipers through his sermon to uphold the lofty ideals of our precious heritage.

At this very moment of great rejoicing I, too, feel the burning flame within me. Indeed, it is the Shechinah, the presence of God that permeates every fiber of our being, in truth, this is a Beth-el, a house of God.

Since time immemorial our people have been building houses unto God; whether they constituted just a stone as at the time of our patriarchs or a tent as to the time of Moses, or they were more elaborate such as the Solomonian temple; whether they were small synagogues for just a few families, or huge temples in big cities such as ours. All through our history, going or being driven from country to country, from shore to shore, we Jews carried the blueprints of a house of God with us. Houses where the soul can commune with its Maker, where the poor can forget his lowly state, houses where the worshippers become perfectly free, where there is no inhibition in regard to status, where the praying multitude brings forth the majestic Sh'ma Yisrael Adonoy Elohaynu Adonoy Echod, houses in which the wrong doings are being condemned whether they concern our own people or non-Jews, white or colored people. Houses of righteousness that do not vibrate with indignations are not true houses of God. In particular Temple Ezra which has been created out of the ashes of our European burned synagogues, and its members who were once fleeing from the destruction who barely escaped death through the unrighteous behavior of some insane leaders across the sea, the Ezraites in particular have built this monument that will spell righteousness, justice, love, compassion, and holiness. We the remnants of concentration camps, who have been branded like cattle, upon whom the numbers were burned into our skins and flesh as a stigma, a mark of infamy, castigated like criminals, we who have been humiliated in such a most cruel way no one would dare fare with animals; yes, as the Yiddish tune has it, it was only too true: "In feir un flamm hot men uns gebrennt." (We have been burned at stake, devoured by the flames of fire.) We are showing the world with this synagogue that we can control our emotions, we, who could flare up in this our free world and do harm physically, economically, mentally, and emotionally to our former taskmasters and slave drivers, we are using our energies to build houses of peace and of brotherhood. Although we cannot blot out from our

memory, and we never intended to do so, that which cruelty has done to us in the days when the scytheman was reaping rich harvest of millions of innocent people, men, women, and children, we will remember Adolf Schickelgruber alias Hitler in the same way as we remembered but yesterday in all our synagogues Amalek by reading from the scroll the words: "Z'chor es Amolek. Remember Amalek what he has done to you lo tishkoch—do never forget!" This house of worship where people gather in harmony and friendship is but the best answer to subdue and combat hatred, prejudice and discrimination. This house will be a house of healing and forgiveness. This house which will be a memorial for all those that gave up their lives al kiddush hashem—for the sanctification of God's name, this house will be a Kiddush Hashem for the living, a house of prayer glorifying God in our triumphant and victorious march through history past, present and im yirtser hashem—if God wills it, future. It is as if Ezekiel's vision would become manifested in this building when he envisioned the valley of the dry bones coming to life again. Indeed, before our eyes our dear ones ascend from the grave at this solemn moment of dedication and encourage us to carry on through the memory of them our task of executing the word of God, contributing our share to Judaism through the revivification of our most precious heritage.

My friends and distinguished guests, truly when people were completely uprooted from everything, their kinsfolk, their land, language, possessions, who stood alone in a foreign land, confronted with almost insurmountable problems of all kinds, those especially of adjustment, bewilderment, and lonesomeness, when they can within a relatively short time rise to such gigantic heights and pull themselves together to form a congregation before they were settled securely and work themselves up to acquire and completely remodel as beautiful a house of God such as this, who in spite of everything are extending their hands of brotherhood and friendliness to all people, who with open arms are welcoming their Jewish brethren regardless of their ethnic and cultural background and invite them to become members or officers of this worthy institution, then we can proudly say that Judaism is not lost and Temple Ezra can look forward to a great spiritual future. You will agree with me that with such an attitude all three concepts of a house of God as expressed midrashically by Abraham, Isaac, and Jacob in form of a mountain, a field and a house are possible to become united in this house of worship. If this is to be true we may ascend to Abraham's mountain reaching the peak of spiritual ascendance which can be found in communion with God in public worship; we may go out into Isaac's field, sowing the seeds of divine worship and gaining a sustaining consciousness of the sanctity of our faith; we may enter Jacob's house, taking refuge in it and being granted protection. We have the opportunity to make this house a fulfillment of all these lofty ideals if you wish it.

At this very moment we are dedicating this house to God. But a house is built out of dead matter and it would stay dead unless we who have created it dedicate ourselves to God. May this house never become a museum to be visited once or twice, and not a mausoleum either, but rather a house of the living God for the living, thus handing down to our posterity a living institution and not a mere edifice, however beautiful, an edifice of dead material bereft of all vitality.

We need today more than ever dedicated men and women who devote themselves to the cause of Judaism, to the cause of justice and of love, to the cause of brotherhood, in short who devote themselves to God, for the world will not be saved otherwise.

At this solemn moment of dedication we turn to our dear departed ones—zichronom livrochoh—(in blessed memory) in whose memory we are now kindling the Yahrzeit lights. Most vivid and befitting are the immortal words of one of the most illustrious sons of America, the almost Biblical figure of Abraham Lincoln, when he said: "It is for us the living, rather to be dedicated here to the unfinished work they have thus far so nobly advanced. It is rather for us to be dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they (here) gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain."

From this house of love and help the thankful prayers will ascend to heaven. May God spread the tabernacle of His peace over this house, over its directors, members, and friends. May He heal the people from the wounds which brute passion has caused to suffer and from the illnesses which bigotry has wrought. "Heal those that are sick with hatred and cruelty. Cure them of the blindness which sees not the brother, and of the deafness which heeds not his cry."

May our heavenly Father bless those who unite to form synagogues for prayer, and those who enter therein to pray.

"Bless, O Lord, this house, we pray." Amen.

Poor Ol' Buck! Even Kids Spurn It

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by H. I. Phillips entitled "Poor Ol' Buck! Even Kids Spurn It":

POOR OL' BUCK! EVEN KIDS SPURN IT—WE STILL FIGHT OVER DOLLARS BUT THEY'RE A DELUSION

(By H. I. Phillips)

I am the shadow of yesterday, low man on a totem pole, the fade-away baseball and the emblem of low visibility. I am the forgotten value, the hole in the doughnut, the slippage in the clutch and the leak in the dike. I am the symbol of the leaky roof, the punctured tire, the shrinkage in the wash, the yolkless egg and the old-time vaudeville vanishing act. I am one with the lost collar button, the fish that got away, the little man who wasn't there, the lopsided pool ball, the defective compass, and the skip in the motor.

NOBODY LOVES ME

I have sunk faster than a skindiver pursued by a posse, and lower than a character in skid-row. I have lost my looks, my prestige, my capacity and my self-esteem. I am at home only with peanuts and penny ante poker players. I have become the butt of jokes. Nobody loves me. In the wallet I am little and in the grocery store I am as a loose cabbage leaf in a hurricane. In the payroll I am an illusion and a snare. The employer and the worker both fight for me but are fooled either way the battle turns out. The only laugh I get out of life comes through the picture of people striving to get more and more of me without a full appreciation of the fact I mean less and less to them.

COMES IN BALES

The employer can use me only in bales. The employee seeks me in the superpackage. It is a performance which makes stupidity a national pastime. Nobody seems to understand that you don't get more distance on a football field because you move the goal posts closer to the lineup. I knew my glories in the forgotten era of the high-wheeled bike, the bustle, the wasp waist and the magic lantern. What has happened to me shouldn't happen to a dog. I bring disappointment and surprise to the housewife at the supermarket and break the heart of the husband shopping for a tonic, a doctor, a bottle of rye, 5 gallons of gasoline, or a good cigar. Teenagers scorn me and even little children sneer, "Are you kiddin'?" when I am offered to them for a trip to the candy store. Pillow slips, mattresses, horse collars, and hidden kiddy banks no longer take me. I am unacceptable in the old sock. Things have reached a stage where, even if the corporation gives 2 for 1. I am held for no gain in midfield. I am the American dollar.

NEW YORK RETARDED?

New York is generally supposed to be more up to date than most communities, but only a few days ago did it take its last trolley car out of service. This reminds us that the horsecar had disappeared from our hometown when we were a kid, yet when we came to the big city years later, they were still running in parts of Manhattan. Incidentally we got extra nostalgic over the trolley car, which, it seems to us, offered a ride away ahead of anything the average city busline can give. The comfort of passengers was a top consideration, with wonderful open cars run through the summertime; safety was so paramount that the law required an operator whose mind was not to be distracted by any other duties, and a conductor who took fares, gave information, and helped passengers on and off politely.

Any suggestion of a one-man-trolley worker who would, in addition to running the car, have to take on the added duties of a conductor, was sure to be howled down or laughed off. Rarely did a trolley roar by anybody to make time or because it was crowded, and the gruff, discourteous operator was shortlived. Our earliest boyhood recollection in the transportation field is of a trolley on the Sylvan Avenue line, past our house, that had a stove amidship in which a fire was kept during cold weather, but there is a vague memory of horsecars on the Chapel Street line. It seems to us there was nothing quite so bracing and pleasant as a trip to Savin Rock or Lighthouse Point back home on an open trolley in the warm months. The memory of the swing and sway of the trolley car as it zoomed out Kimberley Avenue over the two old bridges, the salt air from the meadows and from the harbor filling the nostrils, is still keen. We remember the fights to get on the front seat, the occasional ride on the running board and the Sunday trips when the conductor couldn't get all the fares. Then there was the trolley ride, a long forgotten diversion of childhood days, when a group would charter an open car for a half day of picnicking. Oh, boy.

A Tribute to Thomas H. MacDonald, Father of the Nation's Highway System

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. SCHWENGEL. Mr. Speaker, America lost a great public servant when Thomas H. MacDonald, former Commissioner of Public Roads, died on April 7,

1957. He has been rightfully called the Father of the Nation's Highway System. Because his early background, training, education, and experience tie him to Iowa, I deem it an honor to pay tribute to his memory.

Iowa, perhaps better than any other State, knows the great loss to the world of highway administration, planning, and construction which is sustained in the death of Thomas H. MacDonald.

Mr. MacDonald died at College Station, Tex., on Sunday, April 7, 1957, succumbing to a heart attack.

Though born in Colorado and moved to Iowa at an early age, Mr. MacDonald considered himself a son of Iowa. It was in Iowa that he was educated in engineering; in Iowa that he entered upon his profession; in Iowa that he laid the foundations for sound highway planning and engineering; in Iowa that he created his first magnificent highway system; and from Iowa that he carried to the Nation's Capitol and to the Federal Government the experience and wisdom which were to qualify him so thoroughly for the expressive title "Father of the Nation's Highway System."

Iowa knew Tom MacDonald not only with deep respect and admiration, but also with warm personal affection and friendship. It knew him not only as an engineering administrative genius, but also as a man of the highest principles, inflexible in his insistence upon rendering in his own service the fullest measure of performance to the public which employed and trusted him, and equally insistent upon such performance by others under his direction.

His career is too well known to highway and other governmental circles in this State, as well as throughout America, to need detailed restatement today. But his is an inspiring life, nonetheless, which may be profitably reviewed again.

Mr. MacDonald first attended Iowa State Teachers College at Cedar Falls, Iowa, in 1899–1900. He went on from there to graduate in civil engineering at Iowa State College at Ames, in 1904. It was during his undergraduate days there that his lifetime interest in roads was developed. A thesis which he wrote on studies of the power required to pull a wagon—this was before the days of automobiles—over various types of roads became an authoritative text in that field.

When he was serving as a young professor at Iowa State and the legislature commissioned the college to prepare a study of how Iowa's roads might be improved, Tom MacDonald was the logical person to undertake and head such a study. The research which went into that effort was the beginning of a devotion to highway improvement which was to characterize the rest of his life.

He fell naturally and logically into the position of State highway engineer when Iowa launched a road improvement program in 1907. He simply switched titles, retaining the same functions, when the Iowa State Highway Commission was established separate from the college in 1913, with Mr. MacDonald as chief engineer.

Iowa owes its first real system of all-weather roads to Mr. MacDonald's foresight and energy. This State promptly took the lead among all States in creation of a coordinated highway system, under his administration. He recognized the basic needs for proper grading and draining. More than a third of Iowa's roads were graded, bridged, and drained, and plans had been made for an unprecedented hard-surfacing program when he was called to Washington, D. C., in 1919 to take charge of the Bureau of Public Roads, as the Nation's Federal Highway Commissioner.

There stands to his credit the development of the joint Federal-State system of highway planning and construction. He insisted always upon recognition of State sovereignty in highway matters. He regarded State highway commissions as representative of the States, and the United States Bureau of Public Roads as properly bound to act only with and through the State commissions.

As the acknowledged last word in highway administration and policy planning, Tom MacDonald was frequently the adviser of congressional committees. He never wavered from his loyalty to the principle of State sovereignty. Neither did he ever relax his insistence upon the right of the Federal Government to demand uniformly high standards of design and construction in all projects where the Federal Government shared in financing. Throughout his public life, he was generous in the assignment of credit to State highway departments for their large measure of contribution to highway improvement.

These self-imposed high standards won him in the national field the same admiration and respect they had brought to him in his adopted state, Iowa.

Although himself a Republican, and he always so remained, Mr. MacDonald, without solicitation on his part, was appointed Chief of the United States Bureau of Public Roads, in 1919, by a Democratic Secretary of Agriculture, serving under a Democratic President. He accepted the proffered appointment as a matter of duty and with some misgivings as to his own ability to handle the job. He performed such an outstanding service that, as a matter of course, he remained, through 34 years of shifting Republican and Democratic national administrations, exemplifying for the Nation and the industry, that highway administration itself is not, and should not, be in any degree partisan.

One of Tom's last visits to Iowa was to attend the testimonial dinner accorded to his former associate and his successor, Fred R. White, who retired as chief engineer, Iowa State Highway Commission, in October 1952. He gracefully and justly gave credit to Mr. White for the structure built upon the foundations he had laid in Iowa, without, of course, claiming any credit for the foundation.

Tom MacDonald was widely known throughout Iowa despite his long absence from this State. There are still active in highway and engineering circles here men who knew him as a student and many who launched their own business careers in Iowa while he headed the Iowa highway effort. Many too, met him also at meetings of various national highway and related associations, before which he was a frequent and appreciated speaker.

Mr. MacDonald retired as Commissioner of Public Roads in 1953, but did not discontinue his active interest in and contribution to highway work. He accepted the position of "distinguished research engineer" at Texas A. and M. College, College Station, Tex. There he headed a highway research station which in the few years of his tenure, has contributed important knowledge and counsel to the world of roadbuilding and road use.

We say a sad goodbye to a lifelong distinguished public servant, almost without peer, and a personal friend of all who worked with him in the great and important objective of providing adequate thoroughfares for our country. He spent billions of dollars of the people's money with never a shade of a shadow of a suspicion as to the integrity or the intelligence of the expenditure thereof. He left his imprint on his time as few men are privileged or able to do. His was a substantial contribution to making America a better place in which to live. Much that today's motorist takes for granted in the ease, and comfort, and speed of his travel along America's highways, he owes to Thomas H. MacDonald.

There is no irreverence in quoting as a word of farewell to a good and faithful public servant the 5th verse of the 3d chapter of the Gospel according to St. Luke:

> Every valley shall be filled, and every mountain and hill shall be brought low; and the crooked shall be made straight, and the rough ways shall be made smooth.

Tom did his part to bring that to pass.

Chicago's Lake Diversion

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the Chicago Daily Tribune issue of April 17, 1957:

QUARRELING AMONG LAKE CITIES

The traditional foes of Chicago's lake diversion held a meeting in Cleveland and rehashed the charges, rumors, and crazy statistics they have been using for years. The Governor of Ohio advocated a Federal investigation. The mayor of Milwaukee urged President Eisenhower to name a commission "to find out why Chicago has failed to dispose of waste by modern methods."

Many studies and investigations of lake diversion already have been made, the latest being by the United States Army engineers, but Chicago has no objection to further examination of the problem. Chicago has nothing to hide. Particularly we welcome an investigation of our major sewage treatment plant, which has been named 1 of the 7 modern engineering wonders of the world. Since 1950 Chicago has provided complete

treatment for all its sewage, including industrial wastes, and thus has complied with all the requirements set forth by the United States Supreme Court in its 1930 decree.

If a new investigation of Chicago's treatment works is made by a Presidential commission, as proposed by the mayor of Milwaukee, the same body ought to make a study of Milwaukee's methods of handling its wastes. As every gardener knows, Milwaukee is in the fertilizer business. This business has seemed to be more important, in the minds of Milwaukee officials, than purity of Milwaukee's drinking water.

During rainstorms the flow of surface drainage water into the Milwaukee treatment works results in a lowering of the nitrogen content of the city's fertilizer. To keep the fertilizer rich in quality, it was formerly the practice to have all sewage, both sanitary sewage and storm water, bypass the treatment works and flow into Lake Michigan. About 2 years ago the State government, acting on many protests that Lake Michigan was being polluted, ordered the city to treat all sewage. An investigation by a Presidential commission could determine whether this order is being obeyed.

The same commission also could determine whether other lake cities are giving proper treatment to industrial wastes. Chicago's plants are designed to treat such wastes in an amount equivalent to the sewage of 3,800,000 people, in addition to handling the actual sewage of 4,500,000 people. When all the lake cities have been certified as having treatment facilities as good as Chicago's and are free from all blame, it will be time enough for the politicians of those cities to make snide comments about Chicago.

The Lake States and cities will never get anywhere by quarreling about lake diversion. Everybody agrees that it is important to maintain lake levels for navigation purposes. The cyclical fluctuations of these levels are measured in feet. Yet the current controversy is about a proposed increase in diversion which the Army engineers estimate would lower the level of Lake Michigan by not more than five-eighths of an inch.

The Lake States and the Federal Government ought to proceed as promptly as possible to correct the big fluctuations in lake levels, not the little ones.

Flourishing Area

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. OSTERTAG. Mr. Speaker, a recent issue of the Industrial Bulletin published by the New York State Department of Labor, sets forth graphically and with documentation the remarkable record of a remarkable city and county, the city of Rochester in Monroe County, New York. Year after year, Rochester and Monroe County are in the van insofar as economic conditions are concerned—a condition which reflects the vision and imagination of the area's leaders and the high character of its residents.

Under leave to extend my remarks, I include in the RECORD some excerpts from the article The Rochester Area from the Industrial Bulletin.

The Rochester labor market area—Monroe County—is the Nation's largest center for the manufacture of photographic and optical goods. It has consistently enjoyed more favorable employment conditions than those prevailing in the Nation as a whole during practically all of the past 16 years. In every important category—total employed, unemployed, labor-management relations, growth of industry, proportion of skilled workers to total employment force, labor turnover and hourly and weekly earnings—Rochester figures look good.

The only time since 1940 when the area reported a relatively substantial labor surplus was during the 1949 business recession. For the past 4 years the Rochester area has been classified in the balanced labor supply category. During 1954, Rochester was one of only 16 such areas in the Nation, and the only one in New York State. During 1954, 1955, and 1956 employment conditions in Rochester were generally regarded as the most favorable in New York State.

Estimated total unemployment during the postwar period ranged from a high of 30,000 in August 1949 to a low of 4,500 in the fall of 1953. The October 1956 estimate is 5,500—2.2 percent of the civilian labor force.

The excerpts follow:

In spite of the fact that a whopping total of 47,900 or 42 percent of the area's 114,100 factory workers are employed by photographic, optical, and instrument firms (which themselves form a number of diversified industries-within-an-industry) Rochester plants turn out a wide variety of other products, ranging from electrical equipment, industrial machinery, and automotive equipment to men's clothing, food products, and printing.

At its October 1956 level of 224,100, nonfarm employment was more than one-and-a-half times as large as in the pre-World War II year of 1940. Initial impetus for this increase came in the early years of World War II. Between April 1940 and the employment peak in the summer of 1943 Rochester manufacturers added about 53,000 workers to their payrolls.

After the 1943 high, the number of job holders receded slowly, then dropped sharply by about 25,000 when the war ended. Within 3 months after the end of World War II, factory employment turned up and by late 1946 came close to the peak World War II level. Employment dipped again during the business recession of 1949 but began to recover in early 1950. The Korean outbreak boosted employment again. This recovery continued until late 1953.

Nonfarm wage and salary employment reached a high of 223,800 in December, 1953, an increase of more than 33,000 for the 3½ years following the Korean outbreak. In 1954, in common with most of the Nation, Rochester's job total turned downward. The post-Korean decline was not reversed until early 1955 after nonfarm payrolls had reached a low of 211,300.

Rapid recovery during 1955 made up all of these losses so that by December 1955 nonfarm wage and salary employment reached an alltime high of 225,700.

Employment continued at a high level during 1956, with total employment (including nonfarm wage and salary employment) reaching a new high of 250,100 in October 1956. Employment gains during 1956 occurred in both manufacturing and nonmanufacturing. Manufacturing employment, however, has still not yet attained its postwar peak of 119,300 reached in September 1953. Nonmanufacturing employment, on the other hand, is at an alltime high. About 40 percent of the area's employment gains since 1940 were achieved through the hiring of women. In manufacturing, the proportion of women employed increased from 27 percent to almost 32 percent.

Manufacturing industries have been responsible for the bulk of the area employment increases registered during the 17-year period since 1940. Net expansion of the manufacturing work force was close to 66 percent between the spring of 1940 and October 1956. The photographic, optical and instrument industry, the area's largest industry, added nearly 20,000 workers through October 1956. Electrical machinery gained about 8,000 workers since 1940.

Other important changes since early 1940 include primary and fabricated metal products and transportation equipment which together increased the number of their employees by 6,000; food products by 4,000; nonelectrical machinery by 4,000 and printing by 2,000. As a result of the long-time factory gains, manufacturing employment now accounts for 51 percent of the area's nonfarm total as contrasted with little more than 47 percent in 1940. Incidentally, the proportion of total employment in manufacturing is one of the highest among the metropolitan areas in the Nation. Throughout the postwar period, the Rochester area's record of labor peace was among the best in New York State and was one of the most favorable among the major metropolitan areas in the Nation.

Labor turnover in Rochester has also traditionally been low. A comparison over the past 16 years shows that in every month of this period manufacturing labor turnover has tended to be substantially lower than the national average.

The area's labor force is characterized by a very high proportion of skilled workers. In 1950, the proportion of professional, technical, and skilled workers (30 percent) was higher in Rochester than in any of the 57 largest metropolitan areas in the Nation. In optical manufacturing, photographic equipment, men's apparel, and in almost all Rochester's major industry groups, prosperity is firmly founded on craftsmanship.

Weekly earnings in the area's factories were at a record high and averaged $87.83 during September 1956, for a workweek of about 41 hours. On the average, factory workers in the area earned $2.14 an hour during the month.

Spokane Public Forum Resolution

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. GROSS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution:

SPOKANE PUBLIC FORUM RESOLUTION

Whereas the Honorable USHER L. BURDICK, speaking in Congress, calls for a committee of five to work for legislation to protect the life and health of the Nation by outlawing the general practice of chemically treating most all food and vegetables on the shelves of our stores, rendering our food unfit and dangerous for home consumption by these poison chemicals; and

Whereas as to Coca-Cola, that was challenged over 50 years ago as to its poison

effects and resulting danger to our people, especially our children. This is the same Coca-Cola that floods our market today, and is served in our hospitals, with no word of protest from the authorities: Be it

Resolved, That the Spokane Public Forum go on record highly commending the Honorable USHER L. BURDICK, of North Dakota, for his courageous stand, and work to get action in Congress to protect our people from this commercialized poison, masquerading as pure food in the family market throughout the country.

Mother of the Year

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. SPRINGER. Mr. Speaker, each year the Illinois Mothers Association of the American Mothers Committee selects from all the mothers of Illinois, the woman that they feel has done most to promote the cause of good motherhood in our State. The choice of the committee for 1957 was Mrs. Cassie N. Reeves, of Weldon, Ill., a constituent of mine.

Mrs. Cassie Cross Reeves was the daughter of a farmer and lived all her life in a small rural community where she enjoyed the love and respect of all who knew her. She graduated from grade and high school at Weldon, Ill., and trained for the teaching profession at Illinois State Normal, where she met her husband, Everett Reeves. Instead of teaching, this young couple settled on a farm which they purchased, assuming a huge burden of indebtedness. Lean years and a rapidly growing family however, left little for payments on the mortgage and Mr. Reeves was finally forced to combine his two professions by becoming principal of the village school. Fate had other plans however, and his career was cut short by his untimely death. His young widow was then confronted with a huge mortgage, the problem of raising four little children, and no visible means of support. Mrs. Reeves, however, had great faith in God and mankind, confidence in herself, and the will to see her job through. She accepted her husband's position which was offered to her and became mother, father, and wage earner. With all this she still managed to engage in school activities and wholeheartedly worked for all uplifting projects of her community. At the same time she personally managed her farm.

This mother looks now with pride on her four children. Colon, the eldest son, received his B. S. from the University of Illinois and his M. S. at the University of Chicago. He was a Marine captain in World War II and holds a permanent rank as major in the Reserves. Richard, the second son, was captain in the Air Force during World War II, a graduate of the University of Illinois and he is now a professional engineer. Robert, the youngest son, received his B. A. from the University of Illinois and became an industrial engineer. He served in the Naval Air Corps for 2 years. Margaret, the only daughter, graduated from Illinois State Normal and become a high-school music director. During her 27 years of teaching, this widowed American mother not only paid off her indebtedness, but raised, fed, clothed, and educated a fine American family. She now enjoys security and serenity and continues to serve her church and her community.

On April 7 Mrs. Reeves was honored in her home community of Weldon, Ill. At that time most of the surrounding community turned out to honor her as the mother of the year. Mr. Speaker, I herewith append an article from the Champaign Urbana Courier of Monday, April 8, giving an account of this ceremony that was held in the DeLand-Weldon High School.

MOTHER OF YEAR HONORED—500 AT CEREMONY FETING MRS. CASSIE REEVES

Approximately 500 persons honored Mrs. Cassie N. Reeves, Weldon, "Illinois Mother of the Year," for 1957 at a ceremony Sunday afternoon in DeLand-Weldon Junior High School here.

Ten of the 40 candidates for the title recently given Mrs. Reeves were present, along with two former State mothers of the year. John W. Chapman, lieutenant governor of Illinois, presented Mrs. Reeves the State citation, and she received a pin from Mrs. Amos E. Seymour, Virden, Ill., chairman of the American Mothers Committee.

The Reverend Dale Pitcher, Pontiac Methodist minister and longtime friend of the Reeves family, gave the main address. Other speakers included Miss Carrie Marsh, who substituted for her sister, Mrs. Roy Twist, in explaining why the local WCTU nominated Mrs. Reeves for the honor; Loren Richardson, Weldon, village president, and Richard Reeves, Decatur, one of Mrs. Reeves' four children gave the response for the family.

Her 3 sons, 1 daughter and members of their families came from 3 States to take part in the tribute. The sons are graduates of the University of Illinois and the daughter attended Illinois State Normal University.

Former State mothers of the year attending were Mrs. Addie Carroll, Greenville, and Mrs. Charles Woods, Lincoln, who was chosen in 1955. The 1957 candidates present received certificates of merit.

Representatives of many groups interested in the selection of an outstanding mother each year attended the program, coming from Champaign-Urbana, Bloomington, Danville, Princeton, Kankakee, Litchfield, and other towns.

Ernest Dickey, principal of DeLand-Weldon Junior High School, was toastmaster, and Mrs. Loren Richardson, program chairman.

Mrs. Reeves, 62, was chosen for the award because of her accomplishments in rearing a family and paying off a mortgage on a farm after the death of her husband 30 years ago. She taught in Weldon Grade School about 23 years.

Mrs. Reeves also will be honored at a meeting of the American Mothers Committee of the Golden Rule Foundation May 7–10 at the Waldorf-Astoria Hotel, New York City. The "National Mother of the Year" will be chosen from the State winners.

Mrs. Reeves also will be a guest of honor at a ceremony April 25 at Southern Illinois University, Carbondale.

Flood Insurance Still in Abeyance Although All Details Are Said To Be Worked Out

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mrs. SULLIVAN. Mr. Speaker, in a recent special order in the House, on April 8, I was intensely critical of the delays which have occurred in placing into effect the Federal flood insurance program authorized by Congress last year.

As I pointed out, people are experiencing flood damage right now, with the heavy spring rains in many parts of the country, yet the official attitude has seemed to be that the floods should wait while the minute details of the program are worked out to everyone's satisfaction—before any policies are issued or any businessmen or homeowners are afforded some measure of protection against disastrous flood losses.

Since then, I have received a great deal of additional information from the Flood Indemnity Administration of the Housing and Home Finance Agency, which administers the new program, and have been assured that the details are now being worked out, and are just about all completed.

Now, we are informed, the delay is at the door of Congress—that nothing can be done until Congress appropriates funds for the payment of possible future losses once the policies are issued and also appropriates funds for the payment of private insurance companies of agents' fees, claim adjusting costs, et cetera.

LETTER FROM COMMISSIONER MEISTRELL

This situation is outlined in some detail, Mr. Speaker, in a letter which I have received from the Commissioner of the Federal Flood Indemnity Administration, Mr. Frank J. Meistrell, and in fairness to him, I am inserting the full text of his letter at the conclusion of these remarks.

I will say, in comment on it, that I am pleased all of the details have been worked out for cooperation between the Federal agency administering the program and the private insurance firms which will handle the sale of the insurance on a nonprofit basis.

I will say I am delighted that things have been brought to the point that the program can get underway if money is made available.

But I must say, in fairness to those in St. Louis and elsewhere who live in dread of new flood damage while this whole program languishes in redtape, that it seems to me there has been much too much delay downtown on this and that there now appears to be a desire to blame any and all delays on Congress.

The act was passed last year. There was no money included for the program in the President's budget sent up here in

January. The initial request for funds did not arrive until last month.

I have checked with the Appropriations Committee on this matter and I have been informed that the proposed funds for the flood insurance program were not put on any urgent priority list by the administration, and hence were not considered for any of the urgent deficiencies or supplemental bills which have been reported out so far.

SHOULD COME UP AFTER EASTER RECESS

Hence, this matter is being treated in the usual manner of any rather routine request for a supplemental appropriation, and the reason it is so treated is not by decision of the Appropriations Committee, as I understand it, but rather by decision of the Bureau of the Budget, which has shown no sense of urgency about it.

Congress has just been subjected to a buck-passing, blame-placing fiasco over deficiency postal funds, and the resentments are deep in this entire House over the way this whole issue was handled. I hate to see the Appropriations Committee again being blamed for delay on the flood insurance program, when it is not in any sense responsible for the delays which have occurred.

It is my understanding that this proposed appropriation for $50 million for payment of future losses and for payment of agents' fees and adjusters' expenses, and so on, will be considered by the committee along with other supplemental items in a bill which will probably come out shortly after the Easter recess. I wish this had been earmarked by the Budget Bureau as among the kind of high-priority items taken up in the bill we passed earlier this week which contained postal funds.

LETTER CONTAINS MORE DETAILS ON RATES

In Mr. Meistrell's latest letter to me, Mr. Speaker, there are some additional details on the probable rate structure for this insurance and on other aspects of the program which I believe will be of interest to many of the Members as well as to all of those who are anxious to buy flood insurance once the program is underway.

The text of the letter from Mr. Meistrell, dated April 15, is as follows:

HOUSING AND
HOME FINANCE AGENCY,
FEDERAL FLOOD
INDEMNITY ADMINISTRATION,
Washington, D. C., April 15, 1957.

Hon. LEONOR K. SULLIVAN,
House of Representatives,
Washington, D. C.

DEAR MRS. SULLIVAN: I am pleased to give you the following information in answer to your inquiry concerning the present status of the Federal flood-indemnity program.

I wish I could give you, and many others who have inquired, a definite answer as to when flood insurance will be made available to the general public. The fact is that the date on which we shall be able to offer flood insurance to the public is directly related to action by the Congress.

As you know, there is now pending before the Subcommittee on Independent Offices of the House Appropriations Committee a supplemental appropriation request which when approved by the Congress will provide necessary funds.

A hearing on this request was held on April 3 and I am enclosing herewith a copy of the justification of supplemental estimates and a copy of my statement before the subcommittee, which you requested. I do not have a copy of my testimony to the subcommittee which you also requested.

You will observe that the appropriation request is for $50 million based on an initial insurance authorization of $3 billion as prescribed in the Federal Flood Insurance Act. This request is composed of two major items:

The first item of $36 million is to be used, if needed, to pay losses in excess of premium income estimated at $54 million. In short, we anticipate having available for the purposes of the disaster insurance fund loss reserves aggregating $90 million.

The second item of approximately $14 million is to be used for payments to the insurance companies, and agents and brokers, for selling and servicing flood indemnity contracts, and to claim adjusters for adjusting claims arising under these contracts. This money will be expended only as such services are actually rendered.

In this connection, I should like to emphasize that:

The payments made to insurance companies for issuing policies and performing other related services on our behalf, are to reimburse them only for their out-of-pocket costs, and do not include any profit, or administrative overhead, or any other expense incident to the normal conduct of their business. The claims adjustment organizations are to be reimbursed for their services on a comparable basis. The agents and brokers who sell the contracts are to be paid on a commission basis which has not yet been finally determined.

In effect, we are prepared to put into operation a wholly new insurance business using for the purpose the facilities and the highly trained personnel of the insurance industry at cost. This appears to us to be the most economical and effective way to put this program into operation promptly.

As a consequence, the staff of the Federal Flood Indemnity Administration can be kept relatively small. Our functions will include policy formulation, supervision of program operations by the insurance companies, settlement of claims for losses, and research. The administrative costs of this agency can thus be kept comparatively low, especially during the early years when the program is largely experimental.

You asked me also what the cost will be for this insurance. This raises the whole question of rates which has been our most difficult problem.

For the major classes of risks, our net rates (after application of the subsidy) will range from $1 to $2.50 per $100 of insurance on an 80 percent coinsurance basis. Within this range, the rates will be different in various parts of the country depending upon considerations of flood frequency and flood damage in such areas.

On the basis of available data, we have established a separate set of rates for each major river basin in the United States, and for the more highly exposed areas along the Atlantic and gulf coasts. We believe that these rates reflect varying degrees of exposure, ascertainable at this time, and that they are marketable, as required by the Federal Flood Insurance Act.

The rating system we have devised will of course be refined and improved, as we gain experience. But it makes possible flood protection for the people this program is intended to help—the home owners and businessmen of modest means who are exposed to flood hazards. The insurance industry is prepared to market flood indemnity contracts at these rates.

Mindful of the constant need for economy in our operations, we have given considerable thought to the question of large losses being incurred in excess of income derived from these fates. Certain safeguards have, therefore, been incorporated into the program:

1. The amount of insurance which can be sold to any person or corporation is limited to $250,000, and $10,000 on a dwelling and its contents.

2. The total amount of insurance in force will not be the measure of the Government's liability as most losses arising under these contracts will in all probability be partial losses. Moreover, flood indemnity contracts will contain dollar and percentage deductibles which will tend to reduce nuisance claims.

3. The flood indemnity contracts will be sold nationwide. Since all exposed places will not have damaging floods at the same time, the fundamental principle of insurance will apply, namely, the contributions of the many to pay for the losses of the few.

You will also find enclosed three different sets of answers which we have prepared to various questions that have been asked us from time to time.

We deeply appreciate your interest in this program. If we can be of further service to you at any time, please let us know.

Sincerely yours,

FRANK J. MEISTRELL,
Commissioner, Flood Indemnity Administration.

Departments of State, Justice, Judiciary, and Related Agencies, Appropriation Bill, Fiscal Year 1958

SPEECH
OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. FEIGHAN. Mr. Chairman, the American people have been forced into their present situation whereby we are compelled to defend ourselves and help others who are willing to fight for their freedom. The role of defender of human freedom, a choice which we had to make, is costing billions of dollars each year. The cost of our activities in this regard comprise 63 percent of our total budget. The fundamental issue involved is war or peace. The Russian Communists seek world conquest. We want peace—not at any price but peace with justice and freedom for all.

The Communists are engaged in unrelenting warfare against all the people of the free world. Their warfare takes various forms, with emphasis upon propaganda warfare but not omitting armed aggression when the Communists feel that there is a 50–50 chance of winning. The Russians will not desist in this effort until they conquer the world or are themselves destroyed. That is a sad fact of life but nevertheless a fact of life which we must face up to.

It is now almost 10 years since President Truman made the historic decision to defend our freedom and the independence of other freedom-loving nations

against the threat of Communist agression. That decision has had a marked effect upon the history of the whole world. It also officially ended our uneasy alliance with the Russian Communists which was made during the world crisis which marked World War II.

We have pursued this objective for almost 10 years. The American people have made tremendous sacrifices to make possible programs in support of that objective. There are now unmistakable signs that this great effort is beginning to bear fruit. There have been revolutions in the Communist-occupied countries—revolts against the Russian masters who are the overlords of the Communist empire. There are clear signs that intense struggles are taking place within the Soviet Union. The people of the non-Russian nations are demonstrating again their discontent with communism and their contempt for the Russians whom they know as their exploiters.

Together with this it is obvious that there is dissension among the leaders of the Kremlin. They are confused—uncertain, but nevertheless unchanged in their determination to impose communism upon all the nations and people of the world. The Russians are well aware of the tremendous corrosion and human restlessness that is taking place throughout the entire Communist empire. The Russians are well aware that the people they enslave await only the opportunity to throw off their chains and assault their tormentors. To counteract this the Russians have made unfounded promises to give more freedom to the people, more opportunity for individual development, more recognition of the national demands coming up from all the nations within the empire. The men in the Kremlin have even attempted to blame Stalin for all the errors and miseries of life under communism. They have blamed Stalin for the almost endless list of crimes against humanity committed by the Communists during the past 30 or more years. The much publicized "de-Stalinization" campaign being talked about within the Russian empire is nothing more than an effort to find a scapegoat for the complete and dismal failure of communism to provide the decencies of life for the people is enslaves.

The leaders of the Kremlin are aware that unless changes are made, internal revolution is inevitable and each such revolution hastens the day of final collapse of their empire. Their greatest fear is that if they relax the hold of the police state over the people, total revolution of all the people will occur. This, then, is the great dilemma which now confronts the leaders of the Russian Communist conspiracy.

In the face of this compelling evidence, I am firmly convinced this is not the time to give the Communsts a breathing spell—this is not the time for us to relax our worldwide campaign of truth.

It is generally recognized that the worldwide struggle between the evil forces of communism and the desire of all people for freedom and democracy is essentially one of ideas and ideals. This struggle involves the dissemination of ideas which reflect the social, economic, and political system of the free world. It also involves full exposure of the cruel realities of communism as contrasted with the rosy ideal painted by the theory of communism. Our campaign has been designed to counteract Communist lies about the American free way of life, the free enterprise system, and government of the people, by the people, and for the people. In summary, it has been recognized that the struggle for the world will be largely won or lost by the judicious and astute utilization of all the medias of mass communication to effectively carry freedom's story to all the people of the world.

Economy in the operation of the Federal Government is long overdue. There is no doubt in my mind that Congress can save the American taxpayers several billion dollars of the funds requested in the budget which the President sent to Congress a short while ago. Every Member of Congress is anxious to bring economy and efficiency into the operation of our Government. The question before us is where we can make substantial cuts and at the same time provide maximum security for our people.

I believe that the type of work which the USIA is by law and Presidential directive chartered to do is one of the essential elements necessary to prevent the conspiracy of communism from taking the breathing spell it so badly needs. The USIA is the agency of our Government which, by law, is charged with the responsibility of exploiting all the developments growing out of the effort of the Polish people to win their freedom and national independence and the all-out effort of the Hungarian people to win their freedom and national independence. If maximum exploitation is given to these two historic events and the confusion and uncertainty which grips the leaders of the Kremlin is also exploited, a powerful blow will have been struck for the cause of peace and freedom.

Again I say, this is not the time to give the enemy a breathing spell—now is the time to press forward our advantage and to reap the rewards which the great sacrifices of the American people over the past 10 years have produced. It is my hope that the USIA will intensify the campaign of truth and bring it to an ever increasing number of people throughout the world.

The Lowest Ebb of Our Country

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. JENSEN. Mr. Speaker, last Sunday, April 14, was the 92d anniversary of the assassination of President Abraham Lincoln. The Lincoln group of Washington, D. C., in cooperation with the National Park Service, held an appropriate observance at Ford's Theater, the scene of the assassination, which has since become the famous Lincoln Museum. Our colleague, the Honorable FRED SCHWENGEL, of Iowa, vice president of the Lincoln group, gave the address for the occasion. He entitled his remarks "The Lowest Ebb of Our Country."

Congressman SCHWENGEL is a lifelong student of the life and deeds of the Great Emancipator. He knows his subject well and in his address last Sunday he gave new meaning to the growing importance of Lincoln's stature. I know that Congressman SCHWENGEL considers it a great honor to deliver such an address. I can appreciate this deep sense of pride, because a few years ago it was my distinct privilege to deliver the Lincoln Day memorial address at Ford's Theater.

Under leave to extend my remarks, I am pleased to ask permission to have Congressman SCHWENGEL's fine address printed in the Appendix of the RECORD so that all can share its message:

THE LOWEST EBB OF OUR COUNTRY

(Address by Hon. FRED SCHWENGEL, of Iowa, Ford's Theater, Sunday, April 14, 1957)

Tomorrow morning at 7:22 o'clock, it will be exactly 4 score and 12 years since the great heart of Abraham Lincoln ceased to beat in mortal flesh. This happened at a time when he and the Nation that he led so nobly had reasons to feel that it stood on the pinnacle of its finest and most significant moment in history. After 4 years of sacrifice, bloodshed, and heartaches unmatched in the history of the world, the question of whether a nation had a right to dissolve itself, to secede, was settled forever. With this wonderful victory came also the greatest moral victory of any nation in history. He led his people and they joined him in breaking the chains of slavery for millions born in an atmosphere of freedom. Three million souls born to be slaves became free and soon a nation became aware of the fact that as the slaves were freed, so were their masters.

And so it was, as we look back to that time that our country was getting ready to enjoy its finest moment. It had won its greatest victories. Lincoln was happy and the people were rejoicing—the boys would soon be home now. No more sow belly and beans, home and peace, a united Nation, it was wonderful.

With this great achievement, however, Lincoln saw still other battles to be won. They were in the political arena, and he knew they must be won on the basis of reason and commonsense. This would be awfully hard, but he must try. So as he had planned the battles of the war he now was planning the battles for the peace and there was no precedent for this either. He knew it would not be easy and he knew it would take time, and he knew that what was exactly right would come gradually. We must take our time. So now the real pressure was off, permitting him, the official family, and his family to look forward to some moments of relaxation. And so, on the evening of the 14th, he entered this theater with Mary, his wife, to see Our American Cousin. He was in a box seat just above us 4 score and 12 years ago today.

We need not go into detail on what happened here on that day. All of us know too well the terrible story of the shot that killed this great-hearted man. May I try for a few moments to review the reaction of a Nation toward his passing—then from this, call to your attention some significant observations, from which we can learn some lessons for our time and which might be of some value to us.

Robert Browning Hamilton once said:

"I walked a mile with sorrow
And ne'er a word said she;
But, oh the things I learned from her
When sorrow walked with me."

It was Good Friday when he was shot—one wonders—was this the hand of the Almighty? He lived until Saturday morning; until 7:22. That day was a cold, rainy day. He was in the Peterson house—hundreds of people stood outside watching, wondering, hoping, and praying. Officials were coming and going from this brick house. Inside, Lincoln lay on a wooden bed in the rented room of William Clark. He hadn't been conscious from the time the bullet found its mark the night before. Life was ebbing away.

They did what they thought was best to keep him alive, but the doctors knew it couldn't be.

Rumors spread and soon the Nation was to know that as they sacrified for the four long years with Lincoln as leader and were about to enjoy a great period of celebration, they now were forced to mourn. Sorrow was with them once again. The Nation began a period of mourning. More people shed tears over this death than any in the history of our Nation. Yes; maybe even the world. There were funeral sermons in almost every church and community. Editorials in every newspaper in the land and muffled talk on the streets; in the homes. It was on the lips of those in saloons and the railroad cars. There was black bunting and crepe everywhere. These were attempts to say something that could not be said. Silence seemed to reign. Men tried to talk about it and the words failed and they fell back to silence. To say nothing seemed best. They did go through the motions of grief, and they did take their part in a national funeral and the ceremony of humiliation and abasement and tears.

Newsboys at their stands normally making a lot of noise but at this time they cried no headlines. They handed the damp sheets from the press to the buyers, wiping their tears as they sold their papers. In thousands of stores the merchants told their clerks they would close for the day. And on Monday, in many schools, the sobbing teachers could only tell the children "Go home, there will be no school today."

The board of trade, operators in gold, were shocked and closed the exchange. They couldn't transact business in this atmosphere. In North Carolina a Negro in a shanty barber shop told his first customer that he wouldn't shave anybody that day, because he said, "Somethin's happen to Marse Linkum."

Lincoln wasn't on the official roll of any church, but on Sunday every church did penance—Catholic, Jew, and Protestant. They could have and did have many differences, but in this they were united—thankful that their God had given them a Lincoln and mourned deeply his death. Seemed he might have been a member somehow of every church.

The tragic effect of this murder on the South is strongly expressed in Herman Melville's poem, most effectively edited by Jim Bishop in his book The Day Lincoln Was Shot:

"Good Friday was the day
Of the prodigy and crime,
When they killed him in his pity,
When they killed him in his prime.
They killed him in his kindness.
In their madness in their blindness,
And they killed him from behind.

"He lieth in his blood—
The Father in his face;
They have killed him, the forgiver—
The Avenger takes his place.

"There is sobbing of the strong,
And a pall upon the land;
But the people in their weeping
Bare the iron hand:
Beware the people weeping
When they bare the iron hand."

As we reflect and contemplate the almost unbelievable problems of that time, one wonders how a Nation that had just gone through the valley of the shadow of death paid so dearly with so many human lives for its sins—then having won, and I believe somehow both sides in this war won—stood on the brink of enjoying and celebrating its greatest achievement—could now stand the terrible shock of having to go into the darkest valley of sorrow ever experienced by any nation in the history of man. It seems as we look back now, too terrible a load for his people to carry—but they must. They could if—if, that is, they would harken and be reminded, as Lincoln was, to what our forefathers said and did four score and seven years before. He said at Gettysburg that what they said and did about the great objectives of Government was his goal—and he certainly implied that they are our goals, too. The people must achieve them now without Lincoln as their leader. It seemed hard—but they now had, as we have, a forefather that he did not have; one whose simple pronouncements made so much sense. Volumes could be said about what he said that gave them sustenance for strength and courage in their hour of challenge, but I shall refer to only two short paragraphs of his public statements.

His annual message to Congress, dated December 1, 1862, has been nominated by many a student, at home and abroad, as the greatest state paper any American ever wrote. With this I agree. The country's plight was then as desperate as it ever was. That message was a classic of truth, of philosophy, of love of country, of duty, and actually, of beauty of thought and style. Every American ought to read it. In it Lincoln gave to Congress the formal announcement of his Emancipation Proclamation, together with its facts and reasons and needs. He argued that two nations made out of our one, could not reasonably exist. "There is no line straight or crooked suitable for a national boundary upon which to divide." "There is no possible severing of this but would multiply and not mitigate, evils among us." Note the logic in his every word. He then proposed our Constitution be modified so that his pet plan would prevail, that slaves would be free and slave owners compensated. He said, "By mutual concession we should harmonize and act together. Without slavery the rebellion could never have existed; without slavery it could not continue."

How noble, how logical is every suggestion. Then came the famous last paragraph. It is probably 60 seconds in length. When we read it we ask ourselves, Did anything grander ever come from the White House?

"Fellow citizens, we cannot escape history. We of this Congress and this administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down, in honor or in dishonor, to the latest generation. We say we are for the Union. The world will not forget that we say this. We know how to save the Union. The world knows we do know how to save it. We—even we here—hold the power and bear the responsibility. In giving freedom to the slave, we assure freedom to the free—honorable alike in what we give and what we preserve. We shall nobly save or meanly lose the last, best hope of earth. Other means may succeed; this could not fail. The way is plain, peaceful, generous, just—a way which, if followed, the world will forever applaud, and God must forever bless."

In this 1-minute paragraph there are a total of 160 words—111 of them are 1-syllable words and 49 are 2-syllable words. Every one a jewel set in a crown of logic.

What a precious plea. To end the bloodiest war in history.

To sweep away the curse of slavery and selfishness.

Complete in justice—to all—even to the slaveowner.

Could purpose be more divine?

Did mortal man ever use words for a nobler aim?

How wise was Lincoln. How sad the thought that men did not let his wisdom then prevail.

But surely his God must forever bless the plea.

Let me at this point pose the question—can we find some lessons or ideas in these 160 words to end the terrible cold war today?

Then there are those suggestions on conduct for a people and as a nation for our time and for all the world:

"With malice toward none and charity to all.

"With firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace, among ourselves and with all nations."

In this paragraph, this gem of completely Christian thought, this another of his masterpieces, are exactly threescore and 12 words (72 in all) and 2 less than threescore of them are 2-syllable words and 1 word has 3 syllables and it is "charity"—another and maybe nicer name for love. Christ said, didn't He, "I give you one new law—that ye love one another." This was the core—the central idea of Lincoln's great objective—his life—by precept and example.

Then let us look at the last statement in his final inaugural address—"to do all which may achieve a just and lasting peace—among ourselves and with all nations."

We might ask ourselves—are we doing all we can to bring peace and understanding among ourselves?—think for a moment on some of our domestic difficulties—race, labor and industry, and education. They are many—varied and complex—then we don't really have to remind ourselves of the world tensions, do we? Are we doing all we can to solve the problems that plague us? I think not.

Let us then heed the admonitions of our forefathers and especially those of Lincoln.

Harken unto those great foundations of truth and morality on which our country was built.

Then we will know that as hate breeds contempt and ignorance breeds misunderstanding and poverty, so can the respect for virtue in others make us more respected, and the sharing of our freedoms and liberties will spread these virtues to other lands.

From these fine examples on our American heritage it is not hard to conclude that it is our business to make other men wiser and better as we can find or make opportunity. Let us then think on these and countless other thoughts, foundation truths of our forebears—make them our rule and guide—then try to find ways to make our personal and collective application of them to the problems of our time, remembering that the words of a great seer—"that no doctrine, faith, or knowledge is of value to man except as it bears fruit in action."

Having done this, can anyone doubt that God will continue to bless America?

Let us today then dedicate ourselves to our unfinished task before us—emulating our forbears—doing those things, as they did, that true wisdom dictates—realizing always that right makes might and that if we would

attain our goal as Lincoln did, charity in all its senses must be our motive. Accepting these as our principal guidepost we will be well on the way toward attaining peace among ourselves and with all nations. Thus we do great honor to our forefathers and especially to Abraham Lincoln.

Amendment of Anglo-American Financial Agreement

SPEECH
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (S. J. Res. 72) to implement further the act of July 15, 1946, by approving the signature by the Secretary of the Treasury of an agreement amending the Anglo-American Financial Agreement of December 6, 1945.

Mr. HAYS of Arkansas. Mr. Chairman, I yield myself 1 minute.

I would like to say, Mr. Chairman, that we gain little help from arguing the merits of the original loan, particularly the merits of section 5 and section 6. I do not wish to go into those matters, but some things have been said which would, perhaps, justify my making this brief reference. The British loan legislation was not, as I recall it, a partisan matter. It probably had heavier support on our side of the aisle, but it had respectable support and outstanding and brilliant support from the other side of the aisle. As I recall, it had bipartisan support. Our former colleague from Michigan, Mr. Wolcott, our beloved friend from Michigan, was for the loan. The gentleman from Massachusetts [Mr. MARTIN], equally beloved, was for the loan. I could go on and enumerate others who supported it. But, what I am trying to say, Mr. Chairman, is I hope that we can confine our discussion to the merits of this new agreement under present conditions and judge it in that light. I will include in my remarks some figures which, I think, may be enlightening, and may make some Members feel better about it in the light of economic conditions.

Mr. GAVIN. If the gentleman will yield?

Mr. HAYS of Arkansas. I decline to yield at the moment.

Mr. GAVIN. I just want to say I will not feel any better about it.

Mr. HAYS of Arkansas. There has been a great deal of discussion as to why no security was required of the British when the original loan was made in 1946. I want to make it clear that it would have been impossible for the United States to have secured collateral in the United States to cover the entire loan. As of 1946 the total value of British-owned securities and direct investments in the United States amounted to only $1.475 billion. Of this amount $895 million was already pledged to secure other loans. Consequently, only $580 million would have been available as security to cover the original loan.

We have also heard considerable discussion here of the recent reductions in British taxes. Even after those reductions have been put into effect the British tax burden on the individual will be far heavier than the tax load in the United States. The following table gives a comparison between the tax burden on a British subject with two children and the tax burden on a similarly situated United States citizen:

Income tax

[Married man with 2 children, all income earned]

Income (after deductions but before personal and other exemptions)	Approximate United Kingdom tax before change	Approximate United Kingdom tax after change [1]	Approximate United States Federal tax
$5,000	$960	$930	$520
$14,000	6,158	5,474	2,616
$28,000	16,798	15,452	7,445
$56,000	42,068	40,722	22,472

[1] Assuming 1 child aged under 12 and 1 child between 12 and 17.

Proposed United States Lake Diversion Will Hit Our Shipping, Power

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. BOYLE. Mr. Speaker, in support of the various Lake Diversion bills voted out of the Public Works Committee yesterday, I would like to exhibit this very objective article on that subject:

[From the Toronto Financial Post of February 9, 1957]

PROPOSED UNITED STATES LAKE DIVERSION WILL HIT OUR SHIPPING, POWER

OTTAWA.—Canada will soon be asked by the United States State Department to discuss a greater diversion of water from the Great Lakes into the Illinois Waterway at Chicago.

But Canadian authorities find it difficult to see anything to talk about.

The United States has always insisted on retaining the right to divert the waters of Lake Michigan as it pleases. And it has in fact done so.

The first diversion was in 1899; the latest increase in flow was authorized barely a week ago.

Canada has not been consulted on any of these occasions. Nor has it claimed a right to be consulted.

"Why are they suddenly worrying about our consent now?" asked one Canadian authority.

"We know that users of the whole Great Lakes-St. Lawrence system will suffer from an increased diversion from Lake Michigan.

"It will hurt shipping and it will reduce power output—on the United States side as much as ours. We will go on saying so whenever we are asked.

"But if United States power and shipping interests don't restrain them, we can't. We may object. But we have no formal grounds for protest," he said.

Only reason Ottawa can find for the new United States concern about Canadian "agreement" to increased diversion is that the Columbia River is now in the picture.

Washington now realizes that its cherished "right to divert" cuts both ways.

And on the Columbia, where much more is at stake than in the Illinois diversion, Canada is asserting the right to divert.

The United States, not Canada, insisted on establishing a right to divert in the 1909 treaty on boundary waters. Just as the United States insisted on excluding Lake Michigan from the rules governing boundary waters, so that the right to divert applies to it.

The United States has used these rights consistently, and as recently as last month.

The precedent is now too well established to be changed by any new consultations unless they cover a complete overhaul and redefinition of the principles of the 1909 treaty.

POINT OF DIFFERENCE

The diversion of Lake Michigan water southward from Chicago into the Mississippi has been one of the contentious issues between Canada and the United States for more than 50 years.

Sir Wilfrid Laurier in 1914 listed it as one of the outstanding points of difference between the countries.

And it is now in the news again, because President Eisenhower is under strong political pressure to let an extra 1,000 cubic feet per second (or even 2,500 cubic feet per second) be drawn off from the Great Lakes and fed through the Illinois waterway into the Mississippi.

The Illinois waterway connects Lake Michigan with the Mississippi. It is used for navigation. It also carries off a large part of Chicago's sewage.

Twice Congress has passed bills sponsored by the Midwestern States to increase the present diversion of 1,500 cubic feet per second (plus domestic pumpage) by another 1,000 cubic feet per second.

Twice President Eisenhower has vetoed them. But he is faced in the new congressional session with another 16 bills (in identical terms) asking for the flow to be increased by 2,500 cubic feet per second.

Congress is not giving up, and it is beginning to put some of the blame on Canada for blocking the diversion.

Washington's current impression that Canada has to consent before the diversion can be increased was created by the State Department, and to some extent fostered by President Eisenhower.

It is not supported in Ottawa: And it is a new departure in United States thinking.

The rate of every previous diversion has been settled by the United States administration or the United States Supreme Court, and Canada has never had a say in it.

Nevertheless, the Canadian Government has very clear ideas of the damage that would be done in the Great Lakes and St. Lawrence River if yet more water were taken out of Lake Michigan.

Even if the extra 1,000 cubic feet per second were limited to a trial period of 3 years, the lake and river levels would be affected, it is stated, for as long as 14 years.

During that period, both Canada and the United States bordering the lakes would lose a considerable amount of cargo-carrying capacity in the lakes. Both would also suffer a reduction in output from hydroelectric plants.

Here are estimates:

Loss of electricity: Over a 14-year period of lower levels resulting from the 3-year diversion, reduction in electric output would be:

At Canadian plants: 40 million kilowatts.

At United States plants: 45 million kilowatts.

Loss of shipping capacity: Every reduction in water level reduces the average load of

lake vessels by about 70 tons on every trip. This table shows the reductions caused by the Chicago diversion:

[Inches]

	1909 diversion	Proposed 1957 diversion	Total
Lakes Huron and Michigan	2¼	½	2¼
Lake Ontario and St. Lawrence above International Rapids	1½	¼	2⅛
Montreal Harbor	1½	¼	2

The United States Great Lakes Carriers Association is fully aware of the loss it suffers from every lowering of the water levels.

It estimates that every inch reduction means a loss of 1½ million tons of cargo each season.

Who decides on diversions?

In 1890 the Congress made the Secretary of War responsible for authorizing any change in the course of navigable waters within the United States.

In 1899 the Secretary of War authorized the first diversion from Lake Michigan into the Chicago drainage canal.

In 1909, when the Boundary Waters Treaty was signed with Canada, the United States carefully excluded Lake Michigan from the boundary waters covered by the treaty, though it had to give Canada freedom of navigation on Lake Michigan in return for its freedom of navigation on the St. Lawrence.

Lake Michigan, however, being regarded as domestic waters, it was covered by article II of the treaty which reserves to both countries the right to divert all waters on its own side of the line which in their natural channels would flow across the boundary or into boundary waters.

Under this article, if Canadians feel injured by any such diversion they have the same legal remedies as any Americans who are injured: An appeal to the United States courts.

By the late 1920's so much water was being taken out of Lake Michigan for the Chicago drainage canal that other United States States bordering the lakes protested.

They took the case to the United States Supreme Court, which ordered that the diversion must be cut back to 1,500 cubic feet per second for the canal plus 1,700 cubic feet per second for domestic pumpage. This was the operative decision until December 1956.

In December 1956, Midwest States appealed to the Supreme Court for permission to increase the diversion for a temporary period of 1 month.

This was on the grounds of the severe drought condition in the States down the Mississippi. The Court permitted diversion of 8,500 cubic feet per second until the end of January.

In January 1957, the Supreme Court granted a further extension of this 8,500 cubic feet per second until the end of February.

Meanwhile the politicians have been trying to get the Congress to authorize a larger diversion than the Supreme Court had granted.

In two sessions the Congress has passed bills raising the diversion from 1,500 cubic feet per second to 2,500 cubic feet per second.

President Eisenhower has vetoed them both times, and the State Department has always opposed them as being objectionable to Canada.

ENGINEERING STUDY

In his last veto, in August 1956, the President called for a new engineering study by the United States Corps of Engineers, and noted that objections had been received from Canada and the legal advisers of the States of New York, Wisconsin, and Ohio.

He instructed the State Department to start discussions with Canada to work out a solution to these problems as soon as all the pertinent facts are available.

The engineers' report is expected to be in the State Department's hands within a very short time now; and immediately afterward the call to discussions is expected.

If, as Washington reports indicate, the United States is contemplating separate talks confined to the Chicago diversion, it's difficult to see what sense they could make for Canada.

The Canadian Government could only repeat that it does object, that it thinks further diversion would damage both United States and Canadian interests throughout the Great Lakes Basin, but that the United States must decide now as it always has in the past.

Confidential talks between the two Governments on boundary waters problems are scheduled already by the agreement of last summer. They were prompted by the urgency of the Columbia River problem.

But the principles involved in the interpretation, or possible modification, of the boundary waters treaty are the same in both cases.

It would be intelligible from Canada's point of view if the United States decided to throw the Chicago problem into the same general discussion. Only that might take several years, and the political pressures in the Midwest are urgent.

But short of a complete examination, embracing the Columbia and other rivers as well, Canada hasn't much to say about the Chicago case in isolation.

A Propaganda Weapon So Smartly Wielded That It Took America Into War

---

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. SIEMINSKI. Mr. Speaker, the other day in the New York Times, Arthur Krock cited one of the handicaps of the United States Information Agency.

He cited the belief of some that its news service is a poor and unnecessary supplement to those provided by the private professionals in the field.

Another factor was that pouring more millions of dollars into the payroll of the USIA would not dispel the propaganda advantages which total inhibition from truth and consistency and autocratic government give to the Soviet Union.

After the last war, a sign appeared on a wall in Europe. It said, "Yank, Go Home." A few days later someone added, "Via TWA." Perhaps we need more humor to parry unfriendly thrusts.

On one of the continents a foreigner holds an exclusive franchise as distributor of one of America's great corporations. In 20 years, he has grossed millions. To his countrymen, he is America's bitterest critic. But he sells our products.

There is a new word for the men's room in Peru. When miners come out of the mines, one can hear the question, "Donde istar el Chicago?"—Where is the Chicago?

If what Arthur Krock says is true, then perhaps we need more moxie with the boomerang and more ingenious ways of labeling our products and services.

In his book, The Right To Know, Kent Cooper, former chief of the Associated Press, shows how a foreign power favored us with a propaganda weapon so smartly wielded that it took America into war, the First World War.

In chapter 8 of this book, Mr. Cooper says:

Yet the infant American peacetime effort, reaching for results after the Second World War, harked back to the idea of buying the influence of the press in neutral countries in the discarded German-French type of rivalry of 30 years earlier.

He says further:

Though they knew how to stir up their angers by propaganda news for wars which they started themselves, Americans had never known the experience of having other nations use it on them to gain their participation and support in wars started by others far away across the ocean.

In Cuba's struggle for independence, in the sinking of the battleship *Maine*, in the story of Uncle Tom's Cabin, in the Mexican War, in the War of 1812, and in the American Revolution, Mr. Cooper concludes that—

The propaganda that pushed the American people in all of its own 19th century wars was generated here at home entirely by the people and their newspapers—not by their Government.

Incendiary use of the news did it.

In the two 20th century conflicts, the genesis of the idea of America going to war was in Europe, not in the United States, which meant that foreign propaganda had to cross the Atlantic to get us to fight.

In discussing one of the most important chapters in the history of news, the book on page 101 relates:

The story of how the European virus known as international news propaganda first reached these shores, and how before and after the beginning of the First World War it infected America with the urge to immerse itself in Old World quarrels—records an astonishing, effective international use of news on a grand scale for propaganda to attain a definite governmental goal—for the first time, our country armored itself to battle for its demands anywhere on earth, instead of placidly remaining an isolated North American provincial.

The Right To Know is so timely in the light of Mr. Krock's observations on USIA, Mr. Speaker, that I am taking the liberty of including here the thumbnail reviews that precede each of the 21 chapters:

I

UP FROM DARKNESS

When a primitive male grunted something like "Ug-glug-ung" at a female of the species, trying for the first time to say "I love you," he was giving her some news. And if he meant what he said, he was giving her honest news. When his grunts began disclosing to a group something he did or saw, he was spreading the news. But for ages there was no method of recording it in permanent form for really wide distribution. Then came dissemination of news through the printed

word in a product which we call the newspaper.

2

INTO THE LIGHT

An intensely human trait which we call curiosity carries with it the urge to know. Publication of news is responsive both to the curiosity and the urge. Permanent suppression of the right to minister to this human trait in countries where but one ideology like communism is taught is not possible. Dictator governments can prevent information about other ideologies from being given to the public for a while—sometimes for a long while. But what all such governments will learn soon sooner or later is that, the more they try to educate their people exclusively to accept the one ideology, the more curious the people become and the sooner they will strike down restraints that limit their knowledge.

3

THE CRUCIBLE FINALLY PRODUCED

Dictators who from fear never tolerate a free press have something to learn from America. For here, despite the way newspapers assail suppression, expose malfeasance and demand reform, and despite their unrepressed torrents of personal criticism and abuse of those in high office, the American Government has endured. Not only has it endured with complete press freedom, but the country has grown bigger and stronger. So, too, has its form of government.

4

AN AMERICAN MODEL

Just as resentment from pent-up emotions takes violent form when restraint against acquiring knowledge is first removed, so time and the innate moral character of those intelligent enough to have felt the restraint bring eventual sanity in the public's attitude.

5

WHILE CRITICS RAGED

Despite the adverse criticism of its performance, the press in this land will continue to thrive, if first, it is ardently cooperative as between its news and business departments in the creation of an acceptable newspaper; second, if it deals honorably with its readers by printing the news, suppressing nothing of importance whether or not such news counters the beliefs or prejudices of its owners; third, if having gained acceptance, it resists news suppression by government in peacetime and successfully incites the people to rebel against political censorship in wartime when the very life of the Nation may be at stake.

6

A STRANGER APPEARED

Two thousand years after the Roman Emperors gave up the effort to model their citizenry into a pattern through the Acta Diurna, a giagantic effort at state publication of news was established in Soviet Russia to do the same thing by vigorous dictatorial methods. Just before that, however, European states, including Czarist Russia, had sensed the necessity of giving the people only such information as would serve government interests, even if this involved altering facts and reporting untruths. This was the 20th century stranger that appeared in the news world. Its name became government propaganda.

7

STIRRED HIS CAULDRON

It is not a natural emotion that moves parents to cheer as their governments issue commands to take their sons by the hundreds of thousands to be mutilated or killed in war. First there must be an enemy to hate. Plainly stated, to goad them to hate that enemy has been the purpose of all domestic war propaganda news issued by any government to its own people. The fact that news was used for this purpose marked the recognition by government of man's educational advancement. It also marked the beginning of government by tact instead of by proclamation.

8

PRODUCED ARMED CONFLICT

Rivalries in propaganda methods among the nations in the First World War developed crude, original procedures not used by the more experienced in later years. Yet the infant American peacetime effort, reaching for results after the Second World War, harked back to the idea of buying the influence of the press in neutral countries in the discarded German-French type of rivalry of 30 years earlier.

9

AND BROUGHT AMERICA IN

No one would have believed that the chosen leader of this free people, elected because he had "kept us out of war," could so soon after his election so successfully propagandize the news as to ready them for a war so tragic that it changed the whole trend of history. But the Germans finally favored him with a propaganda weapon so smartly wielded that it took America into the war, to make the world safe for democracy.

10

TO MAKE IT A WORLD WAR

An element of what we call "news" is that it astonishes. The most effective propaganda, therefore, incites astonishment. When the public is suddenly astounded, its reaction can be instantaneous, as it was in 1917.

11

THEN THE NEWS CARTEL WAS USED

When men achieved literacy their governments had to devise methods to channel their thoughts and control their emotions so they would subserviently accept their rulers' plans—even for war. Of all the means adopted to attain this end governmental propaganda in the news proved the most effective nationally as well as internationally. And the instrument that made such propaganda news available through the world press in the first half of the century was the great international news cartel. A descriptive title of one of its functions, therefore, as America learned, could have been "Purveyor Extraordinary of Government Propaganda News."

12

JUST ONCE BUT NEVER AGAIN

The life of the great international news cartel as a highway for propaganda was extended by inaction at Versailles, where the malignance of its operations could have been destroyed by American governmental demand. Since it was not, private American initiative had to end it 15 years later, with no government knowledge that it had even been done.

13

PRESS FREEDOM REQUIRES

If two world clashes confirmed anything for certain it was that rulers, not their subjects, still incite wars. A truthful, unfettered press, free from government dictation, could frustrate the plans of war-mad rulers if it were inclined to do so. It could, because in any country where the press is free the newspapers are closer to the people than their government is. The press, therefore, is in a position through news exposure to put the brakes on any government bent on war, again provided it is free and wishes to do so. Extension of the fre press concept, therefore, is the first essential. The second is for the newspapers to fulfill the opportunity afforded them to expose the intent of government propaganda.

14

SUPPORT FROM ALL AND

Those interests which have most at stake in our capitalistic economy have this yet to learn: that the one great hope of ultimate world understanding in addition to free international trade must be based, not upon governmental efforts, but upon mutual international acquaintance at the level of the people themselves. This is attainable, if at all, through wide unhindered interchange of news completely independent of all governments and conducted solely to inform, with no other intention whatsoever.

15

AN END TO NEWS SUPPRESSION

Censorship which can include complete suppression of news is any government's own worst enemy. For the poison that is censorship is so strong when rigorously applied to suppress the news that it benumbs government into a false sense of security. Where the people are not informed there is nothing to arouse their patriotism, without which their government stands constantly upon the brink of disaster. The form the disaster takes could be rebellion from within or invasion from without, which a people lacking patriotism can no longer be driven to resist.

16

LIKE HISTORY'S MOST FLAGRANT EXAMPLE

The people themselves who in anguish furnished their sons to fight the war and who toiled to pay its costs could wait and wait until political administrators in Washington and a dictator in the Kremlin decided when the public should be told the awful thing was over. * * *

It may well be that the time has come, or will come, when government, with or without using military censorship as a cover for what it wants to conceal, may so far project autocratic control of government news as to render ridiculous the zealous acceptance by the press of the rules the government imposes respecting withholding news from publication. Both political and military authorities have done things other than this which militate against the efforts of the press honestly and promptly to discharge its mission of serving news to the public. Nothing has been done about them. With an Associated Press reporter a casualty in this instance, it well may be that by loss of public respect through tolerance of unwarranted autocratic suppression of news the entire press itself ultimately may be the casualty.—(Except from a statement on the Edward Kennedy case, written June 1945.)

17

AFTER WHICH CAME PEACE

Operations of American Government peacetime news propaganda having had no precedent in the entire history of our country, this story of how it came into being belongs in the annals of the troublous years that followed the Second World War.

18

AND A PROPAGANDA WAR

America always has been at its best when, in its youthful vigor, it has given the world a new idea. It never does well when it merely adopts Old World practices. Yet when Russia began propaganda broadcasts our Government, instead of relying upon original methods based on American ethical standards, followed the Russian lead. And away it went on what was for our country a strange adventure.

19

DON'T TELL IT—SELL IT

Outright suppression of current news or mention of it "off the record" by individuals in high positions in war and peace for later sale by them "on a now it can be told" basis became popular before, during and after the

Second World War. The practice obviously assailed the principle of the right to know. In addition to that, these personally narrated accounts, with omission of the adverse, often undertook to establish records of near perfection in the official actions of the authors. Not only was the public thus denied information when it occurred but unfortunately much of later history must be based upon such distorted presentations. Lack of critical interest on the part of the people in this development militates against their welfare while they live and future generations may wonder how they managed invariably to select as leaders men who never erred.

20

AND CONDEMN THE PRESS

The tendency toward throwing our futures into the lap of the Government as a means of relief from all our worries could end press freedom even if the press were performing with sublime inspiration and with such complete objectivity as to satisfy all its critics.

21

BUT REMEMBER THIS

There is ultimately more for this Nation to fear from lack of internal loyalty because of suppression of news than from external efforts by others to discredit it abroad. If the Government of the United States cannot maintain a wholesome partnership with the people of the United States by trusting them with full information to which they feel they are entitled, then the people will not trust their Government, and they should not.

Is it more moxie with the boomerang, and more ingenuity in getting ourselves more favorably talked about that we need? Or do we bring out greatness in others by treating them with greatness?

Power and Principle

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following article which appeared in the March 25, 1957, issue of Congress Weekly, the official publication of the American Jewish Congress:

POWER AND PRINCIPLE

Has moral paralysis begun to afflict the United Nations? Has this instrument of the international community designed to carry out such noble aims as peace, social progress, the protection of human rights, exhausted its energies? These questions must seriously trouble all who reposed great faith and hope in the U. N. and who continue to believe that a world organization is indispensable for the preservation of international peace and human rights.

It can hardly be denied by even the most enthusiastic supporters of the UN that there has been a fateful slipping away from the heights of 1945. One could easily adduce a catalog of evidence to show that over the years there has been a consistent decline in the will and capacity of the U. N. to realize its high-minded and generous goals. The virus that has infected it and continues to nibble away at its moral resources is the increasing tendency to substitute the expediences of power politics for support of moral principle.

Nothing illustrates this tendency more vividly than the apparent refusal of the organs of the U. N. to come to grips with the tragedy of Egyptian Jewry. In a recent report to the World Jewish Congress, Dr. Maurice L. Perlzweig, its representative at the U. N., observed:

"There were delegations who were prepared to raise the problem publicly, but strenuous efforts were made to dissuade them by influential personalities both within and outside of the Secretariat. We were told at all levels that we had better rely on private diplomacy. Above all we were told that the opening of the Suez Canal was a larger and more urgent international interest, and must be given first priority; for this the help of Nasser was indispensable, and he must not be irritated by public agitation on the Jews of Egypt. In short, it is the tragic truth to say, and the time has come to say it, that the international community has failed in its duty to the Jews of Egypt, and therefore violated the ideal of human rights to which it is committed by the Charter, because it is dominated by the politics of power."

The negative response in the U. N. to the horrors inflicted on the Egyptian Jewry is paralleled by other failures to act affirmatively in the area of human rights. Since 1945 there has been a steady weakening in all countries of the endeavor to back up the Universal Declaration of Human Rights with a convenant that would implement it. For the last 3 years a committee of the General Assembly has been considering the texts of proposed covenants and it still has been unable to complete its work. At a recent meeting the Greeks raised the question of the need for devising machinery to safeguard human rights during the years in which the U. N. slowly moves toward agreement on the covenant. But this wise suggestion only produced a resolution which requested the Commission on Human Rights to study the problem, and thereby removed it from consideration by the General Assembly for at least another year.

Despite such obvious flagging of efforts in the U. N. with regard to human rights, the situation is by no means hopeless. The challenges and opportunities still remain; and above all there remain the persistent aspirations of mankind for a world of security, moral order and human dignity. These aspirations are doomed if the international community continues to base a world organization on mere accommodations among power blocs. Sooner or later this must be recognized.

Henry J. Taylor

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Journal-American of Tuesday, April 16, 1957:

HENRY J. TAYLOR

President Eisenhower's appointment of Henry J. Taylor as Ambassador to Switzerland brings into our diplomatic service a man of extraordinary attainment.

In the newspaper business we know Mr. Taylor chiefly for his outstanding record as a foreign and war correspondent. He was not only a good reporter, he was—and is—a talented writer.

With these qualities it is not strange that Mr. Taylor became a lively radio commentator and the author of a number of provocative books. What is unusual in this day of specialization is that his interests and abilities led him to become a respected economist and successful businessman.

The President recently said Mr. Taylor was a man for whom he had held considerable admiration for a long time. We have, too. We hope the Senate speedily confirms the appointment.

United States Information Agency

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. HAYS of Ohio. Mr. Speaker, I was disturbed during the debate on the appropriation bill for State Department, USIA, Justice, and related agencies when it was alleged that the United States Information Agency had spent $100,000 to produce a film which was said to be a flop. It was also said in the debate that the title of the film was classified. As chairman of Subcommittee No. 7 of the Foreign Affairs Committee which is "State Department Organization and Foreign Operations" and which subcommittee is set up according to the statement of the Foreign Affairs Committee—"to deal with the loyalty and adequacy of all personnel and instruments of foreign policy under the control of the United States, and particularly the State Department and the Foreign Service, United States Information Agency, and liaison with Central Intelligence Agency and other United States agencies involved in foreign policies"—I considered it my duty to find out why the United States Information Agency was allegedly classifying the title of the movie. Following is a statement from the United States Information Agency which I think will set this matter straight and which I think is a sufficiently good explanation to satisfy any reasonable person.

If any Member cares to dispute the allegations and can offer any information to me that the statements herein contained are not factual and valid I will be glad to call a meeting of my subcommittee and ask the proper officials to appear and clarify any matters in dispute.

Mr. Speaker, under leave to include extraneous matter, I include the following statement by the USIA:

STATEMENT REGARDING FEATURE FILM PRODUCED WITH UNITED STATES INFORMATION AGENCY SUPPORT

The United States Information Agency has expended slightly more than $100,000 in connection with the production by a commercial concern of a hardhitting, anti-Communist motion picture. This motion picture was produced overseas and is now being shown on a worldwide basis by a major American film distributing organization. The amount spent by USIA was less than 20 percent of the total budgeted

production cost of the film, the balance of about $500,000 being contributed or arranged for by the producer. Under the contract with the producer, the Government, in return for its share of the financing, received complete control of the script, and agreement by the producer to give the film extensive foreign showings. The producer, who had made available approximately 80 percent of the financing, naturally insisted on domestic as well as foreign showings in order to recover his investment. The film is presently being shown overseas in a number of different language versions and will unquestionably be seen by millions of foreign viewers all over the world. Since it is a film with a compelling anti-Communist theme, it certainly will have a most useful impact on persons in other countries and advance the foreign policy objectives of the United States Government. So far as the box office question is concerned, the picture will probably show a modest profit when all the returns are in.

The United States Information Agency asked the House Appropriations Subcommittee not to identify the film on the printed record of the hearings, since the probable result would be to seriously impair the effectiveness of the film abroad. The Communists study the record of these hearings, as proven by past experience, and would undoubtedly publicize the connection of the agency with the film in question, thus impairing its usefulness with foreign audiences.

The report of the House Appropriations Committee made in connection with the United States Information Agency's budget request for fiscal year 1956 (No. 417, 84th Cong., 1st sess., dated April 13, 1955) stated that greater emphasis should be placed on getting out "unattributed materials rather than those which bear the USIA label." Manifestly, it is not possible for the agency to carry out unattributed information activities like this film if the Agency is compelled to identify the film and disclose the Agency's connection with it.

The Patriotic Spirit of Naugatuck's Crusader Post, No. 1946, VFW

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, I wish to pay tribute to Crusader Post, No. 1946, of the Veterans of Foreign Wars of Naugatuck, Conn., for its organization of a Sea Scout Ship. This post, under the leadership of Chief James J. Owens, is organizing Naugatuck Valley youth between the ages of 14 and 18 into a group of Sea Scouts who will receive training in navigation, instruction in small arms, and Marlinspike seamanship. These young men will also visit naval installations, yacht clubs, and take cruises on naval vessels in addition to other activities Moreover, under the guidance of Chief Owens and other outstanding Naugatuck citizens, these future leaders of our Nation will be better prepared to assume leadership and responsibility in the future

Mr. Speaker, the Crusader Post plan will play a prominent role in developing better citizens, and I wish that veterans' organizations of other communities in the Nation would use the Crusader Post plan as a model. Those of us who serve on the House Armed Services Committee know that Boy Scout training during an individual's youth days enables the individual to become a better military man in later years.

Mr. Speaker, I commend the Naugatuck Crusader Post for its patriotic spirit in organizing this Sea Scout post. The post has taken the lead in a new crusade to mold better citizens, and at the same time prepare young men to become better members of the Armed Forces in the future.

Practical Politics

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mrs. KELLY of New York. Mr. Speaker, the Honorable James V. Mangano is clerk of the Supreme Court of the State of New York. He is one of my constituents and also one of my colleagues on the Democratic executive committee.

Mr. Mangano's lecture at St. John's University on practical politics is an excellent discussion on our two-party system:

At the outset, I want to express my thanks to Mr. Frank Panizzo who invited me in behalf of the political discussion seminar, St. John's University, and I wish also to thank the members of this group for affording me the opportunity to address you this afternoon.

The topic I have chosen, I think, is a very fascinating one: Practical Politics.

I will endeavor, within my limited time, to condense the highlights of politics, primaries, elections, and party organizations. I trust that I will leave you with a clearer and more enlightened view of party politics. Too often we hear it condemned and criticized. Those who are engaged in doing so, very often do not realize that they are tearing down the very pillars of our Government Our Nation has prospered and become the greatest democracy in the world in the some 180 years of our existence because we have a two-party system and we must strive to continue that system not only for our own sake, but for the sake of all liberty loving people throughout the world.

In selecting candidates for public office, party positions and establishing party platforms and programs, we must ask ourselves the plain basic question. Who and what is right and who and what is wrong? What will make things right or wrong? Who will decide that I must live, work, dress, eat and play within the framework of certain standards that are right and anything else is wrong? One of the best explanations I have heard regarding this is as follows:

"That which does the most good for the greatest number of people for the longest period of time is moral and right." Actually, no one person or group of persons made standards of right or wrong. These standards have been accumulated over many years of trials and failures the best of which survived and became standards of right. We owe a great debt to the rebels who dared to try to change our standards, for it is through them that things changed a little, one way or another. However, the real basic standards of right and wrong have changed little in centuries. There is no denying the proof and force of the Ten Commandments or the Sermon on the Mount. By living accordingly, and the standards set therein is the ultimate of right, and the wrong, nil.

In this great country of ours, we have a two-party system of Government. The Republican Party and the Democratic Party. Upon these parties are based the glory which has made America great and the inspiration of man to accomplish his goal for the general welfare and interest of the people of our country and the people of the world. Basically, both parties are interested in making this country a better place in which to live and for its citizens to enjoy the blessings of life, liberty, and the pursuit of happiness endowed to us by the Almighty God and for which our Founding Fathers fought so valiantly.

The philosophies of these parties were originally expressed by Jefferson and Hamilton. Of course, as years went by, changes took place and we have accepted many advancements in our social way of life. But from time to time, in the formation of these party programs, are included the old basic philosophies upon which these parties were founded; namely, conservative and liberal.

These principles are not just carried out in a haphazard manner. The best vehicle conceived to carry out these ideals is our American system of party politics. We will have to commence with the organization of a party on a national scale.

Party politics are comprised as follows:

The Republican National Committee whose headquarters ar esituated in Washington, D. C. Its chairman is the Honorable H. M. Alcorn, of Connecticut. It has, of course, other officers and an executive committee.

The Democratic National Committee is also in Washington. Its chairman is the Honorable Paul M. Butler, of South Bend, Ind.

The selection of a chairman of the national committee doesn't just happen by coincidence. He is elected by the members of the national committee from each State in the Union.

The national committeemen from each State of the Union are elected by Delegates to the National Convention, in caucus.

The Democratic State committee offices are located in Albany and at the Hotel Biltmore in New York City. The chairman of this committee, is the Honorable Michael Prendergast of Rockland County, N. Y. The selection of a chairman is made possible by a majority of the vote of the members of the State committee who are elected from each Assembly District in the State of New York, by the enrolled voters of the Democratic Party within those areas at a primary election.

The Republican State committee is located in Albany, and its chairman, the Honorable Judson Morehouse, is also selected in a similar manner as mentioned above.

Sometimes the rules of the organization vary slightly.

In this connection, I would like to inform you that the members of the State committee, male and female, are also members of the Kings County Democratic executive committee, and also are known as leaders and coleaders.

In order to clarify this particular phase of organization, I would like to bring to your attention that every 2 years members of the county committee are selected in each assembly district at a primary election. Thereafter, a meeting is held for the purpose of organizing the entire Kings County committee, which is the backbone and mother organization of the party in the county. At this meeting the Kings County Democratic committee elects officers and designates various committees for the administration of the affairs of the organization in the county.

Among the committees formed is the Kings County Democratic executive committee, which is the one of the most important and powerful committees and which is comprised of the duly elected State committeemen from each assembly district which is authorized by the Kings County committee to exercise all its powers, rights, and prerogatives.

The chairman of the executive committee is also known as the county leader. The incumbent is the Honorable Joseph T. Sharkey. He is selected by a majority vote of the Democratic executive committee, with headquarters at 400 Fulton Street, Brooklyn.

The Honorable John R. Crews is the incumbent chairman of the Republican county committee with offices at 16 Court Street, Brooklyn.

May I also, at this time, bring to your attention that the Liberal Party is also a recognized party in this State. It has party rules, headquarters, and a chairman and officers.

In the assembly district, the recognized leader of that district, is the duly-elected State committeeman. He is the titular head of the assembly district organization which is composed of the duly-elected county committeemen elected within their election district and who are also recognized as captains and cocaptains. They usually range from not less than 2 nor more than 4, divided equally between the sexes, in each election district, depending upon the number of enrolled voters of their respective party. In addition are the enrolled voters of the party who reside in the assembly district.

The members of the county committee or captains of the election district act as the liaison between the constituency and the political organizations. Their obligations and duties are numerous.

For the purpose of clarifying the political formation and existence of boundary lines, I would like to inform you that an assembly district in Kings County is composed of between 45 to approximately 100 election districts, ranging in voting population between 80,000 to 144,000 citizen population.

The congressional districts are made up of approximately the same area as the senatorial districts, although the boundary lines are not coterminus as they were more than 10 years ago. The formation of these lines usually are based upon citizen population within an area according to the population taken by the last Federal census. During this formation of district lines for legislative purposes, gerrymandering sometimes takes place. A classic example of this exists in this area which is in the 12th Congressional District. It starts at around the Queens water and borderline and ends up at the East River and forms a snake right through the heart of Brooklyn.

I know that you will be interested this afternoon to learn briefly how nominations come about.

On an assembly district basis, a candidate for member of the assembly is designated for nomination by his respective political party, by obtaining a petition supported by the leader and sponsored by the State committeeman and the county committeemen from the assembly district. This designation, under our State laws, may be contested by anyone who files a petition with the board of elections according to the provisions of the election law, and that contest usually takes place on what is known as primary day which, this year, will be September 10, in this State.

The same procedure and rule applies to senatorial nominations and congressional nominations, the only difference being that they must be designated by their respective political subdivisions on a wider basis.

Similar rules apply to municipal court judges, city court judges, county court judges, surrogates, borough presidents, district attorneys, and councilmen.

Supreme court justices in this State are nominated in a different manner, namely, at a judicial convention attended by judicial delegates. A majority vote of delegates nominates the candidate. The judicial delegates are duly elected at a primary election by the enrolled voters of their respective parties within the judicial district. The convention is called by the State committee of the respective party.

The mayor, comptroller, and president of the city council are also nominated by petition on a citywide basis.

The governor, lieutenant governor, comptroller, attorney general, United States Senator, and court of appeals judges are nominated at a convention by delegates duly elected within their respective districts throughout the entire 62 counties of New York State.

There is one very important factor which is not generally known by the people and which, in my opinion, is fundamental and is the cardinal purpose of our Government and, that is, the establishment of a party platform upon which a successful administration must, to a great degree, stand or fall.

The carrying out of this program is recognized as party responsibility and, to a great measure, establishes the standards of right and wrong for the administration of the affairs of our people, for the purpose of deriving the most good, for the greatest number of people, for the longest period of time. Of course, each party proclaims its platform to be the right one and for this reason, representatives and duly elected delegates from all sections and from cross-sections of the population meet in conferences, committee meetings and conventions for the purpose of establishing a party platform and for the presentation of an orderly program of carrying out those policies which, in their opinion, will best administer the affairs of the National Government and for local government, if that be the case. In other words, the responsibilities are not on the shoulders of one person—a President, a governor, a mayor, or a local assemblyman or councilman—but on all the people through their elected delegates and party leaders.

While politics has given us Americans such as Washington, Jefferson, Lincoln, Wilson, and both Roosevelts, and it has given us governors like Al Smith, Lehman, Tom Dewey, and Harriman, and judges like Cardoza, Pound, Lehman, and Loughran, we must keep in mind that these men, like local public officials, were elected by the people.

Government, therefore, is your business. You have a direct and personal interest toward its betterment which you can neither delegate nor dodge. Either you run it, or it will run you. Government will be as good or as bad as you make it. Under our form of government and political system, it is the people who govern themselves by designating, nominating, and electing those people who they believe are able to carry out the policies and programs for the ultimate good of all.

Thank God if an elected official abuses his public office, which is a public trust, it is within the province of the people to terminate his stewardship, trusteeship, or term of office.

May I also leave this further impression with you? Our Government, its political system, and the many millions of honest and conscientious people who make up these two great American institutions, the Democratic Party and the Republican Party, should not be condemned and abused by irresponsible criticism.

While I am strictly a Democrat, I have endeavored, during my discourse, to be as objective and informative as possible. I have espoused no particular political principle or philosophy. You are to make your own decision. Take whatever stand you consider best. Study, as closely as possible, the philosophies of the parties. Join and support a local political party. In short, it is between you and God.

More Scholars Express Views on Two-Term Limitation

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. UDALL. Mr. Speaker, replies continue to pour in from historians and political scientists whose opinions I solicited on the merits of the 22d amendment. Nearly all of the scholars whom I contacted have seen fit to respond—which is, I think, firm testimony of the public spirit of our college professors.

In extending my remarks today, I am including three replies. The first is from Dr. Cortez A. M. Ewing, research professor, government, at Oklahoma; the second was submitted by Dr. Arthur N. Holcombe, professor of government, emeritus, of Harvard University; and the last is a memorandum prepared by Prof. Samuel P. Huntington, Jr., also of Harvard, and sent in by Samuel H. Beer, chairman of the department of government at that institution.

These replies follow:

OBSERVATIONS ON THE 22D AMENDMENT

(By Dr. Cortez A. M. Ewing)

The resolutions calling for the repeal of the 22d amendment point up the difficulty of formulatiig foolproof constitutions. The addition of the amendment was no more than a reflection of the indigenous fear that some future President would seize power by force or control of the electoral machinery and, thus, render ludicrous the constitutional provisions relating to the election of the Chief Executive. That this fear was present in the American public is shown by the ratification of the amendment by States in which the Democrats possessed a majority of the State legislative seats, despite the fact that the four consecutive elections of Democratic Franklin D. Roosevelt furnished the occasion for constitutional limitation of presidential tenure.

Against this traditional American fear of tyranny stands the equally desirable principle that a President ought to be the vital leader of the American people throughout his term as Chief Executive. After a President's second election, everyone knows that he cannot be elected for a third term and the inevitable jockeying among the presidential aspirants occurs. Real leadership passes from the President. Politically he becomes an elder statesman while still occupying the presidential office. This situation unquestionably handicaps the administration in its plain responsibility to secure the adoption of an administration legislative program. And postponement of reform measures may well have serious effects upon the public welfare.

The prime desideratum is to achieve optimum leadership throughout the term for which a President is elected. In States where they are constitutionally barred from succeeding themselves, governors are progressively less important in executive direction as the end of their terms approach. One of such important officers remarked that

"during the last 6 monthe of office, the governor has so few visitors that it is almost necessary to send out engraved invitations to keep from being lonely." Constitutional provisions cannot guarantee strong executive leadership; but they can seriously restrict it. Before the adoption of the 22d amendment, Presidents could, by postponing announcement of their personal intentions or their preferences in successors, retain their influence until the last year of their terms. With the implementation of the 20th amendment and the later scheduling of the national conventions, it would be possible to reduce that period to about 6 months.

It must be admitted that incumbents might succumb to the blandishments of their placemen and announce for third terms, but natural law and public opinion would serve to reduce them to a minimum. In American politics it is becoming difficult, if not impossible, for men to establish themselves as of presidential caliber until they have reached the middle-age bracket. After 8 years of onerous duties in the Presidency most men will be looking forward to the enjoyments of retirement, to be liberated, as Jefferson remarked, "from the hated occupations of politics and to remain in the bosom of my family, my farm, and my books."

As a political theorist I was personally opposed to the ratification of the 22d amendment, for three specific reasons:

1. I thought then, and am still of the same opinion, that formal constitutional prohibitions are not generally as reliable as the best judgment of the American people.

2. Formal constitutional prohibition makes no provision for specific crises in national politics—crises like a war for national survival, in which the disqualification of a strong President may have tragic results for the whole country. On this point, the British constitution is superior to our own. Under it, a strong leader like Churchill can be utilized throughout the critical period.

3. And finally the mere existence of a constitutional disbarment is an invitation to an unprincipled President or political party to use force in retaining control of the Government—always in the interests of the general welfare.

At least the forms of democracy are retained when a President is elected for a third term, which is of vital importance to the future of the Nation. The Republic existed for 152 years before the third-term tradition was broken—and the innovation was accomplished through the positive approval of the American public. I doubt that either the vigor or the spirit of American democracy was impaired by the elections of 1940 and 1944. Much more permanent injury could come from the constitutional weakening of the presidential office.

I am convinced that the 22d amendment's adoption, from the long-range view, was ill-advised and that the inevitable results of its operation are contrary to the proper development of executive management of the Government of the United States.

HARVARD UNIVERSITY,
Cambridge, Mass., March 30, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN UDALL: I have your letter of the 13th instant, and am happy to reply to your inquiry.

You wish to know whether I favor the repeal of the 22d amendment, and will state my reasons for my opinion in a form suitable for publication in the CONGRESSIONAL RECORD.

I was opposed to the adoption of the 22d amendment, because at the time of its adoption it seemed to me impossible to get fair consideration of the basic principles involved on account of paramount interest in protecting or attacking the record of President Franklin D. Roosevelt. At the present time the memory of President Roosevelt would not interfere so much with a consideration of your proposal on its merits, though doubtless some politicians would look forward to the possibility that the first person to be affected by the repeal of the 22d amendment (if it could be repealed) might be RICHARD NIXON.

I fear that it is impossible to arouse enough interest in your proposal to get action upon it without arousing an amount of interest that would throw the question into politics. It is difficult at best to persuade many Americans to take an interest in a speculative question involving the form of government. I do not know why it is, but the bulk of the people have an aversion to the study of the science of government. In order to be persuaded to act, they must first feel the necessity for action; and such a feeling seems to be contingent upon a personal problem such as many felt in the case of FDR's third and fourth candidacies.

If a general convention should be called to revise the Constitution (which God forbid), this would be an appropriate subject for consideration. Standing by itself alone, I think it is better not to make an issue of it. There are more promising and more urgent subjects for consideration by thoughtful Congressmen with a taste for constitutional reform.

This seems to be a reply not well suited for the use mentioned by you in your letter. Perhaps it would be better to regard it as a personal and confidential communication.

Sincerely yours,

ARTHUR N. HOLCOMBE,
Professor Government, Emeritus.

MEMORANDUM ON THE 22D AMENDMENT PREPARED BY PROF. SAMUEL P. HUNTINGTON, JR.

Although, as Congressman UDALL notes, the prospects of repeal are rather dim, it very definitely seems to me that repeal is desirable for the following reasons:

1. The 22d amendment tends to enhance the gap between executive and legislature in terms of continuity and change. In general, the legislature represents the principle of continuity, the executive the principle of change. This gives the executive considerable power when the President first comes to office—a fresh mandate—but it also weakens the President and his executive officials in that they are generally amateurs in the National Government as compared with congressional leaders. The 22d amendment not only fixes a rigid principle of change on the Executive Office, but also means that every 8 years there will be a general clearing out of subordinate executive officials. In this respect, the amendment is a neo-Jacksonian variation on the theme of rotation in office and "where annual elections cease, there tyranny begins."

2. While obviously there is no data to judge how the amendment will affect the Presidency, there is a vast quantity of comparable data on the effect of similar restrictions on the States. As you know, a number of State governors are restricted to one term. While I haven't made any study of the effect of these on State government, my general impression would be that States without this restriction get along better than States with the restriction. Compare, for instance, New York and Pennsylvania: Al Smith in the 1920's, Lehman in the 1930's, and Dewey in the 1940's. Each stayed in office three terms and each was able to give the State consistent and vigorous executive leadership. Each was also able to carry through a program of reform and development which he would not have been able to do if he had been restricted to one term. A comparative study would, I am sure, make abundantly clear the generally deleterious effects of these restrictions on State governments. In addition, no other constitutional democracy, to my knowledge, imposes any formal constitutional restrictions on the length of time which its chief executive can hold office.

3. If there is danger in prolonged tenure in office, this certainly applies just as much to the legislative branch as to the executive branch. The general failure to impose any restrictions on the tenure of legislative officials in American history reflects the late 18th century and Whig view that the legislature represented the people and the Executive was undemocratic. Since the Jacksonian revolution in American politics, this is manifestly not the case, both branches are in their own ways equally democratic, and there is no logic to imposing a restriction on tenure on one branch without imposing it on the other.

4. Although advanced on grounds of protecting democratic government against possible tyranny, the amendment actually denies to the people the fundamental right to choose their governors. As you know, the President generally represents a constellation of political forces (and, indeed, frequently embodies them), and so long as that political configuration remains dominant it seems to me that the electorate should be able to keep the President in office. It is possible that inability to do this might have very divisive effects (the inability of Ike to run for reelection certainly will have this effect on the Republican Party, and, conceivably—we should recognize—on the country as a whole.

5. The increased importance of the President in international affairs and his role as a world leader make it much more desirable for him to have the option of remaining in office. It takes time to educate Presidents and their subordinates to the requirements and responsibilities of the conduct of foreign affairs, and there is a serious question as to what extent the country can afford a constant turnover of leadership. Here, it seems to me, that some of Lippmann's warnings (which, generally, I think, are exaggerated) may well be applicable.

6. While inability to run again will probably weaken the President's power, it may also enhance tendencies toward arbitrary action. I think history shows that most Presidents in their second term have seriously considered running again, and the possibility of so doing has tended to make them more responsible and considered in their actions. If a President knows definitely that he is finished politically and, also, if he feels his power beginning to weaken, he may be led to take actions which he would not take if the possibility existed of his again facing the electorate. In other words, the amendment may tend to decrease not only the power of the President but also his responsibility.

USIA—IV

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington News of April 17, 1957:

USIA—IV

Do you wonder sometimes where your Federal income tax money goes?

We cite you to the case of an official of the United States Information Agency.

On September 22, 1952, he was appointed public affairs officer and attaché to our embassy at Saigon, in Vietnam. His salary was $9,710 per year.

For 26 months, from his appointment to December 4, 1954, according to House Appropriations Committee hearings on the USIA budget, he got a salary of $21,876.

But because Saigon is considered a hardship post, he also got a hardship post differential of $5,017.

His post allowance was $2,944.

He got a transfer allowance of $150, and a temporary lodging allowance of $8.

That totals $29,996, but that wasn't all.

He and his family were transported from here to Saigon. Cost, $4,604.

Then he had a home leave transfer to agency, meaning, we judge, the United States Information Agency. This cost another $4,789.

The grand total spent out of the Treasury over this 26-month period for this $9,710-a-year employee was $39,390.

This helps explain, to us, at least, why the House yesterday followed the lead of its Appropriations Committee and voted to cut the USIA budget for next year by $35 million, from $140 million requested to $105 million.

Now, the USIA budget battle goes to the Senate.

And we hope that there, such examples as the one above will convince the Senate, too, that USIA wants more than it should get.

Korea: Land of the Forgotten Kid

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. HEBÉRT. Mr. Speaker, I wonder just how many of us ever give a passing thought to what our youngsters on duty in Korea are really thinking about.

Not many of us, I am certain.

I just received a letter from a very old and dear friend of mine, who shall be nameless for obvious reasons.

My old friend wrote this:

DEAR EDDIE: I am taking the liberty of sending you herewith a copy of a letter which our son, Peter, sent to his sister Dierdre. He did not have any idea that Mary or I would see it. Mary suggested I might send it onto Washington because she thinks that the Armed Forces in Korea are the forgotten lads compared to those in the European theater.

GIBBONS.

This letter is a remarkable document and after reading it I could not resist the temptation to pass it along so others might also read it. There is plenty of food for thought in it and I just wonder how many other youngsters would not like to have written the same thing if they possessed the same talent as this youngster for articulate expression.

Maybe your neighbor has a kid like this one or maybe you have one in your own house.

Here is the letter:

DEAR DE: At the moment I feel like a little boy lost in a foreign place, not knowing where to go, and even if I did, why in hell should I go there in the first place. This place is filled with Americans, interesting people at home, yet here, with the one thought of home on everyone's mind. No one person seems to have a spark of life. Eventually one starts feeling he is serving a prison term for 16 months, placed in a small compound, limited by his own dislike for the outside which is quite revolting. The distractions afforded become monotonous; a show is not exactly different from any seen before (same type persons, same stories); the library is adequate but even the knowledge to be gained is useless both here and the future is still the future, the food is food, not eggs benedict, or crayfish, not seasoned, etc.; the work a monotonous Army routine. A conversation runs like this:

"Hiya," "Hiya," "Rough day?" "Yep, how about you?" "Colonel got on my ————." "Hell, you're short time (less than 100 days), don't sweat it." "Naw, they won't send me to division." "What are you going to do?" "Go to the club." "Flick tonight?" "Yes; its purty good." "What is it?" "Don't know, think I've seen it a couple of times." "Well, see you down there." "Yea. By the way, you're getting to 'short' aren't you." "Naw, still got 23 days to go." "No sweat." By the time you've heard this conversation from officers and GI's countless times a day, you begin to wonder if there is anything in the outside world; a place where a trip to a downtown bar or theater would be an entirely new experience, or a French Quarter where people think of more than the one subject, "Are you short time?"

Actually, I don't see how these people stay in the Army, doing the same thing day by day, year by year; to me, a job of emptying the ocean into a hole by means of a thimble. Not only that, but in the Army you have to have someone else to plug up the hole in the bottom of the thimble with his finger; an NCO to make sure you do the job, and an officer to check the hole procedure.

But I hope you at home can feel better protected knowing I am here to count the number of times someone else pours out a thimble of water.

Cannot say that I am in the best of moods tonight and shall continue down the road of periodic depression in the future, but, I hope you shall continue to uplift a lad's spirits by your letters to

Your brother,

PETER.

Reserve Forces Act of 1955

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, since the enactment of the Reserve Forces Act of 1955 I have made it a policy to make periodic reports to the Congress on the implementation of that law and the Reserve forces generally.

I know the Members are aware of the recent controversy between the Army National Guard and the Department of the Army which came about because of an Army directive requiring Army National Guard recruits to participate in the 6-month basic training program. The differences between the Guard and the Army were resolved after lengthy hearings before the subcommittee of which I am chairman. We were able to obtain the unqualified approval of the Army and the National Guard to a memorandum of understanding which alleviated their differences.

The required 6 months training program for all guard recruits will have the effect of providing the Army National Guard with persons already trained in the basic arts of war and ready to enter upon the advanced and unit training phases in the Army National Guard. This is necessary because the technique and pace of modern warfare, in this age of possible sudden disaster, requires well-equipped Reserve forces in being, capable of immediate mobilization and almost concurrent entry into battle stations. I have no hesitancy in predicting that with all National Guard recruits receiving 6 months of basic training after their enlistment the level of training of the Army National Guard will rise, and more than ever before the Guard will justify the position which the Congress has given it, the first line of defense for our country.

The Army National Guard has done an outstanding job of attracting and retaining in its ranks on a voluntary basis over 400,000 young men who have consistently demonstrated an intense interest and desire to serve their country. One of the provisions of the memorandum of understanding, agreed to by both the Army and the guard, was that the strength of the Army National Guard should not be permitted to fall below 400,000.

It must be definitely understood, however, that what the committee and the parties to the agreement had in mind, in establishing this figure, was that the strength of 400,000 for the Army National Guard was to be considered a floor and not, in any respect, a ceiling.

The increased international responsibilities thrust upon this country dictating increased worldwide commitments for our active Armed Forces require that our Reserve forces be maintained in a constant state of readiness and that there be no reduction in their strength and training. However, it has been brought to my attention that the Department of the Army has projected a 1958 fiscal year end strength for the Army National Guard of 400,000. Now, at the present time, the Army National Guard has already obtained a strength of approximately 430,000, and it can be reasonably anticipated that this strength will gradually increase as more and more emphasis is put on the acquisition of trained men for the guard ranks.

Last year the Congress appropriated for a 1957 fiscal year end strength of 425,000 and, it is my understanding, that the Appropriations Committee repeatedly stated that it desired no cessation in National Guard recruiting.

In view of this, it is my earnest hope that the Congress will place no limitations on the National Guard for fiscal year 1958 which would serve to restrict recruiting activity at a time when it is now on a steady ascent. I realize, of course, that, for budget purposes, we must have an appropriations limitation on the overall strength of the Army National Guard. But I believe this strength figure should be set sufficiently high so as to not impair National Guard recruiting in the next fiscal year.

The budget now under consideration provides for only 25,000 6-month trainees for the Army National Guard, whereas a more realistic figure would be approximately 50,000. Any restriction on National Guard recruiting at this time, to my mind, would be a grave mistake and cause untold injury to the projected plans and programs for increasing the efficiency and combat capability of our Reserve forces.

The guard has constantly demonstrated its ability to meet the requirements imposed upon it by Congress. It has furnished trained units and individuals in times of catastrophe and need, and is deserving of strong and continued support in its efforts to increase its combat potential and capability for our common defense.

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following address by Melvin Sims, member of the Adams Electrical Cooperative, delivered at the congressional dinner sponsored by the Association of Illinois Electric Cooperatives in Washington, D. C., on April 8, 1957:

NEED FOR ADEQUATE AND DEPENDABLE ELECTRIC SERVICE

Speaking as a member of an electric cooperative, I am going to talk with you about my farming operation, and how much my family and I depend upon adequate and dependable electric service from our cooperative.

Our farming operation is quite typical, possibly somewhat larger, but typical of many livestock farms in our area. We have a hog enterprise, feed some cattle, produce grade A milk and raise corn, wheat, and soybeans. I live on the farm which was cultivated by my great grandfather and I am proud to have a son who now says he too wants to be a farmer. Our family loves the life on the farm, but deprive us of electricity and I suspect that our agricultural heritage might soon terminate.

Now lets look at some of our electrical needs and think together of the consequence of inadequate power or a complete failure in each situation. Each of you are aware of the growing importance of water—it is fast becoming one of the major limiting factors of agricultural production. We now have 3 electric deep well pressure water systems and plan to install 2 more in the next 2 years. My ultimate goal is to have water under pressure in every field. We have 4 electrically heated automatic drinking fountains. Try to imagine a cold winter day with no electricity—no water in the home and what little water available for the livestock would be frozen and the drinks and plumbing in need of repair.

Grade A dairying would certainly be an unpleasant and inefficient task without electricity. It powers the milking machine, cools the milk, warms the milk house in the winter and cools it in the summer, heats the water and lights our buildings so that we can produce a clean efficient and wholesome food for our neighbors.

Pig brooders have saved an additional pig per sow and in some instances the entire litter. Without our brooders on a cold and stormy day, the new-born pigs become chilled, their mothers restless and the liveability low. Pigs saved per liter is one of the important measures of efficiency in swine production—when this figure drops too low it results in another farm-business failure and ultimately a higher cost of pork across the counter.

We do not have a poultry enterprise but the poultryman, too, relies heavily upon his electric supply. The automatic waterers and feeders are an efficiency measure but the chick brooding a necessity. A power failure at chick brooding, as in pig-brooding time, can be a catastrophe. In industry, a power failure means production losses but in agriculture, production losses are sometimes accompanied by serious deterioration.

Our cattle-feeding enterprise requires lots of feed mixing and grinding. Here again we have turned to electricity to save labor and eliminate an unpleasant task. The automatic equipment removes the ingredients from their respective bins, accurately meters specified amounts into the grinder, mixes and grinds the feeds and delivers a predetermined amount into a feeder or bin with only the required time and effort of setting a timer and pushing a button. The vertical auger elevates feed and grain into seven different bins. This electrical equipment saves approximately 6 man-hours per week.

As farming becomes more and more mechanized, the farm shop becomes increasingly important. The electric welder saves in repair bills and in loss of time. With 150 tires to maintain, the air compressor is a necessity. The electric drill, the bench grinder and the power saw are other tools which add to the efficiency of our farm.

The investment requirement of agriculture is at an alltime high—the average in our county being approximately $60,000 with some going in excess of $200,000, but I believe that there is every reason to assume that additional investments will continue to be added.

Many of these additions will be electrical if we are assured of continuance and adequate electric power. Agriculture, like industry, will advance with the supply of power.

Of course, the greatest efficiencies from the use of electricity on the farm come from its use in production, but we must not overlook the comfort and morale of the farm family. We use electricity to heat and cool our home and cook our meals, light our rooms, and warm our beds, wash and iron our clothes, freeze our food, mix our cakes, and sharpen our knives, keep the time, and receive the news, shave the husband, and mend his clothes, and probably most important of all, power the electric train.

The children would probably be in a less jovial mood if it were really necessary to wear their coats in the house, satisfy their hunger by roasting their weiners over a candle, and miss just one episode of the Lone Ranger. Seriously, if we are to keep young efficient, top level families on the farm, electrical conveniences must be guaranteed.

The farmer lives to a large extent by faith, and is generally closely associated with his church. He has faith that the seeds he plants will grow, that adequate moisture and nutrients will nourish the crops and that winds and hail and storms will not destroy that which he tills. In like manner, we are developing more and more faith in our cooperative, that they might always provide us with the electric power we are dependent upon.

Stare Decisis

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD the editorial "Stare Decisis" which appeared in the Birmingham News on April 7, 1957. As pointed out in this editorial, the Supreme Court decision is recognized as a departure from accepted legal precedents and is a venture into sociological fields. This confirms the belief in the minds of many eminent jurists throughout the country that there was no attempt on the part of the court to follow established legal precedents. Unfortunately this tendency is found not only in the May 17, 1954, decision but is also found in many other decisions of the court and is causing a great deal of concern throughout the country. An excellent explanation of the doctrine "Stare Decisis" is contained in the Birmingham News and is as follows:

"STARE DECISIS," OR: WHEN SHOULD COURT REVERSE EARLIER RULINGS?

A small group of distinguished legal experts, who must remain unidentified, has put together some legal history and comment which has a bearing on a basic issue—when should courts change the decisions of previous courts.

The doctrine is that of stare decisis, standing by previous rulings. This long has been a matter of interest to judges. Consistency of courts is important. When there is much inconsistency, operations of lower courts can be thrown into confusion. Mr. Justice Roberts wrote, in a dissenting opinion in *Mahnich* v. *Southern Steamship Co.*, 1944, that "if litigants and lower Federal courts are not to [follow precedents reasonably closely] the law becomes not a chart to govern conduct but a game of chance; instead of setting rights and liabilities it unsettles them."

Mr. Justice Roberts went on to say that, "the more deplorable consequence will inevitably be that the administration of justice will fall into disrepute. Respect for tribunals must fall when the bar and the public come to understand that nothing that has been said in prior and adjudication has force in a current controversy." And: "The tendency to disregard precedents in the decision of cases * * * has become so strong in this court of late as, in my view, to shake confidence in the consistency of decision and leave the courts below on an uncharted sea of doubt and difficulty without any confidence that what was said yesterday will hold good tomorrow * * *."

Mr. Justice Roberts jabbed in still another case, *Smith* v. *Allright*, 1944: "It is regrettable that in an era marked by doubt and confusion, an era whose greatest need is steadfastness of thought and purpose, this court * * * should now itself become the breeder of fresh doubt and confusion * * *"

This particular summary had basic reference to the case of *Radovich* v. *National Football League and Others*, which put pro football under antitrust regulations, though baseball had been ruled not under them, the reason for this being very obscure.

Still, there is a substantial body of high legal opinion that consistency is not necessary

in courts. Mr. Justice Holmes: "It is revolting to have no better reason for a rule of law than that so it was laid down in the time of Henry IV." But although "it may be suggested that at least one reason for precedent is that it enables the expert to exclude the layman (Prof. Arthur L. Goodhart)," departing from precedent involves changes in conditions. This leads legalists to consider whether "the question presented is one of applying, as distinguished from what may accurately be called interpreting, the Constitution (Brandeis)."

Now Brandeis, as is known, was a great one for change. Even so he had something useful to say for those who, especially in the segregation situation, are hopeful that the court's basic decisions may, once more, be reversed.

Brandeis wrote, dissenting in *Burnet* v. *Coronado Oil and Gas Co.*, that "the doctrine of res judicata demands that a decision made by the highest court, whether it be a determination of a fact or a declaration of a rule of law, shall be accepted as a final disposition of the particular controversy, even if confessedly wrong. But the decision of the court, if, in essence, merely the determination of a fact, is not entitled, in later controversies between other parties, to that sanction which, under the policy of stare decisis, is accorded to the decision of a proposition purely of law." Query: Did the segregation reversal of *Plessy* v. *Ferguson* have its base in fact or law?

Therein may be held some hope, however slight, in further reversals. For the decisions in *Brown* v. *Board of Education* and *Bolling* v. *Sharpe*, both 1954, the latest segregation decisions, were based not so much on hard law, as is obvious, as contentions involving fact, to wit, psychological factors allegedly affecting minds of Negro school children. Moreover, Brandeis flatly conceded that in the abstract, "the earlier decision may have been influenced by prevailing views as to economic or social policy * * *."

Well, we know quite well that the segregation decisions do involve social policy. But wherein was the change, where registered, where mandated by the public mood North or South? That is difficult to determine, hence it should be subject to reconsideration.

Justice Douglas noted in 1949 that in the previous 12 years there had been 30 instances of the court reversing itself, whereas in the 30 years between 1860 and 1890, there had been only 18 reversals. Has there been a change simply for change's sake?

Who Cuts Government Spending?

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. HOSMER. Mr. Speaker, on the question of cutting Government expenses the Los Angeles Times of April 16 carried an interesting article which is reasonably self-explanatory. The county has 12 Members of the House of Representatives, more than about 35 of our States. The county contains both metropolitan and rural areas.

LOS ANGELES HOUSE REPUBLICANS VOTE FOR BUDGET CUTS—FOUR BACK ALL PROPOSED SLASHES; TWO DEMOCRATS AGAINST ANY REDUCTIONS

(By Robert T. Hartmann)

WASHINGTON, April 15.—Four Los Angeles County Congressmen, all Republicans, have voted for every budget cut in the 1958 Federal budget put to a record vote to date. Two Democrats representing Los Angeles County in the House have opposed every rollcall reduction.

A survey of the Los Angeles legislators' voting records on the controversial budget shows the county's 8 Republicans and 4 Democrats favoring the following proposed savings:

Republicans	
Representative HIESTAND	$68,282,900
Representative LIPSCOMB	68,282,900
Representative JACKSON	68,282,900
Representative SMITH	68,282,900
Representative MCDONOUGH	66,955,900
Representative HOLT	66,426,800
Representative HOSMER	65,879,100
Representative HILLINGS	56,096,900
Democrats	
Representative DOYLE	362,800
Representative ROOSEVELT	263,800
Representative HOLIFIELD	None
Representative KING	None

Most of the House budget cutting done so far has been by voice, standing, or teller votes, in which the individual Member's aye or no is not recorded. But last week, in a marathon of 14 roll calls, proposed floor amendments cutting appropriations for the Labor Department and the Department of Health, Education, and Welfare were put to the House.

ONLY NINE APPROVED

If all 14 of the economies had been adopted, an additional saving of $68,282,900 would have been effected. As it was, only 9 of the amendments carried and the largest single sum, a proposed $50 million cut in grants to States for sewage plant construction, was rejected by a party-line split.

HIESTAND, JACKSON, LIPSCOMB, and SMITH were among the 90 hard-core budget cutters (74 Republicans; 16 Democrats) who followed the lead of the chairman and ranking minority member of the House Appropriations Committee in voting for every cut in the 14 rollcalls.

HOLIFIELD and KING were in the 54-Member solid spending bloc, composed of 52 Democrats and 2 Republicans (PATTERSON, Connecticut, and BURDICK, North Dakota) who opposed every budget-cutting amendment. So was the majority leader, Representative JOHN MCCORMACK, Democrat, Massachusetts.

Other Members strayed occasionally from party positions but analysis of the 14 record votes leaves no doubt that it is the Republicans in general (with some Southern Democratic support) who really want to cut President Eisenhower's $71,800,000,000 peacetime budget.

Among the Los Angeles legislators, Representative MCDONOUGH voted for every cut except one, a $1,327,000 item for the Food and Drug Administration. Representatives HOLT and HOSMER each opposed this and three other reductions in Federal funds.

HOLT did not support a $346,800 cut aimed at the Bureau of Labor Statistics, $46,300 reduction for the Bureau of Labor Standards, and $136,000 cut in the budget for the Bureau of Veterans Re-employment Rights.

HOSMER also voted against the $346,800 savings at the expense of the Bureau of Labor Statistics, a $442,000 reduction for the Bureau of Employment Security, and a $288,000 cut for the Wage and Hour Division.

HILLINGS opposed a $12,186,000 reduction in Federal grants to States for unemployment compensation and did not vote on a $31,000 cut in funds for the Women's Bureau.

ROOSEVELT and DOYLE voted in favor of cutting $263,800 from the Mexican farm labor program budget, and DOYLE opposed all the other amendments. ROOSEVELT was not recorded as voting on three proposed cuts in Labor Department appropriations.

All the Los Angeles County Democrats except ROOSEVELT, who was not recorded, joined in last month's House resolution deploring the size of the Federal budget and asking President Eisenhower to suggest additional cuts.

Republicans HIESTAND, HILLINGS, LIPSCOMB, MCDONOUGH, and SMITH opposed the House resolution passing the budget back to the President. HOLT, HOSMER, and JACKSON did not vote.

Ike Must "Follow Through" on Foreign Aid as Well as Golf

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. UDALL. Mr. Speaker, last week one of my constituents, William R. Mathews, independent-minded publisher of the Arizona Daily Star, Tucson, Ariz., presented some very valuable testimony to the Special Senate Committee To Study the Foreign Aid Program.

Few editors in this country have given more careful attention in years past to foreign policy problems than Mr. Mathews, and few have his insight.

For these reasons I am placing his testimony in the RECORD, so that it may receive full scrutiny by those who are interested in this subject.

The testimony follows:

TESTIMONY BEFORE THE SPECIAL SENATE COMMITTEE TO STUDY THE FOREIGN AID PROGRAM, APRIL 12, 1957

My name is William R. Mathews. I am editor and publisher of the Arizona Daily Star of Tucson, Ariz.

First, let me thank you for giving me this opportunity to testify.

If there is any one lesson my experience as a working reporter and editor, who has seen much of the world, its wars and revolutions, has taught me, it is that any aspect of American foreign policy as important as foreign aid must identify itself clearly with the self-interest of the American people. Only by such an appeal can they be unified behind the policy and thus enable a Washington administration to speak with an enduring authority that will command respect at home as well as abroad.

This fundamental truth has been confirmed by recent history. Because an unusual combination of circumstances clarified the need of the Marshall plan and its successors, the American people saw their own interest involved. The Communist-promoted civil war in Greece in 1947 sounded the first clear warning. As it was followed by the seizure of Czechoslovakia in March 1948, the hotly contested elections in Italy in April, the Berlin blockade in June of that year, and the growing economic desperation of Britain, France, and Germany, most Americans realized that they had to do something to bring a halt to this expanding Soviet imperialism. The truculent attitude of Moscow aroused their anger as well as their fears.

The Marshall plan came in the nick of time. If the Kremlin had not made the mistake of refusing to collaborate with the many Socialist parties which governed most of the countries of Europe, I believe the Marshall plan would have come too late. From personal observations I can testify that Communist stupidity, combined with the Marshall plan, saved Western Europe, Tur-

key, and Greece from being engulfed by Soviet imperialism.

Just as the Marshall plan's help was restoring Western European productivity and as America's interest began to wane a bit, the Communists struck again in Korea. No people, no congress, no president would have responded instantly to meet that threat unless they saw their own safety, their own self-interest, clearly involved. The implications of the Korean struggle clarified the need for NATO and the indefinite maintenance on our part of a military strength that the Kremlin respects.

Conditions have changed and we should welcome the change. The Marshall plan, NATO, the Korean war, all paid off and, in my opinion, paid off big. The advance of communism by military means has been stopped. Western Europe's productivity has more than been restored; it has been expanded vastly over what it was in 1939. But the biggest thing of all is the changed attitude of the Soviet Union. Had it not been for this American-sponsored program, I doubt whether this notable change would have come.

As one who has been to the Soviet Union three times, the last in April 1954, and who has made a written record whose accuracy has been confirmed by events, I take this change in Kremlin attitude seriously. I believe it means that the Soviet Union has given up all plans for many years to come to expand to the west. Thus, much of what we sought to attain by the Marshall plan and our own and Europe's rearmament, has been accomplished. The Soviet Union now respects our political and military accomplishments, as well as our industrial strength, whereas it did not have such respect in 1947, nor as late as 1950.

Paradoxically, this new situation makes the matter of foreign aid, economic and military, a much more difficult policy to formulate and execute. The old emotional appeals of fear, anger, and hatred have been pretty well worn out and will be neutralized if the Kremlin continues to grow more reasonable and less bellicose.

The effect has already made itself felt at home and abroad. England is cutting its armed forces; France is busy in Africa. Belgium and Holland feel safer and have reduced their contribution to NATO. The action of Congress a year ago in reducing foreign aid by $1 billion reflects a rapidly growing American opinion that will continue to make itself felt in the future.

That the year 1957 will produce a crisis in the entire foreign-aid program is now apparent. If it is to be met wisely, we must take due account of the changed feeling in Europe and among the American people, and take note of the rapidly deteriorating situation in the Middle East.

How to present this need to the people in such a way as to command their support is a basic problem. We assume they will back a program once they see their own self-interest involved.

For instance, the day of economic aid to Western Europe is nearly over, and military aid in the form of financial expenditures will have to be reduced seriously by stretching out the new weapons program over more years.

On the other hand, Americans quickly see their self-interest in the Orient and Pacific Ocean area. They understand the predicament of Greece and Turkey. There will be no trouble to get generous appropriations for those areas. They will go along, grudgingly, with economic help for the Orient, India, and the Middle East. They will go along with the point 4 program as long as it is not overdone. They are extremely sympathetic to all of Latin America.

I believe that a program of $2,500,000,000 to $3,000,000,000 can be carried on indefinitely if it is presented as an historic American job to be carried out by Americans. Americans will rise to assume responsibility as a matter of pride. They like to adventure, but they do not like to be the minority member of a committee when they are paying the bill. Any plan to refer any important part of foreign aid to the United Nations, or any other committee, will seriously lessen the interest of the American people.

However—and in saying this I do not want to appear too pedantic—no amount of aid can be successful unless it is accompanied by a wise political policy. Whereas Europe has learned to live with the blundering and contradictory statements and attitudes of American executive, military, and congressional officials, the Middle East and the Far East have not. They are extremely sensitive and suspicious. If there is any place where we must appeal to native self-interest and pride, it is in these areas. It comes ahead of any foreign financial aid.

This applies to the present situation in the Middle East. As a newspaper editor, I spent a month there in 1947, and opposed editorially the creation of the new state of Israel. When, however, more than two-thirds of the nations of the world formally recognized that new state and welcomed her into the family of nations, opposing governments as well as individuals must accept such a fact and try to make the best out of it.

President Eisenhower, in his speech of February 20, started our policy on the right road. What seems to have escaped so many people is that he made demands not only upon Israel but upon Egypt, too. That he succeeded in persuading Israel to withdraw its forces now obligates him in using equal firmness in dealing with Egypt. Just as I favored, editorially, the use of sanctions against Israel, so now I favor their use against Egypt. In these demands upon Egypt, and with reference to the Gulf of Aqaba, the President said, "* * * we expressed the conviction that the gulf constituted international waters and that no nation has the right to prevent free and innocent passage in the gulf. We announced that the United States was prepared to exercise this right itself and to join with others to secure general recognition of this right."

The implications of those words are far reaching, and answer one of the chief demands that Israel has been making. That the United States was prepared to exercise this right (of using international waters of the gulf), requires us now to keep our pledge, and properly so.

With reference to the Suez Canal, he said, "Egypt by accepting the six principles adopted by the Security Council last October in relation to the Suez Canal bound itself to free and open transit through the canal without discrimination to the principle that the operation of the canal should be insulated from the politics of any country."

Those words pledge the United States to act with a determination and firmness against Egypt similar to what was used against Israel. It is time we not only let Israel but Egypt know that we mean what we say. For us to vacillate after making such an official declaration would ruin our policy, make our foreign aid look ridiculous, and our Government look weak and flabby.

This new firmness makes up what has been a big deficiency in American policy—vacillation. If we are to use our influence for peace, we must win the respect of those with whom we deal. That respect cannot be bought with money. It can be won only by acting with fairness and firmness so that all of the nations of the world will know that we mean what we say.

When the Arab world sees that we will not permit Israel to extend its conquests, its fears will be somewhat abated, and America will win a new respect and confidence. When Israel sees that we will protect her status but not countenance further expansion, she will be more inclined to postpone her basic ambitions of winning back the bounds of the "Land of Israel." Best of all, when the American people see a diplomatic policy succeed, they will support it generously with their lives as well as with their fortunes. They will not support a blundering diplomatic job; they will support a well done diplomatic job.

It is up to President Eisenhower to do in diplomacy what he has learned he must do in golf—follow through—with his policy as outlined in his speech of February 20.

Weekly Broadcast of Dean Clarence Manion, on March 31, 1957

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. DORN of South Carolina. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following weekly broadcast of Dean Clarence Manion on March 31, 1957:

SLASH THE BUDGET OR SURRENDER TO SOCIALISM

Last week I had the stimulating experience of debating with Mr. Norman Thomas before students of the Harvard University Law School. The assigned topic was the United States and the United Nations, but, in our free-wheeling interchanges, the discussion overflowed that subject and covered many adjacent areas of our domestic and foreign policy.

Norman Thomas is probably the most learned and certainly the most distinguished "professing" Socialist in America. I use the term "professing" advisedly, because our political woods are now filled with practicing Socialists who, nevertheless, fiercely resist that designation and call themselves a variety of things ranging from "liberal Democrat" to "modern Republican."

With commendable candor, Mr. Thomas readily acknowledges that he is now and has been a very active Socialist for more than 35 years.

It has been 22 years since Norman Thomas and I first debated the subject of Socialism. We met on the platform for the first time in 1933. On that occasion, I was standing firmly on home base, stanchly defending the constitutional and political status quo. Mr. Thomas was then far out in left field trumpeting for the economic and political revolution.

Last week it was Norman Thomas who was defending the status quo, while I was practically outside the ball park. Yet, neither Mr. Thomas nor I have changed our fundamental positions since 1933. However, in the meantime, it is quite obvious that somebody has rearranged the bases and relocated the grandstand.

Those of us who are against socialism and who are determined to destroy its presently great influence upon American life will find an alarming paradox tucked away in Mr. Thomas' personal political history.

NORMAN THOMAS WON WHILE LOSING

As the Socialist candidate for President in six successive campaigns, he did not get a single electoral vote. Nevertheless, he now points out that the most important Socialist measures for which he campaigned quite hopelessly in 1928 and 1932 are now the law of the land.

At the same time that our professional politicians were publicly scorning socialism and ridiculing the presidential candidacy of Norman Thomas, they were quietly stealing his platform and writing it into law.

Mr. Thomas is certainly entitled to all of the great satisfaction that he presently gets out of this indirect accomplishment. Shakespeare said that "A rose by any other name would smell as sweet"—and, in the same realistic spirit, Norman Thomas is perfectly willing to let the politicians call his Socialist program anything they please as long as they continue to establish it.

EISENHOWER MORE SOCIALIST THAN F. D. R.

On next April 16, the Harvard Times-Republican will publish a copyrighted interview with Norman Thomas. With the editor's permission, I am able to give you the following direct quotation from the statement which Mr. Thomas gave to that newspaper on the night of our debate:

"The United States is making greater strides toward socialism under Eisenhower than even under Roosevelt, particularly in the fields of Federal spending and welfare legislation. This progress can be credited to President Eisenhower and is particularly significant because it is being done by a Republican administration."

Mr. Thomas would be the first to admit that these great strides toward socialism in this country could not have been made by Eisenhower, Roosevelt, or anybody else who frankly told the American people exactly where these strides were taking them. American voters will not buy socialism when it is offered to them under its right name.

In the depression campaign of 1932, candidate Norman Thomas preached Federal spending and centralized socialism to millions of unemployed, dispossessed mortgagors, and outraged farmers. However, on election day, he received fewer popular votes than the Socialist presidential candidate had received in 1912.

Franklin D. Roosevelt won that 1932 election in a landslide, but he did not promise to cure the depression with socialism. On the contrary, he made the campaign on an express promise to reduce Federal expenditures by 25 percent.

In 1952, Norman Thomas had given up running for President. Nevertheless, in spite of the Republican victory, he now observes that his Socialist program is progressing more rapidly than ever before. Outside of the Federal bureaucracy, I dare say that no one is happier about the President's record-breaking peacetime spending budget than Socialist Norman Thomas.

FORMULA FOR SOCIALISM: FEDERAL SPENDING

Federal spending is the common denominator of all components of the Socialist plan for the destruction of our American political end economic system. It was all right for Karl Marx to call for the abolition of private property and the public ownership of everything, but his American disciples have long recognized that this revolutionary goal can be accomplished in this favored land only by circuitous indirection.

Hense, the American Socialist's formula for making private property into public property is a program for more and more and more Federal taxes. It was Karl Marx himself who prescribed a heavy, progressive income tax as the sure way to make all private property into public property.

But nobody can sell confiscatory taxation to American voters as an end in itself. This being so, the Socialist tactic is to dramatize assorted categories of human needs that are far beyond the reach of private charity or local governments and must therefore be satisfied out of the financial resources of the Federal Treasury.

By the terms of the 16th (income tax) amendment, the financial resources of the Federal Treasury are limited only by the earning capacity of all of the people and all of the property in the United States. In order to satisfy a constantly expanded list of such Federal benefactions, first for the American people and now for all the people in the world, it has been necessary for the Federal Government to cut itself in for an ever larger share of the national income.

PUBLIC OWNERSHIP OF PRIVATE BUSINESS

For the preferred and practical purpose of sharing their profits, the Federal Government presently owns from 30 to 52 percent of all the private business corporations in the country. With beccming benignity, the Federal Government forgets this proprietory interest in any one of these corporations when the business loses money. In that case, the Government considerately waives its share of the losses. In other words, the Federal partnership does not work both ways.

On the personal earnings of individuals, the Federal Government imposes a prior first claim that ranges from 20 to 91 percent of the total income. From any point of view, these assorted percentages of public ownership will gladden the heart of American Socialists. But these impressive cuts out of private enterprises are only a part of the long stride that we are now taking in the direction of Karl Marx.

THE FEDERAL GOVERNMENT OWNS ONE-FOURTH OF THE LAND

Over this microphone last week, Mr. Willis E. Stone, of the American Progress Foundation, pointed out that the Federal Government owns outright some 700 business corporations, representing approximately one-fifth of the total productive capacity of the country.

The Hoover Commission found that the Federal Government owns 472 million acres of land within the boundaries of the 48 States. This means that, on the average, 1 acre out of every 4 acres in the country is now owned by Uncle Sam. If you think that this vast area is an ancient residue of the Public Domain acquired by the Louisiana Purchase and the Mexican War, you are mistaken. Nineteen percent of this federally owned land has been acquired in the last 14 years and more thousands of acres are being acquired right now.

When the Federal Government gets title to real estate, that property is automatically exempted from all State taxes. The State tax burden of private owners is thus proportionately increased by every acre under Federal ownership.

If this immense Federal domain was taxable by the several States in which it is located, the property tax on your home would be sharply reduced and your State would have plenty of money for schools, roads, relief and welfare without so-called Federal aid and its coincident centralized controls.

EISENHOWER PREDICTS DICTATORSHIP

In 1949, when he was President of Columbia University, Mr. Eisenhower viewed this evil centralization of power and ownership with appropriate alarm. At that time he said this:

"If we allow this constant drift toward central government to continue, ownership of property will gradually drift into the central government and, finally, we shall have to have dictatorship as the only means of operating such a huge establishment."

Since Mr. Eisenhower made that sagacious observation, real property ownership has been drifting into the central government at the rate of 6½ million acres every year. During the next 12 months, Federal taxes will siphon off more than $73 billion worth of private property into the public ownership of the Federal Government.

Just how far away is the dictatorship which Mr. Eisenhower prophesied as the only means of operating such a huge establishment? Recently he warned us that Federal price and wage controls may soon be necessary to prevent the further inflation of our depreciating dollars.

DOLLARS ON THE DOWNGRADE

Since he made that statement, the value of the dollar has continued to shrink. Federal bonds are no longer attractive to investors. A torrent of F- and G-bond redemptions has forced the Treasury to sell high interest-bearing short-term notes to pay off long-term debt. Ask your banker if he thinks that this is a good sign for the future of your savings.

Norman Thomas knows what is happening and is happy about it, because the Socialists planned it that way. It would be ironical, would it not, if the American dollar would collapse even while the bureaucrats are scattering them around the world like chicken-feed.

DON'T TRIM THE BUDGET—SLASH IT

This is no time to trim the President's fantastic budget. This is a time to hit the budget on all sides with a meatax. Congress should make all Federal agencies disgorge back into the Treasury the unnumbered billions of congressionally appropriated, but unallocated funds, that are now held as unexpended balances. Congress should then hack out of this bloated budget every new spending program, such as Federal aid for school construction and bureaucratic ministration for juvenile delinquency.

What remains after subtracting the reclaimed unexpended balances should be cut at least 30 percent straight across the board. Nothing less than this will prevent your dollar and your liberty from sinking in the slough of socialism.

Wrong Approach

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. HOLLAND. Mr. Speaker, in a few words, the editorial appearing in the Erie Daily Times of Erie, Pa., on Saturday, April 13, 1957, expresses very thoroughly the wrong approach by the Postmaster General on his handling of the postal problem.

If the employees of the post office decided that their request for increased wages was not receiving proper recognition by the Postmaster General and Congress and decided not to report for work until a decision was made, a great clamor to discharge everyone engaging in the movement would be heard from the newspapers and the people.

This is exactly what Mr. Summerfield did and I feel it is up to the President to request his resignation.

He has failed to measure up to the qualifications demanded of a man in this high position.

He should be replaced by one who has been an employee of the post office and has the experience necessary for the position.

The editorial follows:

WRONG APPROACH

We go along with Postmaster General Summerfield that he has a problem.

But he took a helluva of an approach to solving it.

The postal service is a public utility; it is as necessary to every man and woman as their lights, gas, and telephones.

If the phone company, for instance, would decide to cut off service on Saturdays and Sundays because they were not making enough money, the resulting howl from the general public would be heard all the way to Tibet.

Summerfield acts very much like a child with a tantrum; if he doesn't get his way, then someone will get hurt.

Well, he did hurt everybody.

From the invalid sick in the hospital who looks to a daily card for cheer to the big industrialist dependent on orders to keep his factory going, there has been a deep dislocation.

It is not right one man should have so positive a voice in the affairs of a national bureau.

This would be a good time to look past Summerfield and his complaint to a system whereby a final authority for such a drastic action could be appealed to a higher court.

That one man could hurt so many people by so arbitrary an action is not democracy. It is the Fascist approach.

Atom Diplomacy

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the New York Times on the new diplomacy now appearing on the horizon in Russia. In the past 12 days, 5 atomic explosions have taken place in Russia, 1 after this editorial was written. The editorial, in my opinion, points up very realistically the reason why we should continue our efforts, not only in the production of more weapons, but better weapons, which we are capable of doing under present conditions.

Russia has changed her position so many times during this cold war that there is only one approach America can take toward this menace to civilization and a free world—that is, to continue an all-out atomic program.

The editorial follows:

[From the New York Times of April 15, 1957]

ATOM DIPLOMACY

The mushroom cloud of death produced by a nuclear explosion has risen from Soviet soil four times during the past 2 weeks. Such nuclear tests have become so frequent in recent years that these latest explosions might barely merit comment if they were not teamed suspiciously with the latest Soviet diplomatic offensive. These past few weeks Moscow has been giving dire warnings to countries from Norway to Saudi Arabia of the awful fate Soviet nuclear attack can impose on them should these states participate in the free world's defense. Against the background of these warnings the latest Soviet atom tests are clearly intended as much for political as for scientific or military purposes. Moscow seems to hope that by such brandishing of its atomic might it will terrorize one or more of the nations united in defense of the non-Communist world. This is precisely the kind of atomic diplomacy Moscow used to accuse us of practicing, accusations which were made with Moscow's usual cavalier disregard of the truth.

Statesmanship for some years now has required particularly steady nerves on the part of statesmen, and this latest Moscow tactic points up this need. Yet Moscow can hardly be credited with a really effective strategy in this matter. The truth is too plain and has been plain for several years. The truth is that the world can no longer afford to play Russian roulette with nuclear weapons. The Soviet Union can inflict horrible death and destruction on others. But whatever Moscow can inflict on Denmark the free world can inflict on Bulgaria. Moscow and Leningrad are hostages for the safety of London and Paris. As early as 3 years ago the then Soviet Premier, Georgi M. Malenkov, revealed his awareness of that fact. We can hardly believe that the present Soviet rulers do not understand that nuclear war means mutual destruction for all participants, perhaps for all life.

In the light of this latest Soviet tactic, it is clearer than ever that the security of the free world and the hope for averting war rests, for the time being, on the West's remaining so strong that, short of madness, no effort to use Soviet nuclear weapons will be made. It is for this reason that the refusal of West Germany's physicists to contribute to strengthening their country's, and the free world's, atomic might must be regretted. With the exception of Professor Kapitsa, we have no evidence that Soviet physicists have taken a similar stand. No more than any other country can West Germany escape the horrible realities of the atomic age. The radioactive fallout from hydrogen bombs dropped on France or Czechoslovakia would not be prevented from crossing West Germany's borders because West German physicists refused to help their country's defense.

Against this unhappy background there is a ray of hope in some of the latest moves of our own country's diplomacy. The goal of effective nuclear disarmament backed by effective inspection and control measures, including the elimination of all barriers to the free movement of persons, is still, unfortunately, far from having Soviet backing. But the suggestion made by Mr. Stassen at the London disarmament meeting last Friday provides a useful initial step which we can only hope will gain Soviet acceptance. Certainly it would be a good thing if all powers concerned were to agree that beginning next year no newly produced nuclear material would be used to make nuclear weapons. We have been producing such weapons since 1945 and the Soviet Union since 1949, if not earlier. Both countries must now have enormous stockpiles. Agreement to cease building these stockpiles still further would really create a new atmosphere in which there could be justified hope for further, more fundamental progress.

But even beyond the goal of nuclear weapons control, the world needs an end to the Moscow-inspired enmities which cast so deep a shadow over humanity's future. It is in this context particularly that we may welcome the progress that has been made toward Polish-United States economic cooperation. Further progress is still needed, but certainly a mutually satisfactory agreement on an American loan to Poland would help still further to calm the word's tensions. It is certainly a striking contrast that we see today: Moscow threatens our friends with nuclear annihilation while we negotiate with a Communist country to provide grain and cotton needed by the Polish people. Can there be any doubt as to which road holds the better promise for world peace?

Increased Postal Rates on First-Class Mail

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement by George J. Burger, vice president of the National Federation of Independent Business, Washington, D. C., before the House Post Office and Civil Service Committee on April 10, 1957:

INCREASED POSTAL RATES ON FIRST-CLASS MAIL

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote.

The federation is currently completing a tabulation of its nationwide membership vote on the question: "Are you for or against the administration's proposal to increase first-class mail rates from 3 cents to 5 cents an ounce?" When this question was presented to the members in mandate No. 228, the members were given "Comments regarding issues listed on opposite page of the mandate."

The argument "for" was:

"One million dollars a day * * * that's what operation of the United States Post Office Department is costing taxpayers. Treasury Department had to drain off $360 million from general tax collections in 1955 to keep it going, will have to dig up another $650 million in 1956 for it. This is shameful. The post office performs a service, and those who use the mails should pay for it. All the administration's asking is enough added revenue to pay the costs of operation and allow better services, for instance, routing of all first-class mail by air, where this is possible."

The argument "against" was:

"A hidden tax increase, that's what this adds up to. Most every taxpayer in the land uses the mails, therefore pays for the Post Office's operation one way or the other. If rates go up will there be any tax cut? In its request, the administration seems to be following the old tax line of hitting hardest those who squawk the least, people who use first-class mail. This mail comes closest to paying its own way, but would be hit by the largest increase on any class mail. Business people, and small firms at that, use 75 percent of first-class mail. And most of their mail is local."

The results of the poll on this issue show 32 percent for, 63 percent against, and 5 percent no vote.

This poll was made on the proposal to increase to 5 cents an ounce on first-class mail and as the proposal has since been cut back to 4 cents an ounce on first-class mail, it is important to note that in a nationwide poll of the federation membership in July 1953, through mandate No. 196, the question presented to the membership at that time was:

"Are you for or against the proposal to raise postal rates as follows: (1) first-class mail (intercity) from 3 cents to 4 cents; (2) domestic air mail from 6 cents to 7 cents; (3) second-class mail, a 25 percent hike in 1953, a 17 percent hike in 1954 (in place of scheduled 10 percent increase); (4) third-class mail, a 33⅓ percent increase?" and the result of that poll showed: 40 percent for, 57 percent against, and 3 percent no vote.

Mr. Chairman, it is to be noted that in a period of almost 4 years between the above 2 polls it is self-evident that small business has a vital interest in the use of the first-class mail service, because, for practical purposes, first-class mail, insofar as small business is concerned, is in some degree the lifeblood of their businesses, and hence their strong objection to any increase in that class of mail service.

From what we read and hear it appears to small business that other classes of mail service are the ones causing the alleged deficit in the postal operations, and, if this be so, then those classes of mail service should be expected to pay their own way and not charge the deficit to the first-class mail service, which is the one service hitting the hardest at both John Q. Public and small business.

Finally, Mr. Chairman, due to the ever-increasing concentration in our economy, the failure in vigorous enforcement of the antitrust laws over the years, and the failure to come through with promised, expected tax relief for small business, small business today is faced with a serious condition as to their future business life, and if this first-class mail rate is increased it is going to add a further severe hardship to the burden small business is now already carrying.

Mr. Chairman, we wish to advise that it is very encouraging to us, as we review the scene from the grassroots to note that small business nationwide—in all segments of our economy—is becoming aroused, and I mean aroused as to their continuing future in the business world, and I am sure that many Members of Congress hold to the same opinion as a result of reviewing the letters they must be receiving from the grassroots.

Errors in the Trial of Jesus

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. SIEMINSKI. Mr. Speaker, this is Easter Week. It is Holy Week. It is the time of the Passover, too. It is the most solemn week of the year.

People slow down. Strife ebbs. Stores close. People eat less. They think more.

It is a time meant for man to contemplate on the direction of life in relation to that of the Lord.

Easter Week gives man the time to turn back the pages of life and to review them in the quiet of his heart, asking strength to avoid in the future what might not read too well in the past.

Easter means many things to many people.

The question is, Could it mean more to the Congress and to the courts of the United States? Could the impact of Easter, let us say, cause the Congress and the courts to stay execution of any death sentence until the week after Easter? The week after Easter would be the only week in which a life could be legally snuffed out in our land.

This would give all pause for thought.

The question is, Would it have its proper influence on society, on Congress, and the courts?

Had this idea prevailed in the Holy Week 2,000 years ago, Pontius Pilate would not have washed his hands and the life of the Lord might have been spared. In spite of man, it was, anyway. The influence of that life thunders through time.

It might be well for us to review each year at this time, Mr. Speaker, errors in the trial of Jesus.

It is said that our Bill of Rights, scrupulously observed, guaranteed life, liberty, and the pursuit of happiness, and that under our Bill of Rights the tragedy of 2,000 years ago could not be repeated today, or ever.

Errors in the trial of Jesus are said to be so well known that they need not be repeated here.

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following address by Maurice Johnson, manager, Edgar Electric Cooperative, delivered at the congressional dinner sponsored by the Association of Illinois Electric Cooperatives in Washington, D. C., on April 8, 1957:

ADEQUATE LOAN FUNDS FOR LONG-RANGE PLANNING

Those of you who are familiar with the early development of the rural electrification program are cognizant that its early acceptance was more on raising social standards than on economic need or justification. As evidenced in Mr. Sims' presentation, rural electrification has made a much greater contribution than was earlier anticipated. In addition to raising social standards for a very important segment of our people, it has contributed a great deal to our national economy and to the Nation's well-being.

Our primary concern in this discussion is on one phase of our operation that enables us to better serve rural America with all the electric power it can economically use—vigorously compete with inferior forms of energy and continue to be leaders in establishing fair costs for electricity to be used on the farm.

In the beginning when we were just learning to walk we were not exempt from making mistakes. The greatest of these was prompted by our ignorance of the great potential for the use of electricity on the farm. Not only the skeptics but even our most devout and ardent leaders of our program were of the opinion that the ultimate in farm consumption would be around 100 kilowatt-hours per month. Since we had no experience, no relevant data to refer to, we designed, and built, our distribution systems to serve from 40 to 60 kilowatt-hour per month per member. Today many of our systems have the capacity to serve 10 to 15 times these original design capacities. But in order to achieve this we have experienced a heavy and irrecoverable expense in retiring obsolete equipment.

In the late 1930's and early 1940's everyone connected with the program concentrated their efforts on the problems involved in extending central station electric power to the farm. Praise and appreciation were forthcoming from recipients of this great energy even when its predicted limitations of application extended only to the lamp to read by and in some cases to operate an electric motor to drive the water pump and washing machine. The struggle of our farm folks to get electric service was difficult and one which no one would ever forget. But we are forgetting.

Through consolidation of farms, members retiring from participation and death, we are losing those members who are familiar with the history of rural electrification. The ownership is being transferred to a generation of farmers who have never known what it was like to live on a farm without electricity and to people who for various reasons live in the country but are employed and primarily interested in urban activities. To support this the record discloses that practically all our revenue in the thirties came from the farm. Today, however, only 52 percent was reported as coming from the farm, the rest coming from nonfarm residential consumers commercial, small power, and industrial loads.

In addition to our changing ownership, many other facets of our operating environment are changing. We can no longer gain public or member support by reporting so many unelectrified farms. It is well known that most every farm desiring central station electric power is now receiving it. The attitude of the commercial companies toward us has taken an about face. In the early years they were certain they would be able to take over electric cooperatives at a rate of 10 cents on the dollar. They, at times assisted in getting cooperatives started by offering special considerations and technical assistance. Today, they are looking for a vulnerable place in our operation to attack and discredit us.

We have acquainted you with our change from horizontal growth to a vertical growth, our changing ownership, and the change in attitude of the commercial electric companies. If we are to continue to be an asset and contribute to the national economy and continue to be strong competition in the electrical industry, we are going to have to incorporate every artifice known in our operation in order to serve what at one time was considered submarginal territory.

At this point we would like to briefly define long-range planning and how it contributes to the efficiency of our operation.

Long range is a delusive and indefinite interval of time but extends as far into the future as we can conservatively predict after considering all pertinent factors. With demands on our distribution systems doubling every 5 to 7 years and with labor costs increasing each year we must do a good job of planning. Long-range plans enable us to utilize our facilities over longer periods of time—design and construct our systems with greater flexibility to meet varying sets of conditions—make all construction compatible with an overall ultimate system thereby eliminating early obsolescence and expensive retirements. Schedule construction to adequately supply the demands as they mature thereby eliminating over or under investment in distribution facilities.

Since our loan applications are based on the construction set forth in these studies we work in close cooperation with REA. As a whole these studies project our system requirements several years in advance of the time that we need them, but we use them every day a sa guide in programing construction in order to efficiently expand our sys-

tems. Now as set forth above we construct only that portion necessary in order to maintain a good quality of service and we request advances on approved loan funds to meet only the cost of this construction.

If we did not have approved loans covering longer periods of time than our requests for advances we would overload REA and be processing loans continuously. This accounts for the difference between the amounts of money we have under contract from REA and the smaller amount of money that we have actually been advanced.

We are very happy to have had this opportunity to clarify these captions on the status of REA approved loans and advances as they appear on annual reports. We have not overestimated our needs on our applications but only insured that the funds would be available at the time they are needed to carry out our expansion program systematically.

We have the history, information, and tools today whereby we are in an excellent position to meet the great challenge of furnishing rural America with low-cost power. It will not be easy but we know of nothing more worthwhile or contributory to the welfare and economic position of rural America than an abundant supply of low-cost electricity.

Spires of the Spirit: A Cross Against the Sky

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. SIEMINSKI. Mr. Speaker, it is said that the influence of the life of the Lord thunders through time. It does, especially now, in the Easter Week.

Dr. Harris, Chaplain of the United States Senate, puts it well in his article entitled "A Cross Against the Sky." It appeared in the Washington Sunday Star a few Sundays ago, and is cited now:

A CROSS AGAINST THE SKY
(By Dr. Frederick Brown Harris)

Two crossed beams of lumber have become the most sacred symbol of the ages. Everything leading up to its torturing death was old. Everything on this side of it is gloriously and startlingly new. For the One who hung on it and died on it is alive forevermore. That is the emancipating fact which is the very heart of the great glad tidings. St. Paul puts it succinctly when he declares that if Calvary's intended victim is not alive, then the whole cathedral of faith collapses.

The surpassing moral grandeur of the Christ of Calvary is forever epitomized in the sign by which the things for which He stood and for which He stands will at last conquer. The forces on which Jesus literally "bet his life" were spiritual. He taught that it is the meek who shall inherit the earth. He has been called "The Terrible Meek." But real meakness is never weakness. The tyrant Stalin's spiritual bankruptcy was revealed when someone mentioned the power of the Pope which must be reckoned with. Cynically the dictator asked, "How many divisions does the Pope have?" Material force is never the last word, but in righteous hands it can be like the surgeon's knife to remove a malignant growth. Dedicated divisions can back spiritual objectives, and often have. Christ himself did not repudiate physical force. In the very week of His passion, with the cross looming so near, He did not hesitate to use it. He knotted together cords of wrath as whips in His strong hands. He made the quiet courts of the Temple a battlefield. With words of burning anger He actually drove before Him those who had desecrated His Father's house and who had made it a den of thieves. That was no time for sweet persuasion, it was the hour for masterful coercion.

The Christ of the Cross is the gentle Jesus, meek and mild. He is tender, but he is terrible. He caresses like a mother, but He also strikes like a thunderbolt. Who can watch and listen to Jesus without seeing the gleam of a sword bathed in Heaven? But did not the Master declare just before He accepted the cross as the sign of His cause, "He that takes the sword shall perish by the sword"? Yes, but that sword was used to viciously attack, not to defend. It was drawn in personal spite and vengeance. It was a bad sword. But remember Jesus also said, "I came not to bring peace, but a sword." That sword unsheathed against that which defies His cause is a good sword.

If a certain prime minister had used a sword instead of an umbrella, the history of these awful times might have been different. Because the sword of Britain's might was not raised a noble little democracy in Europe was, in appeasement, thrown to the wolves, a perfidy committed for "peace in our time." There is nothing in the spirit and attitude of Jesus to forbid the mobilizing of physical force to aid in the victory of the ideals for which He marched straight to the waiting cross. To interpret the cross as a flag of truce decorated with a white feather, advancing with soft words toward those arrayed at the gates of Hell is a terrible travesty of its real meaning. Without righteous swords, coerced men are compelled to cry peace when there is no peace, and to surrender the most heavenly things to the most hellish forces. A peace gained by constant retreat because of the threatening blackmail of superior force is not peace—it is abject surrender. Ill will must be held in check by fear of the power of organized good will, with arms to match its mandate. To weaken the national striking power in a world like this is to vote to make it inevitable that the democracies shall be forced to do the bidding of moral perverts who have been allowed to fashion a preponderance of swords.

This is by no means to say that material might is the last word. It never is. We are but saying that to so misinterpret the meaning of the cross that callous deviltry is allowed at its will to trample righteousness into the ground whenever it is powerful enough, while the forces of good stand impotently by with unused arms, is not the Christianity of Christ. This is the day of all days for those who are really "soldiers of the cross" in Christ's holy crusade to make men free to sing with a new meaning "Onward Christian soldiers, marching as to war, with the cross of Jesus going on before." America has come to the kingdom for such time as this. Her might alone tips the scales of justice and freedom.

It was with a surge of grateful pride that last summer, at the battlefront, I stood where Korea faces the perfidious foe. With our great commander, General Lemnitzer, we went to the frontline. The Communists were plainly visible. What is keeping that motley horde from sweeping down and once more trampling into bloody mire the fair plants now growing in the garden of a genuine democracy? Answer—American and Korean arms, nothing else. I felt no incongruity that I was wearing a treasured cross as I shook hands with the chaplains on that bleak hill, with their uniforms marked with the same conquering sign.

And why is the Philippine Republic making such strides in freedom today? Because the lamented Ramon Magsaysay, a devout Catholic Christian, bowed daily at the foot of the cross, then went out with that cross to exterminate the Communist Huk guerrillas threatening the very life of the nation. Then after he had done that, disregarding all danger to himself, he went everywhere in the spirit of the Master and of the cross bringing food, education and opportunities for a more abundant life even to the outermost islands. He opened the door of the palace at Manila to barefooted peasants. Sometimes he listened to the pleas of a thousand in one day. With Christlike pity he toiled day and night to lift the living levels of the people he loved and who loved him.

Overcome evil with good is the injunction—yes, but often, first it is necessary to overcome evil that good may have its chance—that the cross may have its day and its say.

"For in the end we pass all by
For a lone cross against the sky."

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following address by V. C. Kallal, manager, Southwestern Electric Cooperative, delivered at the congressional dinner sponsored by the Association of Illinois Electric Cooperatives in Washington, D. C., on April 8, 1957:

THE EFFECT OF INTEREST RATES ON THE COST OF DISTRIBUTING ELECTRIC POWER

Interest is defined as the price paid for the use of funds. It is usually expressed as a rate. Interest is regarded as a market phenomenon, like other prices. It is, therefore, determined by the interaction of the many forces of our complex economy. Compensation for risks and many other items are included in the interest rate over and above the pure payment for the use of funds. The borrower is not interested in funds as such, since money does not reproduce. He is, however, interested in the goods or service which he can secure with the borrowed capital.

The amount of capital necessary per unit of volume of business varies widely, depending upon the type of business. In the case of electric-power distribution, the investment is comparatively high per unit of sales. Hence, the interest rate is of utmost importance. Equally as important is that funds must be available on a long-term basis.

The REA statistical report for the year 1955 shows that the nearly 1,000 borrowers have in excess of $600 invested per consumer served. At 2 percent interest it took in excess of 9 percent of the gross operating revenue to cover interest expense.

The need for electric power continues to grow and grow. Estimates made 10 years ago seem absurd today. In fact, estimates made as late as 5 years ago are but a little better.

The Federal Power Commission is predicting a required capacity by 1980 of 386 million kilowatts compared to 114 million kilowatts today. And even this estimate is considered much too conservative by some in the utility field.

As the consumption increases, so also does the investment per consumer. Interest costs maintain or even increase their importance in the overall cost of distributing power.

It should be pointed out that the cost of distributing electric power includes the cost of generating and transmitting power. Hence, any increase in interest rates for funds for construction of generation or transmission facilities is reflected in the cost of distributing electric power to the ultimate consumer.

A reasonably low-interest rate is, therefore, of utmost importance to those engaged in the generation, transmission, and distribution of electric power. Power, and particularly electric power, has made our Nation one of the greatest from the standpoint of production per worker.

No development has so greatly influenced our homelife, the operation of our farms or factories as has the development of electric power.

This is not news to any of us here tonight. We were aware of this before we assembled here.

Our State and Federal Governments have been cognizant of this fact for years. Laws and controls are designed to recognize the importance of such things as electric service to the consumer and to protect his interests.

Our Federal Government has recognized from time to time the need for help for various segments of our economy. There are today more than 4 million rural consumer members of electric cooperatives. These rural people have prospered since getting electric power for improved living and increased efficiency in production. The cooperation fo the rural people and their Government through the REA has benefited many segments of the overall economy.

It would be somewhat short-sighted and detrimental to the overall economy of our Nation to disturb the arrangement of the 1,000 rural electric cooperatives and the REA.

These 1,000 rural electric cooperatives are doing an excellent job in meeting the demands for increasing amounts of electrical energy each year by their membership. The need for more plant and therefore more funds is continuous.

Therefore, it is imperative that such bills as H. R. 4781 do not become law. The unnecessary burden of increased interest rates suggested by this bill is not justified.

The electric cooperatives have cumulatively to date paid more in interest by about $47 million than the cost of money to the REA. Why then should we jeopardize the whole program by unnecessarily changing interest rates?

The REA Act wisely provides for the right of the borrower to generate and transmit power. Any increase in interest rates would destroy this effective bargaining power.

The REA program has maintained, and rightfully so, the support of the Congress. The program is self-liquidating and it is best adapted for the job for which it was established.

We are confident that you, as Members of Congress, are aware of the importance of electric power to rural America. We are sure that you would not permit increased interest rates or any other obstacle to jeopardize the ability of the electric cooperatives to repay their loans in full and according to schedule.

In closing, I would like to summarize as follows: (1) in electric power distribution, the investment per consumer is high (2) interest on borrowed money is an important cost item (3) electric cooperatives will need additional funds year after year (4) the rural electrification program is self-liquidating (5) for continued success, the electric cooperatives must be able to borrow money from the REA at the present rate of 2 percent.

The Dallas Tornado

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. DORN of South Carolina. Mr. Speaker, I believe sentiment is growing in America among our States and the local communities to do as much as possible for themselves without calling on the Federal Government. The people of Dallas, Tex., were stricken by a terrible tornado which caused over $4 million damage and took many lives. It is my understanding that immediately after the tornado struck, insurance adjusters and investigators moved in to take care of the people's claims. Carpenters, brick masons, engineers, and the people in general moved in the next morning and went to work to restore the damaged property. Local contributions of time, money, clothes, and food poured in. A magnificent job was done by the city of Dallas and the State of Texas. It is my understanding that no official request for help to the Federal Government in Washington was ever issued by the local authorities. The people of Dallas will always remember with pride how everyone chipped in and, at the local level, rebuilt the damaged portion of their great city. This is the kind of effort that made America the Nation that it is today. This is the kind of pride, frugality, and thrift which will preserve this great Nation. I congratulate the people of the city of Dallas, Tex., on their splendid reaction to a major disaster.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Foreign Policy

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 18, 1957

Mr. MANSFIELD. Mr. President, I ask unanimous consent that a speech which I delivered before the Executives Club, Chicago, Ill., on Friday, April 12, may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY

(Address by Senator MIKE MANSFIELD, Democrat, Montana, before Executives Club, Chicago, Ill., Friday, April 12, 1957)

I shall open my remarks today by violating a basic principle of effective public speaking. I shall remind you of a somewhat unpleasant matter. In 3 days your Federal Tax returns are due. It is still uncertain what Chicago's bill for income taxes will be in 1956. In 1955, however, it was about $1.3 billion.

You may wish to contrast that total with the experience of this city a little more than a century ago. In the year 1834, all taxes levied on all citizens of the town of Chicago amounted to $48.90. Lest the urge to return to the good old days grow irresistible, I hasten to add that while taxes were low, life in Chicago in those days was not without some minor inconveniences. It was not, for example, until 10 years later, in 1843, that pigs were officially banned from the public streets.

But I have not come here today to collect your income taxes. A Senator's responsibilities involve many unusual assignments but tax collection is not yet included among them. I have been asked by constituents to stop grizzly bears from crossing the Canadian border. I have been asked to change the light bulbs in the Federal building in Butte. I have even been asked to provide the correct answers for TV quiz programs.

And most frequently, I have been asked to "do something about taxes." The phrase—it is a phrase in very common usage in Washington these days—is subject to varying interpretation. When a constituent demands that a Senator "do something about taxes" he may mean many things. I am convinced by long experience in Congress, however, that there are two things he emphatically does not mean. He does not expect the Senator to raise taxes or to collect them.

I have opened my remarks on this matter of taxes because it relates very directly to the subject which we have under discussion today.

What we pay in Federal taxes is, of course, determined by the budget. This year, the budget submitted by the President to Congress is the highest peacetime budget in our history. What are the really big items? First of all, there is the cost of present national defense, $41.7 billion, almost 60 percent of the total budget of $71.8 billion. There is also a charge of $4.3 billion for foreign aid. To a large extent this foreign aid is military assistance; it is also linked to our own national defense needs. Other major items in the budget stem from the still unpaid price of past wars. Our obligations to veterans of these wars, for example, will require about $5 billion during the next fiscal year.

When we put these charges together we find that the preponderant cost of government and, hence, of the high-tax rate, is closely associated with national defense, past, present, and future. The extent of the need for national defense in turn, is tied to the state of our relations with other nations. And foreign policy is the principal mechanism which guides those relations. Foreign policy and taxes, in short are inseparably interwoven. If our foreign policy can move the international situation toward greater stability and security for all nations, the cost of national defense in time can come down and so too can the tax rate. If it is unable to do so, if instead world tensions and the danger of aggression increase, then the cost of national defense must inevitably increase and so too will taxes. The alternative is to toy with the future of the Nation. I do not believe there is a person in this room who would knowingly do that regardless of how onerous the tax burden may be.

Taxes, I am sure, constitute one reason for the growth in public and congressional interest in questions of foreign policy during recent years. There are others, beyond taxes. Scientific achievements at the University of Chicago and elsewhere a few years ago ushered us into a new era of human history. An effective foreign policy can help to make this new age, this age of nuclear power one of ever-widening horizons of progress for the people of the United States and for all mankind. An ineffective policy, however, opens up the possibility, not merely of vastly higher taxation, but of the sudden death of tens of millions of our citizens. It is not overstating the situation to say that an ineffective policy could act to bring about the end of recognizable civilization everywhere on earth.

These are not remote possibilities. These are the realities of the world in this second half of the 20th century. These are the facts which confront us today and will continue to confront us throughout all of the tomorrows that it is possible to foresee.

We need not fear these facts. We need fear only ignorance of them or indifference to them.

The principal method for dealing with these facts as they affect our national survival and interests is foreign policy. It is the first line of defense of the Nation. It is the one hope in this nuclear age of keeping the price of national security somewhere within the limits of our capacity to pay. And I might point out that in contrast to the cost of past wars, current defense and foreign aid, it takes less than $250 million a year to run the Department of State, the agency that is responsible for foreign policy.

Let me make clear that I do not mean to suggest that foreign policy is the answer to all the problems which confront us in the world. Foreign policy, no matter how effective, is not a panacea. It is not a cure-all for the ills of mankind. It is a highly imperfect world in which we live. Our foreign policy is a major factor, but only one factor, in determining what happens in it.

Recognition of the limits of foreign policy is not, however, an invitation to deprecate its importance. It is not a call to retreat into a citadel of isolation. No matter how thick the walls, that citadel will not insulate us against the powerful tides of the 20th century.

Recognition of the limits under which foreign policy operates, is a warning to use the great but not unlimited power of this Nation with restraint, with economy, and with perception, to safeguard the interests of all the people of the United States. It is, in short, an urgent reminder of our need to develop and to maintain the most effective policy possible.

There are no readymade formulas for such a policy. An effective foreign policy cannot be pulled out of the magician's hat. It cannot be had for the wishing. It is possible, nevertheless, to detect the elements which must underlay a policy that will serve our national interests to best advantage.

One of these elements is an informed citizenry. In the last analysis, the people of the United States by their ballots, determine the broad direction of foreign policy. Sooner or later, foreign policy must reflect their basic sentiments. Unless it does so, it will rapidly become a rootless policy, a sterile policy. It will command neither support at home nor respect abroad.

That is why the people must have the facts on world affairs, as those facts affect the interests of the United States. The greater their knowledge and concern with these facts, the more effective will be the broad direction they give to foreign policy.

Foreign policy can be irresponsibly shortsighted or it can be concerned not only with the needs of the hour but with the long future of the Nation. It can deal only with the immediate problems or it can take cognizance of the kind of world in which we want our children and our children's children to live out their lives. Foreign policy can focus on one problem such as communism or it can, as it should, put this problem in the context of the many problems which confront us abroad. Foreign policy can be pennywise and pound foolish or it can be as economical as possible, commensurate with our long-range national security. Foreign policy can be wavering and fearful or it can be consistent and courageous in keeping with the finest traditions of the Nation. Ultimately, responsibility rests with the people of the United States to determine what form foreign policy shall take. That is why, I repeat, the people of the United States must have the facts.

Where are we to get them? The press and other media of communication, of course, perform a distinguished public service in this connection. So, too, do organizations such as yours and educational institutions which stimulate interest in foreign-policy questions.

Most important, however, the people of this country have a right to expect the facts from their Government. They have a right to expect honest information rather than smiling assurances that the Government, like father, knows best. Those of you who may have teen-aged children, I am sure, have long since bene disabused of that idea, even as I have been.

The point that I am trying to make is that the national administration, whether it is a Republican or Democratic administration, has an obligation to take the Nation into its confidence in matters of foreign policy. It has an obligation to make clear the

good and the bad in international situations, the successes and the failures of our policy. The people of this country are wise enough not to expect perfection in the conduct of foreign policy. They are also wise enough to discount foreign policy by cant.

Most of all, the administration in power has an obligation to spell out where it is that we are headed in foreign policy and what it is likely to cost to get there. This point brings me to the second element of an effective foreign policy. Just as we must have an informed citizenry we must also have clear and continuous leadership from the President.

Under our system of government, the system of separate powers, the President is not a dictator but neither can he be a figurehead, nor a mere agent of Congress. The President is an independent representative of all the people of the United States and his is the function of national leadership. Nowhere is this leadership more essential than in matters of foreign policy. The Vice President, the Secretary of State, and others can assist him in discharging this function. In the end, however, if the Nation is to speak to other nations with an undivided voice, it must speak through the President. If we are to concentrate our national strength to meet the challenges which roll in upon us from abroad, it is the President who must serve as the focus of our national power.

The President can be neither a Republican nor a Democrat in foreign relations. He must be the President of all the people. All of us—Republicans and Democrats alike—gain if the President and his Secretary of State conduct our foreign policy well. All of us lose if they conduct it badly.

Mr. Eisenhower is in a unique position to give the Nation the kind of national leadership we must have in foreign policy. In the first place, he is a Republican but his reputation was largely established under Democratic administrations. He is well-acquainted with the situation abroad and his stature is high throughout the world, even in the Communist countries. His last election, in which he ran far ahead of his party, was a great personal tribute from the American people of both parties. He is not eligible for reelection and is therefore in an excellent position to keep the Office of the Presidency out of politics in questions of foreign policy. He has, in short, an unparalleled opportunity to lead the Nation toward greater security in a more stable and peaceful world.

This brings me to the third of the basic elements which is essential to an effective foreign policy. I refer to the role of Congress and particularly the role of the Senate of the United States.

The President has the responsibility for conducting foreign policy, but there are constitutional limitations on his power in this respect. Under our system of government, he must have the cooperation of the legislative branch. The reason for this is obvious. It is Congress which provides the funds for the Defense Establishment, for the Department of State, for foreign aid, and for numerous other purposes related to foreign relations. Beyond these ordinary legislative functions, moreover, the Senate has a special constitutional function. It is the function of advising and consenting in major matters of foreign relations. In recent years this function has been used with great vigor.

A case in point was the resolution passed a short time ago on the Middle East, the legal basis for the so-called Eisenhower doctrine. You will recall that in that instance the President sought special military and financial authority to deal with the crisis in the Middle East. The Senate gave the most careful attention to the request, as, indeed, it should, to any major foreign-policy matter in which the President seeks congressional cooperation. Before passage, however, the resolution was amended by the Senate in many important respects. What the Senate did by these amendments was to safeguard the constitutional power of Congress to declare war, and, at the same time, it reaffirmed the President's power to command the Armed Forces. The Senate also made other changes designed to prevent a misuse of public funds in the Middle East and to sustain the United Nations Emergency Forces which is trying to keep peace in that region.

If I may digress for a moment, I should like to say this about the United Nations and our relationship to that Organization. The United Nations is what the member states, including ourselves, wish it to be. It is no more, no less. To regard it as a supergovernment is to ignore the realities of the present world and to do a disservice to ourselves and to peace. To regard it as a body without any function in the relations among nations is equally a disservice to ourselves and to peace.

The United Nations is not a substitute for sound foreign policies on our part. It ought not to be made a scapegoat for inadequate policies of the administration. If the United Nations is to serve our interests and the interests of other free nations, it ought not to be assigned, nor should it seek responsibilities which it is powerless to discharge. But when the United Nations does make a genuine contribution to the cause of peace among nations—as the United Nations Emergency Forces are doing in the Middle East—then, by all means, in our own interests, the Organization ought to have our full support.

Those U. N. forces are made up of the troops of several small nations. By maintaining the truce in the Middle East they may well be the major factor in forestalling an outbreak of a third world war in that region. They are performing a great service to humanity, and in this instance deserve the backing of this Nation and the entire world.

If I may now return to the role of Congress, the point I wish to stress is that Congress must see eye to eye with the President on the main questions which confront us in foreign policy. If there are significant differences, they must be reconciled under the leadership of the President. Unless they are, policy will break down in dissension between the two branches of the Government. We shall face the rest of the world, not as a united people, steadfast and persevering in direction, but as a divided nation, halting and indecisive in purpose.

How are we to obtain this reconciliation of views between the President and the Congress in the matters of foreign policy? A similar problem of course presents itself in domestic matters. In that connection, our Government operates largely on the principle of sponsorship of legislation by the President and his party in Congress and responsible opposition from the other party. I suggest that this formula is inadequate in foreign policy matters, particularly when the opposition party happens to be a majority in Congress. That is the case now with the Democratic Party in control of both Houses. In this situation, something more is needed than Presidential proposition and responsible opposition. What is needed is active, responsible cooperation between both political parties and between the executive and legislative branches of the Government.

What this entails is first of all mutual restraint. Neither party can seek to make political capital out of foreign policy without grave risks to the safety of the Nation. Responsible cooperation also entails close, frequent, and frank consultation between the President and the leadership of both parties in Congress. It entails the use of men of outstanding ability, regardless of party, in the State Department. It entails the acceptance by both parties of the supremacy of their national responsibilities over their party loyalties in dealing with matters which affect the safety and the well-being of the Nation.

Let me make clear what responsible cooperation in foreign policy does not mean. It does not mean a pretended unity when none in facts exists. It does not mean a bipartisanship of silence when conscience urges us to speak out in questions of foreign relations. It does not mean blind and unquestioning congressional acceptance of the dictates of the executive branch of the Government.

Every Member of Congress owes to his constituents an obligation to think for himself on matters of foreign policy no less than on other public questions. By the same token, however, he has an obligation to place the national interest above party interest when the stake is the future of the Nation itself.

To sum up, these 3 elements—an informed public, Presidential leadership, and responsible cooperation between the President and Congress and between the parties—these 3 elements provide the foundation for an effective foreign policy.

What of the structure which rests on this foundation? What of the policy itself? A sound foundation is essential to a sound policy. It does not in itself guarantee such a policy.

Foreign policy results from the major decisions which the Nation takes or fails to take with respect to situations abroad involving our interests. These decisions are or ought to be made ultimately by the President, largely on the advice of the Secretary of State. The wisdom of his decisions will determine whether foreign policy is more, or less effective, whether in the long run the cost of national security will be higher or lower, whether we shall move toward international peace and stability or toward international conflict and chaos.

The problem of decision in foreign policy does not differ greatly from the same problem in business or in the professions or even in our personal lives. In any given situation we are usually confronted with a number of possibilities. The doctor must decide whether or not to operate. The businessman must decide whether to buy or sell. We weigh and assess the pertinent factors and then choose what we believe to be the best possible course of action.

This process of weighing the factors in foreign policy can be a very complex one. Let me illustrate just how complex by reference to the situation which confronts us now regarding Poland. As you know, the Polish Government has a mission in Washington at the present time. The Polish Government is headed by Communists. Yet the Poles are seeking aid from this country. If this were the only factor in the situation—a Communist government seeking aid, the decision would be a simple one.

It is not, however, the only factor. Here are some others. The Republican administration, for example, came to power in 1952 on a platform supporting liberation of the Eastern European satellite countries. How is this pledge to be fulfilled? By force of American arms? By words? By tears shed over martyrs to liberty as in the case of Hungary? Or are we to try some other method? Does the Polish request for aid offer any possibility for contributing to peaceful liberation? In this connection, we should note that Poland has recently moved into a more independent position with respect to the Soviet Union. Its capacity to maintain even that limited position of freedom may well depend on whether or not some measure of interim economic support can be obtained from the Western nations.

The aid the Polish mission seeks is largely in the form of loans to purchase agricultural surpluses from this country. I need hardly remind you that we have those surpluses in great abundance. If the Poles do not get

food from us they have two alternatives—to turn back to a greater dependency on Russia or to let their people starve. If they choose the latter we may be sure, moreover, that it is not likely to be the Polish Communists who will go hungry.

Further, all reports indicate that there has been some liberalization of political life inside Poland under the present Gomulka regime. The recent election was freer than any Poland has had since the war. The Gomulka regime has made peace with the Catholic church in Poland—the church of the great majority of the Polish people.

And what of the broader implications of a decision on aid to Poland? What of the impact of the decision on other Eastern European countries—on the liberation of Rumania, Czechoslavakia, and Bulgaria? Any decision will certainly influence them either to draw the strings with the Soviet Union tighter or to seek to loosen them. What of its effect on a divided Germany? German unification, one of the critical questions of peace in Europe and in the world, is closely related to what happens in Poland.

There are other factors that I might mention which have to be considered in this seemingly simple decision of whether or not to provide aid to Poland. I think, however, that I have said enough to make clear that we cannot pose the issue simply in terms of "should we give aid to Communist Poland?" We might well rephrase the question in these terms: "Will aid to Poland contribute to international stability and security and hence serve our own national security? Apparently, the President believes that such might be the case, for the Polish aid mission is in this country on his invitation.

I began my remarks on the subject of taxes and I should like to revert to that matter before concluding. I wish I could hold out the promise of a return to the good old days of a tax rate for Chicago of $48.90, without of course restoring the right-of-way to the pigs in the city streets. I believe most of us, however, would be satisfied with a considerably higher rate than that provided it were considerably lower than what we now have.

I believe further that we can have a lower tax rate. The key to significant reduction, as I have stressed throughout my remarks today, is a more effective foreign policy. And there are steps to that end which can and should be taken promptly. Here are a few. We need to restore and strengthen our relationships with democratic countries abroad on the basis of mutality of interests and mutality of sacrifice. Unless the free nations maintain their defense in common, each will pay an enormously increased price to try to maintain it alone and most may not be able to maintain it at all.

With respect to foreign aid, these programs are now under careful scrutiny in the Senate. From personal observations in many parts of the world, I am convinced that substantial savings can be made in foreign aid not only without detriment but with positive benefit to our interests and to the interests of other free nations.

There is a desperate need to streamline and coordinate the activities of the many governmental agencies which are now egaged in foreign activities. Not only is this diffusion of responsibility in itself wasteful of public funds, but it can also result in grave damage to our relations with other nations. The key factor here is to restore responsibility for foreign policy to where it belongs—to the President and his Secretary of State.

These are the first steps. They can lead, in time, to others. Most important, they can lead, in time, toward an effective foreign policy, a policy that will yield more security for the Nation in a more peaceful world. That is the only kind of policy which will serve the interests of the people of the United States. That is the only kind of policy which is worthy of the people of the United States.

Position of North Dakota State Welfare Board Regarding Federal Appropriations for Public Assistance

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 18, 1957

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram received by me, which is similar to one received by my colleague [Mr. LANGER], from Mr. Carlyle D. Onsrud, a member of the North Dakota Welfare Board. The telegram pertains to certain pending appropriations.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

BISMARCK, N. DAK.

HON. MILTON R. YOUNG,
United States Senate,
Washington, D. C.:

North Dakota seriously concerned regarding Department of Health, Education, and Welfare appropriation for public assistance. The stalemate on this appropriation puts in jeopardy May and June grants for recipients of old-age assistance, aid to the blind, aid to dependent children, and aid to the permanently and totally disabled. North Dakota can advance State funds for May. If the stalemate continues it cannot guarantee operation except in old-age assistance A question whether State Welfare Board can advance State funds on any program unless it is fairly certain Federal funds will come subsequently to replace the State funds substituting for Federal funds.

Likewise concerned with that part of that appropriation dealing with administration of public assistance. The Federal Social Security Act provides that the States will be reimbursed 50 percent matching for administrative costs of these programs. This is a long-standing principle and the Federal Government has a resounding legal and moral obligation to live up to the commitment in the act. A State welfare director makes his recommendations for administrative costs to the State legislature very 2 years, based on the receipt of Federal moneys according to what the Federal Government contracts to do by its own act. The 53 boards of county commissioners make their budget on the basis of reimbursement from the State Welfare Board of a percentage of funds for administration. The Congress by breaking away from this principle through the process of closed-end appropriations snatches the rug out from under responsible administration of public assistance so sensitively attuned to every level of government following a formula. Very genuinely and sincerely I think that any closed-end appropriation for administration both for fiscal 1958 and the deficiency for fiscal 1957 completely nullifies the 50-50 provision already in the act. This we regard as unselective cutting of a dangerous character because reasonable and adequate administration of public assistance depends on administrative money to employ caseworkers and county directors to investigate and serve the North Dakota citizens that need public assistance. A closed ceiling on administrative grants for individuals or for the administration of an admittedly complicated program, realistically high costs of living and medical care cannot be nullified by inadequate appropriations. The times therefore call for a tighter screening than ever to exclude those not legitimately in need. Once on the rolls the cost is high. Indiscriminate tinkering with administration through inordinate cutting could cost many millions because of lack of help.

We urge strongly that the Congress use essential prudence in not adopting a closed-end appropriation in either grants or administrative funds. We want to assure you that the State Welfare Board in North Dakota is concerned about the high cost of government as well as the Congress. We know the Social Security Administration and the American Public Welfare Association would welcome an examination of the reasons that support the type of appeal that I am making today. Let there be an examination but let it come with ample opportunity for an objective, comprehensive, and intelligent analysis. Impulsive action will do much harm to so many people. We would appreciate very much your efforts to restore the cuts made in public-assistance administrative costs so that they will be in harmony with the recommendations of the Department of Health, Education, and Welfare. We would ask very humbly and sincerely also that the principle of open-end appropriations for grants and administration be continued as a vital essential of adequate public assistance in our State and in the Nation.

With kind regards,

CARLYLE D. ONSRUD.

Aviation Facilities Planning

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, April 18, 1957

Mr. BRICKER. Mr. President, last week the chairman of the Committee on Interstate and Foreign Commerce, the Senator from Washington [Mr. MAGNUSON], the Senator from Kansas [Mr. SCHOEPPEL], and I, in response to a recommendation of the President, introduced an aviation bill to create a commission for the promotion of the aviation program to meet the advent of jet propulsion planes.

I ask unanimous consent to have printed in the Appendix of the RECORD a report by Mr. Edward P. Curtis, the President's special adviser in this field, which was forwarded to the Senate at the time of the President's message on the matter. I make this request so that all Members of the Senate may have the advantage of this very critical analysis, and the suggestions for solving the problem.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

INTERIM REPORT OF SPECIAL ASSISTANT FOR AVIATION FACILITIES PLANNING, APRIL 1957

Shortly after assuming the duties of Special Assistant for Aviation Facilities Planning last year, the facts on our air traffic in the United States began to pour into my office. The alarm which has been voiced in the past from many sources is, in fact, supported by evidence that our airways and terminals are subject to increasing congestion.

Over 65,000 aircraft are flown daily in the United States. We have counted, with the aid of radars, as many as 220 aircraft flying at one time in the vicinity of a major city. Many thousands of military jets mingle in the mixed traffic of our airways and serve to

accent the dangers of "see and be seen" rules. The pilot needs assistance if he is to cope with the great increase in aircraft speed and if the danger of collisions is to be minimized.

The present situation is perhaps no more startling than the extraordinary growth in air traffic which the public desires and the economy will support in the future.

In 1946 only 6 billion passenger miles were flown in the United States by the airlines. In 1956 this had mushroomed to 20 billion passenger miles. My studies show that this figure will be approximately 70 billion in 1975. In addition, the present 61,000 private United States aircraft will exceed 100,000 in 1975.

Clearly, the safety and convenience of the public now and in the future requires more sophisticated and energetic efforts to reduce the hazard and delay in the Nation's air traffic. The Federal Government must lead and support this effort. The present vigorous program of the Civil Aeronautics Administration to expand its existing facilities using known techniques is highly commendable and deserves our full support. Its full energies will be needed to accomplish this. The specific proposal of legislation attached to this report in no way affects the operational measures which the Civil Aeronautics Administration intends to carry out.

I have searched thoroughly for the basic causes of our airways problems, and one in particular has emerged sharply: the military and civil agencies in the Federal Government which control and expedite air traffic are not provided systems acceptable to them with which to modernize their operations. Acceptability depends, in large part, on joint test and evaluation by civil and military pilots and ground controllers.

The Government can take steps to solve this problem now, and I respectfully attach a draft bill which proposes legislation to do it. Therefore, I wish to explain this problem and its solution, which is urgently needed. This is the purpose of the interim report.

A search was first made to determine why aggressive efforts have not been made in the past decade to modernize the systems and methods used to assist our air traffic. I found that there was no lack of scientific ideas. In fact, an over-abundance of electronic systems have been developed in the laboratories to improve our terminal and enroute operations. Most of these have been shelved and never used. The key to this dilemma may be found in the organizational arrangements in the executive branch which are intended to set the goals, to develop, and to select the systems and methods which will meet these goals.

The problem of modernizing the airways was clearly recognized in 1948 as one which required urgent action. The actions taken then have not been effective. The Government attempted to resolve the technical conflicts in air traffic control at that time by creating the Air Navigation Development Board. The board was established by an interagency agreement between the Departments of Defense and Commerce. Many excellent men have bent their efforts toward making it work. However, the statutory authority of each of the two agencies and the clouding of the air traffic control problem by an understandable concentration on agency missions have made the board far less effective than anticipated. There being just two voting members on it, all actions have required unanimous agreement. This board of two members, without legal status and without control of its own funds, has been unable to bring sufficient authority, decision, or clear objectives to bear on air traffic problems.

In addition, there are several Government and industry committees which have deliberated constantly in the past 10 years on the goals and the techniques for air traffic control and air navigation. In spite of the usual difficulties of committee action, they have produced, in the past, some useful advice. However, there has been no one agency with specific authority and capability for them to advise.

The determination of our goals, and the selection of systems and methods for controlling our air traffic, has been dangerously slow. It cannot be expedited by committee and interagency coordination. This was not recognized 10 years ago, and today we find our air traffic system antiquated and under strength.

The rapid, continuing growth of aviation foretells future conditions which demand a new element of decision making now, a more modern organizational structure to evaluate and select our air traffic system of the future.

This shortcoming has been recognized and separated from many other organizational problems in aviation. The nature of its remedy and the urgency of need has prompted me to prepare a draft bill and clear it with the interested executive departments. This bill is intended for the use of Congress in creating an Airways Modernization Board. The chairman would be appointed by the President, and would have no affiliations with existing Government agencies. The Departments of Commerce and Defense would each supply one member to the board, in view of their basic interest in its activities.

The Airways Modernization Board, as an independent agency, would be responsible for developing and consolidating the requirements for future systems which are needed to provide the necessary communications, navigational aids, and control needed to accommodate the future air traffic in the United States. It would be responsible as well for the systems engineering, the evaluation, and the selection of such aids as will best serve the needs of aviation.

This bill recognizes that military and civil aviation share the same airspace. It recognizes that the selection of future systems and methods of control of air traffic is a public action in the broadest sense. The Board is authorized to assemble military as well as civil personnel to assist in conducting its affairs. The Board is likewise expected to arrange for satisfactory and equitable advice from the users of aircraft and the engineering talents of industry. In other words, the Board will conduct a joint analysis, test and selection activity which recognizes that the national system must accommodate the civil and military air traffic in peace or war.

The overall system is an essential part of our national defense against air attack. It likewise must respond to the growing demands of public need. These apparently different requirements have not been subject to resolution by the committee conference methods which have been used. Therefore, the Board is expected to engage in extensive test and experimentation in the field, where the intricate problems of procedure and equipment can be tried, and the pilots and traffic controllers can experiment together, bringing the skills of science to bear, and to resolve their problems. This Board, with an impartial Chairman, will then be able to arrive at decisions and specify the most advantageous systems from an economic, operational, and technical point of view.

It is intended that this Board will specify new systems which will best serve the needs of all air navigation and traffic control to the interested military and civil agencies. It is not intended that the Board will have the authority to develop or procure the final ground or airborne equipments to be used in operations.

The Airways Modernization Board is proposed as an interim organization to establish a point of responsibility for system development and selection. At present, this kind of activity is scattered throughout the two principal agencies. This bill is proposed in order to consolidate this activity and to initiate the joint test and evaluation work which is so urgently needed if this country is to avoid an increase in delay and hazard to air traffic.

The functions which the Board will perform are entirely in consonance with the considerations being given to a broader change in Federal Government organization for aviation matters. In my final report, I intend to cover the broader plan. However, it is now clear that much more thorough examination needs to be undertaken in order to achieve a durable permanent organization. To recommend such in final form too quickly might result in improvisations which would complicate or delay the expected action necessary to accommodate the civil and military needs of aviation in the future.

Consequently, the Airways Modernization Board is proposed as the most expeditious and effective way to commence the long-range improvement of our air traffic systems. Its tenure of 3 years is proposed as sufficient to establish the permanent functions of joint test, evaluation and selection of air traffic systems. This period of time likewise will permit the executive branch to plan further organizational adjustments into which the functions of this new Board will logically fit.

Respectfully submitted.

EDWARD P. CURTIS.

Senator O'Mahoney Understands Threat to Liberty in Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 18, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Senator O'MAHONEY Understands Threat to Liberty in Civil Rights Bill," published in the News and Courier, of Charleston, S. C., under date of April 17, 1957. The able editor of this outstanding newspaper is Hon. Thomas M. Waring. This editorial commends the distinguished Senator from Wyoming [Mr. O'MAHONEY] for his sound position on the question of the right to trial by jury, and how this important part of our heritage is being threatened by the so-called civil rights bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR O'MAHONEY UNDERSTANDS THREAT TO LIBERTY IN CIVIL RIGHTS BILL

Speaking at the annual banquet of the Hibernian Society in Charleston March 18, 1947, Senator JOSEPH C. O'MAHONEY, of Wyoming, stressed the fact that the United States has repudiated the doctrine of arbitrary power.

This week, 10 years after he made this statement, Senator O'MAHONEY gave evidence that he believes what he said. The Democratic Senator lined up with southern critics of the so-called civil rights bill. He said he was in favor of a civil rights bill but one that is conceived in justice and freedom rather than in any thought of punishment.

Senator O'MAHONEY told reporters that the proposed presidential Civil Rights Commission to investigate complaints of civil rights

violations could easily do more harm than good. And with respect to another part of the bill vigorously opposed by southern Senators, he said, "I don't think we should be afriad of a jury trial in matters of this kind." In announcing his stand on the legislation, he said that the South has made many striking advances in racial relations, while such relations in some other parts of the country have worsened.

Senator O'MAHONEY's stand on the civil rights bill is of major significance. His statement shows that the South is gaining ground in its battle to convince other regions that the force bills are a threat to the liberties of all Americans.

Senator O'MAHONEY is not a Western conservative like, say, Senator BARRY GOLDWATER, Republican, of Arizona, who might be expected to line up with southern conservatives. The Senator from Wyoming is a western liberal and an oldtime supporter of the New Deal. Hence his acceptance of some of the southern constitutional arguments is all the more meaningful.

If Senator O'MAHONEY is convinced that the right to jury trial and other parts of our heritage are being threatened by the civil rights bill, the likelihood of convincing other northern and western Senators is considerable.

In order to overcome the propaganda barriers of the NAACP and convince these Senators, the South must continue to argue its case—and on the highest level. Senator SAM ERVIN of North Carolina has done especially fine work this session in accomplishing just that.

The other task facing southerners is that of insisting on respect for law and order throughout our region. The enemies of the South must not have any excuse for urging Federal intervention. Hoodlumism must be put down. The ignorant elements who join the Ku Klux Klan must be made to realize they are under the eyes of local and State police. Responsible men must stay active in movements such as the Citizens Council, and prevent infiltration by troublemakers or hotheads.

If the South can speak with dignity in Washington and act with honesty and good sense at home, there will be more Senator O'Mahoneys who will realize southerners are fighting the good fight for American liberties.

What Can We Do?

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 18, 1957

Mr. HILL. Mr. President, the Reverend James A. Chandler, of Mobile, Ala., is a retired Methodist minister who, since giving up his active ministry, has continued to write articles on religious subjects even though confined to his bed because of illness.

Reverend Chandler's article, entitled "What Can We Do?" which appeared in the February 5, 1957, issue of the Methodist Christian Advocate, published in Birmingham, Ala., is an inspirational call for steadfast faith in our God and for the optimism and hope such faith engenders for the future.

I ask unanimous consent to have Reverend Chandler's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT CAN WE DO?

(By Rev. James A. Chandler, retired)

"In a world which teeters on the edge of an abyss of terror and death, what can we as individual Christians do?" (Editorial in Methodist Christian Advocate, December 4, 1956.)

We can trust God and the moral order of the universe.

We are not accidents, neither is the world. If God has a purpose in everything and if on the earth nothing walks with aimless feet, this is not an aimless or a teetering world. Therefore, it must end right.

"That which began best, can't end worst,
Nor what God blest once, prove accurst."
—*Browning.*

If we sing, "This is our Father's world," we should believe it.

Parents are more responsible for their children than they are for themselves. They did not ask to be born into the world. In like manner, God is more responsible for the world than the world is responsible for itself or those who dwell within it.

Christians cannot believe that blind fate holds helm or that God has abdicated. His throne to the Devil. It is therefore difficult to believe that God will suffer His purposes to fail or His world to go to pieces.

Christians cannot justify any hopeless outlook upon the future. We do not know what the future holds, but we know who holds the future. The parables of the leaven and of the mustard seed indicate the triumph of the Kingdom of God in this world. St. John declares that the holy city, the new Jerusalem, is to come down from God out of heaven into this world and that the tabernacle of God is to be with men. (Revelation 21: 2–3.)

The lights are not going out all over the world. "There is not enough darkness in the world to put out the light of one candle." "The light shines in the darkness, and the darkness has not overcome it." (RSV John 1: 5.)

The earth may teeter and totter and reel, but the foundation standeth sure. The seas may roar and deep answer unto deep, but the Lord on high is mightier than the noise of many waters.

"In vain we search the lowest deeps, for Him no depths can drown."

He whom the winds and the waves obeyed always rebuked the fears of His disciples. With Christ, the master of storm and tempest, on board, we need not flounder nor drown in a sea of fear. "We are saved by hope." No Christian can be a pessimist.

Because of the world's conflicts and commotions, many fear the destruction of civilization and prophesy the end of the world. Wars and rumors of wars are cited as proof that the end is near. But the world has had those conditions through long centuries. "History proves that in the last 2,500 years, this world has had 11 years of war for every year of peace" (Nathanael Olsen). Yet people have been expecting the end of all things and the bodily reappearing of our Lord ever since the days of St. Paul. In fact, St. Paul and the early Christians expected the Lord's return during their lifetime. It is not difficult to understand. The loving heart naturally longs for the return of its beloved. But the times are in God's hands and no man knoweth the hour.

"This is my Father's world." If so, let us trust Him to see it triumphantly through all that threatens its destruction.

The philosophy of St. Paul, the greatest philosopher that ever lived, is our stabilizer, a gyroscope particularly apropos to present world conditions. To St. Paul, all the commotions and convulsions of the inanimate world, the groans of beasts, and the groans of man, are in sympathetic understanding and perfect unison—"the whole creation groaneth and travaileth in pain together until now" (Romans 8: 22). To St. Paul, who could read the thoughts of plants and trees and could hear the heartbeat of nature, the universal frame of nature is in the throes of a mighty travail felt in every part and crying out for deliverance—as a mother with child—and that so sure as there be birth pangs so sure must there be a birth, the birth of a new world, a new humanity, a new and better social order (Romans 8: 22). Out of St. Paul's philosophy of pain grows St. Paul's philosophy of the Christian life (Romans 8: 26–39). So that, and no wonder, he could exultantly declare, "And we know that all things work together for good to them that love God, to them who are the called according to His purpose."

Isaiah, looking far down the vista of time, prophesied the time when "nation shall not lift up sword against nation, neither shall they learn war anymore" (Isaiah 2: 4). If so, how can it be that the world "teeters on the edge of an abyss"? He also wrote with the pen of divine inspiration, "He (the Christ) shall not fail nor be discouraged until He has established justice in the earth" (Isaiah 42: 4). There is no place in our holy religion for either the word or the spirit of defeatism. Victory is perched upon our banners. No army could have the heart to win, if it should be assured it marches to a sure defeat. Whatever the seeming or the temporary reverses, God's world does not "teeter on the brink of an abyss" nor need anyone's life "tumble in."

We cannot believe that God will suffer His world to be destroyed by bombs or all the forces that the wicked can muster. The Kremlin denies the existence of God, hates righteousness, and defies the moral order of the universe. The Kremlin has within itself the elements of its own inherent rottenness and final destruction. "A famous historian lists 19 civilizations which have flourished and disappeared. Only 3 of these were overcome by outside forces, 16 of them decayed from within" (Dr. Charles M. Crowe). The swords Russia fashions against the freedom-loving nations cannot prevail. How can they, if it is still true that "righteousness exalteth a nation and sin is a reproach to any people" and that "except the Lord build the house, they labor in vain that build it?"

A bishop had been walking the floor far into the night, worrying about certain evil forces that seemed to prevail over all that is righteous and good. Through sheer exhaustion he fell into his easy chair and was soon sound asleep. He dreamed that an angel came to him and said, "Bishop, you can undress now and go to bed: the Lord God will take over the rest of the night."

If this is our Father's world, we cannot accept any thought that God will suffer His purposes to fail, or that He will stand idly by and see His world destroyed by the devices of the wicked, or by all the military forces they may assemble against it.

In the revised standard version of the 75th Psalm, we find these very significant words:

"When the earth totters, and all its inhabitants, it is I who keep steady its pillars. I say to the boastful, 'Do not boast,' and to the wicked, 'Do not lift up your horn: do not lift up your horn on high, or speak with insolent neck.' For not from the east or from the west and not from the wilderness comes lifting up, but it is God who executes judgment, putting down one and lifting up another.

"When the earth totters, and all its inhabitants, it is I who keep steady its pillars."

How To Spoil a Political Work of Art

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, April 18, 1957

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "How To Spoil a Political Work of Art," written by Arthur Krock, which was published in this morning's New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO SPOIL A POLITICAL WORK OF ART

(By Arthur Krock)

WASHINGTON, April 17.—One of the fondest beliefs of the Democratic management in the 1956 presidential campaign was that the voters could be persuaded that Dwight D. Eisenhower was a do-nothing President, idly uninformed on public issues and content to let a few advisers decide everything—the kind of head of state the French know historically as "le roi fainéant." And the Democratic campaign management as well as the party candidate for President apparently came to believe this themselves.

By October 4 Adlai E. Stevenson had sufficiently completed this political portrait to show it to a Wilkes-Barre, Pa., audience, as follows: "Unfortunately, this failure of leadership is not unique [his reference was to the President's news conference statement that he didn't know why the Republicans in Congress had not supported a bill he favored to relieve unemployment in depressed areas]. In other vital matters * * * it has appeared that the President has not known or has not cared what was going on." And Stevenson, who later was to refer to the recumbent in the White House, inquired if it "was any wonder why we ask, 'Who's in charge here?' "

This correspondent agreed at the time, and before and since, that there are some in the multitude of questions posed at White House news conferences which it might be reasonably assumed the President could answer informatively but which he has seemed unable to do. And this could lend support to the deduction either that his staff failed to brief him on matters as it should, or that he was strangely unconcerned with them.

But close daily observation of the workings of the executive branch never created an impression in this Department that there was any resemblance to reality in the portrait of the President painted by Stevenson and the Democratic campaign management. To the contrary, there was continuous proof positive that the answer to the question, "Who's in charge here?" always has been "Eisenhower." And the election results were powerful evidence that the great voting majority accepted and approved this as the fact.

THE VOICE OF AUTHORITY

The President's news conference today was particularly interesting with respect to this campaign background. His reaction was spontaneous to certain questions that concerned the powers and duties the Constitution and his oath impose on the President alone. And it was the unstudied response of a man who is master in his house.

Had the President seen a letter to him from 10 Members of the Joint Congressional Committee on Atomic Energy in which he was asked to "give the highest consideration" to the reappointment of Commissioner Thomas E. Murray, the Democratic dissenting minority of the Atomic Energy Commission? The President hadn't seen it, but when he did his reaction would be that "it is my responsibility to appoint people in the executive department." And he emphasized "my."

Would the Strategic Air Command be used as an offensive weapon in some future small war, as General LeMay said it was ready to be employed? "When [if] you get a picture," replied the President, "of the great Strategic Air Command charging all over the world for little police troubles, of course that would be entirely wrong." There was no doubt the Commander in Chief, and not just the constitutional one, was speaking.

Has the administration changed policy in the respect that it will now discourage any use by American shipping of the Gulf of Aqaba, which it has asserted to be a free international waterway, "while negotiating with the Egyptians on the Suez question"? "We have not changed our policy with respect either to Aqaba or Suez, I assure you," the President answered, and the last three words bespoke full knowledge and final authority.

BOSS OF THE RAILROAD

If King Hussein of Jordan asks for our military or economic aid, will we give it as the first use of the Eisenhower Mideast Doctrine that Congress has sanctioned in advance by resolution? If Jordan is attacked in the circumstances of that resolution, and asks for aid, the answer will be yes, said the President. And if the circumstances bring into play instead the Anglo-French-American commitment of 1951, the answer again will be yes. Once more there was no resemblance to the Democratic campaign picture last year.

Did Postmaster General Summerfield cut down the mails on his own or with the President's advance approval? "He acted with my complete approval and came to me before he did it." And so with every question that concerned the Presidential authority and responsibility. Even when he explained that he had relied wholly on subordinate counsel—as in the appointment of Scott McLeod as Ambassador to Ireland—the President added that the subordinate "is held responsible by me" for the end results of his counsel.

The Federal railroad is run badly on occasion, and the timetables are not always to be relied on, as when the budget express reverses its direction. But there is no doubt who is in charge.

Air Rights and Defense

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, April 18, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Air Rights and Defense," which was published in the Washington Post and Times Herald of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIR RIGHTS AND DEFENSE

The Dutch Government did not get all that it asked for in the air-rights agreement recently concluded with this country. But Prime Minister Drees' personal appeal to President Eisenhower to intervene in the case probably may be credited with the decision to overturn the recommendation of the Civil Aeronautics Board. Apparently on Mr. Drees' argument that the Dutch must maintain "their historic position as a world carrier if (Holland) is to pull its weight as a sound member of the Western Alliance," the Netherlands airline was granted 2 additional air routes serving this country, 1 to Houston and 1 to New York. Holland already had two American routes.

This means, in effect, that foreign policy considerations have outweighed economic arguments in the decision—partly at the expense of American and other foreign airlines now linking this country and Europe. This alone does not make the agreement unsound as a matter of national policy. Mutual defense often necessitates concessions. The question is whether the basing of an international air-rights agreement on this sort of consideration does not invite a complete breakdown of the already rather subjective procedures by which the CAB assigns such routes.

Generally this newspaper favors the broadest opportunities for the airlines of all nations to share in the world's air commerce. The arbitrary exclusion of foreign lines from this country would amount to a kind of protectionism altogether inconsistent with this country's desire for freer world trade. But this does not mean that the interests of American carriers—which are competing against governmentally underwritten foreign carriers—should be cast aside, or that economic or unnecessary operations should be allowed. Nor does it mean that this country should fail to seek a mutuality of air-rights concessions and scrupulous respect for past accords. As for defense considerations, they could and should be met in some more direct fashion, although the needs of mutual security do have a proper place in the country's general trade philosophy, of course.

Moves are afoot to provide for congressional review of international air agreements. Presidential intervention, it seems to us, complicates these negotiations more than enough already. Probably there is no entirely satisfactory answer to a problem that invariably touches on foreign policy as well as domestic economies. But debates in Congress would scarcely help matters. The desirable course, rather, is to place more reliance on the deliberate and dispassionate findings of the CAB staff in the absence of really compelling reasons to overrule them.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. WIER. Mr. Speaker, under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I desire to insert the report of the Minneapolis Citizens' Committee on the Study of Federal Aid to Education. This report has been submitted in letters by Frank E. Adams, president of our board of education, and Rufus A. Putnam, superintendent of schools, whose letters of submission are incorporated.

The letters and report follows:

MINNEAPOLIS PUBLIC SCHOOLS,
Minneapolis, Minn., March 29, 1957.

The Honorable ROY W. WIER,
The House of Representatives,
Washington, D. C.

DEAR MR. WIER: On January 15, 1957, the board of education authorized the president

of the board to appoint a citizens' committee to study Federal aid to education and to submit findings and recommendations to the board of education, to be forwarded to the Congress of the United States for action.

At the meeting of the board of education which was held on March 26, 1957, the board voted to endorse and support the report which the citizens' committee presented to the board and to send copies of the report to the Minnesota delegation in the Congress of the United States.

A copy of the report of the citizens' committee is enclosed.

Yours very truly,

RUFUS A. PUTNAM,
Superintendent of Schools.

MINNEAPOLIS PUBLIC SCHOOLS,
Minneapolis, Minn., March 29, 1957.

Congressman ROY WIER,
House Office Building,
Washington, D. C.

DEAR ROY: As president of the Minneapolis School Board, and by action of the school board directors, I appointed a special committee of Minneapolis citizens to study the entire question of Federal aid to education. I am enclosing herewith a copy of this report and the committee members.

Our board met on March 26, 1957, and unanimously endorsed this committee's report. It was voted to send copies to our Senators and Congressmen for their consideration.

It has been my feeling that some form of Federal aid to education is not only inevitable but necessary. It was my concern as to what type of aid and who would be the recipients that prompted our study.

We hope that our conclusions will serve for some sort of action in the right direction.

To my knowledge this is the first time any large school board has undertaken such a project.

Very truly yours,

FRANK E. ADAMS,
President, Minneapolis School Board.

REPORT OF THE SPECIAL COMMITTEE TO STUDY FEDERAL AID TO EDUCATION APPOINTED BY MINNEAPOLIS BOARD OF EDUCATION, MARCH 25, 1957

To the Members of the Board of Education:

The members of your committee, appointed in accordance with your resolution of January 15, 1957, have considered the many facets of the problem of Federal support for the public schools.

This committee realizes and believes in the necessity and inevitability of Federal aid for publicly controlled and tax-supported schools, and recommends:

1. Federal support for the public schools should be distributed solely on the basis of the number of children of school age within each State.

2. Control of the public schools should remain the complete responsibility of the States and local school districts; and any funds derived from Federal sources should be channeled to the several States through the United States Office of Education and the respective State departments of education.

3. The basic responsibility for the financial support of the public schools should remain with the States and local communities; but it is in the national interest and entirely appropriate for the Federal Government to give continuing and extended partial support.

4. In addition to providing partial current support of education, and filling other educational needs, Federal funds should be used to construct and equip public-school buildings.

5. The offshore oil and gas resources beyond the limits of State jurisdictions belong to all the people; and the proceeds from such resources should be dedicated to the use of publicly controlled and tax-supported schools.

Respectfully submitted.

SPECIAL COMMITTEE TO STUDY FEDERAL AID TO EDUCATION,
JAMES B. LUND, *Chairman.*
MRS. HOWARD S. KAHN, *Secretary.*

MARCH 25, 1957.

The recommendations of this committee have been established upon certain basic considerations which may be summarized as follows:

Proposals for Federal aid to schools now being considered by the Congress generally emphasize aid for school construction. These proposals are based on the premise that many school districts are unable to meet the classroom shortage through their own resources; consequently, these districts should be helped through Federal grants. Even though some of the proposals would distribute Federal funds among the States on the basis of the number of school children, each State would determine how the funds would be apportioned among the school districts. In most States, need and the ability to pay would be major factors in determining the amount allotted to each district.

Because Minneapolis has more taxable wealth per pupil than the average community in Minnesota or in the Nation, the Minneapolis schools would probably not benefit directly from any plan of Federal aid which was based upon equalization of need. The proposals now before Congress would be of indirect benefit, perhaps, by providing some aid to other Minnesota communities whose needs might otherwise have to be financed from State taxes, a substantial part of which are paid by Minneapolis citizens.

In America, schools have been kept close to the people and there is general agreement that it is in the interest of democracy to keep them thus. Financial support is closely related to control over expenditures. There is general concern that Federal support should not be synonymous with Federal control. In a Federal program based on need, or equalization, there is a danger of Federal control. In order to preserve the fundamental principle of local control of public schools, therefore, any program of Federal support should be distributed on a purely objective, pupil population basis.

The Federal Government creates no wealth. It has no resources which are not available to States and local communities. However, with the growth of nationwide industries whose wealth-generating powers stretch across State lines, and with the corresponding growth of tax collecting powers and the increasing concentration of tax collections at the Federal level, greater equity is secured by assessing a part of the cost of education through taxing powers at the Federal level. There is also real justification for using the income from certain natural resources which belong to all the people, such as the offshore oil lands, for the benefit of all the people by using such income to improve the quality of schools throughout the Nation.

Because in a democracy all have equal votes in determining the affairs of Government; because education is the foundation of high living standards; and because of the mobility of population within and between the States, it is in the interest of all communities and of all citizens that there should be no "educational slums." Because good education for children in all parts of the country is a national concern, the Federal Government may properly be called upon to provide some support for the educational program. Because local control of schools is also important, the control and expenditure of such funds should be determined by the local district.

Membership of the special committee to study Federal aid to education: James B. Lund, chairman; Mrs. Howard S. Kahn, secretary; Frank Adams; Benjamin Drake; Mrs. Donald Dunshee; Shelton Granger; A. I. Heggerston; Dr. Frederick W. Hill; John Huebner; York Langton; Kenneth F. McNulty; Mrs. M. L. Mansfield; Mrs. A. J. Smaby; Dr. Wm. E. Watson; Robert Wishart.

TVA

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, April 18, 1957

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely editorial regarding TVA, published in the Courier-Journal, of Louisville, Ky., on April 5, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"NOTHING IN MIND," THE PRESIDENT SAYS, REGARDING TVA

Next month President Eisenhower must appoint a new director to the board of the Tennessee Valley Authority to succeed retiring director Dr. Harry Curtis, and on his selection depends the life or death of TVA. Yet the President revealed at Wednesday's press conference that he hasn't the foggiest notion of what is at stake in the appointment, and blandly admitted that he had nothing in mind about the qualifications of the man to be chosen.

Concerning the appointment, Frank van der Linden, of the Nashville Banner, asked if the man "would have to be an Eisenhower Republican, or an Army engineer like General Vogel, or what did you have in mind on that?" Replied the President, "Well, I haven't got anything specifically in mind for the person you are talking about. But I believe, of course, it is a Board this is required to be bipartisan, and I don't remember whether the man going out is a Republican or a Democrat."

The President is mistaken. There is nothing in the TVA enabling act requiring the Board to be bipartisan or nonpartisan, and while it is surprising that Mr. Eisenhower is not familiar with the men who head this vitally important governmental agency, the politics of Dr. Curtis has no possible bearing on the upcoming appointment.

The President went on to say, according to the official transcript, that there are many appointments in which politics should play no part, and that he tries to get the best men, an effort which apparently failed when he chose his previous TVA Director, Gen. Herbert Vogel.

Concerning TVA, the President said, "You certainly have to get a qualified individual, who would be a man knowing something about public utilities, their financing, and, in general, what I would call a middle-of-the road philosophy in all of this field of governmental intervention in local affairs."

In other words, the new director of TVA must be a man who considers the agency an example of intervention in local affairs, though it does not intervene in local affairs, and must have a middle-of-the-road, or lukewarm, attitude toward the very enterprise he must help to guide. That is to say, he must be a man who knows something about power (how about flood control, land use, reforestation, administration, naviga-

tion?) and who regards TVA with dynamic suspicion, or ardent apathy.

That's what President Eisenhower says. It isn't what the law says. The law says the Director of TVA shall be a man who believes in TVA.

The Nickel Situation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend and revise my remarks, I am including in the RECORD a letter I addressed on April 3, 1957, to the Honorable Gordon Gray, Director of the Office of Defense Mobilization, and a letter dated March 20, 1957, addressed to me by Mr. John M. Curley, president of the Eastern Stainless Steel Corp.

Over a year ago I became convinced that the Department of Commerce and the Office of Defense Moblization were not taking all the necessary steps to protect American business, particularly in the plating industry, insofar as the allocation of nickel was concerned. Subsequent hearings by 3 committees of the Congress verified this conviction, and the Congress in Public Law 632 of the 84th Congress directed the Secretary of Commerce to make a study of the nickel situation and report thereon by December 31, 1956. The report admitted, in effect, that there had not been fair and equitable distribution, and it is my understanding that some progress has now been made in this regard respecting the plating industry. Apparently, however, there has not been the same attention directed to the plight of other users, and I have accordingly propounded some questions on the subject to the Honorable Gordon Gray, the new Director of the Office of Defense Mobilization.

May I say for the RECORD that it is my hope that Mr. Gray will himself become acquainted with the nickel situation, the manner in which it has been allocated, and the extent to which the Federal agencies have delegated their responsibility for the allocation of this scarce and critical material.

The letters follow:

APRIL 3, 1957.

Hon. GORDON GRAY,
Director, Office of Defense Mobilization, Washington, D. C.

DEAR MR. GRAY: Over a year ago I became interested in the cause of a number of responsible business concerns that use nickel in connection with their operations in the plating industry, others in the stainless steel industry, others in the chemical industry, etc. I became convinced that the Government had a definite responsibility to insure fair and equitable allocation of nickel which was in short supply. This responsibility was increased in my opinion by the fact that 33⅓ percent to 40 percent of available nickel was taken by the Government itself for defense and stockpiling purposes, thus increasing the shortage to civilian users.

As a result of the light of publicity on the matter and following hearings by three congressional committees it became well established that the system of allocation, insofar as platers were concerned, was not fair and equitable. Also the action of the Government in entering into an arrangement with the principal producers of nickel whereby that concern actually allocated the material to American industry was to say the least an unusual delegation if not abrogation of governmental responsibility.

The details of the allocation system were not published in the Federal Register or elsewhere to my knowledge so no one was quite sure just what the system was, the period upon which it was based, the provision for new and expanding businesses, curtailed businesses, etc.

It is my understanding that the Commerce Department, after a survey requested by the Congress, has admitted the validity of the complaints of the platers and that some helpful steps have been taken with respect to the plating industry. However, the situation with respect to operators in the stainless-steel industry and I believe in other industries remains the same. In this connection I enclose a letter of March 20, 1957 from Mr. John M. Curley, president of the Eastern Stainless Steel Corp., Baltimore, Md., wherein certain pertinent points are raised. I would appreciate your comments on the questions raised by Mr. Curley and also on the following:

1. Whether it would be possible to allocate the nickel sinter as he has suggested without involving the regular allotment of those who receive it?
2. Whether additional supplies of the nickel sinter could be similarly handled?
3. Whether some mills are receiving more nickel than they need while others are receiving less than their requirements?
4. Whether there are plans to revise the existing allocation formula?
5. Whether or not there is a written agreement between the Department of Commerce and/or Office of Defense Mobilization and the International Nickel Co. with respect to the allocation of nickel.

I shall appreciate hearing from you with respect to this matter at your early convenience and since there is a widespread interest in this subject I shall place this correspondence in the CONGRESSIONAL RECORD and shall afford your reply similar consideration unless you indicate otherwise.

Very sincerely yours,
JOHN W. McCORMACK.

EASTERN STAINLESS STEEL CORP.,
Baltimore, Md., March 20, 1957.

The Honorable JOHN W. McCORMACK,
Congress of the United States,
House of Representatives,
Office of the Majority Leader,
Washington, D. C.

DEAR CONGRESSMAN McCORMACK: Thanks very much for your letter of March 6 with copy of the CONGRESSIONAL RECORD containing data on the scrap picture as far as export is concerned. This is very interesting and I certainly appreciate your having sent it to me.

You know nickel has been a problem with us and with a couple of other concerns and the whole thing is set up on a ridiculous basis of our purchases from the Nickel Co., in 1950 and 1951. As a result of this, some people get more nickel than they need and we get little or nothing on unrated steel for domestic use.

The nickel situation, however, is easing and there is every indication it is going to ease substantially in the near future. However, in the meantime, we are still suffering for want of nickel and have to go out in the market and pay ridiculous prices for it because nobody is willing to change the formula.

At the present we have been advised by the BDSA that there is 1,500,000 pounds of nickel sinter on hand in Philadelphia in the hands of the National Lead and it has been offered to all the steel companies on the basis that it is available to them, but it will be taken off their regular allotment and, therefore, they all have refused it. We would love to get it, but we have had to refuse it because our regular allotment is so small that we would not get aany electrolytic nickel if we took this sinter at Philadelphia. Sinter can be used by a steel mill, but you still have to have some electrolytic and our allotment is so small we could not even consider taking it. However, if somebody is really sincere, this material should not lie in Philadelphia for over a month just because somebody cannot decide how to distribute it. We have recommended that it be distributed on a hardship basis because the mills will not accept it on a regular allotment basis, although everybody in Washington says it is not controlled.

If they would sell this, or any part of it, as a means of overcoming the very unfair inequity, we would be glad to purchase any quantity of it at the regular price.

There is another million pounds coming in next week which will be in the same position and, of course, what will probably happen, if they are not able to sell it, will be to put it in stockpile as the only other solution. Along this line, if somebody really wants to make sure the budget does not continue on its same high figure before adoption, a good place to look for saving is on the purchases of nickel for the stockpile.

Everybody you talk to on the nickel question will tell you it is not controlled and that the Commerce Department does not tell how it is to be distributed; but, if we got that or any part of it on the basis on which it was offered, it would automatically be deducted from our allotment from the International Nickel Co. as there is a tie-in of information between the various suppliers and whether you call it control or not, we are limited to a very definite figure in spite of the fact that I am sure some mills get more than they need.

If there is anything you could do to shake loose any part of this nickel sinter by getting the machinery working to a point where the facts can be considered and you do not have to be tied to a 7-year-old formula, it would be greatly appreciated and would be of tremendous assistance to us.

I certainly hope there is something that can be done on this because it looks like a possible way of getting more nickel without these people having to lose face which is what it all amounts to.

Very truly yours,
EASTERN STAINLESS STEEL CORP.,
JOHN M. CURLEY, *President.*

Amendments to Public Buildings Purchase Contract Act

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. McGREGOR. Mr. Speaker, I have introduced H. R. 6993, a bill to amend and extend Public Law 519, 83d Congress, and to amend the Public Building Act of 1926, as amended.

The general effect of H. R. 6993 will be to continue the purchase contract method of acquiring public buildings, a program which may be coordinated with existing authority for construction by direct appropriation under the Public Buildings Act of 1926, as amended, and existing leasing authority.

That the Members may know the many advantages of H. R. 6993 herewith is an outline analysis which sets forth the amendments to existing law and accompanying statements in support of the proposed amendments:

OUTLINE ANALYSIS

Section 411 of the Public Buildings Act of 1949, as amended, 63 Statute 176, as added by the act approved July 22, 1954 (68 Stat. 518), as amended, is amended as follows:

AMENDMENTS TO TITLE I, PUBLIC LAW 519, 83D CONGRESS

Amendment

(a) The proviso at the end of subsection (a) reading: *"Provided*, That prior to July 1, 1955, a limitation of not to exceed $5 million is hereby established for such purpose" is hereby deleted and the following added in lieu thereof: *"Provided*, That subject to the foregoing restrictions on total annual payments, any such purchase contract may provide for payments at such intervals as the Administrator may deem necessary and, without regard to the foregoing requirement for equal annual payments, for partial payments during construction to cover interest on and amortization of the earned portion of the purchase price."

Explanation

The recommended deletion would eliminate language rendered obsolete through the passage of time. The substitute proviso would permit the beginning of the purchase contract term at the commencement of the construction so that the amortization of principal and interest may be commenced on that portion of the cost of the improvements as is represented by construction completed to the satisfaction of the Government. It is believed that these changes will facilitate both temporary and permanent financing since they will provide a means of eliminating or reducing short-term borrowing for construction, and of shortening the time the long-term investor must wait after making his commitment before investing his money and receiving amortization payments with interest.

Amendment

(b) The colon after the word "States" in the fifth line of subsection (d) is changed to a period and the remainder of the sentence reading, *"Provided*, That no such agreement may provide for the payment by the United States in pursuance of the terms thereof of moneys in an aggregate annual amount in excess of 15 percent of the appraised fair market value of the property at the date of the purchase contract, or in the case of property where construction shall not have been completed at that date in excess of 15 percent of the fair market value at the date of completion of such construction." is deleted.

Explanation

The proviso which limits the aggregate annual amount of payments under a purchase contract to 15 percent of the appraised fair market value at the date of the contract or the date of completion of construction, depending on whether or not the building is in being at the date the contract is entered into, is inconsistent with the basic authority of the act. Congress sets the maximum limit of cost for the project by approving estimates thereof recommended by this agency and has specified the minimum and maximum number of years over which the purchase price may be amortized, at the end of which time title to the property is required by the statute to vest in the United States. Any arbitrary limitation on the percentage of fair market value which may be amortized annually might render the contract impossible of performance. In addition, the large majority of the projects involve new construction and it is most impracticable, if not impossible, to determine in advance and before completion, what the fair market value will be upon completion.

Amendment

(c) By striking from subsection (e) the words "within 3 years after the date of enactment of this act" and inserting in lieu thereof "on or before June 30, 1960."

Explanation

Subsection (e) of section 411 of the act provides that no appropriations shall be made for purchase contract projects which have not been approved by resolutions adopted by the Committees on Public Works of the Senate and House of Representatives, respectively, within 3 years after the date of enactment of the act. The act was approved July 22, 1954. Therefore, in order that we may proceed with planning for additional urgently needed projects and submit them to the committees for approval it is necessary that the act be continued in force for an additional period and we have here provided for an extension until the end of the fiscal year approximately 3 years beyond the present expiration date.

Amendment

(d) By striking item (2) of subsection (e) and inserting in lieu thereof "(2) an estimate of the maximum cost of the project: *Provided*, That the maximum cost set forth in any prospectus for any project may be exceeded by not more than 15 percent or shall be reduced by an amount equal to the percentage increase or decrease, if any, as determined by the Administrator of General Services, in construction costs generally dating from the time of transmittal of such project to such committees;."

Explanation

Under the method adopted by General Services Administration for implementation of the program buildings are designed to meet the particular needs of the agencies to be housed therein for construction on sites acquired for the particular building. Obviously, the site cannot be acquired or preparation of the plans and specifications undertaken until after complete approval of projects by the Bureau of the Budget and both committees of Congress. Accordingly, the maximum cost estimates required by the law to be included in the prospectus submitted to obtain such approvals are on the basis of sketch plans. As the obtaining of all required approvals, acquiring sites, preparing building plans and specifications, and advertising for bids are a time consuming procedure, the estimates, for purposes of the prospectuses, must precede by periods ranging from 6 to 18 months, the award of construction contracts. The maximum cost estimates in the 99 projects already fully approved were based upon costs current at the time the estimates were made. As indicated by the testimony during the hearing construction costs increased from 10 to 15 percent before we opened construction bids. As a result the maximum cost ceiling set forth in the prospectuses were inadequate to cover current construction costs. While this problem could be alleviated through resubmission of prospectuses, such action would further delay getting the projects underway and would appear to burden, unnecessarily, the committees. Accordingly, this amendment is proposed to provide that the maximum estimates in the prospectuses may be exceeded or shall be reduced commensurate with increases or decreases in construction costs generally.

Amendment

(e) By striking item (3) of subsection (e) and inserting in lieu thereof "(3) a comprehensive plan for providing space for all Government employees in the locality of the proposed project, having due regard for suitable space which may continue to be available in existing Government-owned buildings and in rented buildings;".

Explanation

This amendment will substitute, for the certificates of need by the head of the using agency, a requirement for a comprehensive plan for providing space for all Government employees in the locality of the proposed project. This change will lend more flexibility to the problem of allocation of space in the project based on conditions prevailing at the time of completion of construction.

Amendment

(f) By striking the word "and" following the semicolon in item (7) of subsection (e), by changing such semicolon to a period and by striking item (8) of subsection (e).

Explanation

This amendment eliminates the requirement that prospectuses include a statement by the Director, Bureau of the Budget, of conformity with the policy of the President.

Amendment

(g) By changing the period at the end of subsection (h) to a colon and adding the following *"Provided*, That the Administrator of General Services is authorized to enter into agreements with any State, county, municipality, or any subdivision thereof providing for reduction in the amount of or for exemption from taxes otherwise payable under this subsection."

Explanation

Under this amendment agreements with States, counties, municipalities, or any subdivision thereof for exemption from or reduction in taxes would be permissible.

Amendment

(h) A new subsection (k) to read as follows is added:

"(k) The faith of the United States is solemnly pledged to the payment of all annual payments contracted for under purchase contracts entered into pursuant to this section, and there is hereby authorized to be appropriated in each fiscal year, out of any money in the Treasury not otherwise appropriated, the amounts necessary to provide for such annual payments. Payments under purchase contracts entered into pursuant to this section shall be pledged, if the Administrator of General Services so requires, as security for any loans obtained by a contractor to assist in the financing of the construction of the projects to which the purchase contracts relate."

Explanation

Testimony adduced at the hearing established the fact that the difficulties encountered by contractors in obtaining financing constituted a major deterrent to the implementation of the program. Various potential sources of financing have indicated a lack of interest due to the fact that the Government's contractual obligation to make the annual payments due is the sole security offered. We were advised that a statutory amendment which would pledge the full faith and credit of the United States would materially aid market acceptability. The proposed provision, based on language contained in sections 10 (e) and (f) of the United States Housing Act of 1937, as amended (42 U. S. C. 1410 (e) and (f)), is intended to accomplish the objective without making the contracts public debt transactions. The authority granted by this new subsection, of course, would be subject to the restrictions in the law on total annual payments as well as to all of the other requirements thereof.

Amendment

(i) A new subsection (l) is added to read follows:

"(l) Wherever, in this section, the Administrator of General Services is authorized to

enter into purchase contracts or a purchase contract, such authorization shall be deemed to include any contract or series or group of contracts, including but not limited to contracts covering acquisition of sites, preparation of plans and specifications, financial arrangements, and construction which the Administrator of General Services deems necessary to effectuate any of the purposes of this section."

Explanation

New subsection (e) is a technical amendment designed specifically to remove questions heretofore raised by counsel for financing institutions as to whether the terms "purchase contracts" or "purchase contract" as used in the act include any contract or series or group of contracts entered into by the Administrator of General Services as necessary to implement and effectuate the purposes of the act.

Amendment

(j) A new subsection (m) is added to read as follows:

"(m) Notwithstanding the provisions of the Assignment of Claims Act of 1940, as amended (31 U. S. C. 203, 41 U. S. C. 15), assignments of moneys due or to become due from the United States under any purchase contract entered into pursuant to the provisions of this section may be assigned to any bank, trust company, trust, insurance company, pension fund, other financing institution including a Federal lending agency, or any other individual, firm, or organization providing the financing in connection with any approved project, whether acting as principal or trustee."

Explanation

Counsel for potential investors of pension funds expressed the opinion that, in the absence of a court decision or amendatory legislation, it had serious doubt as to whether a financing institution, acting as pension trustee, could qualify as an assignee under the Assignment of Claims Act of 1940, as amended. The question is not absolutely free from doubt even though the Comptroller General of the United States, by decision dated October 9, 1956, specifically held that the validity of the assignment of the proceeds of a Government contract is not impaired by the fact that the indebtedness secured by the assignment represents an investment of trust funds, where legal title to, and control of such funds are vested in a bank or trust company. Accordingly, new subsection (m) has been drafted to eliminate this obstacle and enable participation of additional sources of financing.

AMENDMENTS TO TITLE II, PUBLIC LAW 519, 83D CONGRESS

Section 2: Subsection (g) of section 202 of the Post Office Department Property Act of 1954, as amended (39 U. S. C. 902 (g)), is further amended:

Amendment

(a) By striking the words "within 3 years after the date of enactment of this act" and inserting in lieu thereof "on or before June 30, 1960";

Explanation

Subsection (g) of section 202 of the act provides that no appropriations shall be made for purchase contract projects which have not been approved by resolutions adopted by the Committees on Public Works of the Senate and House of Representatives, respectively, within 3 years after the date of enactment of the act. The act was approved July 22, 1954. Therefore, in order that we may proceed with planning for additional urgently needed projects and submit them to the committees for approval it is necessary that the act be continued in force for an additional period and we have here provided for an extension until the end of the fiscal year approximately 3 years beyond the present expiration date.

Amendment

(b) By striking the word "and" following the semicolon in item (7) thereof and by changing the semicolon to a period, and by striking item (8) thereof.

Explanation

This amendment eliminates the requirement that prospectuses include a statement by the Director, Bureau of the Budget, of conformity with the policy of the President.

Amendment

(c) By changing the period at the end of subsection (h) to a colon and adding the following: *Provided*, That the Postmaster General is authorized to enter into agreement with any State, county, municipality, or any subdivision thereof providing for reduction in the amount of or for exemption from taxes otherwise payable under this subsection."

Explanation

Under this amendment agreements with States, counties, municipalities or any subdivision thereof for exemption from or reduction in taxes would be permissible.

AMENDMENTS TO PUBLIC BUILDINGS ACT OF 1926, AS AMENDED

Section 3: The first section of the act entitled "An act to provide for the construction of certain public buildings, and for other purposes," approved May 25, 1926, as amended (40 U. S. C. 341), is further amended by striking out "That, to enable" and inserting "That (a) to enable", and by adding at the end thereof the following new subsections:

"(b) No appropriation shall be made to carry out the purposes of this act for any project (1) until the expiration of 30 calendar days of continuous session of the Congress following the date on which the Administrator of General Services has submitted to the Committees on Public Works of the Senate and House of Representatives a prospectus of the proposed project, or (2) where a resolution has been adopted by either committee, during such period, stating in substance that such committee does not approve of such a project. For the purposes of this subsection continuity of session shall be considered as broken only by an adjournment of the Congress sine die, but in the computation of the 30-day period there shall be excluded the days on which either House is not in session because of an adjournment of more than 3 days to a day certain."

"(c) The prospectus of the proposed project shall include (but not be limited to)—

"(1) A brief description of the building located or to be erected at a given location;

"(2) An estimate of the maximum cost of the project: *Provided*, That the maximum cost set forth in the prospectus for any project may be exceeded or shall be reduced by an amount equal to the total percentage increase or decrease, if any, as determined by the Administrator of General Services, in construction costs generally dating from the time of transmittal of such project to such committees;

"(3) A comprehensive plan for providing space for all Government employees in the locality of the proposed project, having due regard for suitable space which may continue to be available in existing Government-owned buildings and in rented buildings;

"(4) A statement by the Administrator of General Services that suitable space owned by the Government is not available and that suitable rental space is not available at a price commensurate with that to be afforded through the proposed action; and

"(5) A statement of rents and other housing costs currently being paid by the Government for agencies to be housed in the building to be constructed, enlarged, remodeled, extended, or purchased.

"(d) The Administrator of General Services shall submit to the Congress promptly after the convening of each new Congress, a report showing the location, space, cost, and status of each project submitted under this act and uncompleted as of the date of any prior report under this act."

Section 4: The prospectuses required by section 1 (b) of the aforesaid act, approved May 25, 1926, as added by section 3 of this act shall supersede the reports required by section 4 of the said act, approved May 25, 1926, and section 409 of the Public Buildings Act of 1949, as amended (40 U. S. C. 355), and said section 409 is hereby repealed.

Section 5: There is hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this act.

Explanation

The purpose of these amendments is to set up a procedure with respect to the approval of building projects under the Public Buildings Act of 1926, as amended, that is substantially similar to the procedure provided for in Public Law 519, 83d Congress, as amended by this act. Also to authorize the appropriation of such sums as may be necessary to carry out the purposes of the Public Buildings Act of 1926, as amended.

Urban Renewal and Redevelopment Program

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. WIER. Mr. Speaker, under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I desire to insert a resolution passed by the city council, city of Minneapolis, Minn., on April 12, 1957, calling attention of the Congress to a problem confronting the city of Minneapolis in connection with the programs for urban renewal and redevelopment and emphasizing its relationship with the local planning of the interstate highway system.

The resolution follows:

RESOLUTION RELATING TO THE PROPOSED REDUCTION OF FEDERAL AIDS FOR URBAN RENEWAL AND REDEVELOPMENT PROGRAMS

Whereas the city of Minneapolis has consistently supported present and prospective programs for urban renewal and redevelopment; and

Whereas such programs have been planned and presented on the basis that Federal aid would be available in substantial degree; and

Whereas the proposed interstate highway system, of necessity, requires coordinate planning for redevelopment of several areas of the city; and

Whereas local revenue resources are inadequate to finance the extensive requirements of urban renewal and redevelopment in time to be effective and productive; and

Whereas the city has been led to believe that the Congress would be asked to provide $250 million each year for 2 years for such aids, but there is now pending a proposal that the Federal budget provide $175 million for 1 year only for aids to urban renewal and redevelopment; and

Whereas such reduction in Federal aid drastically affects the prospects of any early

completion of the Lower Loop, Riverside, and other Minneapolis redevelopment projects, and upsets the future correlation of local planning with the interstate highway system: Now, therefore, be it

Resolved by the City Council of the City of Minneapolis, That we request the Congress of the United States not to reduce the Federal-aid program in support of present and prospective urban renewal and redevelopment projects.

That a copy of this resolution be transmitted to the President of the United States, the chairman of the Senate Finance Committee, the chairman of the House Appropriations Committee, and to each Member of the House and Senate from Minnesota.

Passed April 12, 1957.

EUGENE E. STOKOWSKI,
President of the Council.

Approved April 12, 1957.

ERIC G. HOYER,
Mayor.

Attest:

LEONARD A. JOHNSON,
City Clerk.

Airline Subsidies—Congress Saves the Taxpayers $51 Million

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks, I should like to insert the syndicated column by Drew Pearson which appeared in the Washington Post on Friday, April 12, 1957, headlined "Airline Subsidies Seen Offering Savings."

I should like to make two comments regarding the reforms in the airmail subsidy practice which have been accomplished by the Congress since 1948:

First. Effective with the fiscal year 1955 separation of the concealed airline subsidies from post-office airmail pay relieved Postmaster General Summerfield of $73 million a year of expenditures which he had previously been forced to carry in the post-office budget, and thus Congress in a single action reduced the post-office deficit by over $70 million per year.

Therefore Congress relieved the post office of having to expend $73 million a year in airmail subsidies, an amount which is considerably larger than the amount of money which Mr. Summerfield has been trying to extort from the Congress in a supplemental appropriation this year by the device of shutting off the citizen's mail service last Saturday.

Second. Since subsidies were separated out of the post-office budget and made a separate appropriation item payable by the Civil Aeronautics Board and not the Post Office Department, Congress has made the following cuts in the amount of subsidy requested in the presidential budget submitted to the Congress at the beginning of January each year:

Fiscal year 1955 (the first year in which subsidies came before Congress as a separate appropriations item)	$24,100,000
Fiscal year 1956	10,500,000
Fiscal year 1957	3,800,000
Fiscal year 1958 (House only has acted so far)	13,056,000
Total	51,456,000

The airline subsidy figure for 1958 is not only $13,056,000 below the amount requested in the President's budget for fiscal 1958, on page 441, but also $3,586,000 below the bedrock reduction figure stated 2 months after the President's big "telephone book" budget was sent to Congress as being acceptable to the CAB Chairman, the Budget Bureau, and the President.

It can thus be seen that since subsidies were separated from mail pay, Congress has saved the taxpayers over $51 million on the single item of airline subsidies by cutting the President's budgets by that much.

The items of $5,900,000 and $6,500,000 referred to in the Drew Pearson column attached are additional savings over and above the $51 million mentioned above and are attributable in good part to the insistence of Congress at the beginning of the year 1954 that thorough audits be made of the airline subsidies.

In this connection the credit belongs to the Appropriations Committee of the House. I refer particularly to House Report No. 207 of the 84th Congress, 1st session, March 15, 1955, by Mr. CANNON from the Committee on Appropriations, at page 6:

The survey indicates that the Civil Aeronautics Board does not have accurate facts or figures regarding Pan American operations. Most of the subsidiaries have never been properly audited and some not at all, and there has not been insistence that the operations of the entire system be treated as an entity, as required by a recent Supreme Court decision. If corrective action were taken, substantial cuts in subsidy should result.

The article mentioned above follows:

AIRLINE SUSIDIES SEEN OFFERING SAVINGS

(By Drew Pearson)

If the United States Chamber of Commerce and the congressional economizers want to save more money, the CAB and Senator PAUL DOUGLAS, Democrat, of Illinois, have shown them an important way to do it.

The coleiction from Pan American Airways of $5.9 million in overpaid 1954 subsidies plus a proposed collection of $6.5 million as a result of bookkeeping which requires scrutiny is one way. It's a way by which the Government can make money instead of cutting down on such important projects as schools.

The recent bookkeeping windfall to Uncle Sam was the direct result of the hiring of 30 extra auditors by the Civil Aeronautics Board to check on the subsidiaries of the far-flung Pan American Airways. For a long time, certain members of the CAB, led by ex-Commissioner Joe Adams, have been trying to get the money to examine Pan Am's books. These CAB officials were suspicious that the big airline, with more subsidies than any other American company, was collecting extra subsidies from American taxpayers by failing to bill its foreign subsidiaries for services. But the CAB was never able to get a thorough look at the subsidiaries' books.

Credit for finally collecting this money goes first to Senator DOUGLAS, who, in speech after speech, urged his Senate colleagues both to cut down on airline subsidies and to hire enough auditors to look at the books. In the House Congressman JOHN ROONEY, of Brooklyn, did the same. DOUGLAS argued that the American taxpayers, through subsidies to Pan Am, were paying for luxury hotels and Pan Am's foreign subsidiaries. He began this campaign in 1953, continued through 1954 and 1955.

Finally he won out. Thirty extra auditors were hired.

Credit also go to Joe Adams, who harped on the same subject—and got dropped for his pains. After Secretary of Commerce Sinclair Weeks, close friend of Pan Am, called at the White House last December it was made know Adams would not be reappointed to the CAB.

REPUBLICANS TOUGH

Finally, credit goes to Ross Rizley, recent Republican Chairman of the CAB, and to the new Republican Chairman, James R. Durfee. Both men are "sleepers." Rizley was a lame-duck Congressman from Oklahoma who turned out to be one of the best CAB Chairmen in some years, so good that adroit moves were made to get him off the Board and onto the Federal bench.

Chairman Durfee, former GOP chairman of the Wisconsin Public Utilities Commission, has also proved to be a tough, play-no-favorites commissioner.

The order which Chairman Durfee has now published, reopening Pan American files, is one of the most sweeping ever issued by the CAB. After enumerating various cases in which Pan Am failed to charge its Mexican and Central American subsidiaries for services rendered, the CAB order concluded:

"As a result of these various matters, it appears that Pan American's subsidy needs may have been substantially overstated and that completion of the audit may disclose other discrepanices."

In a direct implication that Pan American engaged in faulty bookkeeping, the CAB stated: "It was not until fiscal 1956 when the CAB received appropriations for a substantial increase in its audit staff that such a project (of auditing) could be and was undertaken.

"The board, we think, was entitled to assume that the carrier's reports and filing were correct.

"Pan American is yet to be heard from in connection with all these matters," the CAB order stated. "On the other hand, the audit may disclose still further areas requiring exploration.

"HUGE SUBSIDIES

"Our duty in this respect is plainly evident when it is considered that transactions between Pan American and its affiliates aggregate some $50 million annually."

This refers to the fact that Pan American is now the only airline receiving a major Government subsidy.

In 1956 Pan American received $2,669,000 subsidy on its Atlantic Division, $11,482,000 on its Latin American division, and $1,356,000 on its Alaskan division. TWA received no subsidy whatsoever, though it flies the Atlantic, parallel to PAA, and has the less profitable run through the Near East. Northwest Airlines received $1,483,000 on its Great Circle Pacific run, and Pan American is now trying to get certificated to fly that route.

Between 1951–6, TWA received a total subsidy of $4,586,000 on its foreign operations. During the same period, Pan American received the huge total of $138,615,000.

Pan American has 30 subsidiaries all over the world. If the extra auditors hired by the CAB continue to find the same bookkeeping that they found on the books of its Mexican and Central American subsidiaries, a lot of money could come back to Uncle Sam.

PAN AMERICAN REPLY GIVEN IN STATEMENT

Pan American Airways yesterday issued the following statement on Drew Pearson's column printed above:

"The Drew Pearson column contains numerous misstatements of fact and draws erroneous conclusions of an audit conducted by the CAB of Pan American Airways' books which has not even been completed. The Board itself states: '* * * the audit to date is incomplete, and substantial further investigation and analysis is required. Also, it is possible that the questionable areas disclosed by the audit may already have been, to some extent, taken into account by disallowance made in this or other mail rate proceedings; and Pan American is yet to be heard in connection with all of these matters.'

"Mr. Pearson states that Pan American received some $15,507,000 in subsidies in 1956, whereas Pan American received only $7,249,000 for its entire operation, including its national interest routes to Alaska, Scandinavia, Africa, and Australia.

"Mr. Pearson claims the money has already been collected from Pan American as a result of the so-called audit, whereas, by the board's own statement, many of the questionable areas involved may already have been taken care of in other proceedings.

"Mr. Pearson, in referring to Pan American's affiliated operations, either by intent or oversight, neglects to mention the benefits in the reduction of subsidy which Pan American has received because of services performed by or for its affiliates. A few examples of these benefits are:

"1. Affiliates act as feeder lines and sell for Pan American from 10 to 15 million dollars of passenger sales per year;

"2. For acting as purchasing and shipping agent Pan American receives annually from $700,000 to $1 million;

"3. Profits from maintenance and repair flight equipment are substantial;

"4. Commissions earned as general sales agent for affiliates in the United States go to reduce Pan American's selling costs.

"One further service about which there is little or no talk is the diplomatic and national defense relationship which proved so valuable through World War II in Colombia and Brazil. The national airlines of these countries were dominated by German personnel and it was only through the investment of Pan American that we were able to de-nazify these airlines and make them of service to the hemisphere defense effort. If Pan American did not have these investments, foreign-flag airlines or nations unquestionably would. It is a possibility that such ownership could fall into Communist hands."

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address by L. T. Clevenger, manager of the Southeastern Illinois Electric Cooperative, delivered at the congressional dinner sponsored by the Association of Illinois Electric Cooperatives in Washington, D. C., on April 8, 1957:

ELECTRICITY FOR THE FARM—WHERE WILL IT BE OBTAINED AND AT WHAT PRICE?

(Speech by L. T. Clevenger, manager, Southeastern Illinois Electric Cooperative, at the Congressional Dinner on April 8, 1957)

The tremendous growth in the use of electricity over the past two decades I'm sure is considered as a prime example of the industrial capabilities of this great Nation.

Ten years ago, in 1946, immediately following World War II, we used, in the United States, 190 billion kilowatt-hours of electricity. This was slightly less than the 198 billion peak year's use in 1944, and considerably more than the 118 billion used in 1940.

Just 10 years hence, in 1956, our needs have more than doubled to the alltime high of 529 billion.

Our total production capacities were approximately 40 million kilowatts in 1940 and we built 10 million more during the war. In 1946, the great postwar expansion began. We have today approximately 120 million kilowatts of generation in service, which represents power company facilities as well as power districts, Federal, State, municipal, and cooperative installations.

No other industry has had to expand as fast and with as much. In both production and sales, the electrical industry is still faced with a growing need for even more than ever before.

From a recent issue of Electrical World comes these new figures: "New capacity additions planned by all segments of the industry have swelled to 59,802,000 kilowatts." Electrical World goes on to say, "it is significant that 40 million, or two-thirds of this total, will be added by the end of 1959, and almost exactly half in the 2 years, 1958 and 1959."

This is a phenomenal growth pattern when one considers that within 3 short years, it appears that our present production capacities for generation will need to be increased by approximately 50 percent.

Yet, this merely is indicative of what today has become the growth pattern of the farmer's use for electricity. Wherein the industry, overall, is doubling in about every 10 years, the farmer has doubled his need for electricity in 5. And, it appears that he is only beginning.

In the past 20 years, farm and agricultural use of electricity has been primarily at the comfort level. A good part of electric consumption on the farm today is in the house. About 80 percent, I believe. Only 20 percent is being used for production.

A sample of what is to come was given you by Mr. Simms. Electricity as a production tool in agriculture has no horizon. It extends just as far as the field of automation can expand; as a labor saver, it has no equal.

The 1,028 electric cooperative systems in operation today, serving 4,357,000 consumers, represents an important segment of our economy. A 15-percent increase in cooperative sales for 1956 points even more to the importance electricity plays in farm operation today.

In 1956, these 1,028 systems sold power to their consumer members at approximately 2¾ cents per kilowatt-hour. Approximately 25 percent of the 2¾ percent cost of power to the farmer represents the price paid by the cooperative for the power it distributed.

This was slightly higher in Illinois, the average being just a litle above 3 cents. Correspondingly, power costs to the electric cooperatives were slightly higher and the 25 percent ratio of wholesale costs to the cooperative as to retail costs to the farm consumer remain relatively the same.

We, in the cooperative electric field, have studied, too, the industry's plans for generation expansion and wonder if the farm potential has been weighed in trying to anticipate the future production needs.

We realize that a product in short supply has a tendency to become more dear in price. The farmer must continue to have an adequate low-cost supply of electricity in Illinois if he is to compete with commodity production of like products in other areas. An increase in power costs to the cooperatives can mean only a corersponding increase to the farmer.

As you know, the Administrator of REA has the right to make loans to cooperative borrowers of REA for funds to construct generation facilities. It is not the desire of Illinois cooperatives to enter into the field of electric generation, so long as an adequate supply of electricity at a reasonable price can be obtained from those now in this field. However, we feel that it would indeed be unfortunate for the farmers and the electric cooperatives of Illinois if ever they were denied the right to generate their own electric power, should the present power suppliers fail in quantity, quality, or price to provide the cooperatives' power needs. Legislation to the contrary could prove disastrous.

Stop Hawaiian Statehood?

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. BURNS of Hawaii. Mr. Speaker, on March 30, 1957, the Tulsa Tribune published an editorial by Richard Lloyd Jones entitled "Stop Statehood for Hawaii." The editorial was evidently written by someone who had no personal or factual knowledge of Hawaii.

A great many people in Hawaii have read the editorial. As a result, a considerable number of people of Hawaii have expressed their opinions to Mr. Jones.

For the information of the Members, I insert in the RECORD two of these letters which are comprehensive in their reply and are particularly pertinent at this time.

The letters follow:

HAWAII CONGRESS OF PARENTS AND TEACHERS,
Honolulu, Hawaii, April 8, 1957.

EDITOR, TULSA TRIBUNE,
Tulsa, Okla.

DEAR SIR: Our sympathies to Publisher Richard Lloyd Jones who apparently has watched one too many TV renditions of exotic Hawaii—scripted, of course, in Hollywood. His references to "tempest-tossed waters," however poetic, are not borne out by the United States Navy and its many marine activities carried on in these islands because of our natural harbors and normally serene waters. These "scattered bits of volcanic lava" just happened to be scattered strategically enough to have offered protection to the United States mainland coast from major enemy action during World War II.

The Honolulu Star-Bulletin, one of our two leading newspapers, editorially extended an invitation to Publisher Jones to visit Hawaii

with the open mind of a journalist and then write his impressions. It was also suggested that he visit our local PTAs. As president of the Hawaii Congress of Parents and Teachers and as a 20-year resident of this community I present these statistics and observations.

Hawaii's PTA membership ranks second in the United States on the percentage basis of parent membership to student population—almost 70,000 memberships or better than 50 percent, representing our 130,000 schoolchildren.

Another interesting statistic is the unique position the Hawaii PTA holds in family memberships. The local leadership which is reflected throughout the district and territorial organization is predominantly male with men of all professions taking a keenly active interest and role in their school and community improvement programs. Dr. William Odell, Stanford professor and leader of a recent school survey team here, stated that the PTA in Hawaii is the most significant of any locality in the United States.

A community so predominantly dedicated to the PTA objects of better homes, better schools, and better communities which are in themselves so thoroughly American, cannot be called either indolent or un-American.

Hawaii's people speak English, Mr. Jones, with no greater variations than appear within your own communities. In Hawaii there is no greater proportion of old country speech than in any other United States locality that has been built up in the last half century from foreign-born immigrants. Our legislators boast a very high degree of preparatory professional training, judging from the degrees they hold from various mainland universities and law schools. We have not developed national leaders from Hawaii, it is true, but neither have we had the opportunity to do so. We lack representation and we have a Governor who is appointed by a President for whom we cannot vote. We are also a young community with a young population—and very few national leaders are themselves established while still in their thirties.

We in Hawaii do not need to defend our patriotism—World War II and the subsequent Korean war recorded most accurately the loyalty and heroism of our volunteer boys, most of whom were of American-Japanese ancestry. For Mr. Jones' further information, the number of soldiers from Hawaii who gave their lives in both these conflicts was proportionately far higher than any other United States community.

Publisher Jones as a stanch American would deeply resent being taxed without representation. Hawaii has accepted this status for many years and asks rightfully for statehood and representation in Congress.

That members of our representation could be of several ancestries including Caucasian, Japanese, Chinese, Hawaiian, etc., should not deter statehood in a country that has been developed entirely from immigrant arrivals from all parts of the world throughout its whole history. In Hawaii we have even included in our population departees from Oklahoma as well as all the other States.

Publisher Jones' sweeping statement of the Communist influence in the islands could be labeled as a scare banner and gives the impression that Mr. Jones' intent was to discredit our American-Japanese population rather than to prove his point on communism.

I have an abiding faith in the people of Hawaii to accept the responsibility that is theirs to clear themselves of communism and to elect representative leadership worthy of local, Territorial, or National Government, irrespective of racial background. The right to choose leadership belongs to citizens, not to racial groups; and the right to develop as a leader should depend on ability, not on one's ancestry.

Our indolent natives plucking guitars under a palm tree have been responsible for many of the on-the-job improvements in the pineapple and sugar industries to help place Hawaii in its number one position in these highly specialized fields. Our sugar and pineapple workers are the best fed, best housed, best paid, and best educated anywhere. And there are PTA groups and adult education groups on every plantation.

Pureblood Hawaiians have shrunk considerably since the population figures quoted by Mr. Jones from missionary reports of the year 1832. Measles, whooping cough, the common cold, and other viruses took toll by the thousands. Intermarriage has not obliterated the full Hawaiian as Mr. Jones charged and present statistics show definite rise in the number of pure Hawaiians.

I take strong issue with the statement made by Publisher Jones that our people are "wholly alien to our American way of life and wholly foreign to our concepts of government and human behavior."

Our schools, our churches, our war records, our local government, our common language all attest strongly to Americanism. Our people have the human dignity and respect for one another to be able to dwell side by side in harmony and cooperative endeavor. Our children are educated, not segregated, and are schooled in the same texts and curricula that are used on the mainland. Our parents share with other United States groups the same common problems of school financing, curriculum enrichment, and technical advancement; and the same personal problems of giving the best that they can to their youngsters. We share with all American communities the same concerns for health and welfare and industrial improvement.

We differ apparently in that we do not label our neighbor by his racial background, but rather by his individual contribution to our community society.

Publisher Jones would enjoy Hawaii as most other journalists with inquiring minds have for its very significant contributions to human relationships. The aloha that is so often carelessly bandied by Hollywood script writers and travel agencies is no more real than the tales we read of Oklahoma. The Hawaiian aloha is a quality of human warmth and understanding that is so deeply ingrained in the people of these islands that it even rubs off on visiting tourists.

Sincerely,

MRS. LEE R. DAWSON,
President.

OPEN LETTER TO RICHARD LLOYD JONES, SR., OF THE TULSA (OKLA.) TRIBUNE

MY VERY UNDEAR SIR: I'm just a malihini wahine in these Hawaiian Islands—having lived here only about 9 months—but then, that is 9 months longer than you have been here. When I read in the Honolulu Star-Bulletin the full text of your ignorant diatribe against Hawaii and the Hawaiians, I was at first more than somewhat huhu—but that strong emotion is now tinged with deep pity that a man can reach your venerable age, and possess the intellect to become a publisher and author, and then fail to have achieved in a long lifetime the simplest glimmering of Christianity, brotherhood, or that lovely, living spirit of aloha. This aloha is the most important export of the Hawaiian Islands—one which the whole miserable, mixed-up world of hatred, bigotry, intolerance, and prejudice, could well import from here in vast quantities. The lovely thing about this product is that it can be imported—and used to great advantage—it is as free as the air and the sunshine—it is limitless—it spreads—can never be wholly consumed or exhausted—in fact, it may be likened to the infinite chain reaction attributed to atomic energy.

To answer your question "Do we Americans want to put a couple of Japs in the Senate of the United States?" Well, first of all, the word should properly be "Japanese," if you are referring to the ancestral background. However, these people you refer to as "Japs" happen to be citizens of the United States, of Japanese ancestry—just as you, I presume, are a citizen of the United States of Welsh or British ancestry. Unless you happen to be a genuine American citizen of 100 percent North American Indian blood, how can you possibly set yourself up to judge and to discriminate against United States citizens of any ancestral background? All our great men, and some of our better citizens, have come from all the nations of the world, and have contributed greatly to the culture and to the industry of the United States.

And, Mr. Jones, if you'd read your history, you'd realize how much our Hawaiian-Japanese-American citizens contributed to the United States during World War II—fighting in the bitterest of battles, rescuing lost battalions of your neighbor State, Texas—bleeding and dying in great numbers, leaving wives and children and mothers and fathers and loved ones bereft, exactly like many of our G. I.'s of Welsh, or English, or Greek, or Hungarian, or Indian, or Negro, or any other kind of ancestry. Did you rise up on your filthy little "hate-box" when they drafted the Nisei warriors—or rather, when these loyal citizens volunteered—and protest against their going onto the beachheads and dying, fighting the Axis powers? Well, perhaps you did—fortunately, until your scurrilous editorial attack, I had never heard of you.

As to there being no common language over here—well, Mr. Jones, this may come as a surprise to your provincial little mind—but the language loosely termed as "English" is spoken widely over here—and some of it a better brand than you'd hear at home. There is also "pidgin English," which is a delight to the ear, with its lilt, freshness, whimsy, humor, and deft application. And the Hawaiian language is certainly one of the loveliest, and most practical, of all languages, and is, I imagine, as ancient as English—but, unfortunately, it is mostly heard only in songs nowadays. But there is another language—and one more than "common"—it is universal, understandable—and may even get us friends on Mars some day—it is the language of love and fellowship—warm, sunny smiles, open hands and hearts and minds—and an innate courtesy and genuine regard for all fellow creatures. So do come on over and further your education as a human being, Mr. Jones—you might even graduate cum laude from the course, if you bring the right attitude.

As to these islands being "tiny specks" in "tempest tossed" waters—well, sir, this crazy little spinning globe known as earth is but a "tiny speck" in the universe—but to all who live upon it it is rather important and is, in fact, until space travel arrives, our entire world. And, after all, tiny specks can be more important than the most gargantuan vacuum—after all, we earthlings recently stumbled onto the importance of a tiny speck which is utterly invisible and widely misunderstood by nonintellectuals like myself—that "lil ole atom." As to your term, "tempest tossed"—I presume you were referring to the broad Pacific Ocean—and we all know what Pacific means—and "peace, it's wonderful."

You must have completely forgotten Pearl Harbor—this "tiny speck" took a horrible beating, which might just have been meted out to the mainland if these islands hadn't been running interference. And when the shock of the attack wore off, the very good and loyal American citizens, many of them of Japanese ancestry, shook themselves, picked up the pieces, and instantly organized into

effective military units in all the services, and many facile hands and clever minds of these citizens were instantly put to use in all the war plants here. That was the time of test—and what a bitter thing it must have been to those patriotic United States citizens of Japanese ancestry—and had their patriotism been as apathetic as many mainland citizens, or had they not been true American citizens, that was their time (since you say the Japs dominate the Hawaiian Islands) to merely turn over this "tiny speck" to the Japanese Empire. And it didn't—thanks to its patriotic citizens of Japanese, Hawaiian, Portuguese, Chinese, Filipino, Samoan, Tahitian, Korean ancestry—what better proof of loyalty could any nation ask for?

When you speak of the dire danger of opening the gateway to empire which is totally foreign to the constitutioinal precepts of this Republic—a nice-sounding sentence, but a bit vague—I'd like to mention that the Constitution is more than a piece of old paper filled with glorious words—it is a sensible, practical, and beautiful declaration of a way of life, with equal rights under the law for all the citizens so fortunate as to be covered and sheltered by it—a dramatic appeal to the very best in the very basest of men—the philosophy that all men are brothers, no matter the race, creed, or individual eccentricity. And, anyhow, a 49th State would sound to the rest of the world a lot less imperialistic than a possession. And even you, Mr. Jones, can't disenfranchise thousands of America citizens who happen to be of Oriental or Polynesian ancestry, and cut the strong ties binding these islands with the mainland, leaving them to sink or swim.

As to your bringing in the communism issue—ah, how well I remember another Republican—a junior Senator it was—who used that issue as a whipping boy to try to get Americans to hate and fear each other. Sure, communism (that misnomer for the political creed of Russia) is a threat to the American and democratic way of life—I might mention—just one of the many threats that way of life has faced since its conception—but it's a threat which can be far better licked by clear thinking and cool heads and an absence of fear and hatred. Characters who foment and disseminate hatred and prejudice and fear are just as big a threat to our country as any Soviet commissar. And, after all, Mr. Jones, there is communism in the States, and it was the United States Government which let loose haole Communists on these islands.

As to your miserable attack on the native Hawaiian—you just don't know whereof you speak. Read any good book on the history of the Hawaiian people before they were discovered by the civilized world—they had a Government, religion, culture, and way of life which was more enlightened, balanced, and wholesome than any known to man—and, until their tempo was interrupted by the encroachment and greediness of the civilized world theirs was a culture to admire, envy, and emulate. They worked, and worked hard, and were self-sufficient—but centuries ago they knew what modern man is now finding out—hard work and industry and the daily grind for material things must be alleviated by and balanced with wholesome and vitally necessary play or relaxation. So, for 9 months they worked and for 3 months they played—and the result was fine, healthy bodies with fine, healthy minds—no mental institutions, no prisons, no hospitals—they didn't need them. I envy them their good sense, don't you? I admire their capacity for serenity and happiness and contentment right now, today, despite the discordant pressures on them of the haole way of life. Most of all, I love and admire the Hawaiian for his deep tolerance of others—and only hope that I can meet many more Hawaiians and become real friends with them, so that I can learn from them—they have so much to offer.

As to the Hawaiian people as a race becoming obliterated by the tides of immigration to their lovely islands—thank the very kind Lord, there are still quite a number left—and their lovely natures have remained whole and balanced, and have been passed on to other races, through intermarriage. And as a parallel to your statement about the "obliteration" of the Hawaiian peoples—take a look in your own backyard, Mr. Jones—how many Indians do you see?

As to the "American is not a guitar thumper, but a worker"—well, for one thing, have you heard of Elvis Presley, Mr. Jones? Or the "modern" theory that was used in war plants during the war—that people work better to music—or do you recall the depression and the "shovel leaners" and the fact that right today there are many, many "unemployables" in the United States—able-bodied people who could work, but don't choose to. And do please check your history books before you revile the Hawaiian people and their "failure to produce a mind who has measured up to the giants of our country's history," etc.—the great crowned heads of Europe acknowledged the magnificence and greatness and stature of King Kamehameha I of Hawaii.

Mr. Jones, I could go on and write a big fat volume to answer each of your specious arguments—but I really think it would be best for you to buzz yourself over to these "scattered bits of volcanic lava" and find out that the people here are, first of all, American citizens as important as any citizens on the mainland—that they are human beings of terrestrial origin—the grass here is green—the flowers are glorious—the air is of the same chemical content as elsewhere—but to those of us lucky enough to be breathing it right now, it is balmier, cleaner, and more fragrant—the soil is varied, as in the States—red, as in Georgia, black and loamy, as in some of the Midwest, sandy as in parts of Florida, California, or some Western States—there is cactus, just like that grown in Texas or Oklahoma—there are exotic and heavenly tasting fruits, as well as those of the garden variety—there is a lot of lava around—on the Big Island tourists from all parts of the world come to see and to admire it—but then, have you ever been to Mount Lassen National Park in California? And if you'll talk to agricultural experts, they can tell you that volcanic land, with proper treatment, can be the richest soil of all.

But more than all these tangible things, which are like things in all other parts of the world, there is something here in the Hawaiian Islands which is unique and wonderful and which, despite the impingement of traders, missionaries, armed forces, tourists, and despite the tense atmosphere elsewhere—atmosphere filled with fear, hatred, ignorance, stupdity, bigotry, prejudice, and intolerance—is still a living, breathing, everyday miracle here in these blessed isles—that is the spirit of aloha—of vast, deep tolerance of others—of sincere love for fellow men—of innate courtesy—a well of contentment and serenity and being at peace with nature and self. Perhaps it's the famous trade winds which sweep over these islands and keep the soiled air of hatred away. Whatever it is, Mr. Jones, do come on over and open your eyes, your heart, and your mind (though it might be a struggle for you), and partake of some of this aloha. Brother, you could use it.

RUTH DEATHERAGE
Mrs. B. C. Deatherage.

EWA BEACH, HAWAII.

Alabamian Passes: Death of Doorkeeper Saddens United States Congress

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. GRANT. Mr. Speaker, during the adjournment of Congress last fall, Daniel R. Jones, Deputy Doorkeeper of the House, passed on. There has just been called to my attention an article by James Free, Birmingham News' Washington correspondent, which I am privileged to insert in the CONGRESSIONAL RECORD. Dan Jones will long live in the memory of the House membership.

The article follows:

ALABAMIAN PASSES: DEATH OF DOORKEEPER SADDENS UNITED STATES CONGRESS

(By James Free)

WASHINGTON, September 6.—Every Member of the United States House of Representatives will miss Dan Jones. So will hundreds of members of the Washington press corps.

Dan won't be at the main door of the House to greet them and to help them any more. For Daniel R. Jones, Deputy Doorkeeper of the House, died the other day at the age of 61. Dan was an Alabamian, but his friendships were not limited by State boundaries.

It was Dan's business to know every Member of the House by sight. It was his business, too, to know newspaper, radio, and television reporters who covered the House—and there are many of them. Dan was good at his business, too, for he worked hard at it.

As a top aid to William "Fishbait" Miller, Doorkeeper of the House, Dan had responsibility for the several key doors used by its Members. A force of 16 men and boys worked under him.

Dan posted himself on the most important door, with three assistants. That was the door on the House floor nearest the elevators that the Members use most.

As the Members filed in—usually in response to the ringing of House signal bells—it was part of Dan's job to bring them up to date on the immediate situation. He wasted no words doing it, for he had a lot of Members to inform.

He'd say something like: "Vote on recommit. Foreign aid." Or perhaps "quorum."

If the incoming Member happened to be a Democrat, Dan would pass on the word from the House Democratic leadership: "Committee votes 'nay,'" he would say. Or maybe just "vote 'nay.'" This was simply for the guidance of Democratic Members.

Dan and his "boys" served as liaison between newsmen and representatives. Newsmen would give the names of the Members they would like to see, and the "Jones boys" would see if the legislators were on the floor and available.

More often than not Dan could tell you without looking on the floor, whether a certain Member was there. He was seldom wrong, but always willing to double check.

He made a particular point of keeping up with Members from his home State of Alabama, and from nearby Mississippi and Georgia. The Chief Doorkeeper, "Fishbait" Miller, is a Mississippian, and Dan—while polite to all—was partial to southerners.

Another duty of "Jones boys" was to keep unauthorized persons out of the Speaker's

lobby, where the Members could read home-town newspapers or talk with reporters. This took a lot of tact, for frequently the visitor would be a constituent of importance to some House Member.

Tact was often needed, also in covering up for a House Member who simply did not want to talk to a certain reporter, or was possibly too busy at the moment to come out to the lobby.

Then, on rare occasions, Dan would be called on to cover up for some Member who was taking an afternoon snooze in the Members' cloakroom.

Dan's friendships were not bound by party lines, either. He loved to joke with "Yankees" and with Republicans. He knew who liked to fish, and who didn't, those who caught fish when they want fishing, and those who didn't.

His excellent relations with Republican Members stood him in good stead when the GOP won control of the House in the 83d Congress (1953 and 1954). Ordinarily, this would have meant that Dan, who was on Democratic patronage, would have to give way to a Republican job holder and move to a less important job.

But in 1953, when the Republicans took control, the GOP Chief Doorkeeper was a longtime friend and fellow native of Alabama—Tom Kennamer. When Kennamer asked the GOP House leaders if he could keep Dan Jones on his job, the answer was "Yes." So Dan was one of the few patronage officeholders in Washington who was not affected by the change of party control.

Dan had worked around Capitol Hill since 1942, when he came here to work for Representative GEORGE GRANT, Democrat, of Alabama. He joined the Doorkeeper's staff in 1943 and except during the 80th Congress (1947-48), when he returned to Representative GRANT'S office, he remained on that staff.

A slight, dark-haired, bespectacled man, Dan always wore the blue suits and black shoes that he insisted his aids should wear also. Those seeing Dan in action for the first time marveled at the results he got with his mock gruffness toward his young assistants.

The Speaker's lobby won't seem the same without Dan Jones.

Radio Station WOWO Honored

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. ADAIR. Mr. Speaker, in this day and age when we are all so conscious of the need for spreading the gospel of freedom and liberty throughout the world, it is encouraging for me to report to my colleagues a signal honor which has been given to a radio station in my district and to the Indiana State Bar Association, of which I am a member.

Only recently, Westinghouse Radio Station WOWO, in Fort Wayne, won the George Washington Gold Medal Award of the Freedoms Foundation of Valley Forge for a daylong program designed to promote better citizenship.

The inspiration and information for this program were furnished by the American Citizenship Committee of the Indiana State Bar Association.

Joining in the daylong broadcast were Robert E. Meyers, mayor of the city of Fort Wayne; Attorney L. B. Harper, who has been active in citizenship work on behalf of the Lions' Club there; and Attorney Alexander Campbell, chairman of the bar association committee in charge of such projects. The broadcasts were highlighted by Jay Gould, a prominent member of the staff of WOWO, from documented statements by refugees, persons formerly in internment camps and local high school students. Mr. Gould's poem, Freedom, also won him a special gold medal. Carl W. Vandagrift is general manager of radio station WOWO.

As a result of its efforts to instill in its listeners the true meaning of American freedom and citizenship, I am sure that all who heard were inspired anew with the ideals of liberty which are the greatest asset of our Nation.

I am indeed proud to call attention to this stirring example of what is being done in Indiana to spread before the world the many and great blessings which are our national heritage.

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address by D. Carroll Walters, director, McDonough Power Cooperative, delivered at the congressional dinner sponsored by the Association of Illinois Electric Cooperatives in Washington, D. C., on April 8, 1957:

EFFECT ON QUALITY AND COST OF ELECTRIC SERVICE TO MEMBERS

(Speech by D. Carroll Walters, director, McDonough Power Cooperative, at the congressional dinner on April 8, 1957)

I speak from the heart when I say I am happy to be privileged to visit this city. The name Washington, D. C., is probably known by more people around the globe than any other city. To you who are privileged to work here, it must be an inspiration, and always associated with privilege to serve goes responsibility. My responsibility at the moment is to represent the members of the rural electric cooperatives of Illinois, to discuss with you for a few minutes the matter of quality and adequacy of electric power at a fair and reasonable cost.

Speaking as a member of the McDonough Power Cooperative at Macomb, Ill., I shall use my own farm as an example of the uses of electric power and why constant full power for further increases in electric energy demand is in the future. My home farm is not the smallest, nor is it the largest, in the community. In our farm home we have 15 electric motors, each of which perform some chore in our daily living, in heating, cooking, cleaning, food preservation, and storage. In the farm operation we have three motors for water pumping for livestock, a number of electric heating units to provide proper drinking water temperature for this livestock, in addition to farm-shop equipment.

A high percentage of our Illinois farms are using heat lamps in the care of small pigs and poultry.

The use of air conditioning is coming to the farm as it has become a part of urban economy. The farm home, yes, but air conditioning is being used in the production of poultry and in the care of little porkers. No man nor bureau can fairly estimate the values of the rural-electric systems in terms of the millions of tons of food products which could not have been produced had not electric power been available to the reduced manpower on our farm in the World War II period. This Nation's people could have written a receipt "paid in full" to all REA loans at that time and would have received more than the value of those dollars in national integrity and security.

When our farm first received electricity we used about $6 or $7 worth of electric energy. The record shows that our farm far in 1956 used from 800 to 2,750 kilowatt-hours of electricity costing as high as $46.69 per month, or for an average of about $27 per month. Eighteen or nineteen years ago we were glad to have electricity—period. We had lights in our house and barn and could discard the battery radio. The wife could have an electric-powered washing machine and an electric iron. I remember well how we both would sometimes have to crank until we were blue in the face trying to get our gas-engine washing machine to run. Those of you and other Members of the Congress and the United States Senate who have not had that wealth of experience as was ours in the preelectric and pre-REA period frequently do not place the same value on our rural electric program as we would place on it.

When I read some of the advertisements intended to discredit the REA program, the former Corliss Archer shows and some of today's national advertising by the Associated Independent Electric Cos., it leaves one with somewhat of a feeling of inadequacy to cope with such activity backed by so much money, so easy to obtain. It reminds me of the people who today hide behind the fifth amendment to keep from telling about their activities, which, in many cases would destroy the Government that provides the fifth amendment behind which they hide.

Today, almost everyone has an idea about the so-called farm problem. Solutions are being offered by persons who have not had their shoes soiled by the byproducts of some of our farms. Agriculture is in the well-known price squeeze. Farms need assistance of electrical energy at the lowest price consistent with good business to aid them in meeting today's economic difficulty. The electric cooperatives have been a competitive factor in today's utility field, a competitive influence in the quality of electric service, fewer outages and power interruptions, and in inaugurating economy in the construction, maintenance, and accounting departments. Without some competition in the automotive industry our automobiles would be somewhat higher in price and would not be so well engineered. Competition has provided America with many things we are now enjoying. We urge that you do not let any influence persuade you to hamstring the field of competitive enterprise in the electric power industry with regard to control on retail price and the quality and continuity of service.

My cooperative has borrowed about $600 per member to provide electric service to my farm. As we are using our farm as an illustration, we point out that the electric water system, the water heaters, farm motors, air compressor, deep freezer, electric stove, refrigerator, television, and sundry appliances have cost us over $3,000 to purchase. These items that require this electric power to operate. We have spent an amount approximating 5 times the amount loaned by the REA to my cooperative, and please remember that the $600 average per connected member of loan funds was 100 percent used in the purchase of material and in the payment of labor and management, the total

amount of which was reflected in our national purchasing power, our national economy, and do not overlook the amount of that total that was paid in various forms of taxes. Multiply that amount by the millions of connected members today and try to visualize what effect that market has made in our national economy. Yes, even in taxes, taxes paid on manufacturers' profits, taxes on retail profit, taxes on wages earned, and not to mention the value of wages and the millions loaned by REA to the rural electric cooperatives pale into insignificance by comparison. Let us not allow the smoked glasses of economic selfishness blind us to the broad horizon of the benefits of this program.

Even those who would take the hide from this rural electric enterprise could benefit either directly or indirectly if they would set their dials properly and tune in.

It has been my pleasure to be here and thank you.

Departments of State, Justice, Judiciary, and Related Agencies Appropriation Bill, Fiscal Year 1958

SPEECH
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. HAYS of Ohio. Mr. Chairman, the gentleman who offered this amendment makes the argument that the thing has gone wild. He said it went wild last year. If it went wild last year from what we have heard divulged on the floor here today, it went wild because the gentleman from Kansas [Mr. REES] was asleep at the switch. I do not know the purpose of the amendment this year; it is not an election year. Last year apparently we had an arrangement whereby the gentleman from Kansas was going to offer the amendment and it would have been accepted. I do not know, but it was kind of a startling revelation to me that the thing was all cut and dried. Now, the truth of the matter is this: These representation allowances are in there so that some people can be ambassadors who are not millionaires. That is just about what it boils down to. The newspapers have carried several articles lately that ambassadors in certain posts have to be picked from the ranks of the wealthy, the campaign contributors, because that shows they have enough to be an ambassador.

But, there are a lot of people who come in before the Foreign Affairs Committee and testify and say that we are trying to make it possible for any person who shows that he has what it takes, the necessary abilities to handle a crucial situation, to be an ambassador in any post. If you really mean that, if you want it, then some people who have what it takes except the cash are going to have to have a little bit of help to be an ambassador. Look up your figures on some of our big embassies where some of the people come in the millionaire class, such as London, and you will find that they got $80,000 to run the Embassy last year, and the record shows that they spent another $80,000 out of their own pocket. Maybe that is too much. I do not know. But certainly if you are going to have to spend $80,000 out of your own pocket, it is going to severely limit the number of people from whom you can choose an ambassador to that post. Now, I am not in favor of anything unreasonable, but the chairman of the committee has already told you that they have cut this item, I believe, by more than 50 percent. Is that not right?

Mr. ROONEY. Exactly.

Mr. HAYS of Ohio. Exactly 50 percent. And you are going to have to leave some things in there for some necessary functions which ambassadors must hold if they are going to remain and do any job for the United States.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Ohio. I yield to the gentleman from Iowa.

Mr. GROSS. Fifty percent with respect to the budget estimate but not 50 percent over what they spent last year.

Mr. HAYS of Ohio. I explained to you why the item got so big last year, and it has been explained half a dozen times, because the amendment was not offered at the proper time, or it would have been accepted. The committee made a cut of 50 percent, over the budget request and if you ask me, I think that is a very healthy cut.

Other Than Honorable Discharges

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. MACDONALD. Mr. Speaker, I have today introduced a bill dealing with the hardship suffered by thousands of American servicemen who have been discharged from the Armed Forces under conditions other than honorable. These are individuals who have committed minor offenses or who because of some mental defect or disease have failed to meet, during their service, acceptable standards of social or military conduct. Their offenses or conduct were not serious enough to amount to crime either military or civil, for they have not been tried and convicted by a general court-martial.

Although the policy of the Armed Forces in issuing discharges other than honorable to such individuals was and is intended to distinguish these unfortunates from real criminals, nevertheless this meritorious effort on the part of the Armed Forces has failed of its intended effect. In the civilian mind there is little or no difference between the individual who was discharged other than honorably and the individual who was discharged dishonorably. The ordinary civilian has neither the time nor the patience to draw distinctions. If one has not an honorable discharge, chances for gaining employment are very small, indeed.

Mr. Speaker, have you seen the effects of such discharges upon the lives of these ex-servicemen? Try as they will they cannot get or hold jobs. Employers don't want to employ them, and therefore not only do they pay the price for a misdemeanor over and over again, but also their wives and children also pay a penalty out of proportion to the original offense. This atmosphere permeates as well to the social level, where it lurks as a family skeleton, a thing to be hidden. These unfortunate ex-servicemen apply, time after time, to the boards for the correction of military or naval records in the desperate hope that something might be found in their record which will afford a basis for changing the quality of their discharges. In most cases, the correction boards are helpless under the state of our present law. Their review is confined to the military record. It is true, the law says they may consider "such other evidence as may be presented by such person." But what effect is given this language? No matter how exemplary a life the individual has led since his discharge, no matter if he has been cured of the mental disease which caused his unacceptable conduct, no matter if his fault did not amount to a crime, the boards limit themselves to the official records and evidence relating strictly thereto; the cold official language comes back, "the board regrets, but." The individual must pay and pay for his misdemeanor committed when of a young age until he dies. His family and children must also pay and pay, not only until he dies, but even beyond. Mr. Speaker, is this the penalty a man should pay for acts or faults which were not criminal? Acts, which in the main, were committed by young persons who had not yet matured into adult judgment or responsibility.

I think you will agree that so severe a punishment should not be meted out to these servicemen. This bill will give them hope, a chance at rehabilitation. It will not wipe the slate clean, but it will say, that under our system, rehabilitation is not only possible but should have its rewards. Congress will now make clear its purpose, that the appropriate board must consider evidence of subsequent good character and exemplary conduct, and must issue to such individuals, a discharge or release under honorable conditions, dated back to the date of the original discharge that these men have rehabilitated themselves. Of course, it must be established to the satisfaction of the board by oral or written evidence, or even by such independent investigation as the board may make, that his character, conduct, activities, and habits since his original discharge have been good for at least 3 years. It directs the Board to take into consideration in each case the reasons for the nature of the

original discharge or dismissal, together with such other factors as the board may consider appropriate. Although the bill would permit the granting of an honorable discharge to these individuals, I call to your attention that it would not authorize the granting of the so-called direct GI benefits including pension, compensation, hospitalization, military pay and allowances, education, loan guaranty, retired pay, or other benefits. They would get a discharge under honorable conditions only.

Mr. Speaker, every Member of this House I am sure will agree with me when I say that this legislation is long overdue. In the fiscal year 1955, a total of 1,062,940 men and women were discharged from all branches of the Armed Forces. Of these were 69,323 who received undesirable, bad conduct, or general discharges—those subject to review under the provisions of the bill which I have introduced. It is interesting to note that between July 1, 1950 and June 30, 1955, only 561 discharges were corrected or changed by the Boards for the Correction of Military and Naval Records. I repeat only 561 out of 69,323. This is due, I am sure, not to the coldness of heart of the reviewing board, but rather to the punitive rules under which the reviewing board operates.

I am sure that every Member of Congress has one or more cases in his district where boys still in their teenage years have been given less than honorable discharges that could be meritoriously considered by the appropriate military review board.

For this reason, Mr. Speaker, I hope that the 85th Congress will enact this worthy legislation into law. By doing so it will give many thousands of our American servicemen, who have rehabilitated themselves in civilian life, a chance to prove that they have lived an exemplary life and are now good American citizens. The stigma which now automatically attaches for a lifetime to them can be erased. It will help them to obtain dignified employment worthy of their natural ambitions and abilities. I feel that they have been punished enough, let us help them to help themselves in their goal to become first-class citizens.

National Investment for Economic Growth

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, the growth of the American economy is of greatest importance to everyone. As the economy grows, so should our thoughts grow with it. We must open our minds to all ideas which are forward looking. As a means of presenting some very provocative thoughts on the American economy, under unanimous consent, I insert a pamphlet entitled "National Investment for Economic Growth," a joint statement by members of the board of trustees and the agriculture, business, labor, and international committees of the National Planning Association, adopted at the annual joint meeting in Washington, D. C., December 10, 1956:

NATIONAL INVESTMENT FOR ECONOMIC GROWTH

(Joint statement by members of the board of trustees and the agriculture, business, labor, and international committees of the National Planning Association adopted at the annual joint meeting, Washington, D. C., December 10, 1956)

I

From 1929 to 1955, total production in the United States, measured in constant dollars, more than doubled. During the next 20 years, it is reasonable to expect that we will be able to double production again. If peace can be maintained, the United States at the time of its bicentennial anniversary in 1976 may find itself at the threshold of an age of abundance. However, certain requirements must be met to make this possibility a reality. One such requirement is for social overhead expenditures, public and private. The National Planning Association believes that this is a most propitious time to look ahead and to examine what requirements in this field the Nation will be called upon to meet in the coming decades.

The goal of abundance will not be achieved automatically. Production increases do not take place as a result of any natural law. Economists and statisticians have become accustomed to assume a projected increase in output per worker of 3 percent or 4 percent year after year. Such an increase in productivity, however, can materialize only if raw material resources and energy supplies are available to satisfy the needs of industry; if labor can meet the requirements of modern technology for greater skills and greater knowledge; if the fruits of pure and applied research can provide the basis for further technological advances; if management continues to venture into new fields of endeavor and to expand productive capacity today for tomorrow's market; and last but not least, if purchasing power and demand are encouraged to rise in accord with the rising capacity to produce and consume.

The case of agriculture gives us a preview of what can happen when the capacity to produce outstrips effective demand. Adoption of new technology in farming has pushed total production beyond the point at which present domestic and foreign markets are absorbing it at prices favorable to the farmer. Other sectors of the economy may run into similar problems, unless we learn how to live with abundance.

There are in an expanding economy certain functions which are desirable for the general welfare and essential for sustained expansion. They include education and training, research, promotion of mental and physical health, the development of natural resources, provision of public recreational facilities, construction and maintenance of highways and skyways, water and sewer facilities, slum clearance and urban redevelopment, and other national and local improvements. These functions may be called the social overhead costs. Some of these functions are performed by private sources; many are traditionally public services. If they are not properly performed, economic growth will suffer sooner or later.

Over the past 15 years, the requirements of war and rearmament preempted much of our productive capacity for national defense purposes. Public and private undertakings for other than defense purposes were held back so that today we are faced with a truly critical situation with regard to our schools and hospitals, our roads and airports; serious water supply problems are threatening in some of our cities and rural areas.

II

During the last 5 years, we have invested over $65 billion in residential housing, almost $300 billion in private plant and equipment, and roughly $80 billion in additional assets for our defense establishment, but only about $50 billion has been invested by Government in what might be called the social capital of the Nation of which $10 billion is federally owned while $40 billion represents State and local government investments.

High priority was required to build up the defense plant, to expand and modernize our industrial plant, and to provide housing for the increased population. The lag in making a corresponding effort, public and private, in bringing our social plant up to date, however, has created serious deficiencies. To correct these deficiencies is one of the most urgent tasks which lie ahead.

This year, the Federal Government embarked on a long-range road construction program to alleviate some of the pressing inadequacies in our highway system. Also, State and local government activities in these areas of public responsibility have increased in recent years. We have failed, however, to provide for adequate educational facilities, to attract by adequate compensation the increasing number of additional teachers which a growing population demands; to alleviate the growing shortage of hospitals and people to staff them. These are some of the problems of today; they will be bigger problems tomorrow. We must begin preparing for them today. Such deficiencies, if allowed to continue, may well seriously handicap economic development. It would be a tragic paradox if a nation which emphasizes the role of private enterprise in economic growth permits these deficiencies to continue and thereby fails to give private enterprise the public support it needs to carry out its functions. A growing economy must have a healthy educated labor force; it needs an ample supply of water and energy; it needs the results of research; it needs roadways and air facilities if private enterprise is to maintain an adequate rate of growth.

In the field of primary and secondary education, we are faced not only with an already heavy backlog of unfilled demands, but we can also look forward to the increasing requirements of an ever-growing population. In a recent publication of the Department of Commerce, it was estimated that $4 billion in expenditures for school construction would be needed during each year of the coming decade to meet requirements in this area. This means that the rate of school construction outlays over the next 10 years would have to rise 60 percent above the current level of $2.6 billion. Furthermore, if in the America of 10 or 20 years hence average outlays per school-age child are to attain a level currently spent only in those communities with high education standards, total operating expenditures for pupils and teachers will more than double, reaching by 1975 an annual rate of outlay which exceeds $21 billion per year as opposed to the 1955 level of only about $10 billion.

A corresponding increase in effort, both private and public, is needed in higher education in order to meet the requirements of a technologically advancing economy. This will call for an intensification of our interest and activity in the basic sciences—including the social as well as the natural sciences. In addition it will be necessary that our colleges and universities prepare to meet the demands for more engineers, chemists, technicians, and executive leadership; and it will be necessary that both government and industry devote increasing atten-

tion and resources to basic research and development projects. It is a special responsibility of Government to support bold programs in those areas of research and development which give promise of uncovering new areas of basic knowledge, and of leading to a more efficient utilization of resources.

The age of abundance will be an age calling for a more intense and efficient use of our available natural resources as well as for the development of new resources.

Public as well as private action is needed for soil conservation on the farms and ranches throughout the United States. Private industries and groups require technical aid and, in many instances, economic assistance from governments (Federal, State, and local) in developing and carrying out effective soil conservation programs. In some areas this must be coupled with flood prevention and regulated run-off. The public lands must be maintained whether devoted to forestry, grazing, recreation, or a combination of uses. Revenues from sales of timber, grazing privileges, admission fees to recreational areas, fishing and hunting licenses provide significant sums, but part of the costs will continue to be paid by Government. Continuing increase in the demand for recreation will call for greater expenditures for public parks, game preserves, and other recreational facilities.

We also face the possibility of serious shortages of water to provide for all the functions it performs in support of a growing economy. Already, in some areas the increasing demands for water by industrial as well as nonindustrial users have gradually but steadily lowered the water level to a point where it is even insufficient to meet all public needs. Water pollution has further restricted the available supply of usable water. The Department of Commerce in another study of water needs and resources has estimated that capital investment in urban water facilities must increase by $19 billion by the end of 1975. Substantially larger amounts will be needed to meet the water requirements for irrigation, industrial production, and public consumption. Assuring an adequate water supply 10 years from now may require doubling of present outlays. The complete solution to the problem of water utilization is not to be found in flood control projects and new dam programs alone, but must include a complete reevaluation of the available supply, distribution and proper use of our water resources. America is blessed with a generous reserve of coal and still substantial reserves of oil and gas. Nevertheless, there is a need for making every possible effort in the development of nuclear energy. It may be wise not to exhaust our conventional fuels because of their valuable qualities as an irreplaceable source of chemical materials. Moreover, there are regions in the United States where the transportation costs for fuel constitute a heavy burden on the economy of the region. This might be reduced in time through the use of nuclear fuel and power.

In the light of the expected great increases in the demand for energy, it will be important that a part of the additionally needed supplies of energy be obtained from such new sources as nuclear and solar energy. Nor are we yet certain what other benefits, aside from power, might be revealed if nuclear energy were to be explored more deeply. There are great uncertainties in the nonconventional sources of energies, and desirable progress can be made only if Government, private enterprise and research institutions cooperate to the fullest extent in this field.

III

In 1955, about $36 billion was spent for the nondefense services performed by Federal, State and local governments. This is a large sum of money. However, these expenditures should be seen in the perspective of a Nation growing in population and in total production.

Nondefense purchases of goods and services [1]

	In 1955 purchasing power				In percent of gross national product	
	In billion dollars		In dollars per capita			
	Federal	State-local	Federal	State-local	Federal	State-local
1929	[2] 1.0	16.0	8	131	0.5	8.8
1939	9.0	19.6	69	150	4.7	10.3
1945	1.6	14.5	11	104	.5	4.6
1950	4.5	24.5	30	152	1.4	7.6
1951	4.3	25.0	28	162	1.2	7.2
1955	5.9	30.1	36	182	1.5	7.7

[1] Total Government purchases of goods and services excluding national security and excluding the so-called transfer payments, such as interest on the national debt, veterans' benefits, farm price supports, and social security benefits.

[2] Estimated from budget totals.

Source: Economic Report of the President, January 1956.

Thus, public expenditures for nondefense purposes amounted to approximately the same percentage of total production in 1955 as they did in 1929. Yet 1929 was a year of extraordinarily high private spending and relatively low Government spending. In contrast, 1955 was a year in which State and local government expenditures continued to increase in an effort to catch up with these deficiencies. Compared with 1939, which was still a year of sizable emergency economic programs, Federal expenditures for these purposes have declined; State-local expenditures have increased. On a per capita basis, the 1939 level of total Federal, State, and local expenditures was not reached until 1955. As a proportion of total production, these public outlays are still below the prewar level.

In addition to the Government outlays in these fields there are also considerable private outlays in education, research, health services, and conservation of resources. It is difficult to estimate the private outlays for those activities which can be classified as belonging to the same category of social overhead costs. Adding an estimated allowance for the private activities to the public functions in these fields, total outlays for social overhead costs in 1955 may be estimated at around $42 billion.

This would mean that in 1955 11 percent of the total production of goods and services was used for these social overhead functions. 1955 was a year in which we were still lagging behind in the performance of these essential services and for a few years an increase in this percentage might be needed. After catching up with the needs during the coming years we may assume that over a longer period of time a minimum of 10 to 12.5 percent of total production may be required in order to provide adequately for the performance of these essential services. What would that mean for future years?

It has been estimated that potential annual production in the United States would approximate $600 billion and exceed $800 billion 10 and 20 years hence, respectively (measured in 1956 dollars).

Assuming that 10 percent of the full-employment production is needed for the social overhead functions, outlays for these programs might rise from $42 billion per year in 1955 to $60 billion in 1965 and more than $80 billion 20 years from now. Even a rise to $100 billion public and private outlays for these purposes by 1975 would mean a rise from only 10 to 12.5 percent of total production. It is probable that the larger share of the increase would be in the form of Government outlays.

We do not know if these amounts actually will be needed or whether they will be adequate. We only wish to point out that increases in outlays indicated by these figures, large as they appear, would impose no or only a small increase in the share of production devoted to these purposes. On the contrary, it appears that unless these national responsibilities are fulfilled adequately there will be little chance that the potential increases in production could materialize.

Some of the programs discussed in this statement are of such urgency that they can no longer be deferred and should be initiated without delay. However, under present economic conditions care must be exercised in carrying out these programs so as to minimize inflationary pressures. If a slack should develop in private investment, expenditures for such programs should be stepped up.

IV

Many of the educational training and health programs to which we have referred would not only support the rise in productivity of workers but by the same token would also help to increase the earning power of marginal workers. Such measures thereby would contribute to a rise in purchasing power generally as well as to an increase in the income of many families who currently live on substandard incomes. Over the past quarter century, the United States has experienced a less uneven distribution of income. Wage rates in what were formerly the lowest level have been raised. Social insurance and private pension benefits have provided some income for the aged. Nevertheless, there are today in the United States 7 million families with money incomes below $2,000. And despite present prosperous conditions we still have 5.8 million individuals on our public-assistance rolls. This low-income group includes some farmers who satisfy part of their needs out of their own production. But it also includes many who are unemployed workers in depressed areas, aged or disabled workers, widows, and members of broken families. Programs designed to rehabilitate these submarginal farmers, to rehabilitate chronically depressed areas, to make social insurance and assistance payments more adequate, appear to be the most promising measures for dealing with the remaining pockets of poverty. Programs of slum clearance and urban redevelopment can be and should be undertaken for the benefit of families in the low-income brackets.

To raise the income of every urban family up to a minimum of $2,000 per year would require less than $9 billion. We do not suggest that the whole deficiency should be made up by public programs. The estimate does indicate, however, that the problem is of a magnitude which can be solved by a nation which is moving toward the threshold of abundance.

V

Increase in Government expenditure programs of the size and magnitude indicated require planning and programing in order to obtain maximum results. The long-range national program—local and State, as well as Federal—which has been undertaken for road construction is the type of bold approach which is equally important for education, conservation, resource utilization, slum clearance, and so on, where the need for expanded action is also urgent.

In many of these fields, the deficiencies are problems common to regions, States, and localities and are the concern of a great number of different governmental agencies and private groups. There is need for greater cooperation both in the planning and in the operations of government and private programs. For example, the problem of water supply and use almost invariably involves a number of neighboring States or cities, and industrial and individual as well as public users.

The financing of a Government program which expands approximately in proportion to total production should not create insurmountable difficulties, particularly on the Federal level. As the economy expands and incomes rise, Government tax revenues increase by large amounts each year even without any modification in tax rates. If it does not become necessary to raise national security expenditures above $50 billion or should they even decline, some reduction in Federal taxes should become possible over the next decade in spite of the projected increase in nondefense expenditures. We believe, however, that until substantial relief is attained for the pressing deficiencies in Government services, greater priority should be given to taking care of the needed increase in Government programs than to granting substantial tax reductions. This does not preclude suggesting desirable tax revisions.

A large portion of the increase in Government expenditures will be borne by State and local governments. Most State and local taxes, however, are of such a nature that tax revenues do not rise as rapidly as Federal revenues in an expanding economy. The disproportion between rapidly rising State-local functions and much lower rising State-local tax revenues will require some revisions in Federal-State-local financial relationships.

A number of studies of desirable revisions in Federal-State-local relationships have been made in recent years. The National Planning Association believes that the very broad scope and large size of the programs discussed in this statement necessitate a new approach to the problem of intergovernmental relationships. We believe that it is urgent to explore new ways for financing the expanding functions of local government and the new programs in the field of urban renewal and regional development.

Race Relations Improve

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. PORTER. Mr. Speaker, the following article from the April 20, 1957, issue of America was written by a friend and classmate of mine who has been working for the Ford Foundation and writes with authority on this important subject:

RACE RELATIONS IMPROVE

(By Joseph P. Lyford)

In an outspoken attack on race prejudice, Archbishop Patrick A. O'Boyle, of Washington, D. C., warned some months ago that America cannot "win the bitter war for men's minds in the world struggle if the Communists can tell the hundreds of millions in Asia and Africa that they, rather than Christians, practice the doctrine that all men are equal."

The reaction abroad to the conflict over desegregation in the South justifies an even more ominous observation. Without prompting from the Communists, a large segment of the foreign press normally friendly to the United States has been printing a daily ration of such stories as the Emmett Till murder in Mississippi, the Autherine Lucy case at the University of Alabama, the bombings of Negro churches, the activities of White Citizens Councils—the same type of stories, in a word, that United States newspapers are headlining.

Almost as serious, the little events in the segregation story leave a deep impression abroad. An example: Indian Opinion, the Natal (South Africa) newspaper edited by Mahatma Gandhi's grandson, recently front-paged half a dozen articles from different nations. The item from the United States told about the white Florida public-health physician who was fired because she lunched with a Negro nurse. A steady flow of such information can understandably create an unhealthy suspicion of America and of Christianity.

Recently, however, the foreign press has been getting a different picture of the situation in America, one which may help balance the stories of crime and strife. Asian, African, and European editors have received copies of a study, published toward the end of 1956, which tells in detail how, quietly and without publicity, racial barriers have been falling in States all over the Union. The report, by Harold Fleming and David Loth, is entitled "Integration, North and South" (Meridian Books, 17 Union Square West, New York 3, 110 pages, 40 cents). It lists more than 1,100 examples of how the Negro is gaining equality of opportunity in the school, in public and private employment, in religious worship, in health facilities, in public accommodations, and in social organizations.

Page after page of the report carries a story within a story: the account of how Catholic institutions have responded to the crisis over race relations in the South. Without depreciating the courageous and effective contributions of other denominational groups which have worked on behalf of desegregation and whose work is outlined in its pages, the report makes it clear that the Catholic Church has set an example that has heartened all supporters of the Christian principle of racial equality. The church's activities have been especially noticeable in such Black Belt States as South Carolina, Alabama, and Louisiana, where the Negro population is densest, where segregationist sentiment is highest and where the flammatory activity of the white supremacy groups are most intense.

THE CHURCH AND INTEGRATION

One of the forces for enlightenment in a strongly prosegregation State is the Rock Hill School in South Carolina, which integrated under Father Maurice V. Shean, C. O. Another, of course, is Archbishop Joseph F. Rummel, of New Orleans, who is educating his people to accept desegregation and who has supported the merging of Negro and white classes in catechism at Erath, La. But besides these comparatively wellknown examples of progress in integration, there are previously unreported cases in dozens of communities and cities in States everywhere in the South.

What is most important, not only have many Catholic schools, churches, and lay groups achieved integration quietly, but in many cases the community has been deeply influenced by their action. Deep-seated prejudices have been quieted and have begun to evaporate as citizens watch, often in real amazement, the way in which Negro and white Americans have shared spiritual guidance and educational benefits on an equal plane. It might almost be said that the initial success in breaking down segregation practices was really overshadowed by the subsequent effect that the sight of equality being practiced daily has had upon southern communities.

Integration, North and South contains dozens of citations of Catholic schools and organizations, mainly in the South, which have taken steps toward integration. The report says, in summary (p. 57):

"In six southern and border States, Negroes were enrolled with whites in Catholic and elementary schools before May, 1954 [the date of the United States Supreme Court decision outlawing school segregation by race and the 'separate but equal' doctrine].

"During the 1954–55 school year and in the following term, Negro children began attending formerly all-white Catholic grammar and high schools in 21 southern cities, as well as in many smaller communities. States in which Catholic school integration occurred in whole or in part are Arkansas, Kentucky, Maryland, North Carolina, South Carolina, Oklahoma, Tennessee, Texas and Virginia."

In the field of higher education, the survey recounts the progress of Catholic colleges and universities. All-white Catholic institutions desegregating since the Supreme Court decisions include Spring Hill College, Mobile, Ala.; Barry College, Miami, Fla.; Belmont Abbey College and Sacred Heart Junior College, Belmont, N. C.; and St. Gregory's College, Shawnee, Okla. An all-Negro college, Xavier University, New Orleans, admitted white students for the first time. As noted before, many of these colleges were located in the areas where desegregation moves could be expected to encounter the bitterest opposition.

In many Southern States, hospitals have been centers of progress for the Negro in his quest for equal treatment. Here, too, Catholic institutions have figured prominently. In the border State of Missouri, the 90-bed Queen of the World Hospital opened 2 years ago as the first nonsegregated hospital in Kansas City, with an integrated hospital staff as well. In Charlotte, N. C., Mercy Hospital began admitting Negro patients in September 1954, after Bishop Vincent S. Waters of the diocese of Raleigh requested superintendents of hospitals to make their facilities available to Catholic Negroes and to allow qualified Negro surgeons and doctors to take care of their patients. St. Francis Hospital in Charleston, W. Va., admitted Negro nurses for training and service on an integrated basis which included housing. St. Mary's Hospital of Knoxville, Tenn., enrolled nine Negroes for training as practical nurses.

The Catholic Church also moved "vigorously" in several southern areas to implement its prointegration position in various church-affiliated lay organizations, reports Integration, North and South. Paradoxically, one of the most forthright demonstrations occurred in Alabama, a most difficult State. In Mobile, Bishop Thomas J. Toolen conferred one of the Church's highest honors, that of Knight of St. Gregory, upon a Negro layman. The recipient was the first Negro in the South to be inducted into the papal honorary society and one of only a few of either race in the entire country.

The Knights of Columbus in Tulsa, Okla., accepted its first Negro member in 1955; and in the State of Delaware the same year, the Bishop Monaghan Council accepted the first Negro applicants for membership since the Knights of Columbus was organized in Delaware 50 years ago.

South Carolina, where integration progress has been almost entirely lacking, was the scene of important Catholic activity. The Catholic Youth Organization was integrated on the diocesan (in this case statewide) level, and as a result, both meetings and conventions have been biracial. The Diocesan Council of Catholic Women of Charleston and the newly formed South Carolina Confraternity of Christian Doctrine (a Catholic lay catechetical group) have also been integrated.

In the context of the whole integration report, the part played by the Catholic institutions was impressive, but even this did not tell the whole story. The report did not claim to include every example of integration. Much progress remains hidden in communities where the work of reducing racial tensions and creating equal opportunities has

taken the form of education and discussion rather than of overt action.

It is important to emphasize that the report lists only examples of integration occurring since the 1954 Supreme Court decision outlawing segregation.

This point is unfortunately not made clear in Integration, North and South. The section of the report which deals with integration in the non-Southern States makes almost no mention of the work of Catholic groups. This omission arises from the setting of an arbitrary time zone to be covered by the report. By the date of the Supreme Court ruling, the Catholic Church and its affiliated organizations in the North had integrated almost completely. Thus, paradoxically, the church was a victim of its own forehandedness insofar as the report was concerned.

The author of the nonsouthern section of the report, David Loth, has acknowledged the validity of criticism directed at his report on this point. To clarify the record he explained, after publication, that in taking his "inventory" of integration since 1954, he had found that "Catholic churches and religious orders provided some of the outstanding examples of institutions which had desegregated almost entirely in the North before the period covered in our survey." Further, he declared, "The examples of successful integration by religious groups, therefore, would have been vastly increased by the remarkable record of the Catholic Church and a few others if the report had been extended to the last 10 years instead of the last 2."

CHURCH LEADERS SPEAK OUT

An historical review of the Catholic Church's position on race-relations matters demonstrates its unequivocal doctrine on the subject. As far back as 1891, Catholic prelates like Archbishop John Ireland of St. Paul, Minn., were taking a clear stand. "What do I claim for the black man?" asked the archbishop. "That which I claim for the white man, neither more nor less. I would blot out the color line. White men have their estrangements. They separate on lines of wealth, of intelligence, of culture and ancestry. But let there be no barrier against mere color."

Since Archbishop Ireland's day, Catholic Church leaders have repeated the substance of his views, and in recent years such men as Samuel Cardinal Stritch of Chicago, Francis Cardinal Spellman of New York, Archbishop Rummel of New Orleans, Archbishop Robert E. Lucey of San Antonio, Archbishop Richard J. Cushing of Boston, Archbishop Joseph E. Ritter of St. Louis, Bishop Russell J. McVinney of Providence, Bishop Waters of Raleigh, and Bishop Toolen of Mobile have spoken out repeatedly on the subject. Their call for interracial justice is strengthened by papal encyclicals issued in recent years—that is, Quadragesimo Anno (Pius XI, 1931), Mit Brennender Sorge (Pius XI, 1937), Sertum Laetitae (Pius XII, 1939) and Mystici Corporis (Pius XII, 1950)—as well as by editorials in Osservator Romano.

LAYMEN TAKE ACTION

Helping to put principle into practice have been lay groups like the Catholic Interracial Councils, which now exercise great influence in 28 cities and cooperate with such organizations as the NAACP, the Southern Regional Council, and the Urban League. The National Council of Catholic Women, the National Council of Catholic Men, the National Federation of Catholic College Students, the Catholic Students' Mission Crusade, the National Catholic Educational Association, and the Catholic Press Association have done their part, too, to advance integration.

The effectiveness of the church and its lay affiliated groups prior to 1954 can be measured by the fact that in Washington, D. C., and Maryland, parochial schools have been integrated since 1949, and that in St. Louis school integration was completed in 1947. Other States where parochial school desegregation was begun or completed in advance of the Supreme Court decision include Delaware, Kansas, Kentucky, Texas, and West Virginia. In higher education, 26 Catholic colleges, universities and seminaries in the District of Columbia, Kentucky, Louisiana, Maryland, Missouri, Texas, and Mississippi had desegregated before 1954.

This record has been an outstanding part of the total movement of all United States educational institutions toward equal treatment of all races. Despite outbreaks of violence in the South, successes like those described above are slowly strengthening the public belief that the days of segregation are numbered—and the people of other nations are beginning to comprehend this, too. Commenting on the events described in Integration, North and South, the Jerusalem Post said recently that the United States appears "determined to follow the difficult road toward full civic equality for her colored citizens."

Read by itself, of course, Integration, North and South presents a completely optimistic picture, and the authors are careful to caution their readers that the report is frankly one sided because it concerns itself only with the forward progress of integration of the Negro into American life. The publicizing of backward steps, reasoned the authors, has more than adequately been taken care of by the newspapers. Chronicles of quiet progress have rated few headlines, but, as a foreword by Morris L. Ernest declares, the report is "news of a high order," and an "inventory of hope." It makes unmistakably clear the fact that Catholics, Protestants, and Jews, Negros and whites, doctors, priests, ministers, lawyers, businessmen, unionists and housewives can share credit for deepening the meaning of freedom to all citizens of this Republic, and for bringing a message about Christianity and democracy at work to the peoples of Africa, Asia, and Europe.

Warning From the Past

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article written by Elias Gilner which appeared in the April 1, 1957, issue of Congress Weekly, the official publication of the American Jewish Congress. Mr. Gilner, a close student of Middle East problems, lived in British mandated Palestine during the period he describes:

WARNING FROM THE PAST

(By Elias Gilner)

On March 13 Britain and Jordan exchanged letters terminating their 1948 treaty and severing the military and economic links between the two countries. In 6 months the British forces will be out of Jordan and all their buildings, land, and permanent installations as well as some of their ammunition and other stores will become Jordan's property. This exit, which is an expulsion rather than a voluntary departure, arouses some melancholy reflections upon the political folly of some mighty nations and the tenacity with which this folly is pursued.

The Kingdom of Jordan, originally created by Britain as the Emirate of Transjordan about 35 years ago, was the illegitimate offspring of a general policy to placate the Arabs at the expense of the Jews. The word "illegitimate" is used advisedly for under the terms of the British mandate the whole of the area of Palestine was to be the territory in which the "Jewish National Home" was to be created. But in his White Paper of 1922, Winston Churchill severed the whole of Transjordan—two-thirds of the mandated territory—from Palestine and handed it over to Emir Abdullah as a consolation prize for the loss of his father's, King Hussein's, domain to Ibn Saud in their war for what is now known as Saudi Arabia.

This emasculation of an international obligation was one link in a chain of events and policy which began shortly after the Balfour Declaration, which was pursued with mounting obduracy over some 3 decades, despite frequent warnings and eventually violent opposition, and which proved as disastrous to the interests of the British Empire as it was unethical. This policy had been actuated by expediency which proved to be inexpedient and by a drive to secure the flow of Mid Eastern oil which, as recent events have shown, has failed. Britain's exit from Jordan is one of the last scenes in the drama of failures resulting from this policy.

While Britain has begun to reexamine her policy—and her attempt to retake the Suez Canal was a fruit of this reexamination—our Government appears to have taken over this policy lock, stock, and barrel, with similar motivations. An error, committed for lack of experience is understandable; an error repeated in disregard of a broad field of experience is incomprehensible, to say the least.

A review of the highlights of Britain's experience and a comparison with our own Mid East policies of recent years may therefore be instructive.

The Balfour Declaration was undoubtedly issued in good faith. But powerful forces in both major parties in Britain, which were oriented on the Arabs and oil, regarded the declaration as a grievous error. These forces included practically all the permanent, top-ranking officials in the Colonial, War, and Foreign Offices and they exercised tremendous influence upon the formulation of Government policies irrespective of whether the Conservative or the Labor Party was in control. These forces had the further advantage of influencing appointments so that their adherents were actually running the colonies and mandated territories on the spot.

The overwhelming majority of the men in Palestine, former army officers reared in the tradition of Lawrence of Arabia, embarked upon active opposition to the idea of a Jewish national home shortly after the 1918 Armistice, roughly a year after the Balfour Declaration. It will be recalled that late in 1918, Dr. Chaim Weizmann and Emir Feisal, who subsequently became King Feisal of Iraq, had reached an amicable understanding. On January 3, 1919, a written agreement between them was arrived at, of which article 3 reads as follows:

"In the establishment of the constitution and administration of Palestine all such measures shall be adopted as will afford the fullest guarantees for carrying into effect the British Government declaration of the 2d of November 1917."

On March 3, 1919, Emir Feisal wrote to Professor (now Justice) Felix Frankfurter:

"We Arabs, especially the educated among us, look with deepest sympathy on the Zionist movement. Our deputation here in Paris is fully acquainted with the proposals submitted yesterday by the Zionist Organization to the Peace Conference, and we regard them as moderate and proper. We will do our best, in so far as we are concerned, to help them through; we shall wish the Jews a most hearty welcome home."

There was no reason to believe that these sentiments were insincere. In any case,

there was no organized Arab opposition to Zionism at the time. Whatever may have actuated Feisal in his professions of friendship, the memory of the hangings of Arab leaders by the Turks was still fresh and the Arabs were not inclined to risk opposing the victorious British.

But the OETA (Occupied Enemy Territory Administration) officials, seeking to stifle the National Home idea in its cradle, encouraged Arab opposition. The first to demonstrate it quite openly and practically at the moment when an understanding with Feisal was being reached, was Colonel Postlethwaite, the then Governor of Jaffa. Early in 1919, he organized the Arab-Christian-Moslem Society whose prime purpose was political opposition to the Jewish National Home. With the advent of this society things began to happen and on the eve of Passover 1919 there were rumors that the Arabs would attack the Jews of Jerusalem. The late Dr. Eder, then principal officer of the Zionist Commission to Palestine, went to see the top OETA administrators but received no satisfactory assurances.

The disturbing rumors reached Commandante Bianchini, who at the time was in charge of an Italian naval unit patrolling the offshore waters of the Mediterranean in the area. Bianchini was a Jew and took the rumors seriously. He, too, went to see the British administrators and, receiving no satisfactory reply, he brought to the Holy City a company of his marines who patrolled it the entire Passover week. Nothing untoward occurred. However, a year later, when Bianchini and his unit were no longer in the area, the process of rumors and futile representations to the Administration repeated itself with the difference that the anticipated riots materialized.

A succession of bloody disturbances followed, resulting in the Churchill white paper and in an undisguised administration policy which favored the Arabs over the Jews. The discrimination affected the administrative departments, the railways, the police as well as the law of the land itself, particularly the regulations concerning immigration and land purchase. In 1926 the Arab Legion was formed in Transjordan but no equivalent all-Jewish Legion unit was permitted in western Palestine. In August 1929 the terrible riots throughout Palestine were the prelude to another attempt to curtail Jewish rights under the mandate. The Passfield white paper of 1930 was devised to stop all Jewish immigration into Palestine but was modified under the pressure of widespread public protests. The sustained riots of 1936–39 brought on the severer 1939 MacDonald white paper, which virtually halted Jewish immigration and acquisition of land by Jews and condemned the Jewish population of the country to a permanent minority of one-third. This was the decree which led to a long period of struggle, costly in blood and property, which eventuated in the partition of Palestine and the birth of Israel.

This brief review would be incomplete without reference to an event which left its indelible imprint upon the Mideast situation.

The 1936–39 riots began in April 1936 with a general strike ordered by the Arab Higher Committee under the leadership of the former Mufti of Jerusalem, Haj-Amin El-Husseini. Despite intimidation and the assassination of Arab dissenters, the strike began to peter out visibly by midsummer, and by the beginning of autumn was on the verge of disintegration. An important factor in the collapse was the ripening of the Arab orange crop. Failure to harvest it would have completely ruined the already tottering Arab economy. The opportunity of humbling the Mufti and dealing a mortal blow to his power was at hand.

While the strike was collapsing, Fawzi Bey Kaukji, the Arab gang leader who had been permitted for months to engage in depredations against Jews, Englishmen, and even Arabs with impunity, was cornered in the hills by Col. H. J. Simson, an incorruptible British officer sent to Palestine to suppress the riots. A decisive kill was at hand.

Suddenly, an amazing move to save the Mufti's face and the life of his henchmen in the field was made by the Palestine administration. It permitted the Mufti to publish an appeal, October 12, 1936, to him and his committee by the Arab kings to call off the strike with honor. Up to that moment these kings had not interfered and had no legal right to interfere in the internal affairs of Palestine. The only official jurisdiction in the country was that of the Mandatory. Yet the Mandatory, against which the Arabs were on strike, was willing to sacrifice its own prestige in order to save that of the Mufti. He, of course, promptly responded to the appeal of the kings.

Shortly afterwards, when Fawzi Bey Kaukji and his gang were completely bottled up, the Mufti gave the Palestine Government an ultimatum: Unless the gang was permitted to escape within 24 hours, the strike would be reinstituted. The utter ridiculousness of the threat was apparent. But the Palestine Government preferred to take it seriously and ordered Colonel Simson to withdraw from his positions. Kaukji was saved, the Arab kings and the Mufti triumphed and the groundwork for the Arab League had been laid.

The history of American Middle East policies since Secretary Dulles took command of the State Department up to our recent position in the U. N. when we threatened Israel with sanctions does not indicate that we have learned anything from Britain's bitter lesson.

Like Britain in the past, we have been pouring huge amounts of money into the Arab coffers and are prepared to do even better under the Eisenhower doctrine. We have helped to accelerate Britain's departure from the Suez Canal. We have proclaimed a new neutral policy as between Israel and the Arab countries which, in practice, expressed itself in a tendency decidedly unfavorable to Israel. Since 1953 the grant-in-aid to Israel has been scaled down annually and now it is in suspension. Arms and ammuition shipped in liberal quantities to Iraq, Saudi Arabia, and Egypt were denied to Israel despite the growing threat to her security. Even after Egypt's arms deal with Soviet Russia, we persisted in denying Israel defensive weapons. As formulated in Dulles' speech of August 26, 1956, we envisioned as one of the major conditions of settling the Israel-Arab differences, the ceding by Israel to the Arabs of territory which would merely increase the Arabs' wasteland but which is vitally needed by Israel as a source of sustenance and security.

In the United Nations we supported the double standard of justice as between Israel and her Arab neighbors by tolerating Egyptian and Jordonian acts of murder and pillage, while censuring Israel for retaliating. The crowning act of our policy of appeasing the unappeasable Arabs was performed in the arena of the United Nations after the recent invasion of Egypt by Israel, Britain, and France. Our almost hysterical rush to the Security Council with a resolution branding Israel an aggressor, while we uttered hardly a word against the pillage and murder of innocent women and children in Israel by Egyptian fedayeen, will not redound to our glory when the history of this period is written. Nor will our threat of sanctions to force Israel to evacuate the Gaza strip and the Gulf of Aqaba.

The fruits of this policy are already apparent. Nasser has chalenged the United States on Israel's assumptions. He has returned to Gaza. He insists that he will continue the blockade of the Suez Canal and the Gulf of Aqaba against Israel. He has proclaimed himself the one and only boss of the Suez Canal, to whom all tolls are payable. He dictates to the U. N. forces in Gaza as he did in other areas of evacuation. His ignoble defeat by Israel has been permitted to become a triumph.

Is not all this reminiscent of the events in Jerusalem in October 1936? It matters little that there the name was Haj-Amin El-Husseini and here it is Gamal Abdel Nasser. The characters, methods, and aspirations of the two individuals are similar. Like the Mufti before him, Nasser aspires to be the supreme ruler of the Moslem world. Like the Mufti, Nasser possesses an inordinate sense of grandeur inflated in no small measure by the spineless submissions of the international community. And our reaction to Nasser's latest acts of defiance does not indicate an essential change of attitude on our part.

Shall we repeat Britain's error to the end? Shall we wait until Nasser plunges the world into an atomic holocaust? Or shall we topple his lawless reign while he still walks on feet of clay?

Billions, Not Millions

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. ADAIR. Mr. Speaker, in these days of very large governmental expenditures, it is not easy to maintain a balanced concept of the enormity of governmental spending and its impact upon our American economy. The following editorial from the Fort Wayne Journal-Gazette points up changes that the years have brought and ends upon a very wise note of caution for the future:

BILLIONS, NOT MILLIONS

Today the American people are living in a world of fantastic figures so far as Federal taxes, budgets, and the national debt are concerned.

The numbers are getting too big for human comprehension.

We have only to go back a few years into the present century and make some comparisons to show how the cost of National Government has mushroomed like an atomic bomb explosion.

Take the public debt of the United States. In 1915, the year after World War I broke out in Europe, our national debt was only a little more than $1,191,000,000.

The debt rose to approximately $25 billion for the fiscal year of 1919 as the result of America's participation in World War I. Then it began to decline.

The national debt was down to $16,931,000,000 in 1929, the year the stock market broke as the prelude to the great depression.

Today the Federal debt is in excess of $276 billion as compared to not much over $1 billion in 1915.

This debt might have been much larger than it is if Congress had not placed a legal ceiling on it. This ceiling has virtually forced the Eisenhower administration to balance the Federal budget. The financial watchdogs in Congress have said they will not let this ceiling be lifted again.

Now let's take a look at the Federal budget. In 1917, for the first time in its history, the United States Government spent in excess of $1 billion in any given fiscal year. The expenditure for that year reached $1,977,000,000. The United States had entered World War I on April 6, 1917.

President Eisehower has submitted to the Congress for the fiscal year 1958 a budget of $72 billion. This is the largest peacetime budget in the history of the United States.

These comparative figures are enough to curl the hair of any citizen with a sense of thrift in his system.

Finally, let's examine what has happened to the taxpayer himself. The year 1913 saw the final ratification and adoption of the 16th amendment to the Federal Constitution permitting Federal income taxation.

Today a man with a $10,000-a-year income and 2 dependent children pays over 25 times more Federal income tax annually than a man of similar income did in 1913. Such a man paid only $60 on a $10,000 taxable income in 1913. In 1955, his total tax was $1,592. The tax payments of this man ranged from a low of $40 in 1929 to a high of $2,245 in the World War II year of 1944.

Taxpayers with $3,000 net incomes paid nothing in 1913, but were taxed $36 in 1918 to help pay the costs of World War I. They then had a tax holiday until 1941 when they were assessed $58. The tax in this bracket arose to $120 in 1955.

A man with the same exemptions and a taxable income of $25,000 paid $260 in 1913—$9,705 in the war year of 1944—and $6,268 in 1955.

The man with a net income of $100,000 paid only $2,510 in 1913. He wrote a tax check for $68,565 in 1944 and for $51,912 in 1955.

These figures may have made you dizzy. They did us, too.

Only the people can stop and reverse this trend.

The remedy for what ails us is to reduce taxes, cut the budget, keep the budget balanced, and get greater efficiency and more value from each tax dollar.

Nobody wants to return to horse-and-buggy days. Nobody want to turn the clock back to the beginning of the century.

But unrestrained Government spending will lead to further inflation, followed ultimately by deflation and depression, national bankruptcy and the end of the free dynamic American economy. Surely nobody wants that.

Departments of State, Justice, Judiciary, and Related Agencies Appropriation Bill, Fiscal Year 1958

SPEECH
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. HAYS of Ohio. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, in view of what the gentleman from New York has just said, may I say when I owe someone an apology I will make it, and it is possible I owe an apology to the gentleman from Kansas. I do not know what the RECORD is going to show but I know what was said here on the floor. Certainly I do not think I was stupid in inferring from that that there was some kind of arrangement made that the Committee was going to accept an amendment which was going to be offered either by the gentleman from Iowa or the gentleman from Kansas. But since the gentleman from New York has stated that there was a misunderstanding it is possible that I misunderstood with whom the deal on the amendment had been made.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Ohio. No, I will not yield to the gentleman from New York. It was his statement that caused the confusion, so I am going to try to clear up the confusion.

If that is the case, and if there was no agreement made, and if the gentleman from Kansas had not had prior arrangements, and if it were not stated here that there were prior arrangements made for the Committee to accept the amendment, then certainly I apologize to him because I do not want to imply that anybody has done anything that he did not do. In other words this is an "iffy" apology.

Foreign Aid Reverse Grants and Repayments by Foreign Countries, Section 2

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under date of April 1, I inserted in the Appendix of the RECORD, on page A2595, a detailed statement on the extent of United States expenditures in support of the foreign-aid program.

Again, through the courtesy of the Legislative Reference Service of the Library of Congress, I am inserting a statement prepared by Mr. Hermann Ficker, analyst in international finance and trade, who also prepared the statement referred to above. Once again he has done an outstanding job.

It is only fair, Mr. Speaker, to point out that some foreign countries have made repayments to the United States on grants and loans. In the report submitted herewith there is covered a period from July 1, 1940, to June 30, 1956. Section 1, the first report, dealt with grants and utilized loans.

Under leave to extend my remarks, Mr. Speaker, I am including this very valuable report. The report follows:

REVERSE GRANTS AND REPAYMENTS BY FOREIGN COUNTRIES AND ORGANIZATIONS TO THE UNITED STATES ON GRANTS AND LOANS FOR PERIOD JULY 1, 1940–JUNE 30, 1956

The following 3 tables dealing with reverse grants and reduction of indebtedness comprise section 2 of a report on United States aid extended to foreign countries and organizations for the war period, July 1, 1940–June 30, 1945, and postwar period, July 1, 1945–June 30, 1956.

Section 1 dealt with grants and utilized loans.

In section 2 the gross tabulation for reverse grants is given by country and program for the war period and postwar period. Repayments on loans and credits are given in one table for the combined period.

I. Net grant aid, war period, July 1, 1940–June 30, 1945

Lend-lease	$46,728,287,000
Grants-in-aid	1,400,010,000
Total	48,128,297,000
Less reverse grants	7,872,637,000
Total	40,255,660,000

II. Net grant aid, postwar period, July 1, 1945–June 30, 1956

Grants-in-aid	$49,095,405,000
Less reverse grants	1,646,408,000
Total	47,448,997,000

III. Net loans and credits, July 1, 1940–June 30, 1956

Net authorizations	$17,056,369,000
Less unutilized loans	955,836,000
Utilized loans	16,100,533,000
Principal payments	4,345,423,000
Outstanding on June 30, 1956	11,755,110,000

IV. Tabulation of net aid, July 1, 1940–June 30, 1956

Net grants, war period	$40,255,660,000
Net grants, postwar period	47,448,997,000
Net loans and credits, war and postwar period	11,755,110,000
Total	99,459,767,000

V. Net reverse grants and repayments, July 1, 1940–June 30, 1956

Reverse grants, war period	$7,872,637,000
Reverse grants, postwar period	1,646,408,000
Repayments on loans, total period	4,345,423,000
Net reverse grants and repayments	13,864,468,000

Sources: Foreign aid, 1940–51, U. S. Department of Commerce, 1952; foreign grants and credits, U. S. Department of Commerce, October 1956.

TABLE I.—*Reverse grants and returns on grants, by country and program, war period, July 1, 1940–June 30, 1945*

(Thousands of dollars)

Country (war period)	
Belgium-Luxembourg: Reverse lend-lease	204,791
United Kingdom:	
Returned merchant ships	5,143
Returned Navy ships	3,963
Reverse lend-lease	4,989,894
Cash war-account settlements	31,500
Total	5,030,499
Australia: Reverse lend-lease	888,441
India: Reverse lend-lease	582,225
New Zealand: Reverse lend-lease	251,732
Union of South Africa: Reverse lend-lease	870
China: Reverse lend-lease	3,672
France: Reverse lend-lease	866,728
Netherlands: Reverse lend-lease	36,973
U. S. S. R.:	
Returned merchant ships	4,494
Reverse lend-lease	2,213
Total	6,707
Total	7,872,637

TABLE II.—*Reverse grants and returns on grants, by country and program, postwar period, July 1, 1945–June 30, 1956*

Congress Should End Unfair Tax on Tax

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from Labor, a newspaper published in Washington, D. C.:

CONGRESS SHOULD END UNFAIR TAX ON TAX

Many Members of Congress are talking about reducing taxes for low-income people. There's one place where Congress can and should make a start, because the country can't afford perpetuation of a tax injustice which cries out for correction.

That's the tax on a tax, and here's how it works now: An employee pays a social security, railroad retirement or civil service retirement tax, which is withheld from his wage or salary, so he never sees the money. Yet Uncle Sam taxes this money a second time, by means of the income tax. If that isn't a tax on a tax, what is it?

Congress granted tax relief to stockholders, who claimed they were double taxed by taxes on both corporation profits and on dividends. Surely double-taxed workers have a stronger claim to tax relief. Our neighbor country, Canada, recognizes that, and does not impose an income tax on the retirement tax money of its people.

Uncle Sam's income tax instructions say "you can deduct," from the income on which you pay the Federal tax, any and all "personal property taxes, real estate taxes, State income taxes, State or local sales taxes, auto license fees, poll taxes, and State gasoline taxes."

All those deductions are fair. Why should you be forced to pay a tax on money already taken from you in taxes? Why is it any different when the money has been taken in retirement taxes?

The railroad unions are asking Congress to enact a bill by Congressman EUGENE MCCARTHY, Democrat, of Minnesota, which would end the tax on tax, and thus make it possible to raise rail retirement benefits with no increase in the total taxes paid by railroaders.

In addition to the obvious unfairness of the tax on a tax, there's another reason why it is unjustified.

The railroad retirement, social security, and civil service systems serve a broad social purpose, and relieve the Federal, State, and local governments of financial burdens they would otherwise have to carry. Just a little thought makes that clear.

Before the three big retirement systems came into being, countless thousands of old folks had to "go over the hill to the poorhouse." Poorhouses cost a lot of money, which the public had to pay in taxes. Also, State and local governments had to spend further tax money in public relief for needy aged men and women.

In the great reform era of the 1930's, Congress created a social security system, which has two parts. One provides old-age pensions paid for by workers and their employers, by means of retirement taxes. This self-pay part is steadily taking over the job of the other part, which provides old-age assistance paid for by taxes on the general public.

Thus, social security taxes are relieving the public of both the burden of the tragic old poorhouses and more and more of the burden of old-age assistance. The railroad retirement and civil service retirement systems work the same way. Without them, the public would have to pay more taxes to support the rapidly growing number of old folks in ways far less conducive to their self-respect.

Why should the employees under the three great retirement systems be penalized for taking over so much of the burden at their own expense? They are penalized now by being forced to pay the tax on a tax. They hope and pray that Congress will stop this injustice.

Our Strange Diplomacy

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include a recent editorial from the Fort Wayne (Ind.) Journal-Gazette—Our Strange Diplomacy. It sets forth some ideas that a good many people have concerning our foreign aid programs:

OUR STRANGE DIPLOMACY

American diplomacy is being conducted today like a huge give-away program.

If other nations do not apply to us for aid, we insist upon them taking it anyway.

That is a strange way for the world's greatest power to conduct itself.

It does not show maturity.

The foreign aid program which was started after World War II was understood to be an emergency measure for the immediate postwar period. Now it seems to be regarded in the State Department as a permanent thing.

If individuals were treated as we treat other nations, we know that the individuals would be robbed of their self-reliance and of the ability to stand on their own two feet.

Nations are not very different from individuals. Nations are composed of people.

Doles to foreign nations are not a solution for what ails the world today.

They could lead to widespread pauperization.

It is not possible to buy friendship in the market place.

The whole business of American aid to foreign lands must be placed upon a sound basis.

There should be sound loans for sound propositions. The loans should be repaid. This is the way to build the future.

Money scattered around without purpose or plan is not going to produce a better world.

People are not going to make progress unless they are careful and thoughtful, unless they plan and operate according to sensible economic policies.

We have encouraged the nations abroad to become like dependent children.

It is time we got back to basic reality.

The Race for Scientific Supremacy

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. WIDNALL. Mr. Speaker, much attention has been given in the press and other media, as well as by speakers on their rostrums throughout the country, to the "critical shortage" of scientific personnel and the "decreasing trends" in science education.

Usually the alarming figures are coupled with such comparable figures as we are able to obtain or estimate for the Soviet Union. This comparison lends drama to what might otherwise be just another dull set of figures. Statistics and graphs can be produced to show what we seem to be falling behind in the scientific race with the Soviet Union.

There is little question that Russia is turning out scientists, engineers, and technically trained people at a faster rate than we are. Both the number and the percentage is greater, particularly the latter. This is understandable, because Russia has had to start practically from scratch to build up a great industrial society. This situation was made worse by the devastation of World War II.

In what has been called a "cold war" of the classrooms, it has been estimated that Russia will produce during the decade from 1950–1960 a total of 1,200,000 trained engineers, compared to our 900,000. In 1955, Russia turned out 130,000 engineers and scientists, as against 60,000 in the United States. Figures often vary, but it must be remembered that in addition, many of the Soviet boys and girls who drop out of the mainstream at the end of their 7th or 10th year, receive specialized training at schools called "technikums." There are estimated to be more than 3,500 of these in Russia. This year they will graduate 100,000 draftsmen, electricians, mechanics, lab assistants, and other technicians. We have no exact counterpart to this rich source of trained people.

It should be remembered that universal education in Russia has now reached the stage where all children receive 10 years of free public schooling if they are capable of receiving it. College entrance is on the basis of severe, competitive examinations, and all tuition is free. Worthy students receive financial aid, in return for which they give 3 years' service, or in a manner of speaking, their whole life to the state.

Russian school children are strictly regimented. They go to school 6 days a week, more hours per day, and more weeks a year than our children, and concentrate heavily on the sciences. They have no electives; they spend 4 years in chemistry, 5 in physics and mathematics, through trigonometry, is a required course. They also study a foreign language for 6 years. English, being a language of science, is very popular.

Much has been written pro and con about the quality of the people being turned out by Russia's 800 institutions of higher learning, and her technical schools. American educators and students of Russian affairs are inclined to believe that the standards are neither as high as alarmists say, nor as low as wishful thinkers would like to believe. They are coming up fast.

If Russia were concentrating only on peaceful developments of her industries, this is the sort of competition between nations that we could welcome. Certainly, it would be a race in which we should have no fear of competing. But there is evidence that the Soviets regard scientific development and engineering progress as a weapon—to build up a strong base from which to infiltrate the underdeveloped nations of the world and eventually to challenge Western industrial supremacy.

What are the actual figures for the United States? How should we best meet this undeniable challenge? Certainly, we do not wish to adopt the Soviet regimentation system. We do not want to turn out robots for certain narrowly-defined tasks. Our emphasis in education has been upon development of the whole personality of our school children. We believe in a democratic system in which students are allowed to reach the full extent of their capabilities.

Percentagewise, we again hear alarming figures. We learn that in 1900 the percentage of students in grades 9 through 12 taking physics was 19 percent whereas today it is only 4.6 percent. However, in 1954, the latest year for which figures are available, the total enrollment in grades 9 through 12 was 6,500,000 compared with only 500,000 in 1900—a thirteenfold increase. Actually the enrollment in high school physics has increased from 98,846 in 1900 to 302,800 in 1954. In chemistry, enrollment has jumped from 40,084 to 482,700. Percentages, therefore, are misleading. Yet they are quoted every day in an effort to prove that we are losing the race.

There is genuine cause for concern, but they are quite different from those usually expressed. These causes are the general decline of the level of scientific teaching, the low salaries of science teachers, the skimpy amounts of money allotted by hard-pressed school boards for scientific and laboratory equipment.

In 1900, physics was offered mainly at the 10th grade level; today it is offered usually as a 12th-grade course. In smaller schools, it is often alternated with chemistry in the 11th and 12th grades. It has been pointed out that about 23 percent of high schools having enrollments up to the senior year offered neither chemistry nor physics. This is another alarming figure, until it is shown that these schools include only 5.8 percent of all high-school students. Figures cited by the Office of Education show that at least 95 percent of all students reaching the 12th grade at least have the opportunity to take these courses.

American youth today is interested in science and engineering. The Office of Education says that 55 percent of the boys who took the 1956 general scholarship exam of the National Honor Society, a high school scholastic group, said they planned to take college majors in science or engineering. Other surveys have shown that children frequently asked more questions about science than any other subject.

Yet the facts also show that youngsters who are fascinated by science at junior high school levels often avoid science in senior high school. Twenty-seven percent fail to take high school biology, 68 percent avoid high-school chemistry, and 77 percent—in this atomic age—do not enroll in high-school physics. The mortality rate continues through college, as the freshmen and sophomores drop out of school, leaving fewer and fewer students who are willing and able to pursue the demanding studies in an institute of technology or science department.

Part of this may be due to the myths that have sprung up about scientific studies. Some students have the notion that one must be a genius to succeed in science. Others think that science classes are dull—textbook and sheer academic drudgery. They can be and often are, but they need not be. What is needed is better curricula, new textbooks, modern equipment, and above all, more and better-trained teachers.

The challenge is threefold: the students' interest must be held and maintained. The new teachers must be given more incentive and challenge to keep them in the field. The experienced teachers must have apportunity to improve and discuss their techniques with their colleagues and specialists in various fields. None of these objectives can be solved very easily by a legislative approach. We cannot create a favorable climate to scientific teaching and study merely by the passage of a law.

One of the difficulties of the high school curriculum is the so-called four solids requirement that too often operates to exclude science courses while emphasizing social studies, English, and foreign language. It is too easy to condemn the schools for the trends that many people regard today as alarming. The quality of instruction is never as high as we would like it to be. The budgets for science teaching are never satisfactory. Besides, industry competes with higher education. They comb our laboratories and classrooms for teachers who are unable to continue to make the sacrifices all too often necessary in this field.

However, there is much that can and is being done. Through such means as the science teacher achievement recognition—STAR—awards, and the preparation of career information material by such organizations as the National Science Teachers Association, we may be able to counteract the current trend. The National Science Foundation provides Federal funds for summer and academic year institutes for science teachers. It serves the President's National Committee for the Development of Scientists and Engineers as well as industrial firms, which are supporting scholarships in ever greater amounts. Contacts between university and college specialists and their colleagues in the general science field have improved greatly in the postwar years.

There is another aspect to this problem. It is obvious that Russia, in training ever greater numbers of technicians every year, is thinking not only of her own needs, but also of the many underdeveloped countries who are willing to accept cadres of scientific and technical workers from Russia. These workers bring both material and technical aid and the gospel of communism. If our own shortage of technicians in many fields persists, we may find ourselves without weapons in a very important aspect of the cold war.

Among the solutions to this problem, a national science or technical academy has been suggested. This would provide engineers and technicians for periods of service overseas in the underdeveloped countries. Perhaps a more simple solution would be to offer an option of service in lieu of military duty for those who have the skills necessary to help other nations—agricultural specialists, geologists, biologists, public health officers, construction men, and others. These men, serving as civilian personnel, or even as members of the Armed Forces, would be suitably compensated for the discomforts and hardships of living in these countries. The servicemen who qualify as scientific and professional personnel might well be willing to spend their obligatory period of military duty as overseas point 4 technicians.

One leaf that might be borrowed from the Russian book is the possibility of longer school terms and more hours of schooling per week. This suggestion has been made by several thoughtful Americans who have visited Russia and observed the education process there. For many students, unable to find sufficient summer employment to spend their time gainfully, a shorter summer vacation would serve equally well. The long summer vacation is a throwback to the days when young children had to pitch in with the summer chores on the farm. Those days are just about gone forever. Admiral Lewis Strauss, the distinguished chairman of the Atomic Energy Commission, has proposed a total of 210 days of school per year, as against the present 180. He also maintains that gifted students must be permitted to forge ahead just as backward children are given special attention. The longer period of tuition could be used to shorten the number of years of elementary and secondary schooling or to bridge the gap between the accomplishments of the American high school students and their European cousins.

Whatever the measures we take to increase our flow of scientific and technical people to the industries and laboratories and classrooms of our country, let us recognize that we are engaged in a race that, if successful, can lead us into a fine new age of peaceful accomplishments. But if we don't keep up, our civilization may be challenged by a power which would like nothing better than to humble if not destroy the great western industrial society which has wrought such significant changes in the world.

A Look at Modern Spain

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a review of The Yoke and the Arrows, by Herbert L. Matthews, which appeared recently in the book review section of the New York Times. It was written by Mildred Adams. Members of Congress might do well to read it, especially those Members and Senators who are associated with Foreign Affairs and Foreign Relations committees.

The review follows:

THE YOKE AND THE ARROWS, A REPORT ON SPAIN, BY HERBERT L. MATTHEWS

Maybe this is it. Perhaps this book, so honest, so well informed, so personal in the best newspaper sense, may help to lift the sullen lid on which Gen. Francisco Franco y Bahamonde sits so firmly.

The Spanish people have learned to live under that lid, and some of them profit by it. Americans, dimly conscious of the fact that a billion dollars of their money is being spent under it, accept it uneasily. The aching need, for us as well as for them, is that the lid be somehow tilted up so that light and air and a reasonable degree of truth about Spain may take the place of those sickly fictions which have poisoned so many attempts to understand the country's recent past or to think with any clarity about its possible future.

This need Herbert Matthews fills with a unique skill. He has produced an "all of which I saw, part of which I was" book, and invested it with the present tense. Writing "not a history of modern Spain, nor of the Spanish Civil War," he insists nevertheless that "certain facts must be kept in mind if we are to understand the situation today." The United States is spending $400 million in Spain to build bases that form an integral part of the neo-Maginot defense belt now being drawn around this continent, and more millions in economic aid. American military engineers are grounding those bases on something more solid than drifting sand; it would seem equally important that the United States should also know the political and economic realities of Spain. They may

be harder to get at than the geologic subsoil, but a wrong assessment would be just as perilous.

So Mr. Matthews, who covered the Spanish Civil War as correspondent for the New York Times and went back in 1956 to see what had happened since, digs first into the layers of myth that have accumulated since Franco attacked the Second Republic in July of 1936.

He starts with the hoary illusion that Franco rebelled against the legally elected Government of Spain in order to rescue his country from communism. That idea, says Mr. Matthews, was not mentioned in the general's first proclamations, but developed as an afterthought. "The facts are that there was precious little communism in Spain when the civil war started, and the Republican Government was at no time Red." By the same token "the Loyalists were not, at that time, saving Spain from the sort of fascism represented by Germany and Italy." That, too, developed along with Franco's strength. In short, the Spanish Civil War was a much more complicated, and, so to speak, private struggle than most outsiders have recognized, and the mirrors that time has held up have distorted it still more.

The second illusion stems from the first and accepts the thesis that because Franco keeps on saying he was fighting communism, he is, therefore, a champion of democracy. From this shaky premise follows the perilous tenet that because Franco is allowing the United States to spend more than $1 billion in Spain on bases and economic aid, we have the Caudillo in our pocket. Mr. Matthews reminds his readers that Hitler and Mussolini, who earlier paid Franco for what they thought were defense agreements, got no aid from him when they needed it most.

He is by no means as sanguine about our expensive bases as are our military men. Their viability in time of war, and our security, depend on the will of "a most cautious, a most coldly calculating man," who, at the moment of crisis, will make up his own mind whether or not we may use them. Though Franco has an evil reputation throughout the democratic world, we have bargained with him for the use of Spanish land in the defense of democracy. Having made this dubious pact, says Mr. Matthews, let us recognize that for our own safety we must watch events most closely, and be at least as clear and frank about it as with Marshal Tito.

Many readers may quarrel with Mr. Matthews' skepticism and dispute his conclusion, but they rest on a sound analysis of the forces that support Franco and with which he plays so skillfully. The new element, American influence through American dollars, is neutralized thus far. No American flag is allowed to fly over those expensive new bases; American officers, under rigid orders to keep out of political discussion, dress inconspicuously in civilian clothes. What will happen when 10,000 GI's go over to man the finished bases, and Pedro who built them, begins to compare his pay with that of GI Joe who serves them, remains to be seen. (More economic analysis would have been welcome in this chapter, but dependable data are hard to get.)

No small part of the fascination of this book lies in the manner of its writing. As though its author were talking by the fireside, it rambles, moves back and forth through time, dodges across the landscape, mixes fact and conviction, things heard, seen, and believed in an apparently artless fashion that conceals a deft skill. Among those who prefer to evade or conceal past or present truths about the Spanish situation it may not be popular, but in its unpretentious way it is one of the most important books on modern Spain this reviewer has seen.

Needed: A New Postmaster General

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. HERLONG. Mr. Speaker, I recommend to the attention of my colleagues the following editorial from the Ocala (Fla.) Star Banner:

NEEDED: A NEW POSTMASTER GENERAL

If President Eisenhower is wise, he'll start looking immediately for a new Postmaster General.

Throughout the controversy with the House Appropriations Committee over the issue of extra funds needed to operate the Post Office Department through June, Postmaster General Summerfield has acted in an arrogant, high-handed manner.

In fact, seldom in history has the public witnessed such a brazen resort to browbeating threats and tactics by a high official of the executive department. The methods employed by Mr. Summerfield in an effort to get his way fall into the pattern of union bosses like John L. Lewis, Walter Reuther and Dave Beck.

Frankly, we think the services of the Postmaster General to the Nation and the Eisenhower administration have about as much value now as a canceled 3-cent-stamp.

To be sure, the House committee yesterday voted to give Mr. Summerfield 41 of the 47 million dollars he says he needs to keep the Department running until June 30. Since this amount is likely to be approved speedily early next week by the House and Senate, it may be said the Postmaster General has been successful in his threats and won the battle with Congress. But the committee members did not bow so much to Mr. Summerfield's judgment as they did to the reality that the Nation could not stand a drastic curtailment of mail service.

One thing that can be safely predicted is that most Members of the House will not easily forget the incident. Indeed, they will long remember Mr. Summerfield's overdramatization of postal problems and his last-minute threat to the entire Congress.

Moreover, there is an important point which should not be overlooked by the public. It is the general botch the administration has made of the whole affair.

The Post Office Department is currently operating under a budget of some $2 billion. According to Representative CANNON, chairman of the House Appropriations Committee, Summerfield was given repeated warnings he should "live within" that amount but did not do it.

The postal official said, in effect, his Department could not "live within" the figure because of a greater mail volume than anticipated, the need to extend delivery routes into new urban areas and to meet pay and retirement increases voted by Congress.

He can properly point to the fact that the Department informed Congress in January that more funds would be necessary. However, the Bureau of the Budget delayed until March an official request for supplemental fourth-quarter funds. That is inexcusable inefficiency.

But that delay doesn't excuse Mr. Summerfield's attitude and actions.

A good and efficient administrator of the Post Office Department would have told Congress earlier of his troubles. He would have prodded the Budget Bureau. He would have been tactful in his dealings with the branch of the Government which controls the purse-strings. He would not have used blackjack tactics.

Above all, an able administrator—one who acknowledges that public interest, convenience, and necessity are paramount—would have followed through quickly after the House committee's action and rescinded the order halting Saturday mail deliveries. But not Mr. Summerfield. He has done what rain, snow, sleet, and the gloom of night aren't supposed to do—stopped the postmen from making their appointed rounds today.

The plain fact of the matter is that Mr. Summerfield's arrogant performance shows he is a liability to the administration and is not the man to attempt to remedy postal service problems. He ought to go—and by special delivery.

Equitable Postal Rates

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks I should like to include an editorial from the April 15, 1957, issue of the Flint Journal entitled "Let the Users Pay the Costs."

I would like to add that the views expressed in this editorial are entirely typical of general public sentiment in the Sixth District of Michigan as indicated by responses to a questionnaire which I recently sent to several thousand people in the district. Although the questionnaire contained no reference to third-class mail, hundreds of citizens took time to add their own opinion concerning it. In my opinion, there is real resentment over present rates for third-class mail.

The editorial follows:

LET THE USERS PAY THE COSTS

The controversy waged last week over appropriations for operation of the postal service should serve, once again, to demonstrate the need for putting the Post Office Department on a sound business basis.

At the present time, the Department operates at a loss of about a million dollars a day. The taxpayers have to make up that loss, and yet the great majority of taxpayers use the mails only occasionally. Their taxes subsidize the cost for those who use the mails frequently.

Most citizens are tired of having their mailboxes crammed with so-called junk mail, advertising circulars, mostly, which go third class. Most people throw it away without even reading it. They regard it as an irritation. They would be even more irritated if they stopped to think that they are helping pay for it through their taxes. And yet that is exactly what they are doing.

A family may subscribe to 1 or 2 magazines which are delivered by mail. The charge for delivering those magazines is not sufficient to cover the cost of delivery of course. Another family may subscribe to 8 or 10 magazines, and still another may subscribe to none. But the no-magazine family, through

its taxes, helps foot the mailing bill for the 10-magazine family.

Why, it can be asked, should a citizen who uses the mail service only for an occasional letter help pay the cost for a business which uses the service extensively to drum up new business? Why should a person help pay the mailing costs of a newspaper or magazine which he never reads?

There may be legitimate justification still for some kinds of mail subsidies, but the Post Office Department should be as self-supporting as possible. Postal rates, including first class, should be raised; and, in general, those who use the mails the most should be expected to pay an equitable share of the cost.

And even if it costs us an extra penny or two to mail a letter to Aunt Minnie in Brooklyn, where can you get a comparable bargain, unless it is a newspaper?

"Here's Your D—— Mail and Tax"

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Monday, April 15, 1957, on the subject of appropriations for the Post Office Department:

A man walked grimly into the Wilkes-Barre post office on Sunday.

Opening the slot, he deposited two letters and yelled at workers inside the enclosure: "Here's your d—— mail and here's your d—— income tax."

Then, in high dudgeon, he strode out of the building, leaving startled customers and employees to their thoughts.

The man's resentment toward the Post Office Department is understandable in view of the jerking around the public received over the weekend. But he was wrong in taking it out on the postal workers. They were not to blame for what happened, although they may be targets in some instances where infuriated citizens do not stop to think.

The responsibility rests on the shoulders of Postmaster General Summerfield in Washington. It was he who high-handedly decreed the weekend shutdown of service in a strike against the public to force Congress to knuckle down and give him what he wants in the way of financing.

The weakness of the position of the Postmaster General is demonstrated by the fact that he still has at his disposal approximately $632 million. There actually was no financial crisis that called for the suspension of service this past weekend. Not only did he have this cash balance, but Congress already had okayed a $17 million appropriation and indicated $24 million would be forthcoming this week. This would bring the total of extras to $41 million. To be sure, this is $6 million short of what Summerfield wants, but obviously no cause for taking a sock at the innocent bystander—the public.

The principal issue involved is not the money the Post Office Department may need or may not need. That is only incidental. What does matter is that a man in the driver's seat, by an arbitrary stand, slapped the American people around. Not even Stalin or Hitler could do that with impunity. Summerfield also must be made to understand he cannot get away with it.

We resent these tactics and we say so in language, we hope, is clear.

At the same time, we repeat: Don't take it out on the mailman or postal clerk; he is not to blame for policy in Washington.

Summerfield Should Be Impeached

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following letter to the editor of the Tampa Morning Tribune, Tampa, Fla., Tuesday, April 16, 1957, entitled "Summerfield Should Be Impeached":

SUMMERFIELD SHOULD BE IMPEACHED

AVON PARK.—I highly congratulate the Tribune's lead editorial April 13, entitled "Needed: A New Postmaster General." You should have added that if this Summerfield be not fired forthwith by the President, then the United States House of Representatives should consider impeachment proceedings against said Summerfield.

The Democrats have a majority in the House, and hence can impeach him, as it takes only a majority to impeach. The fact that the Senate is 49–47 Democratic now precludes that said Summerfield would be convicted of impeachment charges, for it takes a two-thirds Senate vote to convict, but said proceedings definitely would serve the national interests as it would enhance the prestige of Congress and scare the life out of the General Motors brigade now in charge of the executive branch of the Government.

Last fall, Summerfield gave the most partisan political speech in Tampa I think most people have ever heard. The gist of Summerfield's logic in said diatribe ran something like this: "All successful people are Republicans and all unsuccessful people are Democrats. Keep the executive branch of your Government in charge of the 'successful' people, namely, the Republicans." I have never heard a Democratic speech as demagogic as this Tampa Summerfield speech.

What Summerfield is trying to do is, of course, obvious to anyone who thinks this thing through. Summerfield wants first-class postage rates to be increased, letting the ordinary people of America foot the bill for increased costs for carrying second-, third-, and fourth-class mail. It is, of course, Summerfield's constitutional right and prerogative to lobby Congress for this typical Republican big-business stratagem, but it is not all right for Summerfield to autocratically use presumed executive powers to throw a monkey wrench into usual post-office operations to gain his point. This is "sandbagging" Congress, as Congressman CANNON, Democrat, of Missouri, chairman of the House Appropriations Committee, calls it.

But if Summerfield can get away with this dictatorial game of his, then I am not averse to complimenting him—for then typical big-business strongarm tactics have taken over a pusillanimous American public. We can then coin a new American political term, namely, "Summerfielded." This verb means to scare Congress into submission by withholding congressionally voted upon Government service. Yes; the next is for Treasury Secretary Humphrey to "Summerfield" Congress into submission to extend interest rates on Government bond issues. We may see Defense Secretary Wilson "Summerfield" Congress into voting more defense moneys, etc. And thus we will see the absolute abdication of Congress, and the end of constitutional government in America.

HENRY STONER.

Airways Modernization Act of 1957

EXTENSION OF REMARKS
OF
HON. HARRY G. HASKELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. HASKELL. Mr. Speaker, on Monday last I introduced H. R. 6890, the Airways Modernization Act of 1957. This bill translates into legislative form the recommendations made last week by Edward P. Curtis, President Eisenhower's special adviser on air traffic control, and endorsed by the President. It is another step in the direction of safer airways, an objective I have sought to attain.

An editorial in last night's Washington Evening Star points up the desirability of this legislation and, under unanimous consent, I include it in the Appendix of the RECORD and commend it to the membership of the House.

The editorial follows:

SUPERAIRWAYS

President Eisenhower has given justified emphasis to the need for developing superairways for aviation, comparable to the superhighways which have become necessary to handle the great increase in automobile traffic. There are highways of the air now, of course, but they have grown dangerously congested, especially in the vicinity of large cities. Control systems are inadequate and of varying types. Several air accidents have revealed the shortcomings of the present facilities. And numerous near-collisions also have indicated the urgency of more effective controls over air traffic.

The overall problem is so acute and so important that the President wisely has endorsed a special consultant's recommendation for creation of an interim Airways Modernization Board to devise means of solving it. The board proposal was made by Edward P. Curtis, presidential adviser on aviation facilities planning. Mr. Curtis, in a preliminary report on a year-long study of the airline situation, told the President and Congress that a major overhaul of the Nation's civil and military airways is needed "in the interest of public safety and convenience," as well as for national security.

The proposed board would not overlap the functions of the present Civil Aeronautics Administration or the Civil Aeronautics Board, it was pointed out. It would, however, replace the old Air Navigation Development Board, which, according to the Curtis report, "has been unable to bring sufficient authority, decision or clear objectives to bear on the air traffic problem." The new board, unlike its predecessor, would be an independent agency, headed by a presidential appointee not affiliated with any Federal department. The Departments of Defense and Commerce, however, would have representatives on the board.

With the prestige of Executive and statutory authority, the board would have power to obtain the cooperation of all Federal agencies in formulating a program for a network of superairways to serve both civil and

military requirements. And it would work out plans for a coordinated control system designed to end the see-and-be-seen method of avoiding collisions in the air. Certainly it is as essential to bring our national airways up to date as it is to develop a great interstate highway system, with Federal aid. Both projects are designed to serve and protect the public.

Rev. J. E. Gryczka

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 16, 1957:

REV. J. E. GRYCZKA

Wherever men cherish freedom, wherever they admire courage, wherever they respect ability, wherever they are inspired by devotion to duty, wherever they appreciate generosity, wherever they love God, there will be sadness today because of the death of the Rev. James E. Gryczka, a priest of the Roman Catholic Church for 50 years and pastor of St. Hedwig's Church at Kingston 40 years.

Now that he is gone to claim the reward for a life dedicated to the service of God and man, there is little we might add to the record, as revealed here through the years.

For instance, on December 27, 1951, on the occasion of the golden jubilee of St. Hedwig's, we wrote: "The eminence St. Hedwig's enjoys is not hard to understand, for it is largely a reflection of the vigorous personality of its pastor, Father Gryczka, who has labored here so zealously for 35 of the 45 years since his ordination * * * Any reference to St. Hedwig's is a recital of Father Gryczka's achievements in the priesthood * * * The church he has served with such inspiring fidelity, the parish to which he has been so intensely devoted, the organizations he has diligently promoted and, last but by no means least, the community and the country which are so heavily devoted to him for service beyond the call of duty—all join in wishing him well on this auspicious occasion."

On October 28, 1952, on the occasion of a public reception at Kingston High School in honor of Father Gryczka, we had this to say, among other things: "His achievements are explained not only by his capacity, but by his idealism and unselfishness. He has been imbued with the spirit of the crusader to such an extent that no sacrifice, not even of his health, has been too much in the service of God and man. While his life has been dedicated to the salvation of souls, he has labored, with amazing success, in allied fields. * * * Grateful parishioners and men of eminence have been attracted by his warm personality, indomitable courage, inspiring industry and other qualities of leadership."

Under the heading, "A Cross for Man of God," when announcement was made the Polish Government-in-exile had awarded him the Cross of Polonia Restituta, we had this to say on November 20, 1953: "Imbued with the zeal of a churchman and patriot, he combined, in his tall and graceful person, the qualities of a Count Pulaski, the dashing hero of the Revolution, and a Cardinal Wyszinski, Polish primate. * * * Polonia Restituta is a fitting and becoming award for this unselfish man of God."

Three days later, after the ceremony, we added this editorial footnote: "Polonia Restituta (Poland Restored) is a symbol that was not lost on the recipient of the honor last night nor on the audience that testified by its presence to the respect in which Fathed Grysczka is held."

On October 23, 1956, we wrote, on the occasion of the observance of his golden jubilee, this valedictory: "Among Americans of Polish extraction, Father Gryczka is a towering figure. Although he is a native of Blossburg in nearby Tioga County, he personifies the indomitable spirit of Poland while carrying on in the finest American tradition. He combined in his person what is best in the country of his birth and in the land of his forefathers."

There was a lot more about this man who gave away his worldly goods to ease the plight of the needy and to provide education for 30 priests and 40 professional men, but what we have included in this review furnishes an index to his character.

It is a singular coincidence that Father Jim, as he was known affectionately to colleagues and intimates, should pass on during the observance of Holy Week. For him, the glories of this Easter Sunday will be a rewarding experience.

Problems of America and Those of the Other Continents

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Americas Daily, of Miami Springs, Fla.:

PROBLEMS OF AMERICA AND THOSE OF THE OTHER CONTINENTS

The fundamental problems of Inter-American cooperation usually march very slowly, as if it was believed that time, by itself, could solve a great part of them.

This tardiness is in marked contrast with the accelerated rhythm of negotiations between the United States of America and other regions of the earth, especially Europe and Asia.

Should complications—visible and invisible—in the Americas march at a moderate speed, the indifference that there seems to exist with regard to Inter-American problems would not have consequences to speak of. But it happens that those complications are constantly increasing, in particular in the economic field, while the much expected and definite solution of the problems has not been forthcoming for a long time.

It is in the interest of both the United States and the Latin American countries, in a high degree, to reach a prompt solution of pending matters, which because of their magnitude are related with the essence of life itself in the twenty Latin American countries.

When negotiations are frozen in diplomatic procedures, which are traditionally slow, without any encouragement toward the goal of victory, it is very difficult to achieve the success hoped for.

It is necessary to take some measures, strong in their form, regarding Inter-American economic cooperation, and those measures, without a haste that may compromise the result, should be firmly adopted within a reasonable length of time. Otherwise, the aim of that cooperation will fulfill only a politico-psycological task during determined moments, but without any practical and constructive transcendence.

The existence of negotiations with Europe and Asia, for example, of extraordinary urgency and seriousness, because they are closely linked to the fate of world peace, is undeniable. However, this fact does not signify that the problems of America do not require careful study and energetic decisions. Also, the problems of America have very close relation with the equilibrium of international policies. A strong America will be the greatest fear for Communist imperialism. An America, with the solidarity of its 21 republics, would be the maximum defense of world democracy.

Trial by Jury

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the New Orleans Times-Picayune of April 15, 1957:

TRIAL BY JURY

Assistant United States Attorney General Olney made what seems to us a rather remarkable statement April 5: "There is no constitutional right to jury trial in either civil or criminal contempt cases." Those sincerely interested in civil liberties should take a good look at this ukase and its import. What it seems to mean is that if the Federal judiciary and Government so decided, the courts could take over, with the consent of Congress, the unilateral enforcement of every Federal criminal law and (by preemption) most State laws; could similarly take over common United States lawsuits. Maybe the States' judiciary would be allowed some of the "pleasure."

This could be done by the contempt process: orders to, and services upon any number of individuals not to violate criminal laws or offend against the common law; orders at large or by specification; a trial without jury on any complaint that the orders have in fact been violated; unlimited penalties (short, perhaps, of the "cruel and unusual"), in addition to civil damages, not explicitly for violation of law or offense against common law, but for contempt of the court.

It would mean that the Founding Fathers, and the originators of the Bill of Rights, despite three express provisions on the subject, fell short of and nullified their objective by a "foolish" failure to spell out the boundaries of the contempt procedure. It would mean that jury trial has been a chimera from the beginning. It would mean that contempt of court can cover everything by a little stretching.

If it were literally true, it would mean that much waste motion has gone into dealing with crime alone in the past 168 years; that certainly a lot of it went into prosecution of Communist advocates of "violent overthrow."

It can be imagined why Mr. Olney, in the course of "logic," made this statement; and it can also be imagined that if he had it to say over again, he might phrase it differently. It could even be imagined that far from agreeing with the rightfulness of the premise, he is warning that something constitutional should be done to deal with the implica-

tions it raises. But it can also be imagined that when one is committed to an expedient, he is likely to say and urge almost anything. Not only is the truth or falsity of the "official" remark a matter of grave study from the civil liberties standpoint; but also the emotional "high pressure" aura surrounding it.

Mismanagement of the Postal Services

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. MARSHALL. Mr. Speaker, I want to call the attention of the House to editorials appearing in three Minnesota newspapers published in my district concerning the recent action of the Postmaster General which indicate that the people were not deceived by the fog of publicity under which he tried to cloak the mismanagement of the postal services.

These editorials appeared in the Maple Lake Messenger, the Princeton Union, and the Aitkin Independent Age.

The editorials follow:

[From the Maple Lake (Minn.) Messenger of April 10, 1957]

"GIVE ME WHAT I WANT, OR ELSE"

The people of the United States may suffer the loss of a governmental service which has become very dear to them because a Department head has the audacity to affront Congress with the ultimatum—"give me what I want, or else."

Postmaster General Summerfield has instructed postmasters throughout the Nation to curtail certain services as of Saturday of this week unless Congress appropriates the $47 million which he claims is necessary to keep his Department in business.

We wonder what effect it would have on our national security if the head of national defense, for instance, were to make similar demands on Congress. And what sort of turmoil would be in the offing if other department heads were to do likewise.

Seems to us the tactics being used by Summerfield are nothing short of dictatorship. We think this country is still too much instilled with the basic qualities of democracy to allow any one person to place himself in a position where he defies elected Representatives from every State in the Nation.

We don't think it is fair to assume the budget committees of the House or Senate are not aware of the plight of the Postoffice Department. Nor do we believe they are so downright stupid they cannot come to a conclusion as to a budget necessary to run this particular Department.

In our opinion, it appears that Mr. Summerfield is a little too big for his britches.

[From the Princeton (Minn.) Union of April 11, 1957]

UNFAIR CURTAILMENT OF MAIL SERVICE

With the millions and billions that Congress is appropriating for one project after another both in this Nation and abroad, the curtailment in mail service which Postmaster General Arthur E. Summerfield has ordered to become effective this next Saturday, April 13, appears both petty and mean. If that order closing our post office on Saturday and discontinuing rural mail deliveries on that day goes into effect, the 13th will be an unlucky day.

During 1956 we paid in taxes 50 cents out of every dollar that we earned, and there probably are scores of other taxpayers in this community who did likewise. We paid enough to get postal service 6 days a week.

If the Postmaster General and Congress cannot reconcile their differences and get together on some sane, efficient way of operating the Post Office Department, possibly the public will have to go on a sitdown strike in the matter of paying taxes.

There is not reasonably good management or cooperation in the Federal Government when the public has to be penalized in such an essential matter as even fair mail service when the taxpayers' money is being tossed around in staggering sums as it is in Washington.

We would like to make a suggestion to Mr. Summerfield—that the postal rates on third class mail be doubled. Our post offices in the rural districts in Minnesota every day are almost swamped in a flood of third-class mail—posters, circulars, unsealed letters for one advertising scheme after another. The public also suffers from this avalanche of worthless mail.

Every resident of this community should protest to his Representative in Congress and to his Senators against this senseless curtailment of mail service in our villages and rural districts.

[From Tony's Column in the Aitkin (Minn.) Independent Age of April 11, 1957]

Kinda looks like Congress is going to call Postmaster General Summerfield's bluff and refuse him $30 million of the $47 million he has requested to run the Post Office Department for the balance of this fiscal year, June 30. Summerfield threatens to cut Saturday service down the line, third class mail entirely, except medicines, etc., if he does not get what he asks. Some Members of Congress have already weakened and if the Postmaster General starts holding his breath like a spoiled brat, enough old grandmas in Washington might be rounded up and scared into giving him his way. On the other hand, there are some pretty stubborn old he-men down there, who don't like to be bluffed and who just might say "T'hell with you; who's taking all the ribbing for the taxpayers' money that's being squandered in the various departments of Government? You can start doing a little economizing along with the rest of them."

That would sound pretty good to the average taxpayer and I don't think most of them would object if the Postmaster General does have to hold his breath for a couple of months. Anyway, in a few days, no one would notice any difference except probably that the Post Office Department wouldn't be going into the hole any deeper. If Congress voted the Department a billion they would still, in some way, create a deficit. It's been that way since the Post Office Department was founded 175 years ago, and it isn't likely that it will ever change without subsidizing one class by robbing another. If it were operated on a businesslike basis like any independent business is forced to operate in order to exist, these pleas for increased appropriations would not be coming up at every session of Congress.

Snitching Road Funds

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times-Picayune of April 9, 1957:

SNITCHING ROAD FUNDS

When the trust fund for the Interstate Highway System was created by allocating to it new gasoline, vehicle and tire taxes, it was supposed that the whole fund would go for road construction. In fact, Representative HALE BOGGS and his confreres wrote into the bill that the money would be expended by the Bureau of Public Roads, Department of Commerce. It took a fight to get the money into a trust instead of the General Treasury pool where much of it might be diverted to other purposes.

But now the House proposes to pay $365,000 of the fund over to the Departments of Labor, Health, Education, and Welfare to enable them to see that the States comply with the Davis-Bacon Act requiring that road contractors pay the Government dictated "prevailing wages."

Despite the Boggs protest, the House decided to allow this raid. The explanation was that it was not unusual to dip into trust funds for money for other departments to do work connected with carrying out the legislation. It appears that the old age and survivors trust fund has been called on repeatedly to meet expenses of departments whose services are used directly or indirectly in connection with the pensions administration.

But obviously, the fact that some departments do work connected with the trust funds is no reason for special payments to these departments. Their money is supposed to be budgeted and appropriated separately. By drawing on the trust funds they get money that doesn't show up in their budgets.

Representative BOGGS is going to take his fight to the Senate, and we hope that Senators ELLENDER and LONG give him a strong helping hand. It is certain that the taxpayers did not expect that the departments of the Government would be able to cut in on the supposedly well-protected highway construction fund.

Nadler Could Be Ike's Answer Man

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by H. I. Phillips entitled "Nadler Could Be Ike's Answer Man":

NADLER COULD BE IKE'S ANSWER MAN—ENCYCLOPEDIC CLERK WOULD FIND PRESS QUESTIONS A SNAP

(By H. I. Phillips)

Teddy Nadler, a top TV jackpot winner, with $152,000, is taking a year's vacation from his $85 a week job as an Army depot clerk. He can well afford it and even with income taxes taking $85,000 and more, he probably has more money than any two Army generals and possibly as much ready cash as the entire general staff. His depot job had to do with supplies for the service and, despite his amazing performance on TV, we hear he had trouble with questions like "Did those canned eggs go out yet?"—"Where's that invoice?"—"What's new with the Army socks?"

Nadler says he got no further with the Army because "it has no use for my type of knowledge." This seems ridiculous. As

a highly solvent young man who seems to have all the answers and know-how to get dough fast he could be used to help balance the budget.

BATTLE OF THE BUDGET

Nadler's distinction has been his coverage of almost every field and it is hard to see why the Government hasn't grabbed him out of the warehouse and put him to work in Washington where there is a desperate need for right answers. Uncle Sam could certainly use somebody who could answer such questions as "Name any mountain higher than the Federal debt"—"What are the highest waterfalls in the world and how close is the United States Treasury from going over in a barrel?"—"Name any three battles tougher than the present battle against inflation."

He might be of special service assigned to the Pentagon to give swift answers to the question, "How many more laps do I have to cover before I reach the right office?" He could be of value to Ike on those press conferences. We have heard Ike hesitate on many questions Nadler could probably answer, and add, "Do you want a simple answer or shall I go into all the details?"

(NOTE.—We were going to comment further along this line, but our chief scout assigned to the matter just brings word that there is no such person as Nadler. He is a mechanical brain in a two-piece suit. "He is Univac with a bloodstream and a big checking account," the scout says.)

DOUG FORD SPEEDS UP GOLF

"Nixon for More Help to Africa"—headline. "Doctor Live-It-Up, I presume." Can you remember away back when all any American was expected to bring to Africa was a guide, and some mosquito netting? Doug Ford, winner of the Masters golf tournament, is the fastest player in the game, seldom hesitating on any shot. His triumph can speed up the game all over America, if it has the right effect on duffers who address every shot as if about to address a convention of police chiefs. A notorious racketeer was furtively put back into circulation by a single member of a New York parole board. If a fellow has a really bad record it's pretty hard for him to stay in jail these days. A jury has ruled void the will of a woman leaving $700,000 to a waiter. It may have wanted to preserve the tradition that no waiter ever picks up the check. Nine men have been indicted in an alleged plot to create a monopoly in the pickle industry. (Do you suppose the vinegar works figured in the conspiracy?) You can tell a seal's age by looking at its teeth, says a news item. (Remind us of that the next time we meet a walrus who attracts us somewhat.) Tyrone Power and Loretta Young played in a movie "Suez" on TV the other night. There are two actors who don't mind taking a "cut."

More Scholars Express Views on Two-Term Limitation

EXTENSION OF REMARKS
OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. UDALL. Mr. Speaker, I present today the views of four historians and political scientists who have responded to my survey of opinion of American scholars on the wisdom of the 22d amendment.

Three political scientists favor repeal of this amendment. They are: Dr. R. G. Whitesel, of the University of Iowa; Dr. N. D. Houghton, of the University of Arizona; and Dr. John A. Caylor of Cottey College of Missouri.

The fourth reply is from Dr. Frank W. Prescott, chairman of the Adolph S. Ochs Department of Government, of the University of Chattanooga in Tennessee. Dr. Prescott feels that judgment should be reserved on this question until "we have the benefit of a few more years of experience with the limitation."

These replies follow in order:

STATE UNIVERSITY OF IOWA,
DEPARTMENT OF POLITICAL SCIENCE,
Iowa City, April 10, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN UDALL: The most fitting thing about the 22d amendment is its number. That, at least, is suggestive of low caliber and limited range. The amendment carries the historical inference that the presidential elections of 1940 and 1944 were somehow illegitimate; its restrictions are unwise; it creates more difficulties than it meets. Lest I pile sour grapes on sour grapes I shall limit my comments to the continuing faults of the amendment.

Despite the actual indirect process for electing a President, the people have made that office an instrument of popular sovereignty. The 22d amendment is, therefore, not so much an extension of the prized constitutional principle of limited government as it is a limitation on the underlying proposition of popular sovereignty. In effect, the amendment declares that all trust dissolves with the simple fact of third term eligibility; that the people cannot be trusted before the fact, nor Congress after the fact. The argument that a President, too popular, too long, will be too powerful oversimplifies the relationship of tenure and tyranny, which depends upon the degree of power, actual and accessible.

I am also persuaded that the amendment will operate to reduce the effective term of a reelected President to something less than 4 years. A President either must suffer substantial loss of political power before the expiration of his second term or must offset the loss by transfer techniques. Either the people who elected him lose part of his effectiveness or the next electorate loses part of the effectiveness of free choice.

There remains the claim that the amendment simply reaffirms constitutional custom and tradition. I think there may be some question about the validity of the claim, but beyond that, custom and Constitution are rather more complementary than synonomous, and serve different as well as similar purposes. There are many political customs, such as that about district residence of candidates for the House of Representatives, which stand to lose their utility if we seek to provide them rigid constitutional protection. I think the two-term tradition should have remained in this category. On the other hand, there are certain constitutional provisions exceedingly difficult to backstop with tradition and usage: the problem of an incapacitated President suggests itself here.

You have solicited the above views, and I have been happy to respond. What you did not solicit was my sympathy—I use the word advisedly—but I offer you that, too, in your efforts to repeal the 22d amendment. The belief that the amendment is the only real safeguard against the power of an incumbent President to dictate his renomination and reelection indefinitely is widespread and substantial enough to make any change in the amendment a most difficult undertaking.

Sincerely yours,

R. G. WHITESEL.

UNIVERSITY OF ARIZONA,
Tucson, April 8, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR STEWART: The proposal to repeal is in harmony with my own attitude on the matter, namely, that there was no sound reason for adopting the 22d amendment. In fact there was ample reason that it should not have been adopted and since that is my basic position, I could without regret, see it repealed, as a matter of principle. I must say frankly, however, in an apparent accord with your own realistic evaluation, that a Congress which would propose such an amendment is not likely to propose its repeal so soon after its adoption, nor are 36 of the State legislatures at all likely to approve within the 7-year period.

But, even so, any move that may encourage some facing up to the basics involved should be worth making, and could serve to encourage some much-needed critical public consideration of important factors in our domestic democracy and foreign policy.

'Our people and our leadeship must (and it would better be soon) ultimately face up to certain basic questions, including: (1) do we or do we not really believe in this democracy business? (2) do we or do we not have confidence in the capacity of our people to make reasonably sound judgments and decisions on matters of fundamental political, economic, and foreign policy, on a basis of free and open public discussion, in a context of complete freedom and willingness to read, study, and listen to any and all kinds of attitudes, opinions, and evaluations? or (3) are we going to go on cultivating and relying upon fear as one of the bedrock components of our public affairs thinking and operations: fear of democracy, fear of freedom, fear of ideas, fear to teach, fear to be taught, fear of our scientists, fear of Russia, fear to live in the great flow of history, fear of welfare statism, fear of nonconformity, fear of controversy, and fear of ourselves?

It is submitted that any democracy whose leadership has lost confidence in its people, and whose people have lost confidence in themselves and in their capacity to choose and change their major policymaking and policy-directing officials has already laid the groundwork for its own demise.

The adoption of the 22d amendment was an open public declaration of this basic lack of confidence. True, it came in a context of partisan (actually bipartisan) reaction toward "That Man" and his immediate successor; but since it could not apply to either, the one being dead and the other being specifically exempted from its operation, it can only be assessed as a hysterical confession of a lack of confidence in the capacity of our people to govern themselves.

If it be said that this public confession was unwarranted, it still tends to demonstrate incapacity to govern. And, to the extent that it may reflect reality, we face indeed an alarming situation, which could hardly be cured merely by repealing the 22d amendment. Proclaiming a capacity to govern, which we may not possess, might prove to be only political whistling in the dark. Even so, however, the effects of a strong and persistent effort to repeal, involving as it should somewhat prolonged public consideration, ought to be worth while, even for its possible incidental byproducts.

If the effort to repeal can get our leadership, political, educational, and editorial, to face up to the basic questions stated above, that ought to justify the effort. If the effort to repeal can encompass wide examination

of basic underlying issues so as to get our people to recognize the observable fact that they are rapidly abdicating their responsibility for governing themselves in both domestic and foreign affairs, that could be a great service.

If the movement could reveal, as it should, something of how relatively completely our public "thinking" is being done by well-paid "public relations counsel" and professional ghostwriters, hired by private interests, political parties, and governmental agencies, that could be all to the good. If a crusade to repeal could, as it should, serve to make us aware of how largely and increasingly our individual "opinions" consist merely of our mouthings of what we get from so-called newscasters, commentators, and columnists, whose job is to sell lines which must be acceptable to commercial sponsors, advertisers, and publishers, that could, with advantage, leave us feeling justifiably somewhat naked and ashamed, intellectually and politically.

Perhaps it may not be so much that our people have lost confidence in their capacity to govern themselves. It may be, rather, that we have never developed a well-grounded and dependable confidence. Perhaps basic conditions, in this land, originally endowed with abundant resources and ample living space, have allowed us to produce a population of 170 million of the best gadgeteered people in all history, without having had to develop a capacity for understanding and coping with the kinds of great public problems with which we are now, and prospectively, confronted. In any event, our real challenge now is to develop a confident capacity. That can come only when and if our people prove willing and able to equip themselves, by wide reading, continuous study, and critical examination of public problems and proposed programs, with a capacity to make their own individual evaluations. There is no reason to assume that it can ever come by means of mass indoctrinations with "safe," "noncontroversial," or "bipartisan" dogmas. That way lies, not functioning democracy, but quite conceivably, an American brand of totalitarianism.

Any movement which may cause our people to bestir themselves to grow up and to take on democratic political maturity needs to be encouraged and accelerated.

Indeed, it is difficult to see anything but constructive promise in your proposed venture, and you and Senator NEUBERGER are to be commended for launching it. It is worthy of persistent effort on the part of two such promising young members of the Congress. It will not be easy, but it should prove interesting, stimulating, beneficial, and altogether wholesome.

With all good wishes, I am,

Sincerely yours,

N. D. HOUGHTON,
Professor of Political Science.

COTTEY COLLEGE,
Nevada, Mo., April 10, 1957.

Hon. STEWART L. UDALL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN UDALL: I would like to express my appreciation to you for the excellent service you are performing in securing and publishing the comments of leading historians and political scientists on the 22d amendment. I am clipping and saving the letters as they appear, with an eye toward using them, with other materials, in my government class next year as a special project of study.

Although I hesitate to intrude my opinion within those of my more illustrious colleagues, I would, for what it's worth, like to say that I feel that the 22d amendment is an unfortunate restriction on the free choice of the American electorate. Certainly no man is indispensable, but to say that we must take the second choice because the first choice has already served a short period of time is a negation of common sense. Constitutional revision for the purpose of revenge is unworthy of the United States. I hope that the 22d amendment will be repealed soon, and the full and free choice of their President will be restored to the American people.

Sincerely yours,

JOHN A. CAYLOR,
Professor of Social Science.

UNIVERSITY OF CHATTANOOGA,
Chattanooga, Tenn., April 10, 1957.

Hon. STEWART L. UDALL,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN UDALL: Impressive as the list of authorities who may favor repeal of the 22d amendment which your resolution provides, there stands more than a century of debate on the feasibility of a constitutional limitation on the Presidential terms which came to fruition in 1951. And I see no reason to rush into a repeal before we have the benefit of a few more years of experience with the limitation.

Very truly yours,

FRANK W. PRESCOTT,
Chairman, The Adolph S. Ochs Department of Government.

The Late Honorable Fred L. Crawford

SPEECH
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. SAYLOR. Mr. Speaker, it was with profound regret that I learned of the unexpected passing of our former colleague and my personal friend, Fred L. Crawford, on April 13. I know many of our colleagues will miss the warm and friendly visits of Fred Crawford in their offices and on the floor of the House.

Fred Crawford was a kindly and generous man. He was known and respected for his painstaking work with the non-self-governing areas under the United States flag. As a Member of Congress from 1935 to 1952, Fred Crawford played a vital role in obtaining independence for the Philippine Islands, commonwealth status for Puerto Rico, and organic legislation for Guam and the Virgin Islands. In addition, as chairman of the Subcommittee on Territories, he held hearings in American Samoa, the Trust Territory of the Pacific Islands, and Guam. He had a personal knowledge of and interest in the welfare of thousands of our islanders in the Caribbean and the Pacific. For 20 years he was a strong advocate of statehood for Alaska and Hawaii. After his retirement from Congress he maintained an active interest in the affairs of our offshore areas.

Besides being an excellent legislator, Fred Crawford was a keen and practical businessman and financier. He had widespread business and farming interests on the mainland and in the Virgin Islands. He was the organizer of the West Indies Bank & Trust Co. in the Virgin Islands, an outstanding financial institution in the Caribbean. To thousands of persons in the Virgin Islands, Fred Crawford brought the concept that banking was something for the little-business man and farmer as well as for those in the higher-income brackets. To them, Fred Crawford was a benefactor and a true friend.

In the years I served with Fred Crawford on the Committee on Interior and Insular Affairs my interest in our dependent areas waxed and bloomed. I learned much from him in the appreciation of islanders' appetite for self-government and in the need for creating an outlet for their dignity, sense of responsibility, and willingness to cooperate with the Federal Government. I have lost a personal friend whose judgment and advice I often sought.

The people of our offshore areas have lost a true friend. I share in their loss. To his wife and son I offer my sympathy and share their grief. To all of us who were his friends and colleagues—I join in paying homage to the late Fred Crawford.

Tanker Deal Called Full of Loopholes

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. ZELENKO. Mr. Speaker, the Committee on Merchant Marine and Fisheries has been conducting hearings on United States maritime policy. A most significant newspaper article concerning one phase of the hearings follows:

[From the Washington Daily News of April 15, 1957]

GREEK SHIPOWNER VERSUS UNITED STATES—TANKER DEAL CALLED FULL OF LOOPHOLES

(By Jack Steele)

The United States Government has no guaranty that millionaire Greek shipowner Aristotle Onassis will carry out his agreement to build 3 new supertankers, costing $51 million, in American shipyards.

This has been established by a House Merchant Marine Committee investigation of a deal made with Mr. Onassis by the Justice Department and Maritime Administration.

Mr. Onassis is an Argentine citizen and a resident of Monaco, where he owns the Monte Carlo Casino.

COMPLEX DEAL

Under his complex deal with the Government, Mr. Onassis is supposed to build the 3 new American tankers in return for permission to transfer title to 14 United States surplus ships to a Liberian company for foreign-flag operation.

The deal was made as part of a settlement after the Government had accused Mr. Onassis of acquiring the 14 surplus vessels illegally.

The committee's hearings clearly indicated that Mr. Onassis outsmarted the Government by getting the Maritime Administration's preliminary approval to transfer the 14 surplus ships without giving any hard-and-fast guaranty to build the 3 new ones.

Thus the hearings sustained a charge by Representative HERBERT ZELENKO (Democrat of New York) that the Government's agreement with Mr. Onassis is full of loopholes.

ASSURES GROUP

Maritime Administrator Clarence G. Morse has assured the committee he will try to reach a new agreement with Mr. Onassis to guarantee that the three new tankers actually will be built.

He did so after Chairman HERBERT C. BONNER (Democrat, of North Carolina) declared that he was not satisfied United States interests had been protected and expressed fears that the Maritime Administration was about to lose control of the situation.

Other committee members charged at the often stormy hearings that United States taxpayers were being "raped" on the deal.

Mr. Morse first insisted that he was proud of the Government's agreement with Mr. Onassis.

But he wound up by pledging to seek a firmer guaranty that Mr. Onassis will build the 3 new tankers before giving final approval for the transfer of title of the 14 surplus ships. Six of the ships already are operating under foreign flag.

Plight of the Family Farmer Under the Eisenhower-Benson Farm Program

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, Mrs. John O. Stenson, one of my farm constituents has written a letter to me on the problems confronting the family farmer. I feel she has done an excellent job in giving the practical effects of the Eisenhower-Benson farm program. Under unanimous consent I insert this letter into the CONGRESSIONAL RECORD:

GARY, MINN., *March 28, 1957.*

Mrs. COYA KNUTSON,
Congresswoman, Ninth District,
Washington, D. C.

DEAR MADAM CONGRESSWOMAN: This weekend our county paper again carried announcements of eight more farm sales. Last week and the week before there were as many or more.

Right now top grade eggs are 21 cents a dozen. Eggs have not been over 24 cents all winter. We have heard rumors that the Government bought eggs for the school lunch program. If they did, it has had no effect on the price of eggs. Farm magazines keep telling us to raise larger flocks, thereby reducing costs. There is already a surplus, so that can't be the solution. They are trying to squeeze out the small farmer. Mr. Benson does not (or should we say will not) recognize the plight of the small farmer. Last fall when we shipped some of our livestock, we had expected a return for them to pay up bills accumulated during the summer for fuel, repairs, taxes, etc. We were very much disappointed. We received only 8 or 9 cents a pound for most of those. We buy our meat over the counter so we know what a difference there is in the price when we buy it back. The packinghouses must really be raking in the money. Why aren't the packinghouses "investigated"?

During the war years I worked at stores and then they had the OPA to keep the middlemen in line. I think that should be done now. Someone is getting rich, and it isn't us hardworking small farmers.

As you know, it isn't only the low farm prices that are to blame for the farmers' plight. Farm prices have been low before but then other things were in line. Why is nothing being done to check the rise of living costs? Now they are talking about raising the postage to 5 cents on a letter. That's one reason for writing to you now—can't afford it later. Also they are going to raise the telephone rates again. Then we shall have to dispense with that luxury. Our REA rates have been raised several times since we came here.

My husband bought this farm in 1946 after serving in the United States Navy for almost 4 years. We did all right the first few years (when the Democrats were in) so have most of it paid for. We like to live on the farm, that is why we are here. But we think it is only fair that we earn a decent living at it. We don't mind the hard work and long hours (sometimes 17-hour days during busy seasons) if we only could have some of the conveniences that city people take for granted in this bountiful America. We don't have running water in the house, and no water in the barn. With the high cost of farm machinery and repairs and payments to make on the farm there never is money left for conveniences and certainly none for luxuries.

We don't think the soil bank will help the small farmer. We have 280 acres. Some of it is very light soil, and we need to make all of it to produce. To reduce the surplus they should put restrictions on the big farmers. They are responsible for most of the surpluses. Mr. Benson seems to favor the big farmer.

The small farmer can't make a go of it, with prices such as they are. Everything we have to buy keeps on going up. If these farmers are forced off their farms and have to seek employment elsewhere there will be an awful mess.

We need help, and we need it right now. I know it would not do any good to write to Mr. Benson—the letter would go in the wastepaper basket without even being opened. We do sincerely hope that you will do what you can to help us.

Yours truly,

Mrs. JOHN O. STINSON.

Millions Were Lost in Postal Delay

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. BERRY. Mr. Speaker, as a climax to the battle between certain Democrats and certain Republicans over the supplemental postal appropriation, I am inserting the column of David Lawrence which appeared in last night's papers across the Nation. As always, David Lawrence has, in my judgment, well summarized the situation.

MILLIONS WERE LOST IN POSTAL DELAY—CONGRESS IS BLAMED FOR LACK OF ACTION AFTER EARLY WARNING BY SUMMERFIELD

(By David Lawrence)

Incalculable losses running into many millions of dollars were suffered by the American people because of the failure of the Nation's post offices to provide over the last weekend the service normally given.

Business mail was delayed, and many deliveries which had to reach distributing centers on Mondays missed connections, thus causing financial losses that now must be borne by individual businesses. In certain types of business there is no way to make up the losses.

This is an example of irresponsible government. The blame belongs to those voters who last autumn gave the Nation a Democratic Congress and deprived the President of the majority support needed to control the action of the committees in the legislative branch of the Government.

The Democrats today are in control of both Houses of Congress. They got ample warning last January that the Post Office Department was running short of funds due to the increased volume of mail. But the Democratic leadership didn't act in time, and a big bill now has to be paid by innocent bystanders.

There is, of course, the usual outburst of political fury and a demand from the Democrats that Postmaster General Summerfield resign. But the record shows he isn't to blame. He warned Congress last January that his funds were running low. Even though the Director of the Budget didn't come up with the needed request for more funds till March 15, still there was ample time for Congress to act before mail service had to be curtailed. At this point, it should be noted that the Postmaster General is prohibited by law from spending money that hasn't been specifically appropriated by Congress.

So it all comes back to the simple fact that there is no harmony between the legislative and executive branches of the Government. Those pious promises of cooperation made last fall by the Democrats have gone up in smoke—at least so far as they concern voting at the right time the funds needed for the proper support of the Post Office Department.

Postal rates should, of course, be equitably increased all along the line, but the need for reform in handling postal receipts is of even greater importance. It turns out, for instance, that all the money collected for the sale of postage stamps doesn't go into the Post Office Department to be used by it, but into the General Treasury, which is certainly an unbusinesslike procedure. For the Post Office has to ask for appropriations for every dollar it spends. In any private business, the funds taken in can be used to pay expenses, but not in the Post Office Department.

The Postmaster General was right in curtailing service because he didn't have the money to pay for it, and Congress was wrong in failing to heed his warnings and give him the necessary funds in time.

Now, however, with the emergency here, Congress is acting promptly, but the American people are asking why they had to be injured before the Democratic Congress took enough notice of the dilemma to do what ought to have been done several weeks ago.

In no other country in the world that boasts of a free government would a situation such as has just arisen be possible. Under a parliamentary system the executive and legislative branches together take full responsibility for the budget. Yet in America today there is no such direct responsibility, because the Congress is controlled by one party and the Presidency by the opposing party.

President Truman had the same thing to contend with when the Republicans won control of Congress in the middle of his last term. Other Presidents have been up against the same kind of stalemate in Congress. Only the most urgent legislation is passed as the partisans fight for advantages, and many important measures are sabotaged altogether.

Since there is no immediate chance for a change to a parliamentary form of government, the American people will have to learn that in Presidential elections they should vote for the same party to control both the legislative and executive branches of the Government.

The 1958 election affords an opportunity to eliminate divided Government by electing a Republican Congress. The people cannot change the Presidency in 1958, but they can place the full responsibility on the Republican Party for the last 2 years of the Eisenhower administration. Then the voters can decide in 1960 whether the record warrants a continuance or a rejection of the Republican Party for the succeeding 4 years.

Responsible Government has long been the dream of many who have studied the weaknesses of the system of divided responsibility possible under our present form, but it may take a disaster in an atomic age to bring about the needed reform.

House Appropriations Committee Deals Unfairly With Mining Producers Who Properly Relied in Good Faith on Previous Actions of Congress

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. ENGLE. Mr. Speaker, the argument over appropriations which threatened to delay the Easter recess of Congress requires, I think, some statement from those who believe that the Appropriations Committee is wrong in continuing to refuse to appropriate for the minerals program authorized by Public Law 733.

It will be recalled that the budget sent up a request for $30 million for the mineral program to be included in the first urgent deficiency appropriations bill. The House Committee refused to include the money. Some of us protested this failure and the $30 million was put in the bill on the Senate side. The matter has since been tied up in conference between the two committees.

The first urgent deficiency appropriations bill involved other matters, including appropriations for the Department of Health, Education, and Welfare, and the Small Business Administration. In order to take care of some of these items, the Appropriations Committee reported House Joint Resolution 310 which provided funds for a number of these items but leaving out any appropriations for the acquisition of strategic minerals, including tungsten. This bill went over to the Senate where it was amended to include $9,140,840 for the minerals program but limited each producer to not in excess of 2,500 short-ton units—the present law puts the limits at 5,000 units.

The Senate committee, in its report to the Senate, made the following statement:

> The committee recommends the allowance of $9,140,840 for the acquisition of strategic minerals under the provisions of Public Law 733, 84th Congress. Of the amount recommended, $600,000 is for the continuation of the asbestos and fluorspar programs and the balance of $8,540,840 is for the tungsten program.
>
> It is the view of the committee that the sum recommended is adequate to allow the producers of tungsten to plan for an orderly close-down of their facilities insofar as purchases under Public Law 733 are concerned. The committee has recommended the inclusion of a limitation to limit the acceptance of deliveries from any one producer from a mining district to 2,500 short-ton units in any one calendar month. Public Law 733 limits such deliveries to 5,000 short-ton units.
>
> The committee will not consider any additional funds for the acquisition of tungsten under the existing provisions of Public Law 733; and the committee urges the proper legislative committee to consider amendments to overcome the objections that have been raised to the tungsten program.
>
> It is possible that legislation to implement the long-range minerals policy could be enacted during this session of Congress. If such legislation is enacted to provide for a tungsten program the committee will consider funds for it at the proper time.

It will be observed that the committee says that the amount allowed was in order to permit an orderly closedown of the mining facilities, and further states that the committee did not intend to consider any additional funds for acquisition of tungsten under the existing provisions of Public Law 733. This appropriation, in short, was an amount allowed to permit the mining industry to close up its operations in an orderly fashion.

It will be recalled that Public Law 733 was passed last August for an announced program covering 30 months and costing $90 million. The first appropriation last August was for $21 million. On the basis of those facts, the mining industry bought equipment, put milling properties in running operation, hired men, and proceeded to go to work on the very proper assumption that the program would last for 30 months with a total amount of $90 million, of which $21 million was already provided. In fact, the Senate Appropriations Committee last August in its report to the Senate stated that the $21 million was the initial amount and the executive agency was directed to come in with a supplemental request in January.

It is our belief that the producers very properly relied upon these representations and that they should be protected against loss incurred by reason of acting on the basis of those representations. It is manifestly unfair to set a program in operation, lead people to rely upon it, and then cut it off. Many miners have invested literally thousands of dollars in getting their equipment required, procuring some new equipment, and putting the mines in operating order. They feel a deep resentment toward their Government and especially toward the Appropriations Committee of the House. With all respect to my colleagues on the Appropriations Committee, I believe that this feeling is jusitfied and that these miners have been done a grievous wrong.

Those of us who represent some mining areas were very reluctant to accept the provisions put in House Joint Resolution 310 by the Senate. We realized it meant the end of the mining program under Public Law 733 and, for all practical purposes, the end of the tungsten industry in the United States. We thought it little enough under the circumstances, but the House Committee on Appropriations would not even accept that amount and ignored the bill, House Joint Resolution 310, when it was returned to the House with the Senate amendments.

Instead of taking this bill House Joint Resolution 310 on the floor where the Senate amendment would have been debated and voted upon, the Appropriations Committee met and passed out a new bill limited to funds for social security payments and small business. The first urgent deficiency appropriations bill presumably will remain in conference—with the tungsten miners sitting out on a limb, as they are now.

Some of us think that the members of the Appropriations Committee ought to carefully examine their consciences, especially during this Easter period, as to whether or not their action is hurting innocent people who relied in good faith upon the fairness of their Government.

Lippmann Finds NATO Allies Have "Extraordinary Lack of Confidence in Dulles"

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. UDALL. Mr. Speaker, columnist Walter Lippmann is now traveling in Europe, and his dispatches constitute a report on the present state of opinion in the NATO countries.

He drew some rather alarming conclusions in his column which appeared in the press this morning. I refer particularly to his statement:

> There is in the anti-American feeling a general disillusionment with President Eisenhower himself. There is an extraordinary lack of confidence in Secretary Dulles.

Mr. Lippmann's column follows:

[From the Washington Post and Times Herald of April 18, 1957]

SOME IMPRESSIONS

(By Walter Lippmann)

ROME.—One of the things that has impressed me in Great Britain and again in Italy is that in foreign affairs there are no clear and sharp issues. There was, of course, a deep division of feeling over the Suez issues. But now that the intervention has failed and has been liquidated, there does not seem to be anywhere a definite difference of view as to what the Western World or the United States should do next.

My impression is that here in Italy there is a feeling of solidarity with the British and the French but that this feeling is checked by a strong practical sense that it is the national interest of Italy to go along with the United States.

In moving about and talking to a variety of people from the countries of Western Europe I have found a remarkable amount of agreement, almost a consensus, about the Soviet Union, about the Middle East, and about the United States.

I have seen no one who thinks the Soviet Union is planning and is preparing for a general war. For that reason resounding declarations of the so-called Eisenhower doctrine are received with puzzled incredulity. Some think that the President and Mr. Dulles are living in an unreal world, empha-

sizing dangers that will probably not come and not dealing with dangers that do in fact exist. Others think that they must mean something deep, so deep that nobody understands it.

I have seen no one who thinks that the Soviet Union is at present willing or able to negotiate a general German or European settlement. The commonly accepted view is that the Soviet Union cannot afford to withdraw the Red army from Eastern Germany and from Poland. This would mean the fall of the East German Communist regime, and along with that a turning of Poland and Hungary against Russia.

Some whom I have seen think that there is nothing for the West to do but to back up Dr. Adenauer and accept the fact that Europe is partitioned. Others, who are, I believe, more farsighted, think the West should keep on trying to negotiate, offering the Soviet Union terms which Moscow, were it less frightened and suspicious, could find reasonable.

There is a general view, I found, that in the rivalry for the so-called uncommitted nations of Africa, the Middle East, and south Asia, the Soviet Union has an easier hand to play than has the United States. There is a feeling that the Soviet Union has won the game in Nasser's Egypt. Certainly it would be a pleasant surprise in Europe if Mr. Eisenhower and Mr. Dulles are able to hold their own in the game.

Although I have not encountered it myself, there is obviously wide anti-American feeling. There is, on the one hand, a big distaste for the manners and the bearing of Americans traveling abroad or talking to the outer world. The comforts and the conveniences of the American way of life are popular. But the talk that goes with them, be it from tourists, itinerant Congressmen, or other officials is definitely unpopular.

There is in the anti-American feeling a general disillusionment with President Eisenhower himself. There is an extraordinary lack of confidence in Secretary Dulles. There is a general underlying anxiety that the fate of Europe should so much depend upon them. The feeling seems to be unanimous as one learns not only in private conversation but also in blunt correspondence in the responsible European press, that the President is a tired man living in a kind of semiretirement.

All this tends to strengthen the feeling in favor of projects, like the common market, of European solidarity. I have no doubt that the brilliant reception of Queen Elizabeth in Paris reflects in some considerable measure this new feeling of European solidarity. Yet I am unable to judge, nor is anyone I have talked with, whether the general feeling of European solidarity is strong enough to overcome the national feeling and the vested interests which keep Europe divided.

It will be years before we know. But in the meantime the common effort to work at these common projects is in itself a healthy manifestation of European solidarity.

Anti-Americanism in Iceland as a Result of the Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Wall Street Journal on April 17 entitled "Foreign Aid at Work":

FOREIGN AID AT WORK

Things are pretty bad in Iceland, our Mr. Williamson reports from that ancient island republic in this newspaper today.

For example, there is a raging inflation. And a conservative-dominated government has given way to a leftist government which has put Communists in key government posts.

What has caused these events, so unfortunate to the Icelanders—and potentially important to the United States bomber base there? Well, the inflation has resulted from an influx of foreign money—mostly the money spent by the airmen, along with some $40 million in United States grants and loans in less than a decade. As a result of the inflation, anti-Americanism has got so strong that the Communists wound up in the government.

More United States loans are in the offing—loans of the kind that we have been told will shore up local economies and help stave off communism.

In fact, there is some $4.4 billion worth of foreign aid included in this record peacetime budget that President Eisenhower and Congress are having such a hard time cutting.

The Late Honorable Fred L. Crawford

SPEECH
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. ENGLE. Mr. Speaker, I served with Fred Crawford for many years on the House Committee on Interior and Insular Affairs. He was the second ranking Republican on that committee and at one time the chairman of the Subcommittee on Territories. He took an intense interest in all the matters under the jurisdiction of our committee, especially those matters relating to the offshore areas such as Hawaii, Alaska, Puerto Rico, and the Virgin Islands. After his retirement from Congress he actively devoted himself to business enterprises in the Virgin Islands.

Fred Crawford was one of the best legislators I have ever served with. He was intelligent, industrious, and forthright. His extensive business experience gave him a fine grasp of many of the problems which come before the Congress. Fred Crawford was an independent thinker. He would disagree occasionally with his own party just as vigorously as from time to time he disagreed with the Democrats. He was a man who stood up for what he thought was right. On one occasion he spent a short period in a Maryland jail rather than submit to the extortionate bonding practices conducted in that State when he was accused of a minor offense. This exposed him to a good deal of publicity which some people would have avoided. But he preferred to face the publicity rather than be victimized by the bond racket. I felt that the incident distinguished Fred Crawford as a man of singular courage and independence of thought.

More important than all of this, he was a very close personal friend in whose opinions and conclusions I reposed great confidence. His passing is a deep personal loss and I extend my sympathy to members of his family.

The President's Papers

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks an editorial "The President's Papers," appearing in the Boston Herald of April 15, 1957. This editorial addresses itself to a very important matter. Former President Harry S. Truman has long advocated action that will preserve Presidential papers, which I think would be a wise investment to make.

The editorial follows:

THE PRESIDENT'S PAPERS

Washington established the precedent of taking the presidential papers with him when he left office. This has also been the ancient custom of the Prime Ministers of Britain when they departed 10 Downing Street. But not until the middle of the last century did the Federal Government begin to make efforts to obtain books and papers of past Presidents in order to preserve them.

The papers of many of our Presidents are enshrined in the Library of Congress. Lincoln's papers, when they were opened in 1947, were found to have filled nearly 200 folio volumes; Washington's were about as extensive.

But as the Office of President has grown, so has the number of the executive papers, the very history of their times. In late years it has become the custom to build an archive for housing the documents and papers of the Presidents, in or near their hometowns.

Woodrow Wilson's career may be traced by visiting his birthplace, Staunton, Va.; Harding's papers are in Marion, Ohio; several Coolidge memorials are scattered around Massachusetts and Vermont; the Hoover Library on War, Revolution and Peace—Hoover, incidentally, was the first to really break with the tradition of letting his files gather dust in the Library Annex in Washington—is at Stanford University in California; the Roosevelt Library at Hyde Park was erected at a cost of $350,000 supplied by admirers; and Truman's Library will be located on a farm site near Grandview, Mo.

No disposition of President Eisenhower's papers has been declared; still, it is obvious that a situation exists in which the history of the present generation is being preserved in an exteremely haphazard way. A need exists for a centrally located presidential memorial as Irving Brant, the historian, points out, so that presidential papers will be available to the scholars of a future America.

The advantages of such a memorial go beyond central accessibility. They insure a uniform standard of care for precious, perishable matter. And in the private library, where friendly custodians sometimes guard the memory of their presidents so devotedly that the critical historian can be hampered—conditions for impartial research are not always ideal.

It would be unfortunate to junk the admirable efforts of such history-conscious Presidents as Mr. Truman; but present structures could be used to house other mementoes of an administration besides the presidential papers. Situated in Washington, a presidential memorial would shed a strong spotlight on the past that guides the American future. As a tourist attraction the memorial would inspire visitors and more than defray the initial cost.

Taxation of Cooperatives

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from our former colleague, Jerry Voorhis, executive director of the Cooperative League, which very lucidly refutes the claims concerning the unfair tax advantages of the cooperatives. I have long been concerned with the problems of small business and, therefore, am well aware of these claims. Mr. Voorhis' forthright letter readily disposes of these claims and points up the fact that money is being spent to make small business afraid of cooperatives rather than the real dangers, such as the growth of corporate giants, which it faces:

THE COOPERATIVE LEAGUE
OF THE UNITED STATES OF AMERICA,
Washington, D. C., April 8, 1957.

Hon. JAMES ROOSEVELT,
House Office Building,
Washington, D. C.

DEAR MR. ROOSEVELT: There are usually two sides to every question. Sometimes one side gets way out of hand, especially when it has unlimited amounts of money to spend.

That's what has happened in the current campaign against cooperatives. A bakers' association in Wisconsin claims that 50 percent of the independent bakers have gone out of business because of the "unfair tax advantage" of co-ops. Actually none has disappeared because of co-op competition. There is only one cooperative bakery in the State.

It is, of course, perfectly true that small businesses are having a hard time, and that many of them have been either merged or forced out of business in recent years. But it is obvious, even upon superficial observation, that it is the corporate giants with control over 85 percent of the Nation's business which are the cause of this. And it is ridiculous—but, nonetheless, a very clever deception—to blame it on cooperatives, which are themselves small business, and which altogether do only about 2 to 3 percent of the Nation's business. What is happening is that a flood of big business money is being used to try to make small business afraid of cooperatives rather than the real dangers which it faces.

The cry that co-ops have an unfair tax advantage is as phony as a $3 bill. Revenue Act amendments passed in 1951 finished the job of putting co-ops and profit corporations on essentially the same tax basis. The point these letters to Congress attacking cooperatives don't make is that co-ops return to customers according to their purchases what the corporations can accumulate as profits. Federal income tax is not paid on these customer rebates either by cooperatives or profit corporations. The law applies to both equally.

Now comes the American Press with its poll of editors asking a "when are you going to stop beating your wife?" question. "Question 9: Bills have been introduced in Congress requiring that cooperative corporations and savings and loan associations be subject to Federal income taxation in the same manner as other business corporations. Would you favor such legislation?" Naturally, 86 percent of the editors replied "Yes." But 12 percent knew what the tax law presently provides. As one editor said, "Cooperatives are taxed like other corporations now. This is a question widely debated and much misunderstood by lay people and warped out of shape."

By some strange coincidence, the so-called National Tax Equality Association, which has spearheaded the drive to befuddle and confuse small business and the public, takes a double-page advertisement in the same issue of the same paper to boast of its handiwork in confusing editors, as well.

Maybe you have some questions to ask us. If so, feel free to do so. We will gladly give you all the facts in as much detail as you desire about the tax status of cooperative business.

Sincerely yours,

JERRY VOORHIS,
Executive Director.

Trial by Jury

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Louisiana Society, Sons of the American Revolution, on April 4, 1957:

That, whereas our Founding Fathers realized the inequities inherent in depending solely on judicial temperament for justice, and in the Declaration of Independence declared, in part:

"The history of the present King of Great Britain is a history of repeated injuries and usurpations * * *. He has obstructed the administration of justice * * *. He has made judges dependent on his will alone * * *. He has combined with others to subject us to jurisdiction foreign to our Constitution * * *. For depriving us, in many cases, of the benefits of trial by jury."

That, whereas the Congress of the United States is now considering legislation which would permit the Federal Government to intervene in litigation, and by so doing, obtain an injunction against the alleged offender, and in such cases a single Federal judge would be able to issue an injunction, make its initial interpretation, determine who has violated it, and inflict punishment for contempt;

That, whereas the Constitution of the United States makes no exception to jury trial on criminal charges except impeachment; article III, section 2, of the Constitution provides:

"The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the State where the said crimes shall have been committed."

The Bill of Rights goes on to say (amendment 6 of the Constitution):

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed."

Now, therefore, be it

Resolved by the Louisiana Society of the sons of the American Revolution, That we respectfully petition the Congress of the United States to adequately safeguard our vested rights guaranteed to us under the Constitution and the Bill of Rights, and that it endorse no legislation, no matter under what guise it may be offered, that would have the effect of abrogating the trial by jury of persons accused of crime;

Resolved, further, That a copy of this resolution be sent to the President of the United States, the Attorney General of the United States, and Senators and Representatives from Louisiana;

Resolved, further, That a copy of said resolution be sent to the members of the New Orleans press, radio, television, and other mediums.

The Early History of the Interparliamentary Union

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. REED. Mr. Speaker, I am indebted to a recent biography of Theodore E. Burton, a great statesman, for some interesting facts with reference to the Interparliamentary Union and the history of the organization and participation of the American arm of this peace organization. It was my privilege to serve in the House of Representatives with this outstanding legislator and statesman, a man whom I held in the highest esteem and affection.

The author of the biography of Hon. Theodore Burton, Forrest Crissey, in referring to Representative Burton's initial interest and subsequent activity in the Interparliamentary Union, has this to say:

Burton's interest in international peace was crystalized while he was visiting Paris in 1900. The second conference of the Interparliamentary Union was in session. Its announced purpose was to study questions of an international character suitable for settlement by parliamentary action. This intrigued him. Then he learned that its delegates were all members of the lawmaking bodies of the various nations represented. It would be decidedly interesting, Burton thought, to take a look at so polyglot an assemblage of national legislators in the discussion of ways and means for settling disputes between nations by civilized processes. Entirely as an unofficial visitor, he attended the session. There was then no American group in the Interparliamentary Union. What Burton heard of the deliberations of this unique body interested him greatly—but not to the extent of moving him to take steps for the formation of an American arm of the organization. Bringing the United States into this strange parliament was left to one of his colleagues in Congress of a less cautious temperament, Richard Bartholdt, of St. Louis, who entered the House in 1893 and served until 1915. Bartholdt attended the conference of the union in Vienna in 1903. He was so moved by what he heard there that, on his own initiative, he started a movement for the formation of a group

to represent the United States in the deliberations of the union. On his return in America he wrote an article urging Americans to do their share in helping to make the world peace-minded.

The day after its publication he called at the White House and had a conference with President Roosevelt. As a result, the President indicated that he was heartily in accord with Mr. Bartholdt's plan to secure an appropriation from Congress to finance a meeting of the Interparliamentary Union in St. Louis the following year. This appropriation was made and the union accepted the invitation of the United States to call its 1904 conference in St. Louis.

Burton became Mr. Bartholdt's most active coadjutor, taking a prominent part in the deliberations of the conference and in the organization of the American group which became a permanent and powerful arm of the Interparliamentary Union. He attended the London Conference of the Interparliamentary Union in 1906, the Geneva Conference in 1912, the Hague Conference in 1913. Then, following World War I, he was present at the Vienna Conference in 1922, the Copenhagen Conference in 1923, the Berne and Geneva Conference in 1924, the Washington Conference in 1925, and the Paris Conference in 1927.

His activities were not confined to mere attendance at the conferences. He threw himself into the labors of the organization with characteristic thoroughness.

In all the deliberations of the Interparliamentary Union, Burton held to conservative ground.

* * * * *

His expectations of immediate results in the stabilization of international peace were much more modest than those of most of his associates in the Parliamentary Union, but he believed in the necessity for a civilized adjustment of disputes between nations and had faith in the ultimate acceptance of this principle.

The United States delegates of the Interparliamentary Union had invited the Union to hold its next (1925) meeting in Washington. The invitation had been accepted and as there were to be a large number of important representatives of practically all the countries of the world at that meeting, Burton sought permission from Congress to use the Hall of Representatives. After all, it was no more than the other countries had done. In every country in which meetings had been held, he said, the greatest deference had been shown the Interparliamentary Union. The United States should not be outdone in courtesy by other nations.

All precedents were against such a procedure, no other legislative body had ever been permitted to hold its sessions in this historic hall. It was a compliment to this veteran Member of Congress that his extraordinary resolution passed by unanimous consent.

The meeting in Washington (1904) had an excellent effect. Many Congressmen had never before had the opportunity of attending the sessions of this organization. Some could not see its purpose nor when the United States should be a member. Some worked against the appropriation of the $50,000 necessary to cover the expenses of the meeting, saying that it was a waste of the taxpayers' money; that this group of individuals with no official authority would come to this country and talk peace and do nothing to effect it.

To this, Burton made a patient reply, recounting the history of the organization since its founding in 1889. In part, he said:

"It accomplished substantial results in the first decade of its existence, the members met here in the year 1904. Perhaps their greatest accomplishment was at that meeting, when delegates from the United States and from a number of foreign countries in a body called on President Theodore Roosevelt and urged him to ask the other nations to meet again in a second Hague Conference. President Roosevelt gave heed to the request, consulted diplomats of the different countries with a view to a second conference, which, as a result, was held in the year 1907. It was an important step, a milestone in the history of better and more friendly relations between nations.

"The great benefit of these meetings is primarily the coming together of representatives of the different parliamentary bodies for consultation. This was very well expressed by Senator McKINLEY, the president of the American group:

"'The advantages of such an organization readily suggest themselves. Freed from the domination of any government, it represents a universal and democratic aspiration. Nothing in it savors of particular interest or privilege. Composed of officials, holding its conferences in the Houses of Parliament, it is itself only semiofficial. Perhaps its main service is its opportunity for parliamentarians from all parts of the world to meet, to confer, to educate one another. * * * For parliamentarians from so many different countries just to meet, officially or unofficially, at conference, at table, at social gatherings, is in itself not without benefit.'"

A multitude of questions have been discussed at these meetings, including economic and financial subjects, reduction of armaments, problems of social policy, the rights of minorities, the burden of high rates for passports and visas and improvement in international law.

Bossitis

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including by request an item carried by the Memphis Appeal in its issue of April 8, as follows:

POSTAL SYSTEM HAS "BOSSITIS," WORKER SAYS

The president of a Memphis postal union says the big fault in the Post Office Department is "the old Indian disease known as too many chiefs and not enough Indians."

Iron Grey Riddle, president of the Memphis branch of the National Postal Transport Association, wrote to the Commercial Appeal:

"Postal employees were amused by Postmaster General Arthur E. Summerfield's loud wails over his recent dilemma caused by lack of funds, and it is hard not to say 'we told you so.' Ever since Mr. Summerfield took office we have been alarmed at the ever-increasing cost of operation and a steady decline in service.

"Despite the efforts of the GOP to blame the Congressmen who appropriate the fund, it will be hard to deceive postal patrons as to who really is at fault. Here are just a few things which have not improved service but which have cost the taxpayers a great deal:

"1. The flying of 3-cent mail. The public is well aware that airmail postage costs 6 cents, and most of us do not mind paying 6 cents when we want a letter flown; but whether we ask for it or not, the Department pays 6 cents and over for each 3-cent letter that it flies.

"2. Painting the corner mail box to look like a barber pole and postal vehicles to resemble bread trucks. We feel sure that the public will never be informed as to how many millions are involved by this move.

"3. The Summerfield regionalization program, which created thousands of jobs for officials in the upper pay brackets but which failed to provide any relief for production workers who actually move the mail."

Majority of Country Editors Oppose Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the country editors of America have spoken out against Federal aid to education. Under leave to extend my remarks I am including an article which appeared in the American Press of April 1957 on this subject:

MAJORITY OF COUNTRY EDITORS OPPOSE FEDERAL AID TO EDUCATION

The much-touted "emergency" need for Federal aid to education is looked upon coolly by the majority of editors of weekly newspapers, as indicated by a question included in the American Press' most recent survey.

The question on the subject was worded: "A bill has been introduced calling for an appropriation of $600 million a year for 5 years to be used to speed school construction. Do you favor such a program?"

Forty-five percent replied "Yes," 53 percent voted "No" and 2 percent didn't answer. Percentages are based on replies from 760 weekly newspaper editors or publishers.

The majority of those commenting on the question were opposed to the idea largely on the ground that local communities, counties and States could take care of their own school problems and should take care of them. Many also feared that Government aid would lead to a degree of Government control. It was also argued that each dollar going to Washington would come back cut in half before it was put to work on school construction.

Along with the question on school construction was another question reading: "If a school aid bill is passed, do you think it should include a provision denying aid to areas in which schools are segregated?"

To this question 34 percent voted "Yes," 62 percent voted "No" and 4 percent didn't answer. The heaviest opposition, of course, was in the South where 78 percent voted against the idea, 17 percent voted for it and 5 percent didn't vote.

A third question related to education asked: "Federal scholarships, to help 100,000 students with ability, but who can't afford college, to have a college education, are expected to be proposed to Congress. Are you for or against such Federal scholarships?"

Fifty-five percent of the editors voted against this idea, 42 percent were for it, and 3 percent didn't vote. Comments on the various questions regarding education follow:

Kerm Powers, Thayer (Kans.) News: "Why is there a school construction problem? If a town of 100,000 population increases to 1,250,000, isn't there 25 percent more tax valuation with which to build the schools the increased population requires?"

FEDERAL INTRUSION

R. F. Lebbs, Mapleton (Iowa) Press: "Federal aid means we pay for schools anyway,

so why not have each district take care of its own needs?"

H. A. Gossard, Berrien Springs (Mich.) Journal-Era: "It is another Federal intrusion into local government; most areas can do a better job of financing own educational needs by consolidation, integration, etc. The relatively few which need help should be required to pay back."

Samuel O. Carter, Solomon (Kans.) Valley Tribune: "No local situation exists which cannot be eliminated by intelligent local action."

Glenn F. Logan, Mokena (Ill.) Semmler Newspapers: "I don't want to see the schools regimented and that is what would happen in time if Uncle Sam starts putting in his money. There is too much tendency on the part of the public to shun local responsibility and turn to some central authority."

F. Lyn Gladstone, Newell (S. Dak.) Irrigator: "Federal expenditures to spur school building are needed badly, but fund should be allocated, except where schools are not needed, on the basis of the ratio of number of schoolchildren to assessed valuations."

N. G. Neil, Graybill (Ill.) Mercury Independent: "Better solution would be to reduce taxes and let districts which need new schools use savings to improve local units."

LEAVE IT TO LOCAL GROUPS

M. C. Paige, Newton (Ill.) Mentor-Democrat: "Local communities, with adequate State aid, always have and always will be able to meet their school needs if they will make proper use of the facilities at their command. As for segregation: The South has a Negro problem. I think they have done a pretty good job of handling it without interference of Yankee uplifters and do-gooders. Leave them and their schools alone."

Paul M. Clapper, Lousiville (Ohio) Herald: "A school-building program should be only on a loan basis."

Ronald R. Furse, Plattsmouth (Nebr.) Journal: "Keep the Federal Government out of our school systems. We can build our own schools at half the price. We are sick of using half our tax dollar to pay salaries and administration expenses."

Charles Broderick, Mt. Morris (Ill.) Index: "Let the local taxing bodies solve their own school problems. We have."

Robert R. Bliss, Hillsboro (Ill.) News: "I believe great good would come for future generations by spending more on educational facilities and scholarships and less on military and agricultural programs. Federal scholarships could well be tied to the military program to provide the bright kids with an academic education instead of KP and latrine duty."

G. T. Toole, Wayland (N. Y.) Register: "Federal aid is a circuitous means of shrinking taxpayers' dollars. Let the Federal Government rebate a uniform percentage of the taxes taken from each State and let the State decide what school it should be spent for."

Ray Wieloszynski, Franklinville (N. Y.) Sentinel Press Weeklies: "Let each State face up to its own problems. This expectance of State or Federal aid breeds lethargy, encourages bureaucracy, and surrenders individual rights."

WOULD INCREASE COSTS

Karl R. Bierly, Apollo (Pa.) News-Record: "Such a bill would simply be an inducement to building contractors and labor to boost their costs at expense of the public."

N. J. Paul, Merchantville (N. J.) News: "Stop mollycoddling the ravenous education groups and give education benefits comparative with other needs in life."

Ross W. Buck, Sewickley (Pa.) Herald: "Federal aid is a costly, inefficient, bureaucratic way of building schools. State aid is cheaper, and there is less likelihood of bureaucrats in Washington taking over education."

Jack Colby, Littleton (N. H.) Courier: "Local communities can do the job required for education, including school construction, with far greater returns for the dollars spent. A Federal-aid program would eat up a good portion of the tax revenues."

George F. Cleary, Gloucester (N. J.) News: "Regarding college and school aid, we bemoan the Federal Government extending its influence any further and would much rather see these problems handled at the State level."

D. H. Moreau, Flemington (N. J.) Democrat: "If the United States would keep its hands out of its pocket the problem would and could be met locally."

Jack Wettengel, Henrietta (Tex.) Leader: "There may be areas in which aid is needed to build schools, but I believe the greatest number of appeals for aid come from school boards who are too lazy to do anything about it themselves."

Phil Fourney, Ravenswood (W. Va.) News: "Government controls what it finances. Schools should be returned to local government. State control too great now."

Robert S. Latimer, Jr., Bishopville (S. C.) Messenger: "Individual States should handle and finance their programs, as has been done in South Carolina."

Delmus C. Harden, Fulton (Miss.) Times: "If we are facing a serious slump this program may be needed. If not, let matters take a normal course."

Gilbert J. Hersman, Weston (W. Va.) Independent: "Federal aid for school buildings may be necessary—but the local communities should shoulder a large part of the cost of education. Whenever the Federal Government hands out grants some authority and control goes with it. I would like to hear candidates for Congress tell of what they have saved the people—not what they get for them in spending money."

M. A. Perry, Atlanta (Ga.) Herald: "Georgia is completing a $200 million public-school building program, paid for by Georgia taxpayers. If Georgia can provide its own school building funds, so can the other States, and without danger of Federal control."

Loyal Frisbie, Bartow (Fla.) Democrat: "The States can do the job themselves, if they will. Federal aid inevitably means Federal control."

Max Schaefer, Seaside (Oreg.) Signal: "Any aid to education by the Federal Government must first be taken away from us in the form of taxes, tossed around by a bureaucracy and then, what is left, handed back to us under conditions which impose at least a degree of control over our schools. I would particularly oppose Federal aid based upon need. The States which are gaining most in population shifts have the greatest temporary need, but the need is the result of a process which is also resulting in development and the growth of wealth in those States. I do not believe States which are losing population or remaining static should be penalized to provide schools for States which are growing."

WASTE OF FUNDS

Virginia M. Weigand, Golden (Colo.) Transcript: "I am against Federal aid to education because of the loss of revenue involved in collecting taxes here, spending it in Washington and getting back 50 to 75 percent. If just a portion of that tax could be paid directly to our school district we would be using our funds much more wisely."

Steve Williams, Milford (Utah) News: "Cut Federal taxes and let us build our own schools. As for Federal scholarships, what a wonderful pork barrel that would be! Students who want to go to college can find a way."

Adrian Reynolds, Green River (Wyo.) Star: "Any further Government grant for schools puts Federal Government in position of dictating courses, etc., and leads to dictatorship."

Donald Carpenter, Montrose (Calif.) Ledger: "This is another invasion of States rights by the New Deal-Fair Deal-Eisenhower-modern Republican group. Let the States handle their own school problems."

A few comments on the segregation problem were:

James A. Dement, Antonito (Colo.) Ledger-News: "Education is the strongest bulwark against false philosophies."

Victor A. Gierre, Louisiana (Mo.) Press-Journal: "I am for desegregation, but Government already has too much school authority."

E. W. Doherty, Killdeer (N. Dak.) Herald: "I think integration should be required in a school bill simply because there is no object to building two schools in southern communities for each 1 in the North."

H. M. Sutherland, Clintwood (Va.) Dickensonian: "I am opposed to integration in the public schools until the people of the South are prepared for it through education and persuasion, without force. Unless there is a slowdown of present tactics there will be violence in the South that will shame the Nation. It is my hope that this explosive problem will be taken out of the hands of politicians. (Herbert Brownell and DICKIE NIXON) and placed in the hands of a statesman like Walter F. George."

Edward A. Bandjough, Wewahitchka (Fla.) Breeze: "You cannot punish this generation or the next one for the sins of its forefathers."

Commenting on the proposal for Federal scholarships, editors said:

Art Dove, Utica (Ohio) Herald: "I taught college 5 years. Youngsters wanting education can get it if they have enough ambition."

Andrew M. Shortz, Badger (Minn.) Enterprise: "If a student has completed 4 years of college successfully and needs aid to go further, then a Federal aid program might be valuable. By that time a person has gained the education of experience and knows what he wants to do in life."

Richard J. Leiser, Mendota (Ill.) Reporter: "I would be fearful such scholarships would be a political football."

Otha Grisham, Seguin (Tex.) Enterprise: "Youngsters who want a college education can get it. Why go to this expense? Surely Congress has more pressing work to do."

Harold Hudson, Perryton (Tex.) Herald: "This is a bunch of bunk. I worked my way through college and am thoroughly convinced that anyone desiring a college education today can get one through his own efforts. An education is not a 'right' to be handed out by a paternal government."

Elmer R. Price, Toledo (Oreg.) Leader: "I've never seen a youngster who really wanted college to be denied it."

K. A. Eggensperger, Thompson Falls (Mont.) Ledger: "I do not believe there is any such things as a 'young person who cannot afford to go to college.' I worked my way through and never received a single dollar from an outside source. Many of my college friends worked their way. I do not believe in giving our young persons too soft a start in life."

Need a Million?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. MINSHALL. Mr. Speaker, my very good friend, E. Clare Weber, has in the past few years built up an insurance business in Cleveland of astounding

proportions. It is a tribute not only to Mr. Weber but to the free-enterprise system in our country today. An article follows:

NEED A MILLION? TRY INSURANCE COMPANIES—LARGE CORPORATIONS ARE DOING SO MORE AND MORE FREQUENTLY, EXECUTIVE SAYS

(By John Metcalfe)

When large corporations need dough for expansion, where do they usually go?

More and more they are heading for the insurance companies, it was noted yesterday by O. Kelley Anderson, president and director of New England Mutual Life Insurance Co., Boston, whose firm invests about $1 million a day in mortgages and bonds.

Insurance firms, Anderson said, are the country's biggest reservoir for long-term capital funds. By long-term he means loans running from 10 to 30 years, often running into the millions of dollars.

Like everyone else, insurance firms are trying to put their money to work, Anderson asserted in an interview at New England's E. Clare Weber Agency. Occasion of Anderson's visit here was the fact that Weber's agency has been awarded the company's top award for sales achievements, the president's trophy.

In terms of assets, New England is 11th in the insurance industry. It also ranks among the first 50 firms in the Nation, as far as assets go, Anderson said.

ONE HUNDRED BILLION IN ASSETS

The insurance industry, he asserted, is interested in landing the big corporate fish who may need a cool $50 million for an expansion program. Also, he added, "We do an enormous volume" with smaller companies who seek loans ranging from $100,000 to $500,000.

Anderson pointed out that the Nation's insurance firms have assets of nearly $100 billion, waiting to be put to work and make a profit. New England, he added, has total assets of about $1,800,000,000.

New England, Anderson said, is interested in lending capital to sound firms on a long-range basis. "We don't make short-term loans," he added.

Regarding what is termed the present "tight money market," Anderson said he thought that the term is being overworked.

Like an individual borrowing at a bank, money is available to those who appear capable financially of meeting their obligation. Money is still tight, he said, but an ably managed firm can usually raise the capital it needs.

Many insurance firms, Anderson pointed out, are heavily invested in mortgages and bonds. Only 7 percent of his company's money is put into common stocks, these in high-grade issues, with purchases decided on the dollar-averaging method.

On the subject of insurance, Anderson expressed surprise that despite a lot of inflation talk, his industry keeps on growing. A man once thought that a few thousand dollars was enough insurance to care for his family in case of his death.

Now, he said, many heads of households feel the need for up to $100,000 in life insurance to see the family through in case the wage earner dies.

Of the insurance business he offered this observation:

"We always know that we will have more money tomorrow than we have today." By this he meant that the business is growing constantly and that the insurance premiums keep building up.

Anderson ventured the opinion that business will be good this year for New England Mutual. Sales in the first quarter are up an estimated 15 percent from the same period last year. The Weber agency gained 46 percent in the first quarter, compared with the like interval in 1956.

Members of the Weber agency attended a dinner at Hotel Statler last night in recognition of their winning the President's Trophy twice. The agency has $134 million of insurance in force.

High Honors Paid to Hon. John W. McCormack, of Massachusetts, and Hon. John J. Rooney, of New York

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. FLOOD. Mr. Speaker, as the House is about to recess for the Easter holiday, I am aware of the religious overtones of this holy week. On Monday and Tuesday our Jewish brothers paid tribute to their ancient Passover, and we of the Christian faith approach Holy Thursday, Good Friday, and the joyous Easter Sunday of rededication to our respective faiths and realization of the mysteries of eternal spring and the eternal God.

Mr. Speaker, I bring tidings of the great joy, high honor, and special distinction conferred upon two of our most respected and beloved colleagues, the distinguished majority leader, the gentleman from Massachusetts [Mr. McCORMACK] and the distinguished gentleman from New York [Mr. ROONEY].

Last night I was privileged to be a witness with some of my colleagues and in the presence of a brilliant gathering of clergymen led by His Excellency the Archbishop of Washington; His Excellency the Auxiliary Bishop of Washington, and many very reverend and right reverend monsignori and priests, when His Excellency the Apostolic Delegate conferred the Ecclesiastical Order of St. Gregory the Great, with the rank of Knight Commander with Star, upon the distinguished gentleman from Massachusetts [Mr. McCORMACK], and the distinguished gentleman from New York [Mr. ROONEY].

This was not an action of a political, temporal, or sovereign nature, but rather a tribute from the leaders of their faith to these two outstanding Christian American gentleman whose character, integrity, and public service merited this ancient, historic, and prized award.

Mr. Speaker, it matters not what honors may come to a public official from his friends or from his community; it matters not how high and mighty among men he may be. Unless he believes in God, unless he is sincere in the manifestation of his faith, regardless of what that belief may be, he is lacking one element essential to greatness. The distinguished gentleman from Massachusetts [Mr. McCORMACK], and the distinguished gentleman from New York [Mr. ROONEY], are devout communicants of their church and profess deeply and sincerely their belief. In these years of uncertainty and turmoil, they stand among us calm and serene as they embrace the motto of our country "In God We Trust."

Emblazoned upon the emblem of the order with which they have been honored are the words pro deo et principe—for God and country. No better phrase can depict their public and private manifestation of faith in their God and dedication as patriots to the United States of America, and so, Mr. Speaker, not only do I congratulate these, our two beloved colleagues, but I congratulate my country and this House on the good fortune in having them as citizens and as Members. Down the long avenue of time, which I hope and pray lies before them, may they enjoy good health, long life, and great success in the vast circle of their friends and in the intimate bosom of their families ad multos annos.

Tale About "Assistant President"

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. ULLMAN. Mr. Speaker, the April 16 edition of the Washington Evening Star contained an excellent column by the very competent nationally syndicated columnist, Thomas L. Stokes.

The significance of the subject matter of this column cannot be overemphasized. Certainly Mr. Stokes' disclosures contain serious implications. They point up a fact which I and many of my colleagues in the House and Senate have contended for many years. There is a sinister influence at work within the present administration, and that influence is none other than private utility groups who are attempting to monopolize the natural resources of this country. No better example of their influence can be found than their attempted grab of so great a public resource potential as is found at the Hells Canyon site on the Snake River.

The present administration has done everything in its power to give this great resource away. Yet the people of the great Pacific Northwest have indicated their fervent desire that resource development be carried on consistent with the public welfare.

I applaud Mr. Stokes' telling disclosure. My only possible disagreement with him would be over the last sentence of his column. He writes, "Credit should go where credit is due." I believe he would have been more exact if he had written, "Blame should go where blame is due." If Mr. Stokes' facts are correct—and I believe them to be so—then certainly there is a great deal of blame involved in this matter.

The column follows:

TALE ABOUT "ASSISTANT PRESIDENT"

This is a tale about Sherman Adams, major domo in the Eisenhower administration under his innocent title of "Assistant to the President."

It is a tale, too, about geography, Sherman Adams' geography in New Hampshire, where he once was Governor, and how it reacted politically on a lot more geography spread in magnificent splendor of mountain, forest, plain and swiftly coursing rivers in the West and Northwest and on the Pacific Coast and also, indeed, in the South.

But we'll stick to the West, first. This will take us to Salt Lake City and another one of Republican National Chairman Meade Alcorn's regional conferences on May 3 and 4. There will gather Republican political leaders from 9 States—Oregon, Washington, California, Idaho, Nevada, Utah, Arizona, New Mexico, and Montana. The purpose of these regional meetings, of which there are six altogether, is to try to find out how the Republican Party can win next year's congressional elections.

That being the aim, much study must be given at Salt Lake City to the sad news the Republican Party got in some parts of that vast area last November, especially in Washington, Oregon and Idaho. For one of the biggest election surprises was the earthquake which, despite the Eisenhower victory for President, shook up that region. It elected Democratic Senators in Oregon, Washington and Idaho, added two Democratic House Members to make it 3 out of 4 Democrats in the State's House delegation here along with 2 Democratic Senators, elected Democratic Governors in Oregon and Washington, and made wide gains in State legislatures.

Admittedly a factor in this Democratic upheaval was that big gorge with the intriguing name—Hells Canyon—in the Snake River along the Oregon-Idaho boundary. A big piece of geography. Democratic candidates made an issue of it. They attacked the Eisenhower administration and former Secretary of the Interior Douglas McKay for helping to hand over development at Hells Canyon to a private power company, Idaho Power, an absentee-owned corporation which holds its stockholders meetings in Augusta, Maine. The Idaho Power Co. was awarded a license to build three dams at Hells Canyon by the Federal Power Commission. The way was opened for the company when Secretary of the Interior McKay withdrew from the FPC a recommendation by his Democratic predecessor, Secretary Oscar Chapman, for construction of one high dam by the Government at Hells Canyon. The latter was in keeping with the overall plan prepared by the Army engineers for development of the Columbia River system, of which the Snake is a tributary.

Now we come to Sherman Adams, who won't be at Salt Lake City.

It was he who called Secretary McKay from the White House early in the Eisenhower administration and instructed him to withdraw the Chapman recommendation for a high Federal dam. Thereupon Secretary McKay tore up the memorandum which he had drafted supporting the high Federal dam and prepared another to withdraw the previous recommendation.

So much for western geography. Now for Sherman Adams' geography, to get a better understanding of why he is directing the fight against public power development. His attitude reflects a widespread antagonism in New England among businessmen against Federal power development. They have resisted development of their rivers for production of cheap electric power by comprehensive Federal development. This failure is a factor in migration of so many mills to the South. Because of that migration, much of it to the TVA cheap power territory in the Southeast you find deep-seated hostility toward TVA among New England's Members in Congress.

That is shared by Sherman Adams. He revealed that by his attempt to prevent the Chairman of the Securities and Exchange Commission, J. Sinclair Armstrong, appointed Tuesday by President Eisenhower to be Assistant Secretary of the Navy, from turning over certain information to a congressional committee investigating the Dixon-Yates deal. That deal, you may recall, was an attempt to cut under TVA, which was instituted by the Eisenhower administration and finally abandoned when exposed by the Senate investigation.

We see Sherman Adams' hand in the Hells Canyon imbroglio again in the last Congress. He put heavy pressure on Republicans in the Senate to line them up and, with the help of a handful of Southern Democrats, to defeat the Morse-Pfost bill that would have nullified the FPC license to Idaho Power and authorized Federal development at Hells Canyon.

There very likely will be talk at the Salt Lake City Republican meeting about Hells Canyon and what it means in politics, though it is unlikely anyone will be so bold as to point the finger at Sherman Adams. But it is he who is the real driving force in the administration's war on public power development.

Credit should go where credit is due.

Big Government, Socialistic Trend, Extravagance Are Chief Worries of Editors

---

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a very interesting article which appeared in the American Press of April 1957. It relates to big government, to socialistic trend, and extravagance and from the article, it will be observed that these three items are the chief worries of most editors:

BIG GOVERNMENT, SOCIALISTIC TREND, EXTRAVAGANCE ARE CHIEF WORRIES OF EDITORS

Big government—the trend toward socialism—and extravagant Federal spending are the three chief worries about the Washington scene among the country editors of the Nation, as expressed in the Survey for Congress conducted by the American Press.

Results of the survey, showing the opinion of 794 editors on 20 current legislative controversies, public questions were published in the March issue of the American Press, along with comments on many of the questions.

But in addition to comments on specific questions, many editors used the survey as an opportunity to voice their concern with Government in general. Some of the broader comments showing concern of grass-roots editors over what is going on in Washington, follow:

Ray Wieloszynski, Franklinville (N. Y.) Sentinel Press Weeklies: "Would like to see congressmen have the guts to cut costs for the good of the Nation instead of the patronage of a voting body."

L. L. Reading, Lansdale (Pa.) News: "As Lincoln declared, 'This Nation cannot exist half slave and half free,' so this writer firmly believes it cannot exist half Socialist and half free enterprise. It will become one or the other—and if it be Socialist it would not be the Government of our Founding Fathers."

Elmer J. Spears, Washingtonville (N. Y.) Post: "Let our leaders set their sights toward almighty God, begging His assistance in all they do, living their lives in His name, and I say to you that the trouble of this country will fall away like water over a dam. Not until this is done will we see any real advancement."

Ross W. Buck, Sewickley (Pa.) Herald: "Maybe what we need in this country is a third party, a truly conservative party, based on the theory that the best government is the least government."

Mrs. Mary Dirks, Schwenksville (Pa.) Item: "Where is the aid the GOP bragged about for small business? If you're in General Motors class nothing is impossible, but the little fellow is getting squeezed out faster every year. It's not only taxes, but the general attitude of Government toward the small-business man. Tight money is hurting everyone except the ones who now control our finances. America was built 'on the little guys.' Let's get back to fundamentals."

Arthur E. Ball, Little Falls (N. J.) Herald: "The administration should stop kidding the public although I realize they like it. Tell them less about the so-called peace which doesn't exist while we spend three times as much for armaments as for everything else. Also tell them that prosperity gained by inflationary methods is leading us to the devil."

B. B. Bobbitt, Long Branch (N. J.) American: "Eisenhower's increased budget is threat to country. It might have endangered his reelection if known in advance. Secretary Humphrey is regarded as a hero for his protest."

G. W. Hall, Myrtle Point (Oreg.) Herald: "I'm a Republican—but I'm not in favor of Ike's skyrocketing budget. Give us more men like HARRY BYRD. Though a Democrat, such a man would be more advisable for President than anything we've had in the 20 past, devastating years."

Carroll T. Benson, West Allis (Wis.) Star: "One of the must pieces of study Congress faces is a reduction in expenditures if we are not to go under economically. Let's quit kidding ourselves. Taxes have caught us in a vise that bids fair to bleed us to death."

DIPPING INTO FEDERAL FUNDS

John J. Shinners, Hartford (Wis.) Times-Press: "One very basic thing we oppose is this constant dipping into Federal funds for everything. Right here in our little city we are building an addition to a hospital with Hill-Burton funds, going to have an airport with State and Federal help, have just widened a main street with Federal funds, and are planning an extension of rural library service with Federal funds. We think the people should be doing things for themselves, without Uncle Sam getting into the picture and partially running everything.

A. M. Tinker, Somerset (Ohio) Press: "The people of this Nation have got to again look at Government as the servant and not the master of the people, but so long as they are willing to have Government perform the services that should be their individual responsibility that can never be."

T. Ballard Watters, Marshfield (Mo.) Mail: "In general, I hope for a reduction in size of Government, but it is doubtful if my hopes can be realized. I think Government spending should be curbed, with less penalty on thrift. The Government debt should be reduced before tax relief is given."

John O. Denson, Minonk (Ill.) News-Dispatch: "Handouts are spoiling Americans and turning them toward socialism."

A. L. Paddock, Jr., Plymouth (Ohio) Advertiser: "There is still a lot of fat in the military appropriation. If the Bureau of the Budget needs any hints, my telephone number is Plymouth 59. We are still spending too much on veterans. There is absolutely

no need to pay for hospitalization to treat non-service-connected disabilities."

POOR RETURN TO STATES

Charles Broderick, Mount Morris (Ill.) Index: "People in my area feel strongly that the Federal Government has too much to do with local affairs. For every $100 in Federal taxes we pay, only about $75 gets back to us in any way. The rest goes to pay some leech's Federal salary and he can tell us what to do, besides."

Gaylord T. Newby, Woodward (Okla.) Journal: "Let's cut Government spending while the country is described as prosperous. What are we going to do if slow times come, now that the multitude embraces the Roosevelt ian theory of spending ourselves rich? Have Republicans lost their backbone?"

Clark Coble, Stilwell (Okla.) Democrat-Journal: "I favor elimination of all subsidies—social security, unemployment compensation, etc. Let us do away with all socialistic legislation. This country was built by freemen on free enterprise. We are no longer freemen and enterprise is hardly to be called free."

Charles J. Wyly, Delhi (Pa.) Dispatch: "I should like to see all forms of Federal aid (which is another way of saying to return funds to taxpayers after the Washington cut) gradually curtailed. I don't believe in the principle of aid to farmers, but since union labor is protected it's only fair to help farmers have enough income to purchase the products made by union labor."

W. L. Roundtree, Tallulah (Pa.) Journal: "To much giveaway of taxes, both Federal and local. Local Negro population in particular spending 75 percent of their effort trying to get free money. Negro women having bastard children fast in order to get welfare—the more bastards they have, the more they get paid."

W. Mat Jones, Gatesville (Tex.) News: "In reference to strikes, wage increases, especially as applied to defense plants, which of course includes all the big union-controlled corporations: Take John. He gets $80 per week. His union strikes. He gets $100 per week. The NLRB, composed of prounionists the last few years, grants the raise. Then look at your withholding and social security schedules and see who gains. John, no. The company, no. The Government, yes. They get more social security and withholding tax. What does this do to the country's economy?"

H. M. Sutherland, Clintwood (Va.) Dickensonian: "I would favor price control again—particularly of newsprint and food and medicines—to prevent runaway inflation. The only way to control a hog is to keep him in a pen."

E. E. McCarthy, Orlando (Fla.) Corner Cupboard: "These are times of full employment, yet our Government is providing many services that it first started in depression years. Unless there is curtailment we seem headed for more inflation. It will be a test of our democracy to see if we can cut down on these individual benefits without causing a political upheaval."

Bob Lee Kidd, Jr., Porteau (Okla.) News and Sun: "The Government had better do something to aid small business. Most small town businesses are now with their backs to the wall."

Fred T. Turkington, Elkton (Md.) Cecil Democrat: "Having served in both Army and Air Force for about 7 years, I'm convinced there is plenty of room for economizing in the Armed Forces without damaging wartime capabilities."

Ed Schultz, Jacksonville (Ark.) News-Progress: "This newspaper's policy is against the welfare state and Government meddling. It believes strictly in the law of supply and demand. It fears the present trend will lead to the downfall of America in the same manner in which lazy people brought about the downfall of ancient Greece and Rome. It feels that very few newspapers of today are willing to speak for what they believe to be right for fear of political pressure or loss of advertising revenue."

Mason Rossiter Smith, Gouverneur (N. Y.) Tribune-Press: "I think that with courage, real determination and no fear of political repercussions, any Federal department head could cut operating costs at least 25 percent."

Maxwell R. McMillan, Santa Rosa (Calif.) Herald: "We have a Republican administration run by holdover bureaucrats from previous Democratic administrations. Hence the cash flow of $83 billion out of Washington to special pressure groups and ever-increasing billions to foreign countries all over the world."

Msgr. Dr. Joseph Tiso Memory Commemorated

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. BURDICK. Mr. Speaker, some great men have been murdered, others incarcerated for years, merely because they stood in the way of the rulers of the Kremlin, and among these great men we find the name of Msgr. Dr. Joseph Tiso, who was murdered by the edict of the Kremlin. He worked diligently and faithfully for his religion and for the freedom of the Slovak Republic and the people in the republic. This fight for religious freedom and personal liberty was so foreign to the dictatorial concepts of the Communist hierarchy, that men like Monsignor Tiso, must be eliminated and he was.

Today the whole civilized world pays tribute to the outstanding loyalty of this great man, to the idea he pursued of religious and personal freedom of his people. He is dead but still lives in the hearts of civilized men. Here follows eulogy by Joseph A. Mukus, doctor of laws, director of the Slovak League Press Bureau:

MSGR. DR. JOSEPH TISO (1887–1947)

(By Joseph A. Mikus)

On April 18, the Slovaks in the free world are commemorating the 10th anniversary of the martyrdom of Msgr. Dr. Joseph Tiso, President of the Slovak Republic.

There are certain forces that used to present this Catholic priest as a controversial personality on the scene of central European politics after Munich.

In the last message to the Slovak people entrusted by Monsignor Tiso to his confessor before his execution, in the early morning of April 18, 1947, he states: "I feel that I am a martyr of the defense of Christianity against bolshevism, against which our nation must in all possible ways defend itself, not only in the spirit of its Christian character, but also in the interest of its future."

What is the right and what is the false around the dramatic life of Msgr. Joseph Tiso?

Born in Velká Bytva, a small city in western Slovakia, J. Tiso studied theology in Vienna, where he took his doctor's degree. At the end of World War I he became professor at the Nitra Seminary and later secretary to the bishop of Nitra. Since the beginning of the Czecho-Slovak Republic in 1918, he was active in politics.

In 1925, Reverend Tiso was elected deputy of the Prague Parliament for the Slovak People's Party with Msgr. Andrei Hlinka as chairman. That was the largest political party in Slovakia, grouping the majority of the voters of Slovak ethnic origin. Its political program was aimed at the promoting of Christian principles in public life and the transformation of the Czechoslovak centralistic and Czech dominated state into Czechoslovakia, i. e., a federal union composed of the Czech lands on the one side and Slovakia on the other. In 1927 and 1928, when the Slovak People's Party was temporarily a member of the Government coalition, Monsignor Tiso was Minister of Public Health in Prague. After the death of Andrei Hlinka, in August 1938, he became chief of that party.

The Czechs, who had for long time been reluctant to subscribe to the People's Party program, were finally disposed, under the pressure of the Sudeten German problem, to accept the federative reform. As a result of this constitutional change, "an autonomous status, with a special Slovak Diet, was granted to Slovakia by the Government in Prague, on November 19, 1938. The Slovak Diet (members to which were elected on December 18, 1938, in accordance to the electoral laws of Czechoslovakia) opened at Bratislava on January 20, 1939, and Monsignor Tiso was appointed Premier by the President of the Republic" [1] (Emil Hacha).

On March 13, 1939, Monsignor Tiso was summoned to Berlin by the Chancellor of the Third Reich. There, Hitler let him know that Hungary was about to end preparations to occupy Slovakia and added that only the declaration of an independent Slovak State could save her from occupation. "On March 14, the Slovak Diet, which had functioned as the federal Diet of the Slovak part of the Czechoslovak Republic, after hearing Monsignor Tiso's account of his visit to Hitler, voted unanimously for the creation of an independent State of Slovakia. By the same vote the Slovak Diet was transformed into the legislative Diet of the State of Slovakia." [2]

The same day, the Bratislava Parliament elected Tiso Prime Minister of Slovakia, and later, on October 26, 1939, President of the Slovak Republic.

During World War II, Slovakia was in the "Hinterland" of the German eastern front. In this situation, Tiso's policy was to assure the main national interests of Slovakia without provoking Germany excessively. Although she, like any other central European country, was involved in the general war conditions of Europe, Tiso knew how to maintain the political order as well as the social and economic prosperity of Slovakia.

The German-Slovak relations were characterized by a great pressure from Berlin in the field of both, internal and international politics. The German Minister Plenipotentiary in Bratislava, Von Killinger, intended to organize, in 1940, a "coup d'etat" against Monsignor Tiso, when he tried to resist. Having been disclosed prematurely, this plot failed and Von Killinger had to leave Bratislava. His successor, Hans Ludin, in a speech held in summer 1941, in the city of Kezmarok, attacked Monsignor Tiso in a way which has probably no precedent in diplomatic history. But Tiso remained on his place having firmly behind him the strength and unity of the Slovak people. As there were rumors, later in 1943, that, because of new German pressure, he would resign from his office as the head of state, two Rabbis went to see Archbishop Kmetko of Nitra and asked him, on behalf of the Jewish community in Slovakia, to convince Monsignor Tiso of the necessity to remain in his place.[3]

The best proof that the regime of President Tiso was more liberal than the regim[illegible] of any

Footnotes at end of speech.

other Central European country at that time is in the fact that from 1939 until 1944, when German soldiers entered Slovakia, none had been executed in that country. During the whole existence of the Slovak State, from the beginning till the German occupation, there was no condemnation to death for political reasons, it has been stated in an official publication of the Benes-Gottwald regime, in 1946.[4] Of course, it is hardly possible to make Tiso responsible for the atrocities of German soldiers committed during and after the uprising in Slovakia, in September and October 1944. That country then became an area of military operations and was subject to the German military laws. In this Communist-inspired adventure, more than 30,000 Slovaks, besides many Jews, lost their lives in the guerrilla fighting against the units of the German Army.

Because of a token participation of Slovakia in the war against the Soviet Union after 1941, Monsignor Tiso drew the hatred of Moscow upon himself. Before the Red army had advanced on the territory of western Slovakia, he left Bratislava, at the end of March 1945, and went with his government into exile in Austria. In October 1945, he was extradited, according to an instruction of the United States Department of State, by the American military authority, to the Czechoslovak National Front government, after having been indicted by Prague as a war criminal.

Tiso was imprisoned in Bratislava, to be judged later by the so-called Slovak National Court, under the presidency of Dr. Daxner, a Communist, and composed of 7 members, of whom 5 were Communists, 1 Democrat, and 1 neutral, all that in a country whose electors, by a majority of 70 percent, voted in the elections of May 26, 1946, against communism.

"Nevertheless," as writes Hugh Seton-Watson, "he still enjoyed considerable popularity in the country. Slovak independence had been a period of prosperity. Many Slovaks argued that Tiso acted as he did in March 1939 only because the alternative was a partition of Slovakia between Germany and Hungary. So strong was popular feeling in his favor that many Slovaks of strong democratic views, who had personally suffered under his regime, nevertheless argued that he should not be condemned to death on grounds of political expediency. The Communists, however, were implacable. Tiso's greatest crime in their eyes was that he had declared war on the Soviet Union. In the established Communist view, this is sacrilege, for which death is the only penalty. The Czech Social Democrats followed the Communists, and the Czech National Socialists took the formal view that a traitor to the State must be punished. Only the Slovak Democrat Party, pressed by its supporters, pleaded for mercy. It received some wavering support from the Czech People's Party, which was unwilling to see a Catholic priest executed. The decision rested with President Benes. He decided that he could not use his prerogative of clemency against the advice of his Government. Tiso was therefore hanged. The result was a growth of discontent in Slovakia which had dangerous implications."[5]

Both the Vatican and the Slovak bishops interceded with the President asking him to grant clemency to Tiso as an act of political wisdom. But in the eyes of Benes, he was a visible symbol of Slovakia's aspirations for independence, and therefore it was necessary to eliminate him. In fact, both the President and the chairman of the court declared long before the end of the trial that Tiso would hang.

As regards Moscow, Tiso was a symbol of the religious resistance of the Slovak people to communism. At the end of the trial, General Gundurov, chairman of the Congress of the Slav Peoples, came from Moscow to Bratislava to communicate the will of the Soviet Government that Tiso must be hanged. "This, Bardossy, Tiso, and Antonescu," as says Hugh Seton-Watson, "none of whom were guilty of atrocities, found to their cost. Nor can these men be said to have taken part in Hitler's conspiracy of aggression. * * * But in the view of the Soviet Government they had committed treason, and the courts of their native countries gave the verdicts that Soviet Justice required."[6]

There are anomalies in the application of principle of justice, indeed. Hjalmar Schacht and Franz von Papen, two important helpers of Hitler, are free. None, with a sense of proportions, will never believe that Monsignor Tiso's responsibility in World War II was heavier than that of these two prominent defendants of the Nuremberg trial. They had, however, the privilege to be judged by an international tribunal, which has, for unknown reasons, been denied to the political personalities of all Central European countries that, after Munich, necessarily belonged to the German orbit. In this way, their fate was predetermined.

In his heart, Monsignor Tiso, as it could not be otherwise, was a resistant to nazism. But under the pretext of collaboration it was easy for Moscow to let him condemn for other reasons. Maurice Descote, a French political writer, expressed his opinion upon the execution of this Slovak patriot in the following way: "More than a collaborator, it was a doctrine and a political attitude that was on trial."[7]

The trial of history will, without any doubt, confirm this judgment.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Association of American Physicians and Surgeons at Miami, Fla., on Friday evening, April 26, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR WILLIAM F. KNOWLAND, ASSOCIATION OF AMERICAN PHYSICIANS AND SURGEONS, MIAMI, FLA., APRIL 26, 1957

We must not take our constitutional form of Government or our free-enterprise system for granted. Neither fall into the category of something that can be locked in a safe deposit box and kept forever secure. Each generation must be prepared to make the necessary sacrifices to maintain them that that our Founding Fathers were prepared to make in the first instance.

Other nations have been or now are larger in land area, in population, and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to maintain a free world of freemen. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems, or its variety of natural resources as important as these are.

The factor which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States, and the spiritual values which the founders of our Republic recognized and by which they were guided.

We have recognized that there is a higher moral law to which governments are also accountable. We have humbly acknowledged the divine inspiration which made and preserved us as a Nation.

We have read of and been inspired by the action of George Washington in kneeling in prayer during the dark days of Valley Forge and of Lincoln doing the same during his lonely vigil in the White House during the darkest days of the Civil War.

The priceless ingredient for our people has been our constitutional form of government which guarantees our religious, personal, and economic freedom.

We must not dilute our constitutional guaranties whereby human freedom would be comprised with totalitarian tyranny in any form of world government.

The incentives furnished under our system have constantly opened new horizons.

In this atmosphere, Americans of each generation have sought to leave to their children a better land than they themselves found, not just better in a material way but in the educational and cultural developments that make for better family and community life.

New inventions in various industrial fields and the tremendous potentials of the peacetime developments of atomic power are bound to challenge us for many years into the future.

We must as a Nation build on principles rather than personalities. Individuals come and go but fundamental principles endure. What are some of these basic principles for which we should stand.

1. Constitutional government with the division of power between the legislative, executive, and judicial branches of the Federal Government and the reservation of all power not granted to the Federal Government, under the Constitution, to the States and to the people. The longer I have been in the Senate the stronger has grown my support of States rights.

2. Maintenance of our free enterprise system under which we have grown from a small colony of 3 million people to a great world power of 170 million with the most productive economic system the world has ever known.

3. Protection by the Federal Government and the States of the people from the concentrated and arbitrary use of power by business or labor organizations against individuals and small-business enterprises. The right to earn a living as an employee or as a proprietor of a small business is a "civil right" of the first magnitude.

4. Maintenance of a soundly growing economy based on free enterprise and full employment. No business or labor organization should have the power to strangle the economic life of 170 million Americans and by so doing endanger freemen everywhere. With power must also go responsibility.

5. Support of a sound fiscal structure for our Federal, State and local governments. This requires all of them to live within their means and to stop traspassing on the tax resources of the others.

Without a sound dollar and a solvent government our whole structure of local, State, and National governments, of public and private educational facilities, of wage earners, of public social security and private pensions and retirement systems will be jeopardized.

Without a sound dollar every employee, every housewife and our people living on retirement income or social-security payments will be penalized. Inflation and debt repudiation is but another form of confiscatory taxation in the Marxist socialist pattern.

It is time for us to rededicate ourselves to a renewed faith in our free way of life.

A tax system under which the Federal Government taxes personal incomes at rates varying from 20 to 91 percent and corporate income at a 52-percent rate is simply too burdensome. It will ultimately destroy our free enterprise system.

For fiscal year 1958 President Eisenhower estimates that the Federal Government will spend almost $72 billion—an increase of more than $5 billion over the 1956 spending rate.

The budget continues in balance only because of a continuous increase in the level of our prosperity which has brought forth a steady rise in tax revenues with no increase in rates.

Few people realize that all we need to do at the present time in order to be able both to reduce our towering national debt and cut taxes is to stop increasing Federal expenditures. Had Federal outlays been held at their 1955 level we would now face the pleasant prospect of a budget surplus of almost $9 billion in the coming fiscal year. This would be sufficient for a sizable reduction both in the national debt and in taxes.

In order to have a budget surplus of almost $5 billion in the forthcoming fiscal year, all we need to do is to keep Federal expenditures from rising above their already high current level. This reduction of $3 billion can and must be achieved as a minimum. I pledge my efforts to this end.

This must not be any single shot effort. In future years we must continue to keep Federal expenditures from increasing and wherever possible, to reduce them. Only this way can our burdensome taxes and national debt be steadily reduced.

There is a prevalent school of thought which maintains that Federal expenditures must keep pace with the growth of our economy. This is a dangerous and unnecessary philosophy. For one thing, it is the economy that maintains the Federal Government and not vice versa. Further, unless we are able to reduce our tax burden, we may end up by destroying or seriously crippling that which is the source of our strength—our free enterprise economy.

We live in a perilous age. Unless we are able to reduce Federal expenditures and taxes, we will have no margin available for emergencies.

I do not deny that as the country grows, some increase in Government expenditures is necessary and even desirable. However, of one thing I am certain. During a time of peace it is not necessary for Federal expenditures to increase as fast or faster than the increase in the national income or as fast as an overburdened tax system can produce increased revenues.

The founders of this republic knew well the history of the world up to their time. They knew that where there was a concentration of power in a single agency of national government that the freedom they sought to guarantee could easily be lost.

Those of us who continue to believe firmly in this wise political philosophy instinctively know that the Federal Government cannot give anything to the States unless it first takes it away from their citizens.

It is in our best interests that the States of our Union be strengthened rather than weakened.

The 48 States should be experimental laboratories where people within limited geographical areas would have the opportunity to legislate and administer policies in conformity with the local needs and desires.

In determining those State policies all adult American citizens are entitled to vote if they meet the qualifications established by law.

Throughout the major part of the last 30 years, the Federal Government has had to use a constantly increasing portion of the Nation's taxable capacity to meet its expending obligations. Only by calling a halt to this process can the weakened sovereignty of our States be shored up and revitalized. If the Federal system is worth retaining, our aim has to be less Federal spending and less taking on of new obligations accompanied by a reduction in Federal taxes and debt. In this way and solely through these means the

States and localities will have the wherewithal to undertake the many necessary programs as society grows and becomes ever more complex.

America is still the authentic revolution. The flame of freedom which was struck at Concord and Lexington still is an inspiration to the enslaved behind the Iron Curtain.

But it is also an ageless lesson that no outsiders can win independence for a people. They must be willing to pay the price in blood and resources to gain their own freedom.

We do recognize, however, that when freedom is destroyed anywhere a bit of freedom is destroyed everywhere.

Nations can die while delegates talk. Last year the General Assembly of the United Nations passed 10 resolutions in 76 days of debate. All that while freedom was being strangled to death in Hungary. With callous indifference the Soviet Union placed itself above the higher moral law of God as well as above its obligations under the United Nations Charter.

No international organization can long endure with a double standard of international morality.

Are the obligations and the mandates of the United Nations to be applicable to the democratic nations but not to the totalitarian powers? To the law abiding but not to the outlaw nations? To the small and weak countries but not to the big and strong? What kind of justice is this? Are we building on quicksand? What kind of a foundation is this for constructing a system of international law and order based on justice.

We serve no useful purpose if we hide the facts. To the contrary by ignoring them and failing to seek remedies, we may endanger the safety of this Republic and free men everywhere.

For many decades the men in the Kremlin have preached the doctrine that the free world contains the seeds of its own destruction. It is far more likely, I believe, that the Communist world contains the seeds of its own destruction.

Hungary was but the latest in the indications that, even under totalitarian police rule and the brainwashing of a whole generation, the spark of freedom still lived and was capable of lighting a fire that endangered the whole monolithic structure of Communist tyranny.

After the Hungarian experience how much reliance can the Soviet Union place in the armed forces of the other captive nations if freedom is ever within their reach? How can they have faith in Communist indoctrination when young students were the leaders of the Hungarian rebellion?

Within the past 2 weeks the rulers in the Kremlin have sought to intimidate Norway, Denmark, Greece, and Iceland.

The Soviet Union has not changed its long-term strategic objective: The destruction of human freedom everywhere.

They will be relentless in seeking to destroy our institutions. Fortified by our faith in God, we must be determined that our way of life will be preserved.

Hungary has also taught the world that unless an independent government or revolutionary movement can function for several weeks or months it is difficult for outside friends to assist.

Had the British redcoats crushed the first American rebellion in a week and captured the leaders (as happened in Budapest) there would have been no time for France and our other friends abroad to come to our aid.

Sooner or later there will be another Hungary. Will the free world be better prepared to strike a blow for freedom? Will the United Nations be prepared to do more than talk and pass 10 resolutions?

It may come this year or next in Bulgaria, Rumania, Czechoslovakia, Eastern Germany, Albania, North Korea, China, Poland, or in Hungary again.

Indeed it may even come in the Soviet Union where the people of Russia were the first victims of the godless Communist tyranny.

During the week Nagy was the legal head of the Hungarian Government what a difference it would have made if the United Nations had sent in observers; if based on the first United Nations resolution the friends of freedom abroad had sent the freedom fighters bazookas and grenades rather than more resolutions of sympathy.

Or is the policy of the United Nations and the free world now to be that we will throw water on the embers of freedom and revolt against tyranny and that we will finance Communist economic and political systems so that the slaves will be more content with their masters?

There is now being negotiated in Washington grants, loans and credits of $100 million to the Communist Gomulka government of Poland.

This has the support of the executive branch despite the fact that:

1. Poland is a member of the Communist Warsaw pact and is occupied by Soviet divisions.

2. On February 27 of this year it voted for the Soviet resolution in the United Nations to condemn the United States.

3. Gomulka himself helped liquidate non-Communist Poles at the close of World War II.

4. The Soviet Union has stripped Poland of over $4 billion worth of industrial and agricultural products. By this aid we will indirectly be aiding the Soviet Union.

5. When we strengthen a Communist economic system we strengthen the Communist political system.

6. At the very time Poland was negotiating the $100 million out of the United States their delegation in Communist north Vietnam were extending loans and credits to the Communist government of Ho Chi Minh.

On April 11 a joint statement was issued in Peking by Premier Chou En-lai of Communist China and Josef Cyrankiewicz, chairman of the Council of Ministers of Poland, which among other things said:

"The hearty welcome and warm reception accorded the Polish Government delegation by the Chinese people and the Government of the People's Republic of China demonstrated the fraternal friendship between the Chinese and Polish peoples. The visit to China of the Polish Government delegation will bring even closer the relations between China and Poland and between all the Socialist countries."

Further on the communique said: "After appraising the latest international situation, both parties point out that, although thanks to the continuous constructive efforts of the peace-loving countries and peoples who advocate a peaceful settlement of international disputes the general trend of the international situation is toward relaxation, the imperialist aggressive circles have not ceased their activities to wreck peace, but have attempted to attain their old objective by new disguised ways.

"In Europe, they are reviving the forces of West German militarism. In Asia, they are still carrying out activities to endanger the independence and neutrality of many countries in this area. In the Near and Middle East, the ruling circles of the United States are pushing forward the Eisenhower doctrine, which is aimed at supplanting Britain and France in their colonial position."

In addition, the Communist Chinese and Polish representatives said this:

"The two parties consider that the building of socialism in accordance with Marxism-Leninism constitutes the supreme interest of the two peoples, and that in their respective Socialist construction in the light of their national characteristics and specific conditions they should consistently combat all deviations, whether doctrinaire or revisionist. To do this is a sure guaranty for effectively overcoming difficulties and smashing all plots of hostile forces to sabotage the Socialist construction.

"The two parties reaffirm their support for the worker-peasant revolutionary government of the People's Republic of Hungary in their struggle to consolidate the Socialist system and eliminate the consequences of past mistakes. They will continue to help the Hungarian people overcome the difficulties they are presently facing."

Before concluding, the Polish Communists again indicated that they were giving economic assistance to another Communist country in the following words:

"The Government of the People's Republic of China expresses its thanks to the Polish People's Republic for its active support to China in its struggle to defend its sovereignty and Poland's various aids to China in the economic field and in the fields of shipping, science, and technology."

Communist Yugoslavia in the post-World War II period (July 1, 1945, to date) has received more than $1 billion in grants, loans, and credits from the United States.

During this entire period, Dictator Tito has:

1. Opposed our foreign policy of encouraging mutual-defense pacts against potential Soviet aggression.

2. Supported Communist Chinese membership in the United Nations.

3. During the whole period of the Communist aggression in Korea, the Yugoslav Government either supported the Soviet position or abstained on the resolutions condemning the aggression.

4. Abstained on the February 27 Soviet resolution condemning the United States. (Resolution was defeated by a vote of 8 yeas to 53 nays.)

In addition to the economic and military aid already given Tito's Yugoslav Communist government, there is now under consideration a proposal to turn over 215 jet planes to them.

This does not make sense to me.

We have a number of stout non-Communist friendly nations that are allied with us in mutual defense pacts. They need jet fighter planes. These nations include the Republic of Korea, Turkey, Thailand, Pakistan, Vietnam, the Republic of China on Formosa, and the Republic of the Philippines. All of these allies should have priority over Communist Yugoslavia.

I do not favor taxing the American people to support Communist economic or political systems abroad.

For several years the United Nations has discussed the freedom of colonial people in Asia and in Africa. These are and will continue to be important questions until equitable solutions have been reached.

Why, however, has there been a strange silence by the membership to discuss in the United Nations the destruction of freedom in Latvia, Lithuania, and Estonia? Here is a clear-cut prima facie case of the violation of its international treaties of friendship and nonaggression by the Soviet Union. Here is a clear case of the unilateral incorporation of three independent nations as provinces within the U. S. S. R.

Will the General Assembly take further action in the Hungarian case to back up its 10 resolutions or will an effort be made to create a zone of silence so that relations with the Soviet Union will not be embarrassed? Is justice for Hungary to be blinded and gagged as well? Is the conscience of the world that was so thoroughly aroused in October and November to be complacent and

satisfied in April and May? While the Security Council is meeting on the Mideast question this month or next will the Hungarian issue be raised or be forgotten?

These are questions which freemen will be asking, and enslaved people who want to be free will be waiting for the answers.

All Americans, regardless of party, can join together in subscribing to the oath of Thomas Jefferson:

"I have sworn upon the altar of God eternal hostility to every form of tyranny over the mind of man."

Address Delivered by Secretary of State John Foster Dulles

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very eloquent and forceful speech made by Secretary of State John Foster Dulles on Monday, April 22, in New York City, at the annual Associated Press luncheon held during the convention of the American Newspaper Publishers Association.

Secretary Dulles has well set forth the basic principles of our foreign policy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RUSSIAN STRATEGY UNABLE TO DIVIDE FREE WORLD—TEXT OF A SPEECH BY SECRETARY OF STATE DULLES AT THE ANNUAL ASSOCIATED PRESS LUNCHEON

I recall pleasurably your annual luncheon a year ago. It is a compliment that you have asked me to come a second time.

Since this is my first speech of the second Eisenhower term, it may be appropriate to set forth the basic concepts which guide our foreign policy. It is important that both friend and foe should know the principles by which we chart our course.

At the close of World War II, the statesmen of the world met at San Francisco to plan a better future for a war-scourged world. They wrote the United Nations Charter; and in its first article they laid down three basic and interlocking principles.

There must be peace; there must be justice; and there must be liberty for nations and for persons.

Peace, justice, and liberty—these same concepts underlie the foreign policies of the United States.

Our task is to realize these concepts in a world of rapid and accelerating change.

Two decades ago I wrote that world peace depended, not on preserving the status quo, but on finding ways of peaceful change. Today, this requirement is more than ever imperative.

Our foreign policy accepts change as the law of life. We seek to assure that change will be benign, and not destructive, so that it will promote not merely survival but freedom and well-being.

FIRST REQUIREMENT: SHUT OUT AGGRESSION

A first requirement is that the door be firmly closed to change by violent aggression.

Of all the tasks of government the most basic is to protect its citizens against violence. Such protection can only be effective if provided by a collective effort. So, in every civilized community, the members contribute toward the maintenance of a police force as an arm of law and order.

Only the society of nations has failed to apply this rudimentary principle of civilized life.

An effort was made through the United Nations to create an armed force for use by the Security Council to maintain international order. But the Soviet Union vetoed that.

However, the member nations still had the possibility of cooperating against aggression. For the charter, with foresight, had proclaimed that all nations had the inherent right of collective self-defense.

The free nations have largely exercised that right. The United States has made collective defense treaties with 42 other nations. And the area of common defense may now be enlarged pursuant to the recent Middle East resolution.

This collective security system is subject to assaults from without, and to infirmities within.

SOVIET RULERS WANT FREE NATIONS DIVIDED

The Soviet rulers understandably prefer that the free nations should be weak and divided, as when the men in the Kremlin stole, 1 by 1, the independence of a dozen nations. So, at each enlargement of the area of collective defense, the Soviet rulers pour out abuse against so-called militaristic groupings."

And as the free nations move to strengthen their common defense, the Soviet rulers emit threats. But we can, I think, be confident that such Soviet assaults will not disintegrate the free world.

Collective measures are here to stay.

The greater danger comes from internal hazards. A collective defense system, in which each member nation is completely sovereign, requires a high degree of voluntary cooperation and agreement.

Happily, we have that. For example, it is agreed that the primary task is to deter war. Modern weapons have such vast destructive power that there could be no real victor were general war ever to occur.

It is also agreed that the principal deterrent to aggressive war is mobile retaliatory power. This retaliatory power must be vast in terms of its potential. But the extent to which it would be used would, of course, depend on circumstances.

The essential is that a would-be aggressor should realize that he cannot make armed aggression a paying proposition.

LAND, SEA, AIR POWER ALL VITAL TO DEFENSE

It is also agreed that it would be imprudent to risk everything on one single aspect of military power. There must be land, sea, and air forces for local action and for a defense which will give mobile striking power the chance to do its work.

Thus the general design of common defense is widely agreed. Of course, its detailed application presents recurrent difficulties. Also, the sharing of the burden raises problems.

Modern weapons are extremely expensive. Immense sums must be spent in research and development and in making weapons which may become outmoded almost before they are in production.

The United States is the only free world country able to sustain the cost of developing a capacity for retaliation adequate to deter a potential aggressor who himself has great and growing aggressive power.

In addition, the United States supplies military equipment to others and, in some cases, helps to stabilize the economies of allies which cannot otherwise play their proper part in the scheme of common defense.

The President faces no more difficult task than the crucial one of deciding, in this defense field, how much to spend, where to spend it, and how to bring the cost into a budget which provides for other needed tasks and does the whole without monetary inflation or excessive taxation.

There are some who, in a zeal to economize, would slash that part of our budget which is often miscalled foreign aid—as though it did not aid us. That would not be economy, but extravagance.

If the forces and facilities which others provide were subtracted from the common defense, the United States defense budget would have to be expanded vastl from what it now is. That is the considered judgment of the President and his military advisers.

COLLECTIVE DEFENSES NOT CONSIDERED IDEAL

The free world collective defense arrangements are not ideal.

There is nothing automatic about them, and they require a continuing conscious effort by many nations to cooperate and to forego the petty selfishness and the extremes of nationalism which could poison the relationships.

But the relationship is predominantly one of good will and trust. It marks a significant step in the long-overdue progress of international society from anarchy to order.

To maintain and develop this progress is a basic principle of our foreign policy.

But we do not believe that the only way to security is through evermounting armaments. We consider that controls and reduction of arms are possible, desirable, and, in the last reckoning, indispensable.

It is not essential that controls should encompass everything at once. In fact, progress is likely to come by steps carefully measured and carefully taken.

Thus far it has not been possible to assure the inspection and other safeguards that would make it prudent for us to reduce our effective power. But we shall continue to seek that goal.

Armaments are nothing that we crave. Their possession is forced on us by the aggressive and devious designs of international communism.

An arms race is costly, sterile, and dangerous. We shall not cease our striving to bring it to a dependable end.

ANY POLICE SYSTEM ESSENTIALLY NEGATIVE

Any police system is essentially negative. It is designed to repress violence and give a sense of security. But the sense of security is illusory unless behind its shield, there is growth and development.

Military collaboration to sustain peace will collapse unless we also collaborate to spread the blessings of liberty.

Trade, from the earliest days, has been one of the great upbuilders of economic well-being. Therefore, this Government advocates trade policies which promote the interchange of goods to mutual advantage.

Also, the United States, as the most productive and prosperous Nation, assists other nations which are at an early stage of self-development.

It is sobering to recall that about two-thirds of all the people who resist Communist rule exist in a condition of stagnant poverty. Communism boasts that it could change all that, and points to industrial developments wrought in Russia at a cruel, but largely concealed, cost in terms of human slavery and human misery.

The question is whether free but undeveloped countries can end stagnation for their people, without paying such a dreadful price. Friendly nations expect that those who have abundantly found the blessings of liberty should help those who still await those blessings.

Of course, each country must itself make the principal effort to improve its lot. But others can provide an impetus and the margin between hope and despair, and perhaps between success and failure.

They can do this by showing interest and concern; by giving technical guidance; and by providing capital for development.

PRIVATE CAPITAL SHIES AT BIG RISKS

Much of this is done under private auspices, and we wish it could all be done that way. But sometimes the hazards are greater than private capital will assume. So, our Government supplies some funds for economic development purposes.

The sharing of markets and of development capital is not a giveaway operation. It assures that the free world, of which we are part, will be a vigorous, hopeful community. That corresponds to our interests and to our ideals.

Our mutual-security program can and should make our policies more clear and more stable. Two weeks ago I outlined proposals to this end before a special committee of the Senate.

With the help of the Congress, and, with the support of the American people, our trade and economic development policies can serve mightily to demonstrate that the peace of freemen is not the doomed peace of human stagnation, but a peace of such vitality that it will endure.

Just as our policy concerns itself with economic development, so, too, our policy concerns itself with political change.

During the past decade, there have come into being, within the free world, 19 new nations with 700 million people. In addition, many nations whose sovereignty was incomplete have had that sovereignty fully completed.

Within this brief span nearly one-third of the entire human race has had this exciting, and sometimes intoxicating, experience of gaining full independence.

PROGRESS TO GOAL OF SELF-GOVERNMENT

The United States believes that all peoples should have self-government and independence if they desire it and show the capacity to sustain it. We rejoice that there is progress toward this goal.

But liberty requires more than the mere breaking of old political ties that have become unwelcome.

Those patriots who won for us our independence knew and proclaimed that our free institutions could be sustained, and our independence made durable, only if our Nation accepted the disciplines which religion and education enjoin.

That is indispensable to assure responsible leadership able to guide a young nation through the dangers which beset it.

International communism is on the prowl to capture those nations whose leaders feel that newly acquired sovereign rights have to be displayed by flouting other independent nations. That kind of sovereignty is suicidal sovereignty.

The United States stands as the faithful and vigorous champion of the principles of our Declaration of Independence. And we want the new independence of others to be something better than a brief twilight preceding the blackout of Communist despotism.

Nowhere is the pressure for change greater than within the Soviet orbit. For there the most basic human aspirations are the most repressed.

A year ago Khrushchev boasted before the 20th Congress of the Soviet Communist Party that communism was on its way to triumph everywhere on its merits as a system of thought and government.

But in October how many Communists could be found in supposedly Communist Hungary? A few hundreds of secret policemen, hopelessly implicated in the crimes of the regime, and a handful of traitors willing to govern by grace of Soviet tanks.

COMMUNISM PROVED OPPRESSIVE DESPOT

Communism in practice has proved to be oppressive, reactionary, unimaginative. Its despotism, far from being revolutionary, is as old as history. Its subjects, in vast majority, hate the system and yearn for a free society.

The question of how the United States should deal with this matter is not easily answered. Our history, however, offers us a guide. The United States came into being when much of the world was ruled by alien despots.

That was a fact we hoped to change. We wanted our example to stimulate liberating forces throughout the world and create a climate in which despotism would shrink. In fact, we did so.

I believe that that early conception can usefully guide us now.

Let us provide an example which demonstrates the blessings of liberty. Let us spread knowledge of that around the world. Let us see to it that the divided or captive nations know that they are not forgotten; that we shall never make a political settlement at their expense; and that a heartfelt welcome and new opportunity await them as they gain more freedom.

Let us also make apparent to the Soviet rulers our real purpose. We condemn and oppose their imperialism. We seek the liberation of the captive nations.

We seek this, however, not in order to encircle Russia with hostile forces, but because peace is in jeopardy and freedom a word of mockery until the divided nations are reunited, and the captive nations are set free.

We revere and honor those who as martyrs gave their blood for freedom. But we do not ourselves incite violent revolt. Rather we encourage an evolution to freedom.

VOICE OF AMERICA SPREADS INFORMATION

The Voice of America, our information programs and cultural exchanges, spread throughout the world knowledge of what freedom is and does. When Hungary was invaded and freedom crushed, we sponsored a United Nations condemnation of the Soviet Union. And when some steps are made toward independence, as recently in the case of Poland, we show a readiness to respond with friendly acts.

Events of the past year indicate that the pressures of liberty are rising.

Within the Soviet Union there is increasing demand for greater personal security, for greater intellectual freedom, and for greater enjoyment of the fruits of labor.

International communism has become beset with doctrinal difficulties. And the cruel performance of Soviet communism in Hungary led many to desert Communist parties throughout the world.

The satellite countries no longer provide a submissive source of added Soviet strength. Indeed, Soviet strength, both military and economic, has now to be expended to repress those who openly show their revulsion against Soviet rules.

The Soviet government pays a heavy price in terms of moral isolation.

Soviet rulers are supposed to be hardheaded. For how long, we may ask, will they expend their resources in combating historic forces for national freedom which are bound ultimately to prevail?

UNITED NATIONS PEACE WITH JUSTICE

Let me speak now of the United Nations. Its charter couples peace with justice, and provides the most significant body of international law yet known.

The United States has agreed to those principles and seeks to conform to them; and we expect other signatories to do the same. On occasions we invoke the processes of the United Nations to help to make effective the principles embodied in the charter.

We are not ashamed, as a powerful Nation, to pay the same decent respect for the opinions of mankind that we thought proper when, young and weak, we sought our independence.

That is no abdication of foreign policy. It is the exercise of foreign policy, and its exercise in the way which represents the best hope for humanity.

Our dedication to the principles of the United Nations Charter was severely tested by the recent Middle East crisis. We were then faced with a distressing and unprecedented conflict of loyalties. Historic ties would have led us to acquiesce in the forcible action that was begun.

But this would have involved disloyalty to the United Nations undertaking that all members renounce the use of force except in defense against armed attack. That same pledge is also embodied in all our treaties of alliance. We decided to be loyal to that commitment.

This was a hard decision, although to those directly affected it was not an unexpected decision.

DECISION UNPOPULAR BUT IMPERATIVE

It was not, I suppose, a popular decision. Yet it was imperative if the world was not to go as it went when the League Covenant was disregarded.

But, as we have seen, the charter prescribes not merely peaceful settlement, but settlement in conformity with justice and international law.

We must, and do, seek also to advance that goal. For example, we are now striving to bring about conditions in the Middle East better than those provocative and dangerous conditions out of which the recent violence was born.

This cannot be done quickly or all at once. Where emotions run high, and a sense of grievance is deep, those most directly involved are more eager to gain partisans for their cause than to heed impartial counsel.

Wherever such situations occur, they are always worsened by Soviet intrigue. The Kremlin likes troubled waters in which to fish.

We know, in domestic affairs, that it is hard to apply just solutions when racial or class passions run high. The task is equally hard in international affairs, and sometimes war seems to offer a shortcut to the desired end. But that seeming is an illusion.

The only durable solution is one which comes by patiently, resolutely, and resourcefully seeking justice and the rule of law. That, at least, is the faith and the dedication of your Government.

I have tried to describe principles which guide United States foreign policy. But while guiding principles are essential, they are not enough. They must be reinforced by daily action, as throughout the world, our views are sought and our influence is made felt.

This is the task sometimes called waging peace. It is a hard task.

It is seldom dramatic. The many who take part in it may never be known as heroes. Yet they make efforts, and in some cases sacrifices, like those required in war to win a war. By so doing, they spare us the infinitely greater sacrifice of war itself.

Surely the stakes justify that effort. As I am briefed on the capacity of modern weapons for destruction, I recognize the impossibility of grasping the full, and indeed awful, significance of the words and figures used.

Yet we would be reckless not to recognize that this calamity is a possibility. Indeed, history suggests that a conflict as basic as that dividing the world of freedom and the world of international communism ultimately erupts in war.

That suggestion we reject. But to reject in terms of words, or of hopes, is not enough. We must also exert ourselves to the full to prevent it. To this task, the American people must unswervingly dedicate their hearts and minds throughout the years ahead.

That is not too much to expect. Americans are a people of faith.

They have always had a sense of mission and willingness to sacrifice to achieve great

goals. Surely, our Nation did not reach a new peak of power and responsibility merely to partake of the greatest, and perhaps the last, of all human disasters.

If only we are faithful to our past, we shall not have to fear our future. The cause of peace, justice, and liberty need not fail, and must not fail.

Ambassador Campa's Address on Role of the Lawyers in Inter-American Relations

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. O'HARA of Illinois. Mr. Speaker, in anticipation of the approaching 17th anniversary, on May 16, of the organization of the Inter-American Bar Association I am extending my remarks to include the address of one of the great diplomats of the world, Dr. Miguel Angel Campa, Ambassador of Cuba to the United States, at the luncheon on April 16, 1957, at the University Club in Washington given in recognition of Ambassador Campa's work in the diplomatic service of Cuba for over 50 years. The luncheon was the joint tribute of the Inter-American Bar Association and the bar association of the District of Columbia under the chairmanship of Frank J. Kelly. Many of the lawyers present at the luncheon to honor the distinguished Ambassador of Cuba had visited Cuba in 1941 as participants in the first conference of the Inter-American Bar Association held in Habana.

Dr. Campa's address was contained in exactly 193 words. I think many of my colleagues will wish to preserve this address as a classic expression, in a minimum of words, of the spirit properly underlying internatonal relations and the role of the lawyers of one country working in cooperation with lawyers of other countries.

Speaking of the large contribution to Cuba-American understanding made by the Inter-American Bar Association, he said:

I cannot think of any one group better fitted for the cultivation of the pacific and spiritual ideals sustained by nations and men of good faith, than that group which is dedicated to assure, with the book, the word, or the advice, the juridical norms of justice and friendship between nations.

Dr. Campa's classic 193-word address, in full, follows:

I only wish to say a few words to express my sincere appreciation to the president and the members of the Inter-American Bar Association for the cordial invitation extended to me today.

Relations between Cuban and American lawyers have very deep roots, created by the traditional friendship of our respective peoples, and stimulated by a deep and reciprocal scientific and professional understanding.

The frequent visits of American and Cuban jurists between our countries, which gain more importance every day, not only serve as a means of knowing and of developing a higher regard for each other, but go beyond the social and academic levels to flourish in the field of international relations. I cannot think of any one group better fitted for the cultivation of the pacific and spiritual ideals sustained by nations and men of good faith, than that group which is dedicated to assure, with the book, the word, or the advice, the juridical norms of justice and friendship between nations.

As a diplomatic and a lawyer, I sincerely wish, for universal benefit, that we remain always together within this attitude of friendly collaboration, and in this position of supreme human responsibility.

Dr. Adolfo Bioy, of Buenos Aires, Argentina, is the president of the Inter-American Bar Association and William Roy Vallance of our own State Department its secretary general. Mr. Vallance is one of the founders of the association, has attended and participated in all its conferences, convened in the capitals of the various countries in the Americas. No one in the history of our State Department has done more for the cause of hemispheric understanding and solidarity, no one in the United States enjoys the confidence and the warm personal friendship of so many lawyers in so many countries of the American hemisphere. His expected retirement at the end of the present year will be a great loss to the Nation.

Mr. Speaker, I would not wish to close without joining myself with the members of the bar association in congratulating Ambassador Campa on the completion of a half century and more of distinguished service to his country. The Ambassador was born in Habana in December of 1882. In 1906, when 23, he entered the foreign service of the Republic of Cuba as second secretary. The succeeding steps in his remarkable career follow:

Chargé d'affaires, Legation of Cuba in Paris, 1907.

Designated to Legation of Cuba in Rome, Italy, 1909.

First secretary, Legation of Cuba in The Hague, 1910. Chargé d'affaires in The Hague, 1911.

Transferred to Berlin 1911. Chargé d'affaires, Berlin, 1912.

Transferred to London, 1913, as chargé d'affaires.

Appointed secretary of the Cuban delegation to the Peace Conference at Versailles, 1919.

Permanent delegate of Cuba to the League of Nations, First, Second, Third, and Fourth Assemblies.

Envoy Extraordinary and Minister Plenipotentiary to Japan, 1920.

Acting Under Secretary of State, 1925.

Envoy Extraordinary and Minister Plenipotentiary to Brazil, 1930.

President of the National Consultive Commission on Transportation, 1930.

Ambassador Extraordinary and Plenipotentiary, Mexico, 1933.

Under Secretary of State, 1937.

Secretary of State, 1939.

Representative of Cuba to the first meeting of foreign ministers, Panama, 1939.

Appointed Ambassador Extraordinary and Plenipotentiary, 1940.

President, Cuban delegation to the second inter-American meeting of the Caribbean, 1940.

President of the second meeting of foreign ministers, 1940.

President, Inter-American Union of the Caribbean, 1941.

President, International Organization of Archivists, Librarians, and Conservatories of Music.

Plenipotentiary of Cuba in the signature of the Convention of Prisoners of War, and member of the Administrative Council of the Permanent Tribunal on Arbitration at The Hague.

Secretary of the Cuban delegation to first assembly of the League of Nations and various assemblies of that Organization.

President, Pan American Columbian Society, and corresponding member of the Academy of Science of Cadiz.

Minister of State, 1952.

President of the Cuban delegation to the eighth ordinary session of the Assembly of the United Nations, 1952.

President of the Cuban delegation to the Pan American Conference at Caracas, 1954, and President of the Economic Commission of that conference.

Ambassador Extraordinary and Plenipotentiary, Washington, 1955.

Publications: Land and Air Transport Code, 1931; One Year of Cuban Foreign Policy, 1939–40, 1941; Glorious Ashes, 1941; An Actual Interpretation of the Discovery of America, 1942; Regional Politics of the Caribbean, 1944.

Decorations: Grand Cross of the Orders of Carlos Manuel de Cespedes; National Red Cross and the Lanuza Honor and Merit of Cuba; the Sun and Merit of Peru; the Golden Spike and Brilliant Star of China; Vasco Nuñez de Balboa of Panama; Cristobal Colon and Juan Pablo Duarte of the Dominican Republic; Merit, Pethion and Bolivar of Haiti; Cross of the Sun, Brazil; Aztec Eagle, Mexico; Order of the Liberator, Venezuela; Isabel the Catholic of Spain; Cross of Italy and St. Maurice and St. Lazarus of Italy; Merit of Chile; Boyaca of Colombia; Merit of Ecuador; Delgado of El Salvador; and Condor of Bolivia.

Knight Commander of the Orders of Carlos III of Spain, Cross and Leopold II of Belgium; Legion of Honor of France.

Address by Charles E. Wilson Before the Washington Pilgrimage

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. WILEY. Mr. President, most of us have noticed the thousands upon thousands of children who are coming to Washington at this time to be inspired by the monuments and public buildings and the life of their National Capital.

Last Saturday it was my privilege to preside at a meeting of the Washington Pilgrimage, composed of many men and women throughout the country who likewise come to Washington for the inspiration, both political and spiritual, that comes to them in the city. I should like

to read a brief paragraph from what the President of the United States said to leaders at the White House last fall:

If our American ideology is eventually to win out in the great struggle being waged between opposing ways of life, it must have the active support of thousands of independent private groups and institutions and millions of individual Americans acting through person-to-person communication in foreign lands.

At the meeting last Saturday it was my privilege and honor to introduce Mr. Charles E. Wilson, former President of General Electric, who is devoting his life and energy and money to making certain that the American ideology becomes known throughout the world.

I ask unanimous consent that the speech delivered by Mr. Wilson on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF CHARLES E. WILSON, PRESIDENT, THE PEOPLE-TO-PEOPLE FOUNDATION, BEFORE THE WASHINGTON PILGRIMAGE, SENATE CAUCUS ROOM, APRIL 27, 1957

Senator WILEY, distinguished guests, ladies, and gentlemen, I am happy to be in the Nation's Capital this afternoon, sharing in the Washington Pilgrimage.

This is a pilgrimage Americans of all ages should make, not once, but many times. For no one can walk down these venerable avenues of the past, without walking in the footsteps of our fathers as they opened the way in the New World for the dignity and the brotherhood of man under the fatherhood of God.

No one can see with his own eyes, as you have seen, the original written words of the Declaration of Independence without a deep sense of reverence and gratitude. Consider again the everlasting promise, the eternal truth, of these simple words which our forefathers brought forth at the risk of their lives, their fortunes and their sacred honor:

"We hold these truths to be self-evident—
That all men are created equal
That they are endowed by their Creator with certain inalienable rights
That among them are life, liberty, and the pursuit of happiness."

Is there a man, woman, or even a child above the age of 10, anywhere in this country, who cannot understand the tremendous significance of these words?

This is the essence of the message of America.

This is the message that we, the people, must carry to other people in every corner of the world.

Yet there are some rulers of vast populations today who fear this message. There are those who do not want these words to be seen, to be heard, or felt in the lives of everyday people.

There are still those who impose their wills by bayonets; who have brainwashed and otherwise persuaded millions of people into believing that people are the slaves of the state and not its masters. They do not want government by the consent of the governed. They seek to rule the entire world as they now rule these people. Indeed, by their acts they make a mockery of the word "government."

These are not pleasant things to ascribe to so-called governments; but they are facts we cannot ignore. The people they pretend to speak for are not our enemies. Only their masters stand between us and them. The ashes of liberty lie smoldering behind the Iron Curtain, ready to burst into the flames of freedom. But we must carry our message not only to people who are slaves to dictatorship but also to those who are slaves to misunderstanding and poverty.

Equality, liberty, freedom are empty words to the poverty-stricken people of India, Indonesia, and parts of the Philippines. Let me tell you how one man—an American chaplain in the last war—made these inspiring words come alive in the villages of southeast Asia. Chaplain John Peters was with his infantry regiment in a swampy jungle of Mindanao in the Philippines when the first mail they'd received for 2 months arrived. A youngster from Kansas came to the chaplain to show him the contents of a tattered brown envelope. "Look, Chaplain," he said, "I'm not supposed to be her." It was a letter from his draft board saying that he had been deferred as he was deemed essential to the war effort as a farmer. They joked about it as they walked on through the jungle. Suddenly snipers opened fire. The boy, walking 3 feet behind him, got it. He died in the chaplain's arms. That day he promised God that if he survived he would do something to make up for the loss of that boy's life.

When the chaplain returned home, he sought fruitlessly for 2 years to make good on his pledge to do something. His chance came in 1953, following one of his sermons in a small Oklahoma town. Two hundred of his fellow citizens were so moved that they raised $13,000 to start a program of self-help, now called World Neighbors, that is doing miraculous work in both India and the Philippines. He is helping the people of the small villages to help themselves on a people-to-people basis, in much the same way that the county agents helped our farmers to improve their living conditions and increase the productivity of their land.

This is but one of many examples of how individual Americans are sharing their advantages with people of other lands and giving meaning to the great truths enunciated by our Founding Fathers. I'm sure most of you have heard about the American agricultural agent who showed the Indian farmers how to put a small steel plate on their wooden plows and doubled their production by going 3 inches deeper into the soil. This is the kind of language every human being can understand.

It was my privilege shortly after the war when I had returned to General Electric to render some technical assistance to the Indian Government. (Case of the powerplants and generators.)

What, after all, is the magic formula that has made this country the most productive, the most prosperous, the one offering its citizens the greatest degree of individual freedom? Certainly it was not just one thing, but rather a combination of things. However, it seems clear that the principles hammered out on the anvil of free discussion by our early American forebears played a large part in creating the prosperity, security, and justice we now enjoy.

Can we share this with others and substitute an era of good feeling and friendship among men for the miserable situation we call a cold war?

Aware of the inherent limitations of governments alone to cope with this situation, President Eisenhower called a White House conference of top leaders last fall and put the case to them with his customary frankness:

"The problem is for people to get together and to leap governments—if necessary, to evade governments—to work out not one method but thousands of methods by which people can gradually learn a little bit more of each other.

"Every bomb we can manufacture, every plane, every ship, every gun, in the long run has no purpose other than negative; to give us time to prevent the other fellow from starting a war, since we know we won't.

"If our American ideology is eventually to win out in the great struggle being waged between opposing ways of life, it must have the active support of thousands of independent private groups and institutions and millions of individual Americans acting through person-to-person communication in foreign lands."

The President then appointed 41 committee chairmen, representing all phases of the Nation's economic, social, and cultural life, to expand and supplement the people-to-people activities of Government and private agencies already successfully underway.

There are committees on youth organizations, business organizations, advertising, education, music, hobbies, fine arts, cartoonists, service clubs, medical and health groups, religious groups, women's groups—in fact, every phase of organized American life. The question is, can the people of this and other countries, acting as individuals and through their organizations, do the job that their Governments have failed so far to do? Can the people, who have everything to lose and nothing to gain by another cataclysmic war, make their will effective even in the totalitarian states in time to prevent another world conflict?

Perhaps the greatest hope lies in the confidence President Eisenhower has inspired in the people themselves that they can do something to determine their density with respect to peace. Encouraged by the effectiveness of the exchange-of-persons program, which has received such great impetus under the Fulbright and Smith-Mundt Acts and now involves upwards of 50,000 people learning more about each other through person-to-person contacts, he launched his people-to-people program last fall, and not 1 of the 41 committee chairmen refused this challenging assignment. Now nearly a thousand leaders are involved in the program as members of these voluntary committees. And we seek your active help today.

Around you are pamphlets which give a listing of the 41 committees and their chairmen. I know each of you in the room will find at least one committee which will inspire your interest and activity at home.

Our only directives are as varied as the initiative and tastes of 170 million Americans. Here there is room for all. In our diversity is our strength and appeal. Here is a mission for a farmer as well as a missionary; for the Mayflower descendant and first and second generation Americans—35 million of them. Here we need the poet and the advertising mind; the young student and the old philosopher; ham radio operators and Hollywood producers; music—long hair and crew cut; GI's in our armies overseas as well as the 2 million American tourists traveling abroad this summer. We need pen pals, stamp collectors, people with hobbies, people with business and professional contacts in all parts of the world to swing into action.

In just a moment we will give you an illustrated report of the activities of many of the 41 committees embraced in the people-to-people program.

As these ideas and programs spread to the other nations, counterpart committees and organizations will spring up in other countries to strengthen existing ties and multiply new friendly contacts in every direction.

We need your ideas, your personal participation. We invite every American to build his own do-it-yourself kit for peace. You of the Washington pilgrimage have a leading role to play in people-to-people communication. You are helping to keep alive the spiritual heritage that has made America great; more importantly, that has made it loved. Here all our materialistic resources, all our institutions—industrial, military, government—are subordinate to the things of the spirit—to secure for each individual

born and as yet unborn life, liberty, and the pursuit of happiness. Only the dictator has reason to fear the people of the United States of America.

And let us remember that we are not alone. Our country was founded by men who had a profound faith in divine providence. Down through the years our people have sought and received His guidance. If we appear in the eyes of others to have accomplished miracles, perhaps we have—but we did not accomplish them alone.

I, for one, am deeply convinced that in the long run we shall triumph over godless communism and that justice and freedom will, in time, prevail throughout the world. As we seek now to prevent war through the President's people-to-people program we shall succeed only if we, today, match the faith of our fathers in almighty God. I do not hesitate to ask your prayers for this people-to-people program, that we may be ever guided by His might and that we may continue in His way.

Freedom Plus

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech of Mr. Theodore Everingham, of Jackson, Mich., who won the American Legion Michigan oratorical contest. Sometimes a citizen of the United States whose profession is not that of words or statesmanship or politics says something very important to the rest of us, with a sincerity and inspiration which is worthy of notice. Mr. Theodore Everingham, of Jackson, Mich., is such a citizen. He is a senior at Jackson High School. In a speech entitled "Freedom Plus," which won the American Legion's oratorical contest in Michigan, he reminds his fellow countrymen that they must use their freedom if they wish to preserve it. With pride in my constituent and in a fellow American, I offer you the ringing forceful words of his speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM PLUS

You might say the story of American freedom began with the shrill sound of the fife and the distant rolling rumble of the battle drums echoing across the hills and fields of the New England area. You might say it all began with the tramp-tramp-tramping of the marching British boots on the rocky Atlantic coast. Or you might say this story began with that "shot heard 'round the world," fired from behind a crude rock wall by a long forgotten Minuteman. The red-coated British troops, proclaiming by their presence that the Crown would not easily surrender her wilderness Colony across the Atlantic, in America. It happened that the brave efforts of the colonists overpowered the British hand of control. To the kingdom of England, the revolution meant the loss of a backward, remote Colony. To the colonists, it meant a completely new and wonderful way of life—American freedom.

It soon became evident that freedom alone was not enough. Though the American Colonies were free and independent, they were completely dismembered. American financial problems and interior trade were all but impossible, because there was no central government powerful enough to regulate or control the individual Colonies. Local jealousies and weaknesses threatened disruption of the Colonies. The newly won freedom needed guidance and support, in order to survive.

The situation wasn't satisfactory; there was need for an immediate and extensive change in the badly failing Articles of Confederation. To make this change, 55 of the world's most talented political minds of the day convened in Philadelphia in 1787. These brilliant statesmen, led by such coveted names as Washington, Madison, Hamilton, and Franklin worked arduously for 3½ months in the sticky, hot Philadelphia summer. Three-and-a-half months of debate and controversy that grew into bitter personal hatreds, over States rights versus a central power, and the powers of large States against the power of the smaller States. At last the results of their efforts, giving birth to a new and lasting freedom for the Colonies—the Constitution of the United States of America.

The "more perfect Union" that was founded in that colonial summer has come a long way in the last 170 years—from a backwoods frontier group of remote settlements to a nation of concrete and steel, radios, plastic toys, electric blankets, and even too much food. The United States of America—a world leader in agriculture, industry, and happy citizens. A beacon nation, welcoming oppressed, unhappy people to her shores, regardless of their social background. A world melting pot of dialects, skin colors, religions, and nationalities. A nation whose greatest assets still remain her freedom and liberty. The Constitution framed this new way of life, a way of life to be admired, your free way of life.

Generally speaking, Americans are free, happy, at peace, well fed and clothed, and content, I fear too content. What are you going to do to preserve this, your American way of life?

Let's imagine for a moment that American democracy is in the form of a huge, many-headed beast from the Arabian Nights. Let each of its heads represent one citizen of the United States. Each head, or person, has the vital job of protecting the body of the animal from the enemy of American freedom, the scourge of communism. If one head becomes lax and complacent in its job, the dread plague of communistic control creeps into the gap and, like a prairie fire, spreads to all parts of the body until finally the flame of democracy dwindles, flickers, and dies entirely.

The question remains, What are you going to do to preserve what you have?

I've shown you that freedom was not enough for the dismembered colonies after the American Revolution. And today it's still true that to be free, to live in a free nation, to know the taste of freedom, is not enough.

It's not enough to be free when we shun the Negro on our busses or in public places because he has a different color skin and a different ancestry.

Or when we frown on people who speak with a strange dialect or accent.

Or when the key to your door depends on skin color, ancestry, or religion, turning away those who differ from you or your habits.

How free will you remain when your voting privilege depends on your neighbor? Is it right that on election day, the 70-year-old man who can boast of never missing an election should be the exception rather than the rule? Or when you take the all-too-popular attitude, "I don't count, anyway."

Edmund Burke, the noted Irish statesman, once said, "What is liberty without wisdom, and without virtue? It is the greatest of all possible evils, for it is folly, vice, and madness knowing no tuition or restraint." I believe that this is a small price to pay for this, your most precious American heritage—your wisdom and your virtue.

How much is your freedom worth? No price tag has ever been hung on liberty. All the rubles in Russia can't buy your freedom from you if you don't choose to sell. If you lose your liberty, American wealth can't buy it for you. American industry can't produce it, and American power can't match it. But the American heart and will of mind can keep it, if you so please.

I don't believe the American people want to lose their way of life. Rather, I think, they don't really know how to keep the hope of freedom for the American people of the future.

The answer to the problem of preserving American freedom and liberty may be found in your everyday life. Examine yourself. Do you spend more time on the sports page and the comic strips than reading the headline news stories whose outcome could very well change your entire life? If so, you are not an informed citizen. Compare the names Abdul Nasser, David Ben-Gurion, and Selwyn Lloyd with those of Dick Tracey, Popeye, and Donald Duck. Which ones have been the subjects of your reading?

To preserve your freedom you simply must use it. Freedom is not like a light bulb or an automobile tire that wears out as it is used. Liberty strengthens and preserves itself as it is used.

Here are the things that you, as a citizen, must do to assure the strength of America for the future:

Inform yourself. Read about local, national, and world problems. Then form opinions about what you have learned and defend them.

Vote. Put your opinions to work for yourself and your Nation. Voting is the way Americans are represented. Realize that when you stay home from the polls, you aren't making just one less vote to be counted; you are actually casting a ballot, by your silence, for the person or policy that you don't want in office.

Truly, love thy neighbor. Give him a chance, regardless of who his father was, or where he came from, or how funny he sounds when he talks. Prove to him that Americans believe that all men are created equal—that his color, creed, religion, or dialect needn't hinder him in this country.

Realize how much you do mean to the future of America. True, you are only one, but you must do your part to be a true American and to raise your children to follow in your footsteps.

And be sure to worship as you see fit, and pray that others will follow your example. Thus you will be strengthening America's spiritual bond and helping assure a sound future for America.

If you will believe these things that I have told you and practice them as well, you may call yourself a true American citizen. Remember that the flag of freedom cannot fly alone. It needs support—your support. Grab hold of the staff and raise your banner high, showing the world that America will not easily surrender her hard fought for way of life. Use your wisdom and your virtue to defend yourself, now and always. For if you don't, America may well slip back into the mire of political control and when you awaken, you will find that the freedoms you now enjoy will no longer be there to be neglected.

American, freedom alone is no enough. You must use what you have.

The Diplomatic Service

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. CLARK. Mr. President, in my judgment, one of the really important questions which confronts both the President and the Congress is the maintenance of an adequate United States Foreign Service and the appointment of qualified persons to office in that Service.

This is important, first, because in the past few years we have come pretty close to destroying the morale of our Foreign Service by inadequate pay, by the appointment of individuals who are not qualified, and by a general public campaign to bring the Foreign Service into disrepute.

Shortly the Foreign Relations Committee will be holding hearings on the nomination of the United States Ambassador to Ireland. I hope the committee will look very carefully into his qualifications.

I ask unanimous consent to have printed in the Appendix of the RECORD, two articles from the New York Times, the first entitled "Foreign Affairs: The Misuse of a Diplomatic Service," written by C. L. Sulzberger and published in the New York Times of April 27, 1957, and the second an article entitled "Slash in Funds Threatens New United States Diplomacy Goals," written by James Reston and published in the New York Times of April 29, 1957.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 27, 1957]

FOREIGN AFFAIRS—THE MISUSE OF A DIPLOMATIC SERVICE

(By C. L. Sulzberger)

PARIS, April 26.—The United States depends heavily upon the intelligence, vision, and reliability of its envoys abroad. These qualities, in a real sense, represent our first line of defense. American foreign attitudes are influenced to a considerable degree by the judgment of these diplomats as collated and evaluated by the State Department and National Security Council.

It is therefore of utmost importance that we exercise care in the appointment of suitable ambassadors. For policy is fundamentally based upon the art of weighing probabilities. This is especially true of United States policy, which continues to be largely empirical.

Reliance upon the competence of individual diplomatists remains vitally important. This is true despite the increasing vogue for international conferences and flying visits by foreign ministers. Even Secretary Dulles would admit as much.

Why, therefore, are we so careless about selecting those who represent us? Why are we, the wealthiest country, so niggardly about paying adequate allowances to envoys—with the result that often we send inexperienced rich amateurs to most important capitals?

This is no new development in our history. It has long been custom to reward faithful party contributors with fat bank balances by giving them embassies. Frequently they prove wise and competent. Douglas Dillon and David Bruce were admirable in Paris. An Italian diplomat observed of Clare Luce: "She is the best Ambassador you ever sent to Rome. She was the first member of your politburo to come here. She could get things done through the White House."

ALSO SOME LUNKHEADS

But we have also managed to appoint some lunkheads. A Democratic stalwart, privy to nasty political secrets, was named to two small but extremely sensitive posts by Roosevelt. He botched up each of them. Certain noncareer selections have become figures of fun in the countries to which they were assigned.

And even with competent amateurs Washington is not always wise in distributing them most suitably. Thus, for example, Bruce, one of our best French-speaking statesmen, is now in Bonn. He knows no German. The new envoy in Paris, Houghton, understands German. He knows no French. The chief mission in Rome doesn't speak Italian. Linguistic talent is not everything. But surely it is possible to find rich men who comprehend the better-known foreign tongues.

And, admitting that they are often effective, should it be necessary for us to appoint only millionaires to certain of our most important positions abroad? Congress has just reduced the State Department's entertainment fund to $600,000. Yet diplomats are forced to entertain. Often, indeed, their guests are Congressmen.

But while the British Ambassador in Washington has a special allowance of more than $80,000 a year, our envoy in London gets only $7,500 for similar purposes. As a result he loses money. Ellsworth Bunker, now representing us in India, was once offered the Paris job. He declined it after Bruce told him the post cost him $50,000 annually.

The French Government is embarrassed about the small hospitality budget furnished its diplomats. Yet this amounts to over $850,000—40 percent higher than what Congress allows our embassies and legations.

THE M'LEOD NOMINATION

In the professional Foreign Service we are fortunate in having some outstanding individuals. Raymond Hare in Cairo knows both the Arab world and language. Charles Bohlen was the most brilliant envoy seen for years in Moscow. But we do not make the best use of available ability. Bohlen has been shunted to Manila. He could serve far better in a position concerned with Soviet affairs. The Dulles regime has railroaded out some of our finest talent—men like George Kennan, John Davies, and Charles Thayer.

This in itself is lunatic. But it is positively shocking that the police agent chosen for such dirty work, Scott McLeod, should be rewarded by being named Ambassador to Ireland. The choice is an insult to the Irish and to American commonsense.

Dulles contends that McLeod has considerable knowledge of world affairs. A former FBI agent, the nominee once assured this writer that security was a basic criterion of diplomacy. Checking qualifications of Foreign Service candidates, he used to ask himself: "How would I like him behind a tree with me in a gunfight?" Such cerebral approaches qualify McLeod better as representative to the underground Irish Republican Army than to the respectable Irish Republican Government.

Isn't it time sanity and order were applied to our Foreign Service? Certainly enough money should be made available to the State Department to enable any man to accept any assignment. Certainly we should try to select envoys who know the simpler and more widely spoken languages. Certainly, also, we should employ specialists like Bohlen where they are best suited. And certainly we should cease exporting hacks or hatchetmen as a reward for electoral bets or dirty work.

[From the New York Times of April 29, 1957]

SLASH IN FUNDS THREATENS NEW UNITED STATES DIPLOMACY GOALS

(By James Reston)

WASHINGTON, April 28.—The House of Representatives' cut in the State Department's budget has caused concern here primarily because of its effect on the plan to enlarge and strengthen the language-training program of the Foreign Service.

It has come at a time when some of the most distinguished senior members of the Foreign Service—Ambassador Charles E. Bohlen in Moscow and Deputy Under Secretaries of State Loy Henderson and Robert Murphy—are nearing retirement. It also comes when the State Department is starting a program to modernize the professional diplomatic service.

Though the main burden of implementing United States foreign policy falls on these Foreign Service officers, here and overseas, and though the State Department budget is less than 1 percent of the total budget for next year, it was cut by the House of Representatives from $227,700,000 to $180,400,000.

TIMING SIGNIFICANT

John Foster Dulles, Secretary of State, will make a major effort with President Eisenhower's strong backing this week to get the Senate to restore the cut. Many of the administration's plans for rebuilding and strengthening the Foreign Service will depend on the outcome of his appearance Tuesday afternoon before the Senate Appropriations Subcommittee of Senator LYNDON B. JOHNSON, Democrat, of Texas.

The timing of the House cuts has special significance for the Foreign Service. These are the permanent officials of the State Department who spend most of their lives overseas in carrying out the foreign policy of the United States.

Important new responsibilities are now falling on these men and women. They are being asked to assume vastly increased duties in the area of the Middle East, since the United States has taken over many of the responsibilities there previously met by Britain.

Coincidentally, the uprisings in Eastern Europe and the increasing importance of Africa are adding to the opportunities of United States diplomacy.

The cuts have come, too, just at the time when the State Department was beginning to get over the economy wave of 1953 and 1954, and when applications for Foreign Service have been recovering from the crisis in recruitment that followed congressional attacks on the State Department and Foreign Service 3 years ago.

These developments have enabled the administration to build an active recruiting program in more than 500 United States universities this year, and it has paid off. For example, about 7,000 university graduates took the most recent Foreign Service entrance examination as compared with 5,000 last summer and fewer than 2,500 6 months before that. If sustained, the House cuts would reduce the year's crops of new Foreign Service officers from 400 to 200.

TRAINING IMPERILED

The proposed House cuts also threatened the efforts now under way seriously for the first time in many years to correct what is generally regarded as one of the most serious weaknesses of the Foreign Service—its comparative lack of foreign language facility.

Fewer than 50 percent of the men and women now in the Foreign Service have an adequate command of French, German, or

Spanish. Also, in the light of the Nation's new responsibilities in the Arab world, the shortage of trained Arabic-speaking officers is widely regarded as a dangerous shortcoming.

New language training centers of the Government's Foreign Service Institute have been established recently in Nice, France; Frankfurt, Germany, and Mexico City. New procedures are planned for next year to force more officers to specialize in foreign language training.

For example, one of the great deterrents to adequate language training in the past has been the unwillingness of Congress to provide funds for finance replacements for Foreign Service officers while they were at language training school in Washington, Taipei, Tokyo or one of the other language centers.

Lack of replacements has made Ambassadors unwilling to allow members of their staff to leave their posts to acquire or improve facility in foreign languages. Therefore, the House was asked to increase the Foreign Institute budget this year from $3,700,000 to $5,100,000. This would have enabled the State Department to provide replacements for the officers in language school, but it ran into the severest kind of opposition in the House.

This is one of the problems Mr. Dulles will try to have removed when he appeals Tuesday to the committee of Mr. JOHNSON, the Democrats' Senate leader.

Paradoxically, Congress has been liberal in providing funds for a 10-year overseas-building program. This will provide new embassy buildings, new consulates, and improvements on old buildings. However, on the more important matter of providing language training, representation of allowances, and other things that improve the quality and effectiveness of the officers overseas Congress has not met the State Department's recommendations of what is necessary to keep pace with the Nation's role in the world.

EIGHT HUNDRED THOUSAND DOLLAR FUND VOTED

For example, the total sum voted to enable all Foreign Service officers to meet their official entertainment or representation obligations this year was $800,000. This had to cover more than 3,000 Foreign Service officers and all Ambassadors and Ministers in all overseas missions.

State Department officials feel that the main reasons for the failure to get a larger percentage of the best college graduates into the State Department and Foreign Service are as follows:

The pay scale is considerably lower and the requirements are more exacting than in commerce, business, and in the new and growing foundations that are looking for the same kind of talents.

The uncertainty of family life in a job that requires a great deal of moving from one part of the world to another.

Slowness and element of accident in advancement from the entering class in the Foreign Service (class 8) to class 1 or to the rank of career minister or career ambassador.

Slowness and difficulty in getting appointed even after all examinations are passed. The security check alone often takes 3 to 4 months.

For example, many of the men who have gone through the arduous task of passing the written and oral examinations and the security check will not be sure of appointment, though the State Department is ready to appoint them, until Congress decides whether it will sustain or restore the cuts made in the Department's budget.

The State Department recently has taken action to minimize some of the objections to the Foreign Service listed above. Examining officers, for example, have found that normal language training in United States universities does not usually qualify men for the kind of foreign language assignments they get in the Foreign Service. Nevertheless, the language requirements in the examinations in the past have frightened away many good Foreign Service prospects and eliminated others.

These figures show, for example, the ratio btween the applicants who passed and failed for foreign language examinations last year:

Language	Took language examination	Passed language examination	Failed language examination
French	1,226	392	834
German	572	189	383
Russian	213	69	144
Spanish	1,043	334	709
Total	3,054	984	2,070

LANGUAGE TESTS DROPPED

Consequently, the stiff foreign language requirements of the past have now been dropped in the belief that the State Department will get better men and women in the long run if it concentrates on all-around ability and furnishes concentrated language courses of its own in the Foreign Service Institute.

Also, to meet the criticism that Foreign Service officers are not always promoted in accordance with merit, a new career development and counseling branch has been established in the State Department's personnel office. This will make the promotion procedure more scientific and more in keeping with the officer's abilities and ambitions.

Congress did increase the salary and retirement scales last year. While these still fall below the inducements offered to especially talented men and women in private enterprises, the State Department is not making any issue of the present pay scale. It is as follows:

Career ambassador, $20,000.
Career minister, $17,500.
Class 1, $14,600 to $17,000.
Class 2, $12,600 to $14,400.
Class 3, $10,60 to $12,400.
Class 4, $9,000 to $10,500.
Class 5, $7,400 to $8,900.
Class 6, $6,100 to $7,300.
Class 7, $5,100 to $6,000.
Class 8, $4,300 to $5,350.

Thus the issue this week in the Senate Appropriations Subcommittee hearings is not primarily salaries, but the need for more and better trained men and women, particularly in foreign languages, to meet the growing responsibilities of the Nation.

Home Demonstration Week

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, April 29, 1957

Mr. STENNIS. Mr. President, the week from April 28 through May 4 is National Home Demonstration Week. The home demonstration work of the Nation represents one of the finest possible examples of splendid and effective cooperation by the National, State, and local governments. It also represents the very best in joint efforts of the trained workers and the people at the community level, including the community leaders who give so generously of their time without direct compensation. This great program includes the 4-H Club work.

The Nation is greatly benefited by these fine programs.

The Memphis Commercial Appeal, ever a champion of these programs, has a splendid editorial entitled "Home Demonstration Week." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Memphis Commercial Appeal of April 25, 1957]

HOME DEMONSTRATION WEEK

"Today's home builds tomorrow's world."

This will be the theme of National Home Demonstration Week which will be observed by more than 6½ million homemakers in the United States from April 28 through May 4.

Organized with the cooperation of the Agricultural Extension Service of the United States Department of Agriculture, the home demonstration program is designed to provide information which families—particularly those in rural areas—can adopt for better living.

National Home Demonstration Week was started to acquaint the general public with the various problems relating to home and family. In the United States and territorial possessions, there are 66,000 Home Demonstration Clubs. These clubs select their own volunteer leaders, of whom there are now 70,000.

Home demonstration agents work with club members by demonstrating new methods and techniques in homemaking. They also advise homemakers on individual plans and problems. They aid in establishing new clubs and in obtaining new members.

It is a fine combination—college-trained specialists in home economics working personally and in groups with homemakers who constantly face and consider changing conditions in an organized effort to solve problems of the family, the community, and the world.

We hail National Home Demonstration Club Week, salute the members and the organization it honors and commend the splendid contribution they are making to today's home, which, in truth, builds tomorrow's world.

The National Debt

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, April 29, 1957

Mr. FLANDERS. Mr. President, the national debt is a matter of serious interest to all of us. It has risen to a point where the per capita debt is $1,613.38, compared to a per capita yearly income of $1,935; and the family debt is $5,100, compared to a family yearly income of $5,520. We are all seriously concerned about the immense size of this debt.

One of the Members of the Senate, the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL], has proposed legislation which looks toward reduction of the debt. The bill introduced by the Senator from Massachu-

setts is S. 1738, which I have been glad to support.

I ask unanimous consent to have printed in the Appendix of the RECORD two articles relating to the bill introduced by the Senator from Massachusetts. One is an article by Donald I. Rogers, the Herald Tribune business and financial editor, published in the New York Herald Tribune of Friday, April 19, 1957; and the other is an article written by Tom W. Gerber, the Herald Washington correspondent, published in the Boston Sunday Herald of April 14, 1957.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of April 19, 1957]

SANE WAY TO CUT UNITED STATES DEBT

(By Donald I. Rogers)

One of the wisest proposals ever offered for reducing the Federal debt is scheduled for a hearing soon by the Senate Finance Committee when it gives consideration to a bill introduced by Senator LEVERETT SALTONSTALL, Republican, Massachusetts, whose recommendation may prove to be the most spectacular "sleeper" of this session of Congress. This reporter predicts that this bill, whose advent occasioned so little attention, is destined for wide and wholesome discussion.

The bill, S. 1738, is called the Public Debt Reduction Act of 1957, and it presents a sane, workable, and practical program for gradually cutting down the Federal debt, the largest contributing force behind inflation.

It would further amend the Second Liberty Bond Act, amendments to which now establish the ceiling on the national debt at $275 billion. It would provide that the ceiling on the national debt be reduced on July 1, 1958, by an amount equal to 2 percent of the net revenue of the Nation for the 1957 fiscal year.

After the first direct reduction the bill provides that, effective July 1, 1959, the ceiling of the national debt be reduced by an amount equal to 3 percent of the net revenue for the 1958 fiscal year that, effective July 1, 1960, by an amount equal to 4 percent of the net revenue for the 1959 fiscal year; effective July 1, 1961, and July 1 each year thereafter, by an amount equal to 5 percent of the net revenue for the fiscal year ending June 30 of the preceding year.

SUSPENSION PROVISIONS

It contains three suspension provisions. One would take effect when the country is in a state of war or its armed forces are engaged in conflict. The second would be invoked upon recommendation of the President because of threatening economic conditions (such as the necessity to increase government spending to create employment). The third suspension would apply if Congress passes any tax-relief measures during the operation of the act resulting in reduction of revenue to the United States. The amount of money otherwise applied to the reduction of the public debt may be reduced for 2 fiscal years by the amount of the loss of revenue caused by the tax measures enacted.

It may be difficult to remember that back in 1941 the Federal debt was $48,900,000,000. Five years later it had risen to $269 billion. With great effort it has been contained at approximately $275 billion for several years.

INTO ALL POCKETS

The average taxpayer need not feel remote from the overpowering Federal debt—for it reaches into every individual's pocketbook in the Nation. For one thing, a substantial portion of all the tax money sent by individuals to Washington—this year approximately 10 percent—annually must be diverted to pay the interest on the debt. This year the Government must obtain more than $75 billion in new loans at current high-interest rates in order to meet the more than $75 billion of public debts that will mature in the next 12 months.

And, when you consider that the high Federal debt is responsible, in good measure, for the tight-money supply and the resulting high-interest rates, it can be perceived how the Federal financial structure is trapped in a spiral of its own creation.

The Saltonstall bill at least opens an avenue of escape from what ultimately must be fiscal disaster. For, if this Nation has not reached the peril point of indebtedness, it is fast approaching it—and will certainly pass it in the event of any emergency requiring greatly increased Federal expenditures.

[From the Boston Sunday Herald of April 14, 1957]

SALTONSTALL PLAN MAY SAVE UNITED STATES FROM SOVIET PREDICTION

(By Tom W. Gerber)

WASHINGTON, April 13.—Some of the Nation's leading economists fear the United States is plunging headlong toward fiscal chaos on a timetable set by the Soviets 35 years ago.

This fear is reflected at least in part by the unprecedented economy drive in Congress aimed at butchering the $71.8 billion budget.

In this uneasy atmosphere, a bill introduced by Senator SALTONSTALL, Republican, of Massachusetts, is gaining quiet but increased attention as a possible roadblock on the dash toward economic disorder.

The Saltonstall measure would provide for systematic reduction of the public debt.

Behind this simple and unexciting title are economic realities like the value of the money that jingles in your pocket or warms in your billfold.

The Saltonstall bill would provide a means for the Government to pay banks and individual citizens a small slice of the $275 billion it owes. This is the national debt.

At the same time, Government services and international policies Congress believes the Government should provide would not have to be sacrificed.

SALTONSTALL believes his debt-reduction bill is essential for national security. And here's why he feels that way:

The national debt in 1941 was $49 billion. By the end of World War II, or midway in fiscal 1946, the debt had risen to $269 billion.

On this basis, if the United States were pitched into a war in the next few years, it could swell the debt to nearly a half trillion dollars.

And these are debts the Government would have to pay to keep its credit standing. It also is far beyond what many economic thinkers believe is the Nation's peril point.

This is the point when the public's confidence in the Government's ability to pay its debts begins to deteriorate.

Thus, to SALTONSTALL, the size of the national debt is linked directly to national security.

COST ZOOMS

As a member of the Senate Armed Services Committee, the Senator says he has reason to believe the World War II criterion of cost now is outdated. It would cost considerably more to run a war in the 1950's than it did in the 1940's.

By gradual reduction of the public debt, the value of the dollar would be stabilized.

Here's how the Saltonstall bill would work:

1. If it went into effect on July 1, 1958, an amount equal to 2 percent of the previous fiscal year's revenues would be set aside to reduce the national debt.

This would be about $1.4 billion. The Saltonstall bill thus would require more revenue than spending. And this would tend to hold down the budget.

2. The amount set aside each year would increase by 1 percentage point up to 1961 when it would settle at 5 percent.

3. Provisions of the Saltonstall bill would be suspended under three circumstances.

The first would be in time of war when national survival hinges on unlimited spending.

The second would be in time of crisis, such as a depression when stepped-up Government spending usually is required to keep economic activity alive.

FIRST OF KIND

And the third time would be in event of a tax cut voted by Congress. This would suspend the bill for 2 years. And in this regard, SALTONSTALL points to the fact that his proposal encourages tax relief.

Congressional historians report that the Saltonstall bill is the only one of its kind ever introduced, though the files bulge with other proposals for reducing or controlling the debt.

The national debt in 1789 was about $75 million. This was paid off by selling western land.

In 1920, when the national debt was $24.3 billion, Congress established a sinking fund to reduce the debt. But the problem was that there was no provision against deficit financing at the same time.

Thus even as steps were being taken to reduce the debt, it was growing.

No schemes have been enacted since 1929 to reduce the national debt.

LENIN PREDICTION

It was about this same time that Lenin, who just had won control of Russia, predicted gleefully that the Soviet Union would force the United States to spend itself into bankruptcy.

And despite the growing strength of the United States in the world community, some comparative figures indicate Lenin's prediction may have a chance of coming true.

For instance, the nonpartisan National Economic Council reports that the United States debt is more than twice as large as that of the rest of the world combined.

And this Nation's budget is 17 percent greater than the combined total of 32 other major nations of the world.

Top economists like Jerome Frank, former head of the Securities and Exchange Commission, and Yale Prof. Olin G. Saxon, have expressed concern that the Nation might not be able to withstand a $300 billion national debt.

They claim it would be inflationary and cause the Government's credit standing to topple.

This might mean the Government would have to borrow at higher interest rates to swell the national debt even larger. This, in turn, would lead ultimately to depression.

FLEXIBILITY CITED

Other economists, and many congressional experts, reason that if the United States fails to reduce its public obligations in time of unprecedented prosperity, it will never get at the task.

In this regard, one of the cited advantages of the Saltonstall bill would be flexibility.

If economic activity increased revenues also would increase. And under the Saltonstall formula, Federal spending also could increase to absorb the needs of a growing nation.

In addition, as the national debt gradually were decreased under the Saltonstall bill, a lesser amount could be set aside each year to "service" or pay interest on the debt.

The Senator's bill, submitted less than 2 weeks ago, surely is the most important proposal he has set forth in his 12 years in Congress.

New Montana State Highway Engineer

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. MANSFIELD. Mr. President, I recently made a few brief remarks on the Senate floor relative to the retirement of Montana's State highway engineer, Scott P. Hart. Today I should like to comment on the very able replacement appointed to assume these duties on May 15—Fred Quinnell, Jr., of Helena, Mont. Mr. Quinnell is well qualified for this vital post in the State administration and is at present the assistant highway engineer in the highway department's technical division.

Fred Quinnell comes from a family long associated with the engineering field. His grandfather, his father, and his son have all been successful in the field of engineering. Fred joined the Montana State Highway Department in June 1927 and has served in many Montana cities as well as being State project engineer, division engineer, and as administrative assistant to Scott Hart.

I know that Fred Quinnell, Jr., will continue to provide the valuable services associated with the State Highway Department. I am looking forward to working with him and his associates on matters of State interest for Montana has a great future ahead in its numerous highway programs, local, State, and interstate.

Mr. President, I ask unanimous consent that an article from the Miles City Star be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASSISTANT TO SUCCEED HART—QUINNELL APPOINTED NEW STATE HIGHWAY ENGINEER

HELENA.—Appointment of Fred Quinnell, Jr., Helena, as Montana highway engineer was announced Friday by the Montana Highway Commission. The 53-year-old Quinnell will succeed Scott P. Hart, resigned, on May 15.

Quinnell, presently assistant highway engineer in the highway department's technical division, has been with the department since 1927.

He previously served as project engineer, resident engineer, division engineer, and as administrative assistant to Hart.

The commission announcement from Chairman Harry L. Burns, Chinook, was released by Secretary Clarence E. Cunningham, Helena.

Quinnell was born at Wisconsin Rapids, Wis., September 2, 1903. He attended public schools at Melstone and Roundup and received his civil engineering degree from Montana State College, Bozeman.

Hart, highway engineer since January 26, 1953, announced his resignation for health and personal reasons March 29. It was accepted with regret by the five-member highway commission. Hart, 67, also was highway engineer for 14 months in 1948–49.

The new highway engineer first worked for the highway department while still a high-school student, doing summer survey jobs. His father, Fred Quinnell, Sr., now retired, is a veteran Montana civil engineer, and his grandfather was a construction engineer in England. Quinnell's son, Arthur, is a location engineer with the department's interstate division.

Quinnell joined the highway department at Roundup in June 1927, the year after his graduation from Montana State College.

During the past 30 years, he served in many Montana cities, including Forsyth, Butte, Wolf Point, Glendive, and Miles City.

Fred Quinnell, Sr., lives in Roundup. He retired as Bozeman city manager 3 years ago. He also served as Roundup city manager about 30 years.

Among his early day civil engineering jobs in Montana was the Glass-Lindsey irrigation project near Big Timber, one of the oldest such works still functioning in the State.

Report on Operations of United States Information Agency Abroad

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of the experience of the United States Information Agency throughout the world, published in the New York Times of April 28, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

USIA—REPORT ON ITS OPERATIONS ABROAD

(With the United States Information Agency's appropriation threatened by heavy cuts in Congress, New York Times correspondents were asked to report on the agency's operations in several areas of the world where its work is most important. Their dispatches follow.)

WEST GERMANY

BONN, April 27.—In terms of budget, personnel, and variety of programs, the USIA's German operation is the biggest in Europe.

The programs include the RIAS radio station in West Berlin, a network of Amerika Haeuser in West Germany and West Berlin, exchange of teachers, students and leaders, presentation of books and magazines, distribution of documentary films, television and radio shows, preparation of pamphlets and feature articles, and the organization of public exhibits.

The budget for fiscal year 1956–57 was $7,500,000, of which $3 million was spent on RIAS. This radio station beams its broadcasts to the people in the Soviet Zone of Germany and is generally considered the most worth-while activity of USIA in Germany. The exchange program is rated by nonofficial Americans as the second most worth-while American investment in West Germany.

Effects weighed

The effectiveness of USIA's other activities is an open question. It is the claim of nonofficial Americans that, judged in terms of political action, the USIA's operations in the Federal Republic are conducted in a vacuum.

Except for the distribution of prepared feature articles, the USIA has virtually lost contact with German newspapers and periodicals. Up until 4 years ago intimate personal contact was maintained with German reporters and editors in Bonn.

Except for RIAS, the Amerika Haeuser and the exchange program, the Germans today are only dimly aware of the fact that the United States Government maintains one of its biggest and costliest programs in their country. One of the reasons for the gradual recession of USIA from the public scene is the increasing tendency to concentrate on staff work and to diminish work in the field.

AUSTRIA

VIENNA, April 27.—The staff and scope of the USIA in Austria were cut by more than half after this country achieved its independence and the need to counteract the propaganda disseminated by Austria's Russian occupiers ceased. The staff now numbers 30 Americans and 200 Austrians.

USIA's news and feature service, however, still distributes 30 to 40 stories weekly to Austrian newspapers. Since the state treaty it has averaged about 5,000 printings a year.

There is a small theater in Vienna, run partly by the United States of America in connection with the Austro-American society, and a Wander Theater has been touring the country presenting such plays as "The Patriots" and "Abe Lincoln in Illinois."

Although the exchange of persons program has been curtailed about a hundred Austrain students, editors and cultural leaders visit the United States under USIA's auspices annually. There are American Houses in Vienna, Salzburg, Linz and Graz; reading rooms in Klagenfurt and Innsbruck. There is a visual media unit which supplies window displays and photographs.

On the whole USIA here seems to be carrying on with a much smaller staff an information operation that compares favorably with the more ambitious activities of occupation days.

MIDDLE EAST

AMMAN, April 27.—The United States has launched through its Information Agency an all-out propaganda campaign to enlist the sympathies of the Arab leaders and people for the Eisenhower doctrine.

The response to these efforts has been gratifying to the USIA officials in most capitals of the Arab world. Appreciable amounts of mail bring requests for more information and expressions of approval.

But the problem confronting the USIA is that in the Arab world antiwestern agitators already have turned the Eisenhower doctrine into a dirty word before it has even been studied or implemented. The task of the USIA is to try to defeat this negative campaign.

One is inclined to conclude that unless United States Government policy gives all the appearance of full support for the Arabs, efforts by the USIA to win the people over to the western camp will have a sadly limited effect.

MOROCCO

RABAT, Morocco, April 27.—With the independence of Morocco the USIA increased its budget from $50,000 a year to $100,000 and the spending has now reached a level of $125,000 a year. The personnel includes 8 Americans and 20 local employees.

The Arabic sections of its 3 libraries have been expanded and 12 portable libraries of about 100 volumes each, 80 percent Arabic, have been set up to meet local demands for information. (Five caids of remote regions south of the Atlas Mountains sent in requests for libraries last week.)

The United States point of view has received better presentation in the nationalist press than the Communist point of view or the more important neutralist point of view from Egypt, despite the greater expenditures by Egypt, which also has the advantage of cultural affinity.

INDIA

NEW DELHI, April 27.—The United States runs a generally thoughtful and balanced propaganda program in India but it staggers under enormous political weights.

As long as the United States arms Pakistan, United States Information Service men here will be regarded as representatives of a country that is acting against India's security interest. No propagandist can persuade the Indians to like the arming of their neighbor or even get them to appreciate the reasons for it.

That is the political handicap when it comes to presenting the case for the United States. When it comes to presenting the case against the Communist there are other handicaps.

One is that the Russians and Chinese have their own propaganda machine, the Communist Party of India, which does not have the foreign label attached. Another is that the Indian Government keeps a tight reign on anti-Communist propaganda of the USIA.

The United States Information Service here has a budget of about $2 million. There are about 500 local employees and 60 Americans. United States propaganda here has to be aimed at the relatively small group of opinion-making people—officials, professionals, teachers, students, businessmen.

INDONESIA

JAKARTA, INDONESIA, April 27.—American information specialists have been hard at work in "neutralist" Indonesia since 1949 trying to make more friends and influence more people on behalf of the United States.

It is a a challenging asignment "selling" pro-Americanism and anticommunism to 82 million former colonial people whose Government is constantly telling them that Indonesia has decided not to take ideological sides in the cold war. The task is not made any easier by the increasing heavy salvos of Communist propaganda from the Soviet and Chinese Communist embassies here.

In the opinion of many Indonesians, the program generally appears to be effective. But there are criticisms, and usually these deal with matters of policy that are apparently set by Washington.

For one thing, some educated Indonesians say that local Information Agency officials send to the United States only those politically "pure" Indonesians who don't have a trace of leftism in their records.

"That means that the United States will accept only people already on their their side to visit the United States," they say, noting that Communist-bloc nations send outspoken anti-Communists on tours behind the Iron Curtain .

Many young Indonesians, they say, hunger for books, and they consequently would rather see more Information Agency libraries established rather than see money and energy go into still another anti-Communist news item in the daily bulletin.

JAPAN

TOKYO, April 27.—Activities of the USIA in Japan undoubtedly have a wide influence on public opinion. This is obvious to anyone who studies the use made by mass media—newspapers, radio, television, and other outlets—of material supplied by the agency.

One reason for the success of the USIA in Japan may lie in the fact that a lot of informational work Americans might be doing here is actually carried on by the Japanese in nine "Japan-America cultural centers." Material for these establishments, which include libraries, is supplied by the USIA.

Besides these projects, the USIA itself maintains 14 American cultural centers in as many important cities. Last year 12 million Japanese passed through these institutions, half of them to use library facilities, the other half to view USIA films.

Success of the indirect approach through mass media, in which the USIA label seldom appears, is much more important in a country that is virtually 100 percent literate and prosperous enough to have 50,000 television receivers in operation.

SOUTH AMERICA

LIMA, PERU, April 27.—In South America, not yet a particularly critical area for United States foreign policy, Washington's information and propaganda activities are geared to keeping old friends and making new ones. Emphasis in the efforts of the USIA is on presenting undramatically a general view of American policy objectives and explaining the American way of life.

In this endeavor the Agency apparently is meeting with a fair degree of success. Numerous newspapers throughout the continent print the Agency's releases, editors often use the USIA's background material for editorials, specialized groups view the technical films with propaganda content, much free time is obtained on radio and television outlets for the Agency's programs.

In view of the rising nationalism throughout South America, frequently with an anti-United States tone, and continuing Communist influence these programs appear to be important on all levels. Yet what can be accomplished here is limited, first, by the size of appropriations, and second by the caliber of the Agency's representatives.

The criticism most often heard is that the Agency's officers, with some exceptions, fail to establish the kind of intimate personal contacts with public-opinion leaders that is so vital in Latin America. The fact that the officers have almost no entertainment allowances is a factor.

BASIC FACTS ABOUT THE USIA

The United States Information Agency is an independent office within the executive branch of the Government, charged with the cold-war role or dispensing American propaganda and information abroad. In the polite language of a directive of the National Security Council, the purpose of the agency is:

"To submit evidence to the peoples of other nations by means of communications techniques that the objectives and policies of the United States are in harmony with the advance of their legitimate aspirations for freedom, progress, and peace."

ORGANIZATION

USIA was established as an independent agency in August 1953, the successor to several informational operations starting with the Office of War Information established during World War II. It now has about 12,000 employees. Of these, about 7,500 are foreign nationals employed in the 200 field offices now operating in 82 foreign nations or territories. Of the approximately 4,300 Americans on the payroll, 1,500 are stationed abroad and 2,800 are at the Washington headquarters.

PROGRAM AND COST

The USIA mission is carried out through these communications methods:

1. Broadcasting, primarily the Voice of America: The central studios of the VOA are in Washington; additional major transmitters are located in Manila, Okinawa, Ceylon, Salonika, Tangier, Munich, and afloat in the Mediterranean. As of December 31, 1956, VOA programs were on the air 162 hours and 45 minutes a week, using 45 languages. Allocation this year: $21,316,264.

2. Information centers and libraries: There are 164 of these centers scattered around the world where American books, magazines, and newspapers are available; where staff people answer questions about the United States; where exhibits reflecting American culture and achievement are shown. Allocation this year: $8,858,332.

3. Press service: Furnishes special materials, including the texts of United States Government policy pronouncements, to overseas USIA centers and to the press of foreign nations. Allocation this year: $9,880,000.

4. Motion-picture service: Produces or acquires motion pictures depicting various aspects of United States life, for use abroad through commercial or USIA outlets. Allocation this year: $7,004,000.

In addition to the funds for specific services, the cost for local overhead and personnel to operate these activities abroad is currently put at $46,451,154. Of this, $18,800,000 is available for Europe; $10,700,000 each for the Near East (including Africa) and the Far East; and $6,300,000 for Latin America. Another $8,600,000 is earmarked for running the Washington headquarters.

Comparative Electric Power Rates

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, April 29, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article distributed by the Electric Consumers Information Committee April 17, 1957. The article reports that while electric power rates are rising over the Nation, they are being reduced by the nonprofit distributors in the Tennessee Valley Authority area, and the Bonneville Power Administration area. At the same time, both the TVA and Bonneville Power Administration are ahead of schedule on repayment of costs, plus interest, to the Government.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. JOHNSTON of South Carolina. Is it not correct to say that whenever private power companies do not have competition, their rates are higher than when they do have competition close by in the form of Government-controlled power?

Mr. MURRAY. That has been my observation. The Senator is absolutely correct.

Mr. JOHNSTON of South Carolina. The further they get away from a yardstick, the higher the rates of the private companies are. Is that not correct?

Mr. MURRAY. The Senator is absolutely correct.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NONPROFIT UTILITIES IN TENNESSEE VALLEY AND PACIFIC NORTHWEST BUCK NATIONWIDE INCREASE IN ELECTRIC POWER RATES

In sharp contrast to Federal Power Commission figures showing a general upward trend over the country in domestic power bills since 1948, publicly and cooperatively owned utilities distributing power obtained from TVA and the Bonneville Power Administration have been steadily lowering rates to consumers. As a result the average residential use of electricity in these two regions is the highest in the United States and more than double the average use nationwide.

The report on the private power industry in 1955 by the president of the Edison Electric Institute revealed that over a 10-year period ending in November 1955, a total of 454 applications for rate increases had been made by private electric utilities, of which 419 were granted, 9 were pending, 11 withdrawn, and only 15 denied.

In California early this year the giant Pacific Gas & Electric Co. asked the State public utilities commission for a 6-percent hike in electric rates which would cost consumers $16.6 million more a year. Southern California Edison a few days later applied for a 16-percent rate increase which would remove $34 million annually from power users' pockets.

Congressional policy written into both the Tennessee Valley Authority Act of 1933 and the Bonneville Project Act of 1937 provides that power sold at wholesale by the Federal Government for distribution is for the purpose of benefiting the people as a whole, particularly domestic and rural consumers. Electric power is to be made available to the people served by TVA and Bonneville through distributing utilities at the lowest possible rates in such manner as to encourage the widest possible use of electricity.

How well this objective has been met is reflected in the record of the 152 municipalities, rural electric cooperatives and 2 small privately owned utilities obtaining their power from the TVA system.

Rate reductions below the original basic TVA rate have been made by 53 distributors over the history of the agency's operations. Of this number 34 rate schedules are 10 percent below the basic rate, and 19 are now at the lowest rate schedule—20 percent under the basic rate.

From 1934 to June 30, 1956, TVA distributors have made more than 200 rate reductions, and during fiscal 1956 lower rates were adopted by 30 distributors. TVA is now drawing up a new rate schedule lower than the lowest now in use, and further reductions can be expected by the distributors.

Last year the Northwest Public Power Association gave 19 nonprofit utilities—10 in Oregon and 9 in Washington—the "One Cent Power Achievement Award." To obtain such recognition, a utility must have an average residential rate of 1 cent or less per kilowatt-hour.

A 1-cent residential rate is more than 60 percent under the national average rate per kilowatt-hour of 2.6 cents in 1955. No private utility in the Columbia region has met the 1-cent test.

Is the Federal low-cost abundant supply policy unbusinesslike?

The Federal budget for fiscal 1958 estimates that by the end of that year TVA repayments will be running 23 percent ahead of schedule, while TVA's 1956 report showed net income of about $26 million. Bonneville Power Administration reported that in 1956 the power investment on the Columbia River dams and BPA's transmission system had exceeded the repayment schedule by $77.1 million, with a net profit to the Federal Government of nearly $6 million for the year. The payout requirements for both agencies include principal, interest, operation, and maintenance.

The nonprofit utilities distributing TVA and Bonneville power to their users have experienced a greater power use and an accordingly greater return on their investment. The 150 municipal and rural electric cooperative utilities in the Tennessee Valley netted an aggregate $25 million in 1955, after all expenses, including interest, taxes, and depreciation were deducted. Before interest the average earnings of these systems gave them an 8 percent return on their investment. This makes possible further rate decreases.

How cheap power has increased domestic consumption in both regions can be seen by the following table:

Time	Annual electric energy used per domestic consumer (kilowatt-hours)		
	Columbia Basin	Tennessee Valley	United States
1933		600	600
1940	1,551	1,353	1,008
1955	7,462	5,800	2,850

From 1940 to 1955 average annual domestic use of electricity grew nearly fivefold in the Columbia Basin, and from 1933 to 1955 nearly ninefold in the Tennessee Valley because of the Federal power program. Over the United States, however, average domestic use increased four times between 1933 and 1955, and about 2.8 times between 1940 and 1955. In the latter year average domestic consumption is less than half that of the Tennessee Valley and amounts to less than 40 percent of annual domestic consumption in the Pacific Northwest.

TVA has estimated that domestic power users in its service area paid $36 million less in 1955 than they would have if they had purchased the same amount of power under rate schedules prevailing over the United States as a whole. Total savings to consumers of all kinds served by distributors of TVA power were estimated at $76 million in 1955.

Although similar figures are now harder to come by for the Pacific Northwest, it is roughly estimated from scattered BPA and FPC data that the domestic consumers of publicly and privately owned utilities in the Northwest paid about $115 million less for their average annual consumption of power under the composite rate for Oregon, Washington, and Idaho in 1955 than they would have if they had purchased the same amount under the composite domestic rate for the United States.

The wide effect of the high-use low-rate power marketing policies of TVA and BPA has reached millions of electric consumers outside their respective service areas by the yardstick of performance on rates, service, and expanded use which all utilities have been forced in varying degrees to emulate. In every direction, the nearer to the Tennessee and the Columbia Valley, the lower the electric rates, the farther away the higher those rates become. This area of influence, as far as it has reached, has resulted in many millions of savings to power consumers served by privately owned electric utilities.

Increased use of electricity has stimulated the manufacture of electric appliances that use power in the home, and electric equipment that generates, transmits, and distributes it. And the greater productivity in the farm, home, and factory has been one of the most significant achievements of TVA and BPA wholesale rates which have in peace and war stimulated the economic strength of both regions and thereby that of the Nation as well.

Federal Aid to Colleges

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story by Dr. Benjamin Fine which appeared in the New York Times on April 21, and a recent editorial from the Asheville (N. C.) Citizen regarding the shortage of college facilities.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 21, 1957]

THOUSANDS OF COLLEGE APPLICANTS AWAITING DECISION ON ADMISSION

(By Benjamin Fine)

For the next 3 to 4 weeks the postman will have a hand in the future of thousands of young people.

These youngsters, all high-school seniors, will be waiting for letters from colleges to which they have applied. The letters will carry acceptances or rejections from the schools of their choice.

Acceptance means the end of fretful waiting; rejections means the student must be content with a second choice, or perhaps even a third.

Not too many years ago a high-school senior with good grades had his pick of a college. Now, with the 1940 college population of 1,500,000 grown to 3 million, many colleges receive 5 to 10 times as many applications as they can accept. This is particularly true of big-name schools in the East.

Entrance standards get tougher each year, foreshadowing the difficulties to be faced by the students of 1970, when the college population is expected to reach 6 million.

Because of these conditions, some students now apply to at least 4 colleges, sometimes to as many as 10.

In its turn, a college may have to accept twice as many applicants as it can admit. Rejections from students make this necessary. Once a student is accepted by the school of his desire, he declines bids from any others. Good students might receive as many as four acceptances.

Princeton, for example, will send acceptance notices to 1,200 students to get a class of 750 this fall; 4,000 applied. Brown University, with 3,000 applications, will accept 1,200 for 650 places. Harvard, with 3,600 applications, will accept 1,550 for 1,100 places.

Smith received 2,188 applications. It will admit 600 students. Dr. Benjamin F. Wright, president of Smith, said the college did not know how many acceptances would be sent to get 600 students. Last year Smith had 45 more freshmen than it had anticipated because of a rise in student acceptances.

Yale has received 4,000 applications. The exact number to be admitted, said Arthur Howe, Jr., admissions director, has not been decided.

Miss Harriet Newhall, admissions director at Mount Holyoke College, reports that it has received more applications this year than in any other year. She predicts there will be about 150 more than last year's 1,600. At the same time, Mount Holyoke will take in a smaller class than last year.

To handle the heavy applications, colleges charge $5 to $25. This might look like a revenue producer, but Jonathan Pearson 3d, Union College admissions director, estimated that it costs more than $75 an applicant to run the admissions office. Union, where the $5 fee is expected to be increased to $10 next fall, has received 1,350 applications for a freshman class of 300 to 320.

Colleges differ in the dates on which they notify students of acceptance or rejection. Some send notices as early as the beginning of the high school senior year, others not until May 16.

Harvard, Yale, and Princeton and some other Ivy League universities have an agreement to notify candidates on May 14. Leading women's colleges, such as Smith, Mount Holyoke, Vassar, Barnard, and Radcliffe, set May 16 for notification.

Cornell notifies applicants as soon as a decision is made early in March. Brown sends notices after April 22. Union began accepting candidates on March 1, with rejections of unqualified candidates going out before that date.

Talks with high-school students and guidance counselors and comments from college officials give this picture: The students are fretful, the guidance people harassed and the college officials agreed that New York area students should look beyond the crowded eastern colleges for their education.

In replies to questionnaires, many college officials cited the flood of applications as perplexing and troublesome.

Charles R. Dalton, admissions director at the University of Rochester said: "The kind of admission procedure with which all colleges and universities are faced today, resulting from the number of multiple applications and the necessity of overadmission, is transforming admission officers into numbers racket gamblers, promising no more attractive outcome than a set of ulcers."

Miss Barbara Ziegler, admissions director at Wheaton College at Norton, Mass., had another concern. She said repeated references to "tidal waves" of students had increased the fretfulness among students and their parents.

"Junior high-school students are already beginning to panic," she said.

THE STUDENTS' SIDE

If the senior class at South Side Senior High School at Rockville Centre, Long Island, could be taken as typical, there is nervousness among students.

One girl has applied to Goucher, Vassar, Wellesley, Connecticut, Bryn Mawr, and Mount Holyoke. She is 20th in her class of 230, has a 91 percent 4-year average and did superior work in her college board tests, going above 600.

Despite her record, she is worried. Others in her class have applied to the same schools, and she knows that colleges will place a geographical quota on the number of students accepted from one locality.

"My first choice is Goucher," she says. "Right now I'm on edge. But I guess my parents worry more than I do."

A classmate with an even better school record—seventh in her class, 94 percent average and 650 in the college board tests—hopes to go to Smith. She also has applications in for Mount Holyoke, Middlebury, Radcliffe, and Vassar.

"If I'm turned down in all five, I just don't know what I'll do," she said. "It will probably be too late to apply to a big-name college the last week in May."

Her worry is real. Most colleges do not accept applications after April 1. This makes the waiting period difficult. Students know that if they get turndowns by mid-May, they will not find it easy to find a college with openings.

Another classmate said she dreamed she was accepted at Smith, but suffered the disappointment of waking up.

"It was so real," she said, "that I jumped out of bed and shouted, 'Mother, Mother, I've been accepted.' I threw my arms around my mother and kissed her. But it was just a dream."

If Smith fails her, she still may dream of Cornell, Connecticut, and Oberlin, her other choices.

At Manhasset, a girl said she had applied to Northwestern; Hollins, in Virginia; Beaver, in Jenkintown, Pa.; and Grinnell, in Iowa. She has an 83 average, a college scholastic aptitude score of 600 in verbal and 500 in mathematics.

"So many of my friends are getting rejections, I just don't know what to think," she said. "I've never been so anxious in my life. My parents are even worse than I am."

Private school students worry, too. A senior at Rhodes School, 11 West 54th Street, applied to Mount Holyoke, Radcliffe, Smith, Swarthmore, and Cornell. She was fifth in her class and scored more than 700 in college tests.

"What'll I do if I'm turned down?" she asked. "My folks are pretty upset."

Now and then a student admits the college is not always at fault. One of these has applied to Massachusetts Institute of Technology, Rensselaer Polytechnic Institute, Carnegie Tech, Johns Hopkins, Pratt, Cooper Union, and City College. He hopes to be a chemical engineer. With an average in the mid-eighties, he feels he has reason to worry.

"I should have studied harder the first 2 years," he admits. Then I wouldn't be so on edge now."

Guidance directors with these young people in their charge must devote full time to the problems.

Dr. Marison E. Byrnes, in charge of college placement for the 230 Rockville Center seniors, devotes many hours to interviewing students and visiting admissions officers. A record 92 percent of the Rockville Center senior class wants to go to college. This high percentage is becoming quite usual, particularly in suburban schools.

Her Manhasset counterpart. Miss Reba Boze, said she was "getting grayer by the minute." She described parents and students alike as beside themselves.

One boy, she said, was rejected by four colleges.

"He came in this morning in tears," she related. "It just broke my heart. He's not a bad student. In former years I could place him somewhere. What will happen this year?"

With acceptance, another fee enters. This is in addition to the nonrefundable application fee. When a student is accepted, he is required to send a deposit ranging from $50 to $100, also nonrefundable.

The acceptance may come from a college that was the second choice of the student. He is not certain, though, about his first choice. In these cases, students have been sending the deposits to the first colleges accepting them. These fees will be forfeited if the students are accepted by their first-choice schools.

[From the Asheville (N. C.) Citizen]

COLLEGE AID

Senator CASE, Republican, of New Jersey, is continuing his advocacy of an emergency program of Federal aid to provide classrooms at community colleges.

Last December he warned that the bumper crop of war and postwar babies now crowding elementary schools will soon be seeking college admission. The result, he says, will be lack of room unless provision is made soon.

The Senator proposes to expand 2-year colleges through grants-in-aid to States.

Such a program would be welcomed by communities which lack or have inadequate junior college facilities. For the Asheville, Charlotte, and Wilmington junior colleges it would supplement the aid plan proposed by the State board of higher education.

Nationwide, the program would require a large sum. Although the idea is good, for it is designed to meet a foreseeable situation, the difficulty lies in getting approval of Congress which is already faced with a huge budget. At any rate, lively interest is being shown in the junior college bill.

The United Nations and Responsibilities for the Future

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 29, 1957

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Francis O. Wilcox, Assistant Secretary of State, before the Foreign Policy Association of Pittsburgh, Pittsburgh, Pa., on April 12, on the subject The United Nations and Responsibilities for the Future.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS AND RESPONSIBILITIES FOR THE FUTURE

(Address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, before the Foreign Policy Association of Pittsburgh, Pa., Friday, April 12, 1957)

I am happy to be in Pittsburgh again and to take part in the Seventh Annual Pittsburgh Public Forum on World Affairs. I recall with pleasure my visit here several years ago when I was with the Senate Foreign Relations Committee.

In my talk today, I should like to direct attention to the changing composition and role of the General Assembly of the United Nations. It is not surprising that our main focus should be on the General Assembly. A quick look at the events of the past decade leaves us with the impression that the United Nations today is a somewhat different organization from that conceived at San Francisco.

In 1945, the Security Council was hopefully expected to maintain and restore peace. In this Council power and responsibility were neatly combined. However, the 10 years of cold war, of sharp differences between the Soviet orbit and the free world, and in particular of repeated abuses of the veto by the U. S. S. R., have pushed the Council into a secondary role. The Council today, while still available, tends to be most useful primarily in situations where there is a possibility of East and West finding a common ground. In other situations it has been faced with increasing disuse.

In contrast the role of the General Assembly has outstripped the expectations of the framers of the charter. The General Assembly was designed to be the less powerful organ. It was scheduled to meet in regular annual sessions. It could not make decisions as could the Security Council—only recommendations. Its main weapon was discussion and debate. Power and responsibility were not realistically reflected in it—the vote of a small state equalled that of a large power. If increasing disuse has characterized the Security Council, quite the opposite is true of the Assembly.

THE ROLE OF THE GENERAL ASSEMBLY

If past is prologue then it would seem helpful to consider the implications for the future of the enlarged General Assembly and the greater responsibilities that have been assumed in the past few years by this body. These are changes which give new dimensions to the United Nations and which therefore pose for its members new problems and, I think, new opportunities.

In the last year and a half, the United Nations has grown from 60 to 81 members. A preponderance of the increase, it is interesting to note, represents newly sovereign states in Africa, the Near East, and the Far East, commonly referred to as Afro-Asia.

In the last 6 months, the General Assembly has assumed and discharged unprecedented responsibilities under the uniting for peace resolution which was adopted in 1950 following the Communist aggression in Korea. The machinery provided by this resolution was used for the first time when the Security Council was prevented by negative votes of some of its permanent members from dealing with the crisis in the Middle East and Hungary.

The increasingly important role played by the General Assembly and its greatly enlarged membership, taken together, are causing concern to some members of the United Nations and to some able students and critics of world affairs. Some of our stanch allies are wondering whether the Assembly can effectively face up to critical issues which threaten or break the peace.

I think it would be useful to review briefly some of these fears and warnings. Perhaps, in the process, we can form a judgment as to whether the Assembly is in fact in danger of becoming a Frankenstein monster about ready to destroy itself as some would have us believe.

First, the General Assembly, it is contended, is becoming more and more addicted to bloc voting, with loyalty to bloc taking precedence over any real attempt to meet issues objectively and on their merits. This is regarded as an irresponsible, even dangerous, development when a coalition vote of over one-third can be mustered by the Afro-Asian bloc alone.

Second, it is charged that there is an increasing tendency to water down resolutions in order to get a two-thirds supporting vote where important issues are under consideration. This tendency, it is contended is producing diluted resolutions of little force or effect.

Third, the principle of sovereign equality under which each state has one vote has come in for renewed criticism as giving an unreal, and distorted, reflection of the relative power, and influence, of the several states in international affairs. Is it right, it is asked, for a small, economically and politically weak state to weigh equally in the balance with a large and strong state when the votes are counted? Does not this encourage a tendency to "gang up" on the larger state?

Fourth, it is argued that the General Assembly has a double standard of justice and morality; one for states which abide by its recommendations, another for states that defy them. This also raises the question as to whether we are at fault in resorting to the United Nations on issues which it is powerless to resolve and which, therefore, may result in a sense of frustration or loss of faith in the organization itself.

A LOOK AT THE RECORD

These charges are serious ones and deserve our careful consideration. I believe a look at the record of the 11th General Assembly will help us determine their validity. With regard to all of them, I would like to make the general observation that they imply a greater authority and power than the General Assembly actually has. The composition and role of the General Assembly may be changing but its duties as set forth in the charter remain unchanged. It is a recommendatory body whose influence depends on the voluntary cooperation of its members.

BLOC VOTING

Let us take the matter of bloc voting. The only really consistent bloc voting in the General Assembly—and it is carried on with monotonous regularity—is done by the U. S. S. R. and its satellite states. This is a pattern long established; it is not a new phenomenon. The fears currently expressed are that the Afro-Asian group of nations may, as a matter of agreed policy, vote together and control Assembly action on important matters in a manner contrary to our interests. This, in my opinion, is more a mathematical possibility than a logical expectation or certainty. The mathematical facts are as follows:

As presently constituted, when all 81 members are voting, 54 votes are needed for the Assembly to act on matters requiring a two-thirds majority. If all the Afro-Asian states were to combine they would have a "blocking minority" of 28 votes, sufficient to block action on matters requiring a two-thirds vote and enough to give them a major voice in deciding all important issues. By contrast, in the new Assembly, the Latin American States now have but 24 percent of the vote, non-Communist Europe 19 percent, the Soviet bloc 11 percent, and the old British Commonwealth countries 5 percent.

In practice, however, the Afro-Asian group does not regularly vote as a bloc and when it does it is apt to be on issues for which there is overwhelming support from States outside the Afro-Asian area. Again, I think we should look at the record of the last general assembly.

Take first the vote on the principal resolutions relating to the Middle East crisis. Here, certainly, one might expect to see Afro-Asian solidarity. Yet out of 11 important resolutions approved between November 1, 1956, and February 2, 1957, this bloc voted as an entity on only 2, and in both these cases the resolutions received total votes of 74 in favor, 2 against, and 2 abstentions. Indeed, the general observation may be made that the Afro-Asian group displayed considerable unanimity in casting affirmative votes on the resolutions which were adopted by impressive or overwhelming majorities. In other words, they did not act as an irresponsible splinter group in opposition to the will of the majority.

The voting record on the Hungarian situation demonstrated less unanimity, although there was an increasing tendency for all United Nations members, including those from Africa and Asia, to be more sharply critical of brutal Soviet actions as they became revealed. On this issue, it might be observed, we would have welcomed a solid Afro-Asian bloc vote. But on only 3 out of 10 resolutions were more than 20 Afro-Asian votes cast affirmatively and these dealt with the less contentious issues of relief for the Hungarian refugees. The vote on the remaining seven resolutions reflected wide splits within the bloc. The point I want to emphasize is this: the Afro-Asian group does not constitute a monolithic bloc.

Of course, there is a tendency for States with common interests and problems to vote together when they think this will serve those interests. These tendencies, wherever they exist, present problems to all who wish to see international issues dealt with on their merits. At the same time, we should not exaggerate the extent to which such bloc voting prevails nor should we exaggerate the practical consequencies.

WATERED-DOWN RESOLUTIONS

Let us consider the record on the watering down of resolutions. Now it is true that a resolution is seldom approved in committee in the form in which it was first submitted. This would be a remarkable thing not only for the General Assembly but for any political deliberative body. We have only to consider, for example, the tortuous course of a piece of legislation, or a simple resolution, in our own Congress.

This process of compromise is certainly a democratic process. It is an attempt to find common ground and secure the widest possible area of support. It is an essential step if the General Assembly is to comply with the charter injunction to harmonize the action of nations. It exercises a moderating influence on the action of states and places a premium on reasonable policies reflecting broad rather than narrow interests.

A good example of the wisdom and effectiveness of this process is the General Assembly's handling of the Algerian problem. You will recall that France a year ago withdrew her delegation when Algeria was inscribed on the agenda. This year, in the 11th General Assembly, France, while denying the Assembly's competence, did not oppose inscription. When the matter came up before the Political Committee in February 1957, a strong resolution drafted by 18 Afro-Asian States was introduced. While this resolution no doubt expressed the convictions of the drafters, it was obvious from the beginning that it could never receive the two-thirds vote necessary for adoption. Actually no vote was ever taken on this resolution as a whole.

On February 11, in an effort to reach a measure of agreement, a milder resolution was introduced by Japan, the Philippines, and Thailand. The following day a number of other powers tried their hand at drafting an acceptable resolution. Both these resolutions came to a vote in committee and were adopted. Neither, however, received a two-thirds majority.

On February 15, the General Assembly in plenary session heard the Political Committee report failure to secure two-thirds support for any resolution on Algeria. At this juncture, the powers which had fathered the two resolutions that received a simple majority in committee, introduced in plenary a moderate compromise resolution. This resolution, expressing the hope that a peaceful, democratic, and just solution to the Algerian problem would be found in conformity with the principles of the charter, was adopted by a unanimous vote. France refrained from voting in keeping with its position that the General Assembly is not competent to deal with the Algerian situation.

This result could be called, I suppose, an example of a "watered down" resolution. I believe it more accurate to describe it as a practical compromise arrived at after exhaustive debate in which all sides had an opportunity to express their views. The debate cleared the air; and substantive action by the Assembly, which would have hampered rather than promoted a solution, was avoided. It is clear from the unanimous vote that during this debate the States principally concerned had achieved understanding, if not approval of each others attitudes and interests. All members faced the fact squarely that the General Assembly on its own could not provide a solution to the Algerian problem. Progress, however, was possible and progress was made because the Assembly acted responsibly in maintaining an atmosphere conducive to a practicable solution in the future by the parties directly concerned.

General Assembly consideration of the question of Cyprus followed very much the same pattern.

I believe that the Assembly's record on the disarmament question was also an example of responsible action. Assembly members recognized fully that before disarmament can be achieved the principal powers must reach agreement through quiet negotiations. The Assembly was aware that the 81-nation forum is not the right place to try to reach agreement on highly technical details involving the security of many peoples and many countries. For these reasons, it voted unanimously to refer all the disarmament proposals before it to the Disarmament Commission and its subcommittee for prompt, quiet, and detailed consideration. This is an excellent example of the Assembly realiz-

ing what it should or should not do in a given situation.

Of course, not all compromise resolutions passed by the Assembly are generally regarded as the best result that might have been achieved. For example, a good many delegations considered the Assembly's last resolution on the deployment of the United Nations Emergency Force in Egypt as something less than satisfactory. It would obviously have been preferable if the Assembly had been more precise in definining UNEF's role in the Gaza Strip or at the entrance to the Gulf of Aqaba. But here, as in other cases, the outcome was determined by the prevailing balance of interests in the Assembly, in this case by those who favored less precision. Nevertheless, the result, while not ideal, did make possible the effective interposition of the UNEF between Israeli and Egyptian forces.

Now, I realize that such halfway measures will never satisfy those who expect the United Nations to make quick, clear-cut and enforcible decisions based on agreed concepts of right and wrong in a given issue. Nevertheless, such precise and complete solutions to problems are not always possible. International issues today often are susceptible of only modest solutions. The Assembly's willingness to face up to its limitations as well as its capacities in concerete instances represents a forward step toward even greater responsible action in the Assembly.

THE VOTING FORMULA

One of the very first actions that a newly sovereign state takes in the international field is to apply for admission to the United Nations. Membership in this body is looked upon as the final stamp of approval by the international community. Once admitted, the new state is anxious to demonstrate its ability to contribute to the objectives of the charter, and equally desirous, I think, to assert and maintain its new-found independence and sovereignty. The new state tends to avoid actions which would make it appear that its vote is in someone else's pocket.

I believe that, by and large, these new states, and the so-called small or weak states, have acted responsibly and in the common interest. There are occasions, of course, when a state or group of states advances proposals which are impossible or extremely difficult for the United Nations to carry out and which place the major powers in a difficult predicament. On such accasions in particular we may feel that the 1-state 1-vote formula is, in fact, an inequity and perhaps some consideration should be given to weighted voting devices.

But it is hard to blame these states for using the General Assembly, on occasion, as an opportunity to make the major powers sit up and take notice. Sometimes, when the latter are at loggerheads, such action may serve a decisively constructive purpose.

The General Assembly is as near as the world has come toward the creation of a parliament of nations. As an international institution it tends to reflect accurately the underlying political, economic, and social conditions in the world. It should draw upon, as does a democracy, the energy and intellectual resources of all its members. The atmosphere of equality which prevails encourages it to do this. We should also recall that the Assembly, as a recommendatory body, has built-in safeguards against the imposition of the will of the majority on an opposing minority, even if this is a minority of one. Its recommendations may be disregarded.

However, where the majority is overwhelming and the justice or good sense of a proposal is abundantly evident, opposition or noncompliance by one or more of the great nations will be at the peril of turning world public opinion against them. As the General Assembly has grown this has been revealed as one of its great unwritten powers. No nation can lightly accept a position of definance to its limited authority.

THE DOUBLE STANDARD

I would like to say a word now about the so-called double standard. The failure of the General Assembly to bring about the withdrawal of Soviet forces from Hungary, as contrasted with its success in the Middle East crisis, has become a cause of concern.

The record of Assembly action on these two issues does not support the charges made against it. The resolutions invoked against the Soviet Union and the Hungarian Communist regime were more strongly worded than in the case of the action in the Middle East. The Assembly climaxed its action with outright condemnation of the U. S. S. R.—a step which has blasted the underpinnings from the Soviet propaganda campaigns of the past years. Frustrating United Nations action has cost the Soviet Union dearly.

We must face the fact that the possibility for such frustration of United Nations action was written into the Charter when great power unanimity was required for Security Council decisions. It was hoped, of course, that unanimity on questions of aggression or threats of aggression would prevail but we were as insistent as any other power in including this provision. It is true that the uniting-for-peace resolution empowers the General Assembly to act in cases where the Security Council fails to act. But this was a resolution, not an amendment to the Charter. The fundamental responsibilities and authority of the Security Council and the General Assembly remain unchanged.

There are and there will remain those within the community, the state, and world who attempt to defy the law. In the absence of enforcement power or a decent respect to the opinions of mankind they may—at least in the short run—get away with it. It is true that this is a threat to the rule of law, but it is not its abrogation.

The Soviet Union remains charged by mankind with a brutal and flagrant violation of the Charter in the case of Hungary. With regard to General Assembly action, I believe the cause of freedom was served within the capacity of that body to do so in the circumstances, and that the cause of Soviet communism was dealt a serious and irreparable blow.

I think we underestimate the telling and lasting effect on governments, and people throughout the world of the long days and nights of incisive debate and investigation of the Hungarian issue by the General Assembly. As the details of Communist ruthlessness, cynicism, and falsehood were revealed, the eyes of many were opened for the first time to the true meaning of Soviet imperialism. This was particularly true among the representatives of states who, for a variety of reasons, have tended to take a noncommital or detached stand, particularly on issues with cold-war overtones.

By way of illustration, I would like to refer to an episode in the 11th General Assembly when the Hungarian matter had been under debate for nearly a month. A resolution of condemnation of the Soviet Union was before the Assembly. The delegate from Burma asked for the platform and spoke as follows:

"My delegation has listened with objective detachment to the arguments put forward by the Soviet Government and its allies in defense of the Soviet action in Hungary." "We have hoped," he said, "that the truly modest steps proposed by this General Assembly would have been unanimously adopted. We abstained and waited during the week of December 2, under the expectation that surely the Secretary General of the United Nations would be agreeably received in any member country, at any time. We abstained and waited, while the Secretary General told us that there was a chance that he would be received in Hungary at a stipulated date within the next few days." Then, in telling the Assembly that he was now prepared to vote condemnation of the U. S. S. R., the Burmese delegate said, "We do this to keep our self-respect. After all responsible waiting for action has passed, we can do no less." "There," he said, speaking of Hungary, "but for the grace of God go we."

At the conclusion of this debate, Burma joined 14 other Afro-Asian nations in condemning Soviet violation of the Charter. In my opinion, this exposure and condemnation of Communist imperialism has served to strengthen the bonds of the free world. It may well turn out to be one of the greatest blows suffered by the Soviet Union and the satellite system in the past decade. In any consideration of a double standard it must be weighed on the positive side of General Assembly accomplishment. For any measure that reveals the methods of despotism and suppression of freedom serves the cause both of the oppressed and of the free who wish to remain free.

PROBLEMS FOR THE FUTURE

In discussing the changing composition and role of the General Assembly I have attempted to place the problems encountered in the light of our experience to date. We will continue to have these problems and new ones will evolve as the resources within the General Assembly are developed.

In summation, I would like to suggest some guidelines for the future.

We should not assume that there will be solid bloc voting or mechanical majorities in the General Assembly except for the Soviet Union and its satellites.

We must remember that states generally act in what they conceive to be their own best interests. There are varying gradations of interest on various problems. There is much in international intercourse that tends to unify—and as much which causes disunity.

We should keep in mind that when a two-thirds vote is required it is often necessary to negotiate among the regional groups or blocs making up the Assembly. If, however, we continue to demonstrate constructive leadership and do our utmost to identify our interests with the interests of world peace and of progress, then I believe the General Assembly is not a body to be feared, now or in the future.

In discussing earlier the question of weighted voting, I did not mean to close or dispose of the issue. For it may well be true that the General Assembly does have a voting system which tends to give a distorted reflection of the power and influence in the world of the various members. However, as I indicated earlier, there is evidence of a responsible restraint exercised by members of the Assembly. This is due, in large part, to an awareness that a General Assembly resolution when passed is still only a recommendation and that its effectiveness depends upon the degree to which it is followed—particularly by the stronger and more influential powers.

The mere fact that a bloc of powers can muster a two-thirds vote on an important issue does not necessarily mean that they will do so. I cite as a case in point the reaction at the General Assembly to the question of the invoking of sanctions against Israel for failure to withdraw her forces. One of the Middle Eastern states had actually introduced such a sanctions resolution. It was very posible at the time that such a resolution could have passed by a two-thirds majority. But this potential majority exercised a commendable restraint and caution; they waited to learn in particular what the position of certain powers would be whose support might be decisive. As it turned out, the resolution was never brought to a vote and Israeli forces were eventually withdrawn.

Such responsible action is an example of the General Assembly being used as an instrument through which our interdependent world realizes and accepts its interdependence.

The more influential states must recognize that power and responsibility go hand in hand and that their positions of leadership cannot be taken for granted.

The less influential states should take care not to impair or destroy by their actions the usefulness of the organization that protects them and gives them an equal voice in the councils of nations.

The United Nations should be recognized for what it is, an aid to progress toward a more peaceful world. It is complementary to traditional diplomacy, not a substitute for it or for responsible international conduct. It is not a political Univac, where you feed the problems in one side and take the answers out the other.

In this connection we have often recognized that there are certain international problems that can be more effectively handled outside the context of the United Nations. We have also recognized that we can never use the United Nations as a substitute for bold, imaginative, and realistic foreign policies and programs of our own; that we must continue to pursue many of our national interests and objectives through various regional arrangements and bilateral relationships.

I think there is no doubt that the United Nations must develop more effective pressures to get members to abide by its decisions and recommendations where threats to the peace are involved. In this connection, I believe the creation and use of the United Nations emergency force is an important step in the evolution of voluntary peace-enforcing devices. The experience gained through this current experiment may prove invaluable in the future.

I look to the future of the United Nations, and of the role of the General Assembly in it, with optimism. It has recently faced crucial issues and has emerged a stronger and in some ways a more mature organization. We and the other member states will be called upon to assess its limitations and exploit its resources if it is to discharge well the purposes for which it was founded. The United States will continue to contribute its full measure of support to this end.

Montana Mother of 1957

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. MANSFIELD. Mr. President, each spring an outstanding mother is selected in the Nation and in each State to be honored on Mother's Day, the second Sunday in May.

I am extremely pleased to announce that Mrs. Adolph Rieger, of Plevna, Mont., has been selected as Montana Mother of 1957.

This 66-year-old mother has 18 children and 55 grandchildren. Mrs. Rieger was born in South Dakota and was a schoolteacher before coming to Montana, where she and her husband have been engaged in ranching.

Montana has selected a woman of great accomplishments in all things associated with American motherhood. She has raised a large family and many of her children have received higher education. Five sons served in the Armed Forces. The Reigers have developed a fine ranch in eastern Montana, providing a future for several of their sons.

In addition, Mrs. Rieger has been very active in church work, as well as school and community activities.

I am taking this opportunity to extend my very best personal wishes to Montana's mother of the year, and to express the hope that she will enjoy many more years with her fine family.

Mr. President, I ask unanimous consent that an article from the Miles City Star, April 17, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLEVNA WOMAN NAMED 1957 MOTHER OF MONTANA

(Montana's mother of 1957 is the mother of Mrs. Lyle Horr, 806 Washington, in Miles City.)

DEER LODGE.—Selection of Mrs. Adolph Rieger, of Plevna, 66-year-old mother of 18 children and grandmother of 55, as Montana mother of 1957 was announced Wednesday.

Mrs. Warren H. Graeter, of Deer Lodge, Montana chairman for the American Mothers Committee, made the announcement. She said Mrs. Rieger, who was born at Tyndall, S. Dak., is a candidate for the American Mother title.

Sixteen of Mrs. Rieger's children are living. One daughter died at the age of 5 and a son was killed in the World War II Battle of the Bulge. Five of the Rieger boys served in the Armed Forces.

Three of Mrs. Rieger's children were graduated from Montana State University, Missoula, and two others received special training there. Two daughters became nurses.

Her husband is retired and three of their sons manage the family ranch near Plevna.

Mrs. Rieger, the former Lydia Freier, attended Teachers Institute in South Dakota and taught school in that State before she was married and came to Montana.

She has been active in the Emmanuel Congregational Church and taught Sunday school for years. Mrs. Rieger also has been active in the American Legion Auxiliary, her county home demonstration club, and in 4-H Club work.

Operation of the Post Office Department

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 29, 1957

Mr. JOHNSTON of South Carolina. Mr. President, two editorials have come to my attention, pertaining to the current controversy over the operation of the Post Office Department and the question of whether the postal operation is a public service or is a business that should be run on a profit basis.

One editorial, published in the Daytona Beach Evening News of April 24, 1957, is entitled "What the Post Office Is For," and the other editorial, published in the Charleston, S. C., News and Courier, of April 17, 1957, is entitled "A Breach of Law."

I ask unanimous consent that the two editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Daytona Beach Evening News of April 24, 1957]

WHAT THE POST OFFICE IS FOR

United States Senator OLIN JOHNSTON, of South Carolina, was speaking in the finest American tradition when he said here this week that the main purpose of the post office is to serve the public and that it's not something to be run the same as a business.

Senator JOHNSTON, who holds a potent position as Chairman of the Senate Post Office and Civil Service Commission, has taken a sound view also, in our opinion, in favoring a pay raise for post-office employees.

It is to be expected also, as he seems to believe, that first-class mail rates may have to be raised again, and perhaps other post-office charges as well.

But the American people have learned, as post-office customers, that an academic business attitude toward the post office can raise hob with the service and thus hurt private business all along the line and injure the private lives of all citizens. They have learned these things from false economies put into effect by Postmaster General Arthur Ellsworth Summerfield as an expression of Republican Party policy.

Pennypinching the past few years has cut in half mail deliveries to residential areas and otherwise has caused the service to deteriorate. The argument in support of these follies has been that it's sound business to curtail service to overcome a deficit. We can remember some private businesses which have put themselves out of business by following such a policy. Aggressive businesses have turned failure into success by improving service in the face of losses.

The important thing about the post office is the public service it renders to everybody—to all citizens, men, women, and little children, to the poor and the rich, the educated and the ignorant, to big and little business and to Government itself on all levels.

The key thing to remember is this service and how important it is to the business, social, and political life of this Nation. The dollar factor, important though it may be, is of secondary importance.

It is unfortunate that the Republican administration has taken the private business view of the post office. It is fortunate that in the United States Congress there are other Senators and Representatives who share the views expressed by the South Carolina Senator.

The American people can afford to foot the bill for a post-office deficit—the per capita share of this deficit being something like $3 a year or less. The American people cant' afford to lose the post-office service. They can't afford to let it run any further down hill.

A recent survey by the New York Times showed that today many other countries maintain postal service which in many respects has ours licked. The American people want the best. They're willing to pay for it—willing and able.

Because this traditional attitude toward the post-office service has been upheld pretty consistently, the service has been broadened and improved through the years. Republican as well as Democratic administrations have had a share in many succesful adventures in post office enterprise.

Looking backward the New York Times recalls the start of registered mail in 1855; the start of the pony express in 1860; free city delivery, in 1863; money orders, 1867; special delivery, 1885; rural free delivery, 1896; postal savings, 1911; airmail, 1918; the

start of experimental flying of regular 3-cent mail.

To these should be added parcel post early in this century—a revolutionary though controversial boon to business and to private citizens, and c. o. d service.

Besides all this the post office renders extracurricular services: It gives out information regarding civil-service examinations and even conducts some of the examinations. Documentary internal revenue stamps can be bought in post offices. It sells migratory bird hunting stamps. Postal employees are required to administer pensioners' oaths in the execution of pension vouchers. Post office employees give notary public service, for example when you cast an absentee ballot.

All these manifold services help to make the post office what it is—a vast apparatus whose civil-service employees give the public just as good service as the officials in Washington will let them. A deficit? Let's pay the difference and keep the service as good as it can be made.

If we wish to reduce the deficit let's cut out some features which interfere with essential service. For example, third-class mail, consisting mainly of unsolicited and unwanted advertising mater, costs a deficit of more than $100 million a year. But that's a money deficit. We must figure in also the loss of time, space, and efficiency in processing, loading, hauling, and carrying by hand the tons of third-class mail which nobody wants at the receiving end. We could save a mint of money and expedite the mail by eliminating most or all of the third-class stuff.

The thing to remember is that the American people want to keep on with this typically American service. They want to pay for it collectively, as they pay for Weather Bureau information, the services rendered by the Patent Office and the Bureau of Standards, the Library of Congress and its Copyright Office, the Coast Guard and its Lighthouse Service.

Then there's the National Park Service, the United States Fish and Wildlife Service. They don't pay their own way, yet these and many other services are essential to our life as a great nation. We cherish them for the same reason that we maintain public libraries, hospitals, parks, botanical gardens, and national monuments—because our sense of civilization carries us beyond and above the concept of public service as a dollar business.

[From the Charleston (S. C.) News and Courier of April 17, 1957]

A BREACH OF LAW

The Post Office Department's no-extra-money, no-mail trick has been so successful that we wouldn't be surprised if other Federal agencies adopted it. We can just imagine the public power boys in TVA saying "More money, or we won't be able to deliver electricity on the weekends." If the State Department doesn't get every dollar it wants, it could threaten to remove United States Consuls from countries visited by large number of American tourists. The FBI could enforce the law only on Mondays, Wednesdays, and Fridays.

The Federal agency strike threat may be just the device the bureaucrats have long sought for the purpose of keeping down economy-minded Congressmen.

A return to normal mail service should not be an occasion to forget what Postmaster General Arthur Summerfield has done. The question of law violations should be pursued. In this connection, we note a statement by Joseph C. Campbell, Comptroller General of the United States, whose General Accounting Office serves as Congress' watchdog on Government spending.

Mr. Campbell said that the Budget Bureau on three occasions—last July, December, and February—decreased the Post Office's fund for the quarter which began April 6 in order to increase allotments for earlier quarters. Mr. Campbell pointed out that there is a law requiring agencies to apportion their funds through the entire fiscal year so that additional funds will not be necessary.

The Comptroller General said this Federal law had been violated by the Budget Bureau in permitting the Post Office Department to spend its appropriations so rapidly. The Post Office, Mr. Campbell added, violated, the spirit of the law.

We feel sure that Senator OLIN D. JOHNSTON of South Carolina, chairman of the Senate Post Office and Civil Service Committee, will take Mr. Campbell's charge into account in conducting an investigation of the situation. Senator JOHNSTON has been awake and alert to this matter, and can be counted upon to see that the mail gets delivered.

Dollar of Federal Aid Costs Ohioans $1.69

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an editorial appearing in the Mansfield News Journal, entitled "Dollar of Federal Aid Costs Ohioans $1.69." Mr. Speaker, this editorial is worthy of the reading and thinking of every Member of this Congress. It clearly demonstrates what our States pay and what we receive. It is information that should be remembered by the Members of this legislative body, because all of us should recognize that whenever the Federal Government participates in any program, we encounter additional redtape and additional costs.

[From the Mansfield News-Journal of April 15, 1957]

DOLLAR OF FEDERAL AID COSTS OHIOANS $1.69

Federal aid is a great big painful laugh as far as the citizens of Ohio are concerned.

For each dollar of Federal aid that Ohioans get they pay out $1.69 in taxes.

On top of that, they pay 20 percent more which goes to the agencies of the Federal Government which "handle" the aid.

In contrast the great and wealthy State of Texas, the State of millionaires, pays only 78 cents in taxes for each $1 it gets in Federal aid.

Ohio is one of 14 States which has to pay out substantially more than a dollar to get a dollar back. The other 34 States get the gravy. They get back more than they pay.

But all of the States lose 20 percent on the deal because that is the Federal Government's handling cost, for taking money away from some people and giving it to others.

Writing in the Magazine of Wall Street, McLellan Smith explains the situation in detail:

"Federal aid to States and local units of government, one of the great misnomers of our times, may be voted by the current Congress to the tune of $5,273,000,000, to be distributed in no less than 54 forms of aid," the article says.

"Aid, that is, if one may consider it as such, giving back to some States a fraction of the money Washington takes from them in taxes, and turning the horn of plenty toward some low-taxpaying areas with donations far out of proportion of their contribution to the Federal Treasury.

"And whether a State receives more or less, there intervenes the middleman, the United States Treasury, a costly and inequitable dealer in the great game of dollars. The Federal handling charge runs to approximately 20 percent of the money handled. That goes to payroll and administration expense. It is therefore reasonable to say that the proposed $5.3 billion giveaway represents $6.3 billion in the overall. The processing fee naturally must come from the taxpayer.

"It's a topsy-turvy hocus-pocus but it has no element of humor to it, especially to those States which are minus in the deal because they get out of the aid pool only a fraction of what they contribute to it."

Here is a table showing what the several States paid in and what they lost or gained in the Federal aid hocus-pocus:

Amount taxpayers in 14 States paid in taxes for each dollar of Federal aid received (fiscal 1956)

State	Tax paid	Loss
Delaware	$2.45	$1.45
New Jersey	2.40	1.40
Connecticut	2.21	1.21
New York	1.82	.82
Ohio	1.69	.69
Maryland	1.67	.67
Illinois	1.64	.64
Michigan	1.59	.59
Pennsylvania	1.50	.50
Indiana	1.46	.46
Massachusetts	1.24	.24
Wisconsin	1.23	.23
California	1.05	.05
New Hampshire	1.02	.02

Amount taxpayers in 34 States paid in taxes for each dollar of Federal aid received (fiscal 1956)

State	Tax paid	Gain
Oregon	$0.96	$0.04
Florida	.93	.07
Virginia	.90	.10
Minnesota	.89	.11
Rhode Island	.89	.11
Washington	.79	.21
Texas	.78	.22
Iowa	.77	.23
Maine	.71	.29

Arkansas	.31	.69
Mississippi	.29	.71

Tax Cut for Low Income Taxpayers

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. DINGELL. Mr. Speaker, today I introduced two bills to provide a tax cut for low income taxpayers, and I rise to discuss my reasons for so doing and to

urge Congress to give early and favorable consideration to my bills.

During the last session of Congress I introduced a bill substantially identical to one of the bills that I introduced today.

The House has cut budget requests of some $72 billion by over $1 billion to date, with the big money bills yet to come. I insert here a table showing the amount of the various cuts by the House of Representatives in budget requests:

Summary of House action on appropriation estimates, 85th Cong., 1st sess.

Appropriation bill	Estimates	Cumulative estimates	Bill reduction	Cumulative reduction	Percent reduction	
					Bill	Cumulative
1. Regular and supplementals, 1958:						
Treasury-Post Office	$3,965,291,000		$80,364,000		2.0	
Interior	515,189,700	$4,480,480,700	60,794,000	$141,158,000	11.8	3.2
General Government matters	20,921,870	4,501,402,570	4,900,500	146,058,500	23.4	3.2
Independent Offices	5,923,195,000	10,424,597,570	537,993,300	684,051,800	9.0	6.5
Labor-Health, Education, and Welfare	2,981,277,581	13,405,875,151	134,446,000	818,497,800	4.5	6.1
District of Columbia (Federal payments only)	25,504,450	13,431,379,601	3,000,000	821,497,800	11.7	6.1
Commerce	871,513,000	14,302,892,601	217,827,940	1,039,325,740	25.0	7.2
State-Justice-Judiciary (as reported)	665,649,802	14,968,542,403	101,850,009	1,141,175,749	15.3	7.6
2. Supplementals and deficiencies, 1957:						
Urgent deficiency, 1957	382,067,500		46,977,500		12.3	
Second urgent deficiency, 1957 (as reported)	55,100,000	437,167,500	6,110,000	53,087,500	11.1	12.1
3. Total session		15,405,709,903		1,194,263,249		7.7

The President said recently that the Budget Bureau has projected a surplus of about $1.8 billion, based on figures preceding the cuts which Congress has made to date. He further indicated that another $1.8 billion can be saved through administrative economies, which would mean an estimated surplus of $3.6 billion. It does not appear either unlikely or unreasonable to expect that there will be sufficient money available for a tax cut of the kind which I propose in one of my two bills. Indeed, I have withheld introducing any tax cut legislation until this time because I was not sure that responsible fiscal policy would permit an orderly reduction of the national debt together with a reasonable amount of tax relief. The first bill which I have introduced provides for raising individual exemptions from $600 to $700. Revenue loss to the Federal Government from this proposal will be $2.8 billion. Under this proposal approximately 3.6 million people in the low-income tax group will be absolved from any tax liability whatsoever. This is a very small percentage of the number of taxpayers in this country, of which there are today about 81 million. Those who will be removed from the income-tax rolls are those who are least able to pay, and those whose income tax is most expensive to process in the Bureau of Internal Revenue. Many of those removed from the tax rolls actually pay less than the amount that it costs the Government to process their return. Slightly over half of this tax cut will go to those who earn less than $5,000 a year, and who constitute the largest class of taxpayers.

Under this particular program the average worker in my district earning the average wage of about $5,000 a year with a wife and two children would receive a tax cut of about $80 or 15.4 percent. For comparison among the various income levels I insert into the RECORD a table of reduction of taxes for various representative income groups with an average family of two children:

Married couple, 2 dependents

$3,000	$120	$40	$80	66.7
$4,000	320	240	80	25.0
$5,000	520	440	80	15.4
$8,000	1,152	1,064	88	7.6
$10,000	1,592	1,504	88	5.5
$15,000	2,900	2,780	120	4.1
$25,000	6,268	6,116	152	2.4
$50,000	18,884	18,648	236	1.2
$100,000	51,912	51,624	288	.6
$500,000	402,456	402,092	364	.1
$1,000,000	857,456	857,092	364	(1)

[1] Less than 0.05 percent.

The other bill which I have introduced offers the taxpayer an increase in the individual exemption from $600 to $800 per annum. This will be possible if the present rate of reduction in appropriations is continued by Congress. The reason I say this is that at the present rate of reduction of appropriations the House will cut the Eisenhower budget by slightly in excess of $4.7 billion. An increase in individual exemptions from $600 to $800 per year will reduce Treasury revenues by about $5 billion. It will also have the effect of eliminating about 7.2 million of the low-income bracket taxpayers.

I want to underscore this, Mr. Speaker, that independent of the economies being effected in the budget by reductions of appropriations by the House of Representatives, Mr. Eisenhower and the Bureau of the Budget have anticipated a Government surplus of about $3.6 billion. This leaves ample room for reduction of taxes along the lines of either of the 2 plans I have suggested in my 2 bills with a budget surplus of about $3.6 billion for reduction of the national debt.

This is the kind of tax cut which is most beneficial to the economy of this country. It goes principally to those who are in the lower income-tax brackets and must immediately spend the proceeds to buy their daily needs. As such, it will flow immediately into the channels of trade and create jobs and opportunity. Those in the upper brackets benefit also by a reduction in taxes. Industry and trade will have an increased volume of money moving in pursuit of goods and services. All will benefit. Such a tax cut will stimulate business and industry, and it is not inconceivable to expect that the stimulus will be such as to result in additional revenue to the Federal Government so as to reduce estimated revenue loss.

I urge early and favorable consideration on either of my two tax cut bills.

Speech of Hon. Clifford Davis, of Tennessee, at the Dedication Ceremonies for the E. H. Crump Memorial, April 21, 1957

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, the late Edward Hull Crump, who served as a Member of the House of Representatives in the 72d and 73d Congresses, was a dynamic political and civic leader in Memphis and the State of Tennessee for 5 decades. He was without question a man of integrity, patriotism, and great mental capacity. He was beloved by the citizens of Memphis, who recognized that he served unselfishly to build a happier and more prosperous community. He was interested in the common man. His charities and helpfulness were extended quietly. Many who were ill, discouraged, in financial distress, or with personal sorrows found ready assistance from him.

When he left this life for a greater reward, the Council of Civic Clubs decided that there should be an everlasting memorial to his long and great life. A perfectly beautiful life-sized statue was erected in Overton Park, one of our oldest and most beautiful recreation and cultural centers.

I had the very high privilege of making the address at the dedication of this memorial on the last Easter Sunday. In this speech I sought to recite some of his outstanding contributions to the life of our section of the country.

By this permission to extend my remarks, I have the honor to include that humble effort that those who knew him in Washington and others may be able to review his outstanding record.

The address follows:

SPEECH OF HON. CLIFFORD DAVIS, OF TENNESSEE, AT THE DEDICATION CEREMONIES FOR THE E. H. CRUMP MEMORIAL, APRIL 21, 1957

Mr. Chairman, Your Honor the Mayor, gentlemen of the city commission, our beloved Senator McKellar, and my friends:

It is with sincere humbleness that I have the honor and the high privilege to represent so many on this Easter Sunday when we endeavor to pay tribute to that great American, the late Edward Hull Crump, to

whose memory we are dedicating this everlasting reminder.

Mr. Crump was my closest political adviser, counsellor, and friend. Countless others called him such. He gathered unto himself loyal friends in every walk of life.

Humble in victory, without rancor in defeat, he traveled far along life's road to great achievement. Service to others is the toll we pay as we travel life's highway. For every mile along his way he paid in devoted service to his fellowman.

There are many roads in life which one may follow. Some lead to quicksands of tyranny and some to freedom. Some roads lead to individual despair and others to happiness. Many roads lead to destinations unknown. Mr. Crump was always ready to use his legislative influence to erect a helpful sign for the benefit of his fellow citizens traveling along life's many highways. He never hesitated to recommend the coercion of law to prevent the stronger travelers from impeding the progress of the weak. He used his voice and his vote to help those stranded in the march of life through no fault of their own.

Mr. Crump was devoted to his mother, who created a family atmosphere in which he breathed the highest ideals and was stimulated to sustained and strenuous intellectual and moral effort in order to conform to family standards. His mother had an abiding confidence in the future of her son, which strongly influenced him to justify it.

Through three generations of this family the same could well be written. Mr. Crump had great pride in the three fine sons he and his beloved wife brought to manhood and success.

While Mr. Crump was fundamentally conservative, I cannot help but refer to him even so as a true liberal. As a review of his record will show and the people more and more realize, he believed in the most freedom possible for the individual consistent with orderly society.

For nearly a century and a half there was no memorial to Sir Christopher Wrenn, the great English mathematician, architect, and scholar in St. Paul's, the great cathedral of his building. At long last the famous epitaph was composed. That inscription known to so many of you who have visited the cathedral simply says, "Beneath lies buried the founder of this church and city, Christopher Wrenn, who lived more than 90 years not for himself but for the public good. Reader, if you seek his monument, look around you."

If there ever were a parallel in thought, it lies in this tribute to the real builder of Memphis. How true it is that the hard work of Mr. Crump will ever live in the hearts of generations unborn when we but look around.

Though he never made a public speech, he made some of the deepest and finest utterances in meetings with public delegations and with his political supporters in the privacy of his well-appointed office. Though not admitting that he was a city planner, he was constantly working for a bigger, happier, cleaner, and more prosperous Memphis.

He was interested in the building of schools and we have but to look around to see these fine physical structures. We must be reminded that he insisted that the training of our youth be left with skilled educators. He tolerated no political influence in the election of teachers nor in the prescribed courses of study.

During Mr. Crump's administration as mayor, he established the juvenile court in the days when there were few courts of this jurisdiction in the land. This court to this day has contributed immeasurably to the happiness of our youth, in the rehabilitation of those who have faltered, and in the reestablishment of broken homes. So it is in these days when juvenile delinquency presents a problem in so many concentrated centers of population, we see but rare instances of juvenile crime in Memphis and no investigating committee can find reason to seek cause and effect here.

It was Mr. Crump who established the City Beautiful Commission. He loved the beautiful and insisted on the city's physical cleanliness. The national recognition given to the efforts of the current work of the City Beautiful Commission bears evidence of its worthiness.

Looking around further we see park after park built upon his urging. I shall never forget walking with him through Hodges Field when he envisioned another place for athletic contests. The E. H. Crump Stadium will ever stand as a monument to his interest in athletics. It has provided a great outdoor arena not only for football and track events but has accommodated great religious gatherings on many occasions.

It took courage to force some transportation companies to separate grades for safety and easy movement of traffic, but the older citizens within the hearing of my voice know that he had that courage and in many instances viaducts and subways were constructed.

One of the great monuments to his memory is the beautiful Mississippi River bridge, to which I shall always refer most naturally as the E. H. Crump Bridge. The late Mr. Thomas H. MacDonald, longtime Commissioner of Public Roads, considered this the finest and most beautiful bridge built under the many years of his administration. Mr. Crump influenced the building of the beautiful approaches and the modern lighting facilities. He it was who had the vision for this necessary gateway east and west. Senator McKellar was a great instrument in its successful conclusion, and in a small way I was able to work with him and local officials and citizens of Memphis and Arkansas under the constant direction of Mr. Crump.

The Memphis harbor project so important to the future of Memphis, which will add to our transportation needs and the making of more payrolls and the spread of wealth to everybody in Memphis, was a creation of his own mind. This development already so far along in its design and building is progressing steadily toward the fullest possible accomplishment.

Years ago he became interested in cleaning up the bad conditions at our front door in the Wolf River channel. An interceptor sewer was built but we found that with the rapidly growing population and the development of chemicals and industry still more had to be done. One of his last monuments, not yet completed, is the cutting of Wolf River directly into the main channel of the Mississippi on the northern limits of our city. I am pleased to advise that we are nearing success in this matter and I have dedicated my best efforts as a member of the Committee on Public Works in the House, and as chairman of the Subcommittee on Flood Control, to its earliest possible completion.

All of you know that cheap power from the Tennessee Valley Authority has added to our prosperity and has benefited our section tremendously. Mr. Crump long ago was an advocate of cheap power and he never failed for a moment in supporting the philosophy and the objectives of TVA, and it was he who builded another monument in insisting that Memphis purchase the distribution system for electricity. Today under wise management our light division is operating on good business principles and is keeping up with the growth of Memphis most satisfactorily.

He was interested in bringing natural gas to Memphis, and all of us know the tremendous demands on our water system and the fine way in which those demands are met.

So we have another monument that will live for all time in the distribution of public utilities by a city well known throughout the country for its efficiency and its service to the people. And I should like to remind all of you that working with his long-time friend, Mr. E. W. Hale, former chairman of our county commission, he established the same unselfish interest in county affairs as he did in purely city matters, and with a recognized strong city and county government cooperating in matters of State government, we have reached a high place in the family of cities.

On many occasions Mr. Crump surprised me by his knowledge of the Bible. Undoubtedly he read it with a deep earnestness and with an amazing understanding. He had had one of the cleanest minds I have ever encountered.

An excellent conversationalist, he had in his fine brain such a wealth of general information that he could talk accurately, thoroughly, and exhaustively about any subject that could be suggested by anyone.

Mr. Crump was most highly respected as a Member of the United States House of Representatives during his two terms of service.

It must not be forgotten that he was seven times a delegate to the Democratic National Conventions, a member of the Democratic State committee for 4 years, of the Democratic National Committee for 9 years, a regent of the Smithsonian Institution, as well as a successful mortgage-loan, real-estate, and investment banker.

When I had business at the White House some years ago, President Roosevelt opened the conversation with an inquiry about Mr. Crump. He asked particularly that I urge him to come to see him. Shortly before President Roosevelt's death, he telephoned Mr. Crump and asked that he drop by to see him on a matter of some importance. Upon returning from the visit, Mr. Crump said to me, "Cliff, the President will not be with us long." In less than a fortnight, he had passed on to his reward. I have often said that to many Mr. Crump seemed to have an extraordinary ability to see far into the future and oftentimes many of us felt he could see through a stone wall.

He gave to all of us two mottoes which I have never heard used by any other man. They have been most valuable to me personally. He said, "Plan your work and work your plan." And still another was, "Observe, remember, and compare." If in every walk of life we could but observe a set of circumstances, remember them well, and compare the relationship with a problem or emergency of the moment, we could save so many mistakes in decision.

To me, this is not a sad moment. The man we honor had much too full a life for that. I must confess, however, a feeling of great loneliness and a heart filled with a longing for his counsel in these troublesome days. I like the works of the poet Edwin Markham:

"And when he fell in whirlwind, he went down
As when a kingly cedar—green with boughs—
Goes down with a great shout upon the hills
And leaves a lonesome space against the sky."

Born of a great intellect, Mr. Crump was a man of great faith, industry, and manifold experiences. He had faith in his fellow man. That faith in others led them to put their trust in him.

He had great faith in our kind of government. His life was dedicated to its preservation and its betterment. His compass was the Constitution of his country; his ultimate goal, a better life for his fellow man. To paraphrase Emerson, governments have their development in the moral integrity and character of man.

He believed in a life hereafter.

One of the imperishable yearnings of the soul of man is to live beyond the day of death. During life our departed leader created to himself an everlasting memorial. His services to his Government and, through Government, to his fellow man will go on and on. Many hereafter, because of his ennobling example, will gain inspiration to serve in the cause to which he gave his full devotion. That will be our lasting memorial in his honor.

Address by Ambassador Joaquin E. Salazar

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD I wish to include the following address made by His Excellency, Ambassador Joaquin E. Salazar, of the Dominican Republic, on the occasion of his presentation of $100,000 as the first check of the half-million dollar gift from the Dominican Republican to Dr. Fred Soper of the Pan American Sanitary Bureau in Washington:

Dr. Soper, Secretary General Dr. Mora, gentlemen, it is a most distinct privilege for me to place in the hands of the Director of the Pan American Sanitary Bureau this initial contribution by my country for the Bureau's campaign against malaria throughout the Americas.

Upon receiving the pertinent instructions from my government for this purpose, the thought immediately struck me that its financial assistance for the eradication of the physical scourge of malaria is proof anew of the dynamic spirit with which the Government of the Dominican Republic, inspired by Generalissimo Trujillo's leadership, vigilantly, and diligently endeavors to improve the lot of humankind in all spheres. Under that lofty leadership, the Government of the Dominican Republic has devoted itself these last decades to the enhancement of the dignity of man by safeguarding and improving in every possible way the living conditions of our citizenry. In following its ideals of well-being and happiness for the Dominican people, my government has clearly seen the unquestionable need for eliminating every form of misery from our communities. That is why what may be termed the Trujillo program of government can be defined as a persistent effort to eradicate ignorance, disease, poverty and all other manifestations of fear and want from our soil.

As an example of this let me point to the fact that we are conducting this very moment a nationwide all-out campaign to eliminate illiteracy from our midst. Generalissimo Trujillo has urged every person in our territory, whether Dominican or foreigner, to help in this noble cause.

Highly important aspects of this patriotic approach to the national welfare are found in the Dominican Government's work in the field of public health. Modern sanitation and unsurpassed general medical care extending from the cradle to old age, are available to everyone in our country regardless of individual financial means. And in our land malaria will soon be a thing of the past. I do not have to go into detail as to what such blessings mean for the Dominican people.

Our country's prodigious progress in all fields—political, social, and economic—is not ours alone to enjoy, but, rather, is for the benefit of men everywhere. In the moral order, we stand foremost among those nations which stanchly combat any infiltration of the deadly virus of international communism. In the material order, our service to humanity's forward march is no less conspicuous, as shown by the special contribution amounting to $100,000 which we are making today to the Pan American Sanitary Bureau as a first instalment toward a total of $500,000, for its malaria-eradication program.

Out of our sentiments of brotherhood and love that are so deeply rooted in the Dominican spirit toward anything related to this great family of American nations, in dedicated service to the loftiest ideals of Pan Americanism, I express the hopes of my Government that our contribution will go a long way in helping get rid of the physical evil that is malaria and, also, its concomitant harm to men's minds and their spirit.

Congressman Paul C. Jones

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter of appreciation which is self-explanatory.

Few men have rendered such notable service to American agriculture.

The letter is as follows:

NATIONAL FARMERS UNION,
March 14, 1957.

Hon. PAUL C. JONES,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JONES: Thank you from the bottom of my heart on behalf of depression-struck family farmers all over the country for your untiring, sincere, and effective efforts to bring about enactment of the farm income-improving feed-grain bill.

If your efforts had succeeded, almost every farm family in the Nation would have had almost one-fifth more income in 1957 than they otherwise will have. Moreover, enactment of the proposed legislation for which you worked so hard would have left the livestock-feed grain economy and the entire farm economic situation in a stronger and healthier position to face subsequent years.

I know from close personal observation that you did everything a Member of the House humanly could to bring about enactment of this income-improving bill. While the temporary setback that family farm forces received is a disappointment to all of us, you may be sure your efforts were not entirely in vain. The fight you made has become part of the record of farmers' long, uphill struggle to attain a full parity of income and living standards in a prosperous expanding national economy.

Personally, may I thank you for the fine, courteous, and cooperative way in which you have helped me to make my feeble efforts as effective as the circumstances permitted.

Sincerely,

J. A. BAKER,
Coordinator of Legislative Services.

Russians Are Trying To Bully Us and Hoax the World, Says Truman

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. McCORMACK. Mr. Speaker, former President Truman, as President, and now as former President, always spoke or speaks with firmness, directness, strength, and with consistency. The whole world, Communist controlled and non-Communist, knew that, first, President Truman made his own decisions, and second, that when he made them he meant them.

Before making any decision on foreign affairs, he always saw that friendly nations and allies of our country were consulted and advised. He never did anything that would cause a friendly nation to think it was slighted or cause them to impugn our motives, particularly from the angle of respect and friendship.

He is one man the gang of conspirators in the Kremlin respected, because they feared him.

They know that Harry S. Truman is a true leader—a man of decision. They also know that Harry S. Truman is a man of courage—a warrior.

The conspiratorial gang in the Kremlin, and their associates elsewhere, know that he will not fall for their "soft-soaping" tactics; that he would not follow the road to appeasement to another Munich for the West. They also know that Harry S. Truman as President, and now as an elder statesman of the United States, knew and knows the cold, cruel, destructive mind of a Communist-in-fact, with their origin of "hate" of all peoples and all governments who do not agree with or submit to their will.

In an article appearing in the Boston Sunday Globe of April 28, 1957, as well as other newspapers throughout the country, which I include in my remarks, former President Truman again gives his keen knowledge of the intent and purposes of international communism, warning the American people of the danger of falling for changed Communist tactics—not any changed intent—and clearly showing that the conspiratorial intent of international Communist to world revolution and thereby world domination, still exists.

It would be well for our people, and the peoples of other countries outside the sphere of Soviet—Communist—domination to pay heed to the views of former President Truman, for his views are those of the man of actual experience.

Our country and the free world, with the chances of a future world of peace, would be better off if President Eisenhower subordinated whatever personal feelings he may have against former President Truman, and sought his direct and active advice and assistance in these trying days that the world is undergoing.

Former President Truman knows that "soldiers fight when statesmen fail" and

that whenever possible to avoid it, the United States should not try to go it alone.

The article follows:

RUSSIANS ARE TRYING TO BULLY US AND HOAX THE WORLD, SAYS TRUMAN—MANKIND IS SICK WITH ANXIETY AND FEAR OF ANOTHER WAR—RUSSIA LIKES IT THAT WAY

(By Harry S. Truman)

The Russians have reached a new climax in their campaign of fear. They are trying to make Western Europe surrender to their Communist designs. That is the main reason behind their series of nuclear explosions and their thinly veiled threats of annihilation in their recent messages to European capitals. Their object is to disarm and disrupt the free world.

The Russians like to pose as a peace-loving nation, anxious only about its own security and survival, when, in fact, the real purpose of the Kremlin is to terrorize free nations into coming under its influence.

I am sorry to say that there are some people who cry peace, peace with the Russians when there is no peace, just as Jeremiah lamented in Babylonian times. There are those today who do not realize that unless the free nations face up to the Bolsheviks and meet strength with strength, there can be but one kind of peace—a Hungarian peace on Kremlin terms.

I believe the Russians are attempting to do three things: They are trying to intimidate the free world: they are trying to break up the NATO alliance; they are determined, at any cost, to achieve supremacy and domination in the nuclear field.

The Russians are taking advantage of the opportunity we gave them in the Suez misadventure to drive the western allies still further apart. In the typical Russian fashion of exploiting the fear of nuclear war, they are combining an unusual number of nuclear explosions with threats of destruction to independent nations in the west, the south, and the east.

We must be neither intimidated nor beguiled into lowering our guard by naively believing that the Russians are now really serious in seeking better relations with us and our western allies.

We must not again make the mistake we made at the Geneva "summit" Conference when our Government wishfully mistook the grinning tactics of the new masters of the Kremlin as a sign of a reformed Russian approach to world peace.

In fact, the Geneva Conference proved to be a major hoax to cover Russian maneuvers for penetration of the Middle East. One of Russia's historic aims has been the control of the Middle East through the Black Sea Straits.

I speak with some experience when I urge that we should never again meet with the Russian rulers outside of Washington.

Three Presidents of the United States have gone to meet the Russians at places suitable to their convenience and needs.

We in the United States and the free world have waited patiently for the emergence of a truly peaceful Russia. We will be the first to welcome and cooperate with well-meaning Russians for world peace.

But pending the emergence of a truly peaceful Russia, we must not forget that the only thing the masters of the Kremlin have ever understood is force. For that reason we are compelled to maintain our strength and to help maintain the strength of the free world.

This is no policy of despair; it is the course of prudence and hope. Time is on the side of the free peoples of the world, and until the Russian people are free to assume their responsibility in helping to guard the peace of the world, we must do everything we can to discourage Russian dictators from embarking on mad ventures which will lead eventually to World War III.

I strongly believe, therefore, that Great Britain and the United States should continue as expeditiously as possible whatever experiments are necessary to maintain our supremacy in the nuclear field.

Let us bear in mind that our continued experiments should also enable our scientists to find new ways of harnessing nuclear energy for peaceful purposes. We have already learned many important facts from our tests with the hydrogen explosion.

I, for one, have some misgivings about our negotiations for a so-called open sky.

I would suggest that from above the surface, even with the most sensitive equipment, we will be able to see only what the Russians allow us to see. Until we have full and equal inspection on the ground as well as underground, we may find ourselves in a position where we are likely to lose more than we can gain.

At the very moment the Russians are bullying us and our allies with their large assortment of nuclear explosions, they are attempting, at the same time, to deceive the world by saying they are prepared to stop their own tests, on the condition Britain and the United States agree in advance to stop their tests.

For one thing, let us remind the Russians that when we make agreements, we keep them. The Russians have another code when it comes to agreements. They keep only the ones that suit their purposes.

Therefore, I am of the opinion that there can be no agreement on nuclear tests or nuclear weapons control except under a system of rigorous and continuous mutual inspection.

I would ask the Russians if they are prepared to let our inspectors see for themselves what they are really doing. If not, we must remain on guard and continue to suspect the intentions and motives of the Russians.

This is a state of affairs which the world cannot too long endure. All the peoples of the earth want peace, but the Russian Communist dictatorship persists in blocking it.

For 12 years, since the end of the Second World War, the Kremlin dictatorship has not ceased its relentless harassment of every effort the West has made to reach a working agreement with Russia.

The cold war persists even after the death of Stalin, and the brief campaign of de-Stalinization that intrigued the world tempted some of our people to hope that a new Russia had emerged.

Russia has known all along that she has nothing to fear from us in the way of aggression. All she needs to do in the interest of her security is to attend to her own business and leave the rest of the world alone, as we do.

We have no territorial ambitions, nor are we interested in building up an empire of satellite states.

Quite to the contrary, we have been encouraging and helping self-determination and independence everywhere for all peoples who feel ready for it.

But the Soviets are again using the pretense that the United States is doing everything possible to encircle Russia. The masters of the Kremlin know full well that the United States and her friends and allies act solely for defense and for no other purpose. That is true even in the face of constant Russian truculence, subversion and infiltration. We have only to look at the recent troubles they have stirred up in the Middle East.

They are back at their old tactics of simultaneously offering peace pacts and threatening to unleash a hot war upon those nations that stand up to them and refuse to submit to their terms.

The Soviets would have us settle for what they call coexistence. Their idea of coexistence is, in reality, a nervous and perilous truce which could leade to war. Coexistence is Russia's device to avoid making the necessary concessions for an assured world peace. In fact, coexistence is Russia's idea of making everybody do what Russia wants.

There are some people, and I regret to say some governments, who have not accepted the fact that but for Russian intransigence the world would now be enjoying the pursuits of peace.

Mankind today is sick with anxiety and torn by fear of another world war, solely because Russia wants it that way.

It is up to Russia to dispel the belief that she cannot achieve her legitimate aims in a free and peaceful world. She can achieve peace, if she really wants it, as all other nations do.

For if Russian performance were up to its pretended peaceful propaganda, there would have been no conflict in Korea, no Far East crisis and no Middle East crisis. There would have been no slaughter of Polish and Hungarian people, and no crushing burdens of an armaments race. The world would be directing its energies toward production for peace and the improvement of the standards of living of all peoples everywhere.

Every attempt to reason with the Russian dictators and every effort at reasonable compromise and conciliation have failed.

More than ever now our foreign policy needs to be clear and unmistakable. Let us stop running around the globe with disjointed pieces of policy pulled out of the air and made on the fly. Let us have real frankness and bipartisanship in the administration's relations with Congress. We must check the growing skepticism that in our foreign policy we don't know where we are going or what we are doing.

Above all, let us be sure that the Russians and our allies do not continue to have that idea.

Employment of the Handicapped: A Community Responsibility

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am proud to insert an essay on community responsibility for offering employment opportunities to the physically handicapped. This essay was written by a very intelligent young lady in my congressional district. It placed fifth in the 1957 national essay contest conducted by the President's Committee on Employment of the Physically Handicapped.

The author is Miss Clare Frances Connors, of Mechanic Street, Bellingham, Mass. Miss Connors and the other contest winners will receive their awards from the hands of President Eisenhower at the annual meeting of the President's Committee on Employment of the Physically Handicapped on Thursday, May 23.

As Miss Connors' representative in Congress, I am delighted with her success. I share in the pride which I know her family and all her friends and classmates must feel. Miss Connors is a student at St. Mary's Central Catholic High School, in Milford, Mass., which will share in the honors accorded Miss Connors. There will be presented to the school a wood and bronze wall plaque

which will be a permanent record of the achievement of Miss Connors and the school where she has had such excellent training.

The essay follows:

EMPLOYMENT OF THE HANDICAPPED: A COMMUNITY RESPONSIBILITY

(By Clare Frances Connors)

"We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." These ideals, taken from the Declaration of Independence, are dear to all Americans. Our forefathers died for them; our democracy was founded upon them; our lives revolve about them.

"Life, liberty, and the pursuit of happiness"—the most treasured rights in all our heritage. And yet, they are actually being denied to a certain group of our fellow Americans—right here in the "land of the free and the home of the brave." I am speaking of the handicapped. For centuries these unfortunate people have been misunderstood, neglected, and sometimes even mistreated. And even today, in our land of freedom and brotherly love, they have been forgotten to a great extent.

I am not saying that we have imprisoned them, or that we have afflicted them in any corporal way. But how can a man consider his life fruitful and purposeful when he is banished to the care of relatives or placed in a rest home, there to spend his days in empty idleness? Is this the life meant by our predecessors in the Declaration of Independence? Obviously not. Can a man truly possess liberty when he must depend upon the generosity of others for the very necessities of life? Again, obviously not. Furthermore, can a man truly be said to be engaged in the "pursuit of happiness" if he is not given the opportuity to develop his talents and abilities? Again, we must admit that he cannot.

But what can be done to aid these physically handicapped people to enjoy the fruits of liberty? The answer to this problem lies in one word—employment. Employment gives a man much more than money; it gives him a sense of security and independence, and, above all, it enables him to feel that he is making some worthwhile contribution to civilization.

In the past, and even at present, employers have been most unwilling to hire physically impaired workers. "It is not good business to hire the handicapped," they objected. "My other employees do not like to see them around; they make my establishment appear to be a charity concern; and they drive away business, for customers do not like to see them or ask them for service."

These and other objections were answered by the handicapped themselves when their opportunity to prove themselves came during World War II. At this time, most of America's able-bodied sons were sent overseas, and the shortage of manpower became so crucial that employers were eventually forced to hire handicapped workers to maintain the wheels of industry.

Contrary to their expectations, employers found that the performance of the handicapped compared favorably with, and, in some cases, even surpassed that of able-bodied workers. Although this discovery caused many employers to reverse their policies and hire handicapped workers, there still remain many more who cling to their former ideas. Therefore, since the handicapped have proved themselves to be steady, loyal, contented, and competent workers, we can see that a tremendous amount of potential manpower is being wasted due to the obstinacy of employers.

The employment of the handicapped is a community responsibility. After all, what is a community? A large collection of homes, business buildings and public utilities? A political division of territory? A group of people having common interests and ideas? Yes, the community is all of these, but it is also something much more important—a group of people having a common goal—the general welfare of all—in which each member cooperates in attaining that goal.

The "general welfare of all" has many aspects. Among these are the social, economic, and moral aspects. Socially, a community cannot function perfectly unless all of its members are playing their proper roles. But what of the handicapped? Can they be considered to be in their proper roles when they are left to be a family burden or a public charge? No, their proper role is like that of any able-bodied member of the community—being employed in some work which benefits the community as a whole. Therefore, if a community desires social harmony, it must enable the handicapped to utilize their abilities for the common good.

The economic prosperity of the community depends upon the manner in which it utilizes its resources. When members of the community refuse to employ their fellow citizens merely because they have a physical handicap, the community is being deprived of its potential manpower.

The moral law requires us to render to each man his due. This is especially binding in the case of the employment of the handicapped. For, if a man demonstrates ability to perform a certain service, and is conscientious and willing, justice certainly demands that he be given the opportunity to prove himself. It is, then, the moral obligation of the community to give all of its handicapped members a chance to demonstrate their capabilities.

Much can be done about this great responsibility of the community. Private citizens can do a great deal to arouse public opinion. Civic groups can be organized for the purpose of alerting employers to the value of handicapped workers. And eventually the community as a whole, abandoning the phrase "Let George do it," will take up the motto of the current craze, "Do it yourself," until the combined efforts of all will finally succeed in abolishing the greatest handicap of all—unemployment.

I, Me, My, Mine

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. CANNON. Mr. Speaker, under leave to print I am enclosing correspondence which is self-explanatory:

NEW YORK, N. Y., *April 18, 1957.*

DEAR REPRESENTATIVE CANNON: May I respectfully register the fact that as a voter, I agree completely with the New York Times editorial position on the irresponsibility and politically prompted motives behind your committee's actions in its un-thought-through cuts in appropriations. And may I further state my belief that the American public as a whole, having voted overwhelmingly for President Eisenhower and his program, will prove to have long memories politically on your present actions.

Sincerely,

M. MCCRUM.

APRIL 22, 1957.

DEAR SIR: In response to the accompanying letter of April 18, 1957, who in the world would consider it politically expedient to deny appropriations?

I take my political life in my hands every time I vote to cut these topheavy budgets. But I have been here so long that I can afford to vote for the general welfare and the solvency of the Government notwithstanding the bludgeoning assaults from the lobbyists and special interests and self-seeking pressure groups who jam Washington and the corridors of the Capitol and fill the mail with letters like yours.

With best wishes.

Very truly yours.

CLARENCE CANNON.

Crisis in Middle East Eyed

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an interesting article entitled "Crisis in the Middle East Eyed," appearing in one of the strongest Republican papers in the country, in its April 28, 1957, issue, and written by George Minot, an outstanding member of his great profession.

In his article George Minot gives an idea on several questions of import to our people of the real views prevailing among the 1,200 members of the American Newspaper Publishers Association, at their meeting in New York City last week, and gives an idea of their concern about certain policies and actions of the present Republican administration.

The article follows:

[From the Boston Sunday Herald of April 28, 1957]

CRISIS IN MIDDLE EAST EYED

(By George Minot)

There were two things on which the 1,200 members of the American Newspaper Publishers Association agreed at their meeting in New York this last week. One was that there is no sign of a letup in the increase of individual prices and services. The other was that in this country people will spend more money, have bigger incomes and pay larger taxes in 1957 than in any year in history.

As was the case last year, they were an outwardly optimistic crowd. But if you went to enough of their gatherings, and sat around late enough into the night, you would find that off the record a great many of them were worried about costs, creeping inflation, and such things as consumer-price indexes.

INFLATION STALKING NATION

The rise in prices in March was only two-tenths of a point, and of itself it might be dismissed as of little or no importance. But editors and publishers from one end of the United States to the other and from Hawaii, Peurto Rico, and Canada were quick to point out that the March rise represented the seventh such monthly rise in succession. Consumer prices now have risen without interruption for a full year. In that time they have moved up from 114.7 to 118.8, which is 3.7 percent.

William Dwight, of Holyoke, president of the association, found this problem of inflation stalking across the room in a discussion of scores of individual topics on the program. The system of life we have developed in the United States is at stake, was the way he put it.

If you wanted to find what executives from the Atlantic to the Pacific thought about the way things were going, you probably got a better idea by sitting in with informal groups at luncheons, in hotel lobbies, or the proverbial smoke-filled rooms at night. Here you would run into topics like these:

BIG BUDGET NOT POPULAR

Ike and his health: This was the one question you ran into most often. There seemed to be sincere and affectionate interest in that. The answers were all to the good. Two or three of the publishers had visited the White House in the last month. One had played golf with him in Augusta. Another had attended one of the famous stag dinners last week. From all the story was the same. Ike is fine. He feels as good as he looks. His cough is gone. He never has been more sharp, more alert, possessed of more poise, working harder.

The budget before Congress: Very few persons like it and not too many understand it. This is how John S. Knight, publisher of the Chicago Daily News, expressed it: "When Mr. Eisenhower was elected he talked about reducing our commitments, but now they seem actually to have been expanded. Another change is in his attitude toward the size of Federal spending. At first he talked of the prudent use of the taxpayer's dollar—the emphasis was on governmental economy. Then he came up with the largest peacetime budget in history. The people are at a loss to understand why this is so."

Norman Chandler, publisher of the Los Angeles Times, was more emphatic than many others that the budget should be sharply cut. "The minimum cut should be $5 billion," he said.

The state of business: You didn't have to be around New York long last week to discover that the scare about business conditions was over. Analysts who were gloomy in January were optimistic again. Now they will tell you 1957 will be one of the best in the history of American business. It may not be a recordbreaker, or show a gain over last year, but it will be good by almost any standard. In nearly every activity, in almost every section of the country activity is at a high level. Obviously the economy is not headed for a bust. Home building, hurt by tight money, is picking up sharply again on the Pacific coast. Automobiles, slow in February and early March, are getting the upturn expected in April. It seems certain the industry will sell more cars in 1957 than in 1956.

WHOSE CRISIS IS IT?

The recurring crisis in the Mid East: The idea that every time a place like Jordan gets into trouble or King Hussein fails to manage his affairs, then it becomes our crisis, is a proposition that fails to gain much enthusiasm among newspaper publishers. The best thing Washington can do is to keep out of it, was a statement you heard more and more often when you asked why we shouldn't be alert to rescue the situation in the Middle East when and if it gets out of hand. And the warning of the President the other day that the United States regards the independence and integrity of Jordan as vital clarified nothing.

"It is one thing," said a New York publisher, "to pledge support to nations—if they seek it—beset by armed aggressors. It is something else again to flirt with a foreign policy that makes every political crisis of every nation our responsibility."

The people around Ike: During the first term, Sherman Adams, former Governor of New Hampshire, was closer to the President than anybody else. The same thing is true now. "Of all those with me in the Government, he comes closer to knowing what I am trying to do." That is the way Eisenhower put it 3 or 4 years ago and he said exactly the same thing to one of the publishers within the last month. A number of those at the New York meetings deplored the influence of brother Milton on the President. He is supposed to be a great advocate of big spending in both foreign and domestic fields. The thinking of brother Edgar drew considerable applause from the New Yorkers. "The Republican Party could do a lot worse than draft him to run in 1960," said one of them.

DULLES VIGOROUS, ROBUST

The speech of Secretary Dulles at the big Associated Press luncheon, billed as a major foreign policy address, fell flat. Not a flutter of applause broke its 30 minutes. He told the satellite countries they are not forgotten, that we never will make a deal with the Reds and that we aren't trying to reunite divided nations. Few could see anything new in that. Incidentally, Dulles never looked more vigorous or in better health.

Modern Republicanism: It might be amusing here to repeat the standard greeting handed out by some members of the Washington press corps attending the meetings:

"Are you a modern Republican?" And your answer was supposed to be:

"Certainly not. My father and mother were married."

The Twin Enemies of Freedom—Communism, Like Crime, Advances and Takes Hold Because Men Ignore God—Communism Denies and Destroys Every Spiritual Value

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present copies of correspondence between myself and Mr. J. Edgar Hoover in which it will be noted he granted me the privilege of including in the CONGRESSIONAL RECORD the text of his address before the 28th annual Convention of the National Council of Catholic Women on November 9, 1956, in Chicago, Ill. I am sure that every Member of this great legislative body will be pleased to have the text of this important speech by this distinguished American available to full reading.

Being a member of the House Un-American Activities Committee you will naturally expect me to call your special attention to Mr. Hoover's comments on the subject of "Communism."

The letters and address follow:

JANUARY 10, 1957.

Hon. J. EDGAR HOOVER,
Director, Federal Bureau of Investigation, Department of Justice,
Washington, D. C.

DEAR FRIEND: On November 9, 1956, you delivered an address before the National Council of Catholic Women at Chicago, Ill., entitled "The Twin Enemies of Freedom."

If you have no objection I would appreciate very much having the privilege of presenting this to the House of Representatives and ask unanimous consent to have same printed in the CONGRESSIONAL RECORD.

Thanking you for your consideration of this request, I have the honor to be,

Cordially,

CLYDE DOYLE,
Member of Congress.

UNITED STATES DEPARTMENT OF JUSTICE,
FEDERAL BUREAU OF INVESTIGATION,
OFFICE OF THE DIRECTOR,
Washington, D. C., January 15, 1957.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have received your kind letter of January 10, 1957, and I am happy to enclose a copy of my November 9, 1956, speech before the National Council of Catholic Women which you may certainly feel free to have included in the CONGRESSIONAL RECORD.

Your interest in this regard is indeed encouraging.

Sincerely yours,

J. EDGAR HOOVER.

THE TWIN ENEMIES OF FREEDOM

(Address of J. Edgar Hoover, Director, Federal Bureau of Investigation, before the 28th annual convention of the National Council of Catholic Women, November 9, 1956, Conrad Hilton Hotel, Chicago, Ill.)

I am honored to discuss with this outstanding group of "career" women a matter of pressing urgency to every home in America. I say "career" women because I feel there are no careers so important as those of homemaker and mother.

As homemakers and mothers, you must be disturbed, as I am, with the continued advance of the twin enemies of freedom—crime and communism. These evil forces menace not only the security of our Nation but they also menace the homes of America, which are the foundations of our civilization.

Statistics show that before this year comes to an end, 1 out of every 16 homes across the land will have been blighted by sorrow and misery because of crime. Lawlessness will deprive some of these homes of their breadwinners and leave disgrace, shame, and heavy hearts, as their loved ones join the ever-expanding forces of the lawless.

Recently, newspapers carried a heartwarming report that church membership in America has now passed the 100 million mark. That is good news for all of us. But this good news was marred for me by the knowledge that nearly 11½ million persons have been arrested for serious offenses, or to bring this dreadful fact into sharper focus, 1 out of every 15 persons in our Nation has a record of arrest for a serious offense.

Those who look upon life in the abstract might hold to the view that the number of arrests is not a true yardstick for measuring the extent of lawlessness. I invite them to look at the record of convictions. This record shows that more than 5½ million persons have been convicted for one or more violations of the law, or 1 out of every 29 persons in the land.

In this age of materialism, all too frequently crime is considered merely in terms of dollar costs. It is a shocking fact that crime costs every home in America $467 a year—an estimated total of $20 billion each year.

The staggering cost of crime in dollars and cents becomes more realistic when we face the fact that for every $1 spent on education, $1.29 is spent on crime. For every $1 contributed to the churches of America crime costs $12. Our national debt could be wiped out completely in 14 years if this money were used to reduce that debt rather

than to pay tribute to the lawless. But unfortunately the real cost cannot be measured in monetary terms.

Some 11½ million people in these United States have either been disgraced or have had their lives completely ruined in their attempts to live outside the law. If a person wants to throw his life away, he has that choice. But it is not a right; because the innocent suffer more than those who violate the laws. The real tragedy of crime lies in the suffering of its innocent victims. In any 24-hour period, 7,094 serious crimes are committed across our land. Every time your watch ticks off 12 seconds you can record the occurrence of a serious violation.

I believe the basic source of pressures for peace and security lies with the women of America. The fact that you have gathered here in Chicago in convention is proof that the necessity for militant action to sustain the American way of life is obvious to you. For today, a dangerous complacency threatens to blind our people to the menaces which would destroy us unless they are recognized and curbed.

Textbooks are filled with theories on crime causation. There are many contributing factors to crime, but the real cause can be stated in simple terms: crimes are committed by those who lack a sense of moral responsibility. For the most part, they commit crime knowingly and with deliberate intent. If we are to live in an America free of crime, if we are to see a better world, then we must live by and teach the golden rule.

Criminals are made—not born. The blame for crime must be placed where it rightly belongs—upon the adult. A new sense of responsibility must be born in the home if we are to reverse the rising trend of youth toward lawlessness. Reasonable discipline, administered with consistency, is essential in developing a stable individual.

The crime problem is basically a youth problem. In the past 4 years, while the number of 10- to 17-year-old children in this country increased 10½ percent, arrests of boys and girls in this age group increased nearly 21 percent. Youths are committing more serious crimes with increasing frequency, and this is a source of real alarm in every community in the land.

Last year 2,262,450 major offenses were committed by the Nation's crime army. A little over 42 percent of these crimes were committed by children under 18, and nearly half of these were under 15. The 10- to 17-year-olds last year were involved in 62 percent of all arrests for automobile thefts, 53 percent of all arrests for burglary, 47 percent of all arrests for larceny, and 21 percent of all arrests for robberies.

This situation, in the final analysis, is not the failure of youth but the failure of adults. The fact remains that out of every 100 boys and girls in the 10 to 17 age group, 97 live law-abiding lives. There is nothing basically wrong with the youth of the land. Youth needs only to be guided along the proper path. A youth's intelligence must be anchored in morality to give him the ability to determine right from wrong, good from bad, and the true from the false. Given discipline, young people will learn self-discipline; given training, they will learn to live useful lives. The 3 out of each 100 who annually break the law have wandered into a morass of disbelief—where they have no faith, no belief in a Supreme Being, no respect for the rights of others, no belief in the dignity of man, and finally, no belief in themselves.

There must be training for parenthood as well as a fixing of responsibility for the failure of parenthood. Too many parents allow their children to run free with no check on what they do, where or with whom they go. The result is a juvenile jungle. Too many homes breed juvenile delinquents through parental neglect. Too many children are left to shift for themselves—hungry, helpless, loveless.

When parents are not sufficiently interested to know where their children are and what they are doing, the risk for their future is grave. It is the parents who should be brought before the bar of justice to account for their stewardship when their children go astray. The parents are responsible to a great extent for the sins of their children. The parents should be held morally, legally and financially responsible.

I have studied the case histories of thousands of criminals. In almost every case, the failure to develop character is directly attributable to lack of proper influence and guidance in the home. Unfortunately, the home no longer provides the inspiration for right living. The American home must become again a center of learning how to live as well as a center of living.

Modern society is geared to a fast tempo; there are great demands on the parents to provide the material necessities for their children. Too often, the primary need for sympathetic and spiritual guidance is neglected and the child is deprived of the very element which is most essential to stabilize him emotionally and to aid him in his growth toward maturity. As a result of this thoughtless neglect, society suffers.

What is needed is to restore the home to its proper place where the lessons of the Golden Rule are translated into daily living, where the members of the family counsel and aid each other, and where each has a share in the responsibilities of home life.

What is needed is a return to the home where parents are companions of their children as well as the providers of the necessities of life, where parents share their leisure time with their children, and where children are taught the spiritual and civic responsibilities of manhood and womanhood. A child above all else needs the firm moral backing of a conscientious mother and father and the love, understanding and security that a good Christian home affords.

What is needed is gerater participation by parents with their children in the programs of the church, the school and the community. What is needed is to cease being "penny-wise and pound-foolish" in providing for our churches, schools, and community facilities.

What is needed is a greater interest in and knowledge on the part of parents of the needs of local law enforcement agencies to the end that those agencies might have the support and the facilities so necessary to protect the homes of the land. Good government does not just happen—it is the result of the constantly vigilant efforts of the many who selflessly strive to build a better community, and beyond that, a better Nation and a better world.

What is needed above all is to practice the living faith of our fathers in our daily lives and a dedication to making the Kingdom of God a reality on "earth as it is in Heaven."

The neglect in the training of so many of our Nation's youth, their lack of spiritual nourishment, their ignorance of the great truths of the Bible, and the tragic void of God and prayer in their lives weaken our homes and our Nation's welfare.

Secularism is not necessarily an evil of immorality and excesses. More often it is the evil of nonmorality and indifference. That is why I say the greatest crime is the toleration of crime.

Neglect at home and lack of discipline in the home are two of the main reasons for juvenile delinquency, it is true, but the basic cause of the present situation is that so many of our young people have no real sense of moral responsibility which comes from an intimate knowledge of God's teachings. This is essential to meet the criminal enemies of our freedoms.

It is essential in order to meet the Communist enemy of both our spiritual and physical freedoms.

Communism, like crime, advances and takes hold because men ignore God. The real danger in communism lies in the fact that it is atheistic and seeks to replace the Supreme Being. Communism is secularism on the march. It is the mortal foe of all the world's religions which acknowledge the existence of God. Either the faith of our fathers will triumph or communism will engulf us. In this land of ours the two cannot live side by side.

Nowhere among the leaders of the Communist Party in the United States, Russia, Red China, or in any other part of the world will you find one who loves and believes in God. God is truth. Communists hate truth and, therefore, they hate the church.

One of the slogans of the Communist Revolution in Russia in 1917 was: "Religion is the opium of the people."

This was first uttered by Karl Marx, the founder of communism, in 1843. Lenin, now resurrected by the Kremlin as the Communist idol and guide of the present and future, restated it in 1905. And last year, Nikita Khrushchev, the present head of the Russian Communist Party, publicly proclaimed that Communists have not changed their opinion on religion and said: "We remain the atheists that we have always been; we are doing all we can to liberate those people who are still under the spell of this religious opiate."

When Communists temporarily and passively tolerate religion, it is for the purpose of furthering communism. But time and again they have struck ruthlessly against Christians, Jews, and other faiths, torturing, imprisoning, and murdering those who hold God above the state. Those who hate God always bring misery in their wake. They are brutal, cruel, and deceitful. Communism denies and destroys every spiritual value. No church and no church member can temporize with it.

And now the American Communists would have us believe they have changed their philosophy. What a farce that is. They now even deny their allegiance to the Soviet Union. They now speak of advocating a "peaceful and constitutional road to socialism in our country." Communism in America would garb itself in new and more respectable raiment, but it is the same old conspiracy against human dignity and freedom it has always been and always will be. The Communist conspiracy is as deadly now as it was before the Geneva Conference because of its false smiles.

The "big lie" technique originated with the Communists and has been perfected by the Communists. Largely through this technique, backed with a ruthlessness which challenges the imagination, one-fourth of the world's surface and 1 out of every 3 persons, or 900 million souls, are under the influence of the Red star. The Communists never have taken over a country by a majority vote in a free election. There are only 25 million Communist Party members in some 60 countries of the world, a bare 3 percent of the people enslaved. They have attained their tyranny through infiltration and by brutal force, by seizing leadership of key organizations, popular fronts, and lulling the vigilance of patriots with propaganda, lies, and deceit.

We relax our vigil at our peril. In dealing with the Kremlin and its followers the road of appeasement is not the road to peace. It is merely surrender on the installment plan.

The American public must not be lulled into complacency by the new Communist propaganda line. It is just another Leninist tactic. Lying, twisting, and turning are their time-proven techniques to gain their ends.

The current Communist tactics do not change the basic goals of Communist con-

quest; they do not change the basic Communist techniques; they do not mean independence from Soviet Communist leaders; and they do not represent any change of heart or a lessened antagonism toward religion. Communists shift from violence and threats of violence to rely temporarily upon enticement, duplicity, and division. The current Communist tactics are designed to win again by deceit the influence and alliance the Communists once enjoyed with some well-meaning but unsuspecting progressive-minded persons in our Nation. These tactics are designed to develop a broadened base for the advance of Marxist socialism; and primarily they are designed to evade American justice and the relentlessness with which the Communist Party has been prosecuted by the United States Department of Justice in American courts and exposed by congressional committees and the American press.

Communist concessions are never made with peaceful intentions, nor with honor, nor with honesty, and the Communists have proved time and again, when their false smiles will not gain their objectives, that they have no hesitation in using tanks and machine guns to achieve their purpose.

Lenin said with utter frankness, "Concessions do not mean peace with capitalism, but war on a new plane."

American Communists have not suddenly become good citizens. They are merely making war against America on a new plane.

In fact, there is nothing really new in the current Communist tactics. The American Communist Party, from the time of its inception here in Chicago in 1919 until the present, has changed its name 9 times. The constitution of the Communist Party in this country has been changed 17 times, zigging and zagging for the attainment of its diabolical ends through deception and double talk.

If the party runs true to form, it will change its constitution again next February, and perhaps its name, when it meets in convention in New York City. Regardless of what it does—of this you can be sure—it will be the same old crowd at the same old stand banded together for the same old purpose—to advance the Communist cause and to serve the Soviet Union. They will use the same old techniques with which they have hoodwinked so many people in the past.

The women of the Nation must make their contribution by raising their voices to preserve the American way of life and to counteract the Communist attacks against our laws which have so effectively been applied to curbing the Communist program with its criminal ends. The chief objective of Communist attacks will be to discredit acts of Congress; the courts; the prosecutions of the United States Department of Justice; and the FBI.

The strategy of the Communists to get others to front for them and do their dirty work cannot be underestimated. To illustrate, last Christmas 42 persons signed a petition to request Presidential amnestry for the Communist Party leaders convicted under the Smith Act for conspiring to teach and advocate the overthrow of the Government of the United States by force and violence. Not only did these persons ask the Government to release a group of Communist conspirators from prison to observe a Christian holiday which they would destroy, but they asked that the sentences of these atheists be commuted to the time already served. Even more shocking is the fact that half of the signers of the petition were clergymen, professors of theology, or persons who were engaged in other religious positions. Another such petition is now in preparation to again ask for the release of those who would destroy the American way of life.

This is not an isolated example. Last year a legal brief was filed with the United States Supreme Court urging that the Internal Security Act of 1950 be declared unconstitutional. This legal brief had been initiated by 18 persons. Nine of these persons, exactly one-half, were members of the clergy. Of the 360 persons who signed the brief, some 100 were clergymen.

Because they despise the church, the Communists continually attempt to infiltrate unsuspecting religious organizations. What better cloak of legitimacy can be found for their programs than to present them as the offerings of clergymen and churches?

One of the oldest Communist techniques is to use others to do their dirty work. Communism, they say, must be built with non-Communist hands. Today there are less than 20,000 Communist Party members in the United States. But the party's actual strength never can be measured in terms of members because thousands of bleeding hearts, pseudoliberals, sympathizers, and dupes always stand ready to lend their aid when their services are needed.

The record clearly establishes that Communist Parties have the power of swift and solid growth when the opportunity arises. When the Communist Party membership was at its peak in the United States a decade ago, it was stronger in number than the Soviet Communist Party when it seized power in Russia. In Italy, the Communist Party once dwindled to only 15,000 members and then increased to more than 2 million. In Red China, a small inconsequential party of less than 10,000 grew to more than 6 million.

The national chairman of the Communist Party of the United States, William Z. Foster, has correctly said: "The actual strength of the Communist movement in the United States is not something that can be accurately stated in just so many figures. It has to be measured largely by the general mass influence of the party and its program."

Our most effective defense against this conspiracy lies in our basic American faith in God, an ardent fervor for liberty under law and justice for all, and belief in the God-given rights of individuals. Morality and religious convictions stand as major obstacles in the path of Communist progress.

Even today, in the lands where Red tyranny reigns, the fires of freedom are burning as never before. Incident after incident has come to light where patriots were willing to shed their blood to feed the fires for freedom which one day will burst into a giant conflagration which even the dictators' heels of might cannot stamp out. The fact that physical and mental torture, slave labor camps and brutal murder do not stay man's selfless drive toward freedom for all mankind has baffled the Red Fascists, because they do not know God and His way.

To a people who still love freedom and who still look to a Supreme Being, their sacrifices shall not be in vain because one day the Almighty will wreak vengeance on this atheistic, terroristic tyranny. Communism runs counter to the aspirations of the human heart. The Communist way eventually will perish from this earth because it prostitutes truth, because it is heartless and cruel, because it is evil and because it denies the existence of the Omnipotent. We pray for the coming of that day.

We must strive to overcome the apathy, ignorance and guile which nourish the twin enemies of our freedom—crime and communism. Let us never forget that strength and good character, like charity, begin at home. So long as the American home is nurtured by the spirit of our Father in heaven and is a center of learning and living, America will remain secure.

A Reducing Diet for Government

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Boston Sunday Advertiser for April 21, 1957, on taxes, inflation, and the cause of it all, Government spending:

A REDUCING DIET FOR GOVERNMENT

If your doctor tells you to get rid of a lot of overweight that's endangering your health, you'd be foolish to go on slinging whipped cream desserts down the old gullet. Wouldn't you?

Well, your Uncle Samuel, the gent in the stars-and-stripes suit, is ignoring the doctors' orders just that way.

Twice in the last 10 years, first from 1917 to 1949 and again from 1953 to 1955, a team of economic medicos did a real overhauling job on the Federal Government's anatomy.

Their diagnosis: Uncle Sam packs too much fat for his health.

The doctors, known as the first and second Hoover Commissions, prescribed a diet each time. The first time they found 273 items on the Federal menu that were too rich in calories. The second time they urged restraint or elimination of 314 items. Many of those were on the original diet list and ignored.

MD'S ADVICE BRUSHED OFF

But Uncle Sam, like the patient who thinks he knows more than the doctors, hasn't reduced. In fact, he has added weight.

Your high taxes are paying the tab.

And you're paying it in more ways than taxes. In 20 of the last 25 years, the Federal Government has operated in the red, spending even more than the taxes you pay. That has been a big factor in the inflation that makes your dollars buy much less.

The State and local governments aren't streamlined sylphs, either. They're all overweight like Uncle Sam, and you have to pick up the tab for them, too.

In these days of world tension, the need for adequate defense, no matter how costly, is unquestioned by any thinking American. But only about 39 billions of the hotly contested new Federal budget of $71,800 million are allotted to defense.

The rest, nearly 33 billions, are nonmilitary expenditures. And that's about as much as the entire cost of the Federal Government, including the Armed Forces, as recently as 1948. And it's nearly twice as much as the total Federal expenditure in 1940.

Not that the entire Defense Department budget is untouchable. Some of it is fat of no value, the second Hoover Commission found. The Federal Government was operating five laundries at our big San Diego, Calif., base, at less than half of capacity. It turned out that having the admiral's and the general's shirts washed in the same laundry just wasn't considered good protocol.

It is estimated that $7 billion savings have been effected to date by going along with 72 percent of the recommendations of the first Hoover Commission.

WHAT OTHER HAND DOES

Typical results were creation of a Cabinet Department of Health, Education, and Welfare (which brought into coordination many overlapping agencies) and the creation of

the General Services Administration (which did a similar job).

How clumsy our Federal setup is can be shown by two of the more senseless conditions the Hoover Commission found.

1. Government agencies can't agree on simple definitions. So Uncle Sam buys hundreds of kinds of screwdrivers.

2. Lack of proper inventory has one department paying a premium price for an article that another department down the hall is selling as surplus at 5 to 7 cents on the dollar of the purchase price. The Commission figured that every cent more on the surplus sale price would save the United States $20 million a year.

It is the building of little empires in departments which causes waste like that. It also causes much of the foot dragging that has prevented more economies. The little empires want to be let alone, because streamlining would bump a lot of officeholders off the public payroll.

There's a big gimmick in cutting Government costs. The Citizens' Committee for the Hoover Report keeps a box score and estimates that the few recommendations of the second Commission which have been put in effect are saving more than $500 million a year.

But, in defending his big budget, President Eisenhower recently pointed out that many big savings can be accomplished only by act of Congress, since Congress authorized the costly programs.

And there's the rub. Last session of Congress, some 260 bills (many overlapping) were introduced to implement Hoover savings. Some 20 were enacted.

LEARNING NEW TRICKS

One that could be a whopper of a saving was a bill to streamline the archaic budgeting and accounting system that makes for inconsistent figures. The budgeting part of that bill was killed by opposition from some veteran economy advocates in the House Appropriations Committee. They just didn't want to learn new methods at their age.

The accounting improvements have saved money.

The same opposition faces a similar bill in this session, although it is sponsored by at least 50 Senators.

When some lawmakers who shout loudest for economy fight it if it inconveniences them, you can bet the only voice they'll listen to belongs to you, the voter who elects them and pays the taxes.

THE FAT OF THE LAND

There's no mystery about Uncle Sam's overweight. The clinical job done by the Hoover Commissions was sharp and comprehensive. Some of the reducing diet can be accomplished by Executive order of the President and his aids. But more of it requires action by Congress to undo its own programs. Some programs have so long outlived their utility that the original worthy aims are lost in the fog.

The Hoover task forces diagnosed many fatty spots among the more than 2,300 arms of the Federal Government in Washington. The total Federal civilian payroll is well over 2,300,000 persons.

Listed here are some of the items the Commission urged Uncle Sam to drop for his diet or cut down. In some cases, progress has been made. In most cases, nothing has been done.

Ending chemical research and the commercial manufacture of fertilizers by the subsidized Tennessee Valley Authority.

Raising premiums charged by the Federal Crop Insurance Corporation to cover costs and provide a reserve, if the agency is retained.

Liquidation of many Federal agencies that the Commission says have served their purpose. Those listed included 12 production credit corporations, the Agricultural Marketing Act Revolving Fund, the Federal Farm Mortgage Corporation.

Shutting down of many commercial-type bakeries, laundries, and dry-cleaning plants operated by civilian Government agencies. The Hoover Commission and the Bureau of the Budget uncovered 19,771 such businesses. Over 500 have been shut down.

Centralizing executive department printing, a big dollar item, to put it under businesslike control.

Making the Federal Savings and Loan Insurance Corporation return to the Treasury some $66,800,000 of the Government securities it holds. This is to settle a debt. The Hoover Commission found that the relations of the Treasury and this agency amounted to the debtor collecting interest from the creditor.

Reorganizing the Federal Housing Administration to do its own financing outside Government sources.

Ending of the postal-savings system as outmoded. The system was most useful for safety during the depression, but now the United States insures bank deposits.

Reorganizing the veterans' life insurance program, costing the Treasury $37 million a year, to pay its own way by efficiency without raising premium rates.

Ridding he National Park Service of wasteful business operations. In this area something has been accomplished, but not enough according to the Hoover Commission box score.

Reorganizing the Export-Import Bank to return to the Treasury large sums now used for short-term loans in competition with private banks. Also restricting the bank to long-term export-import loans, loans for development of foreign resources and loans to foreign governments.

With 94 percent of all United States farms now electrified, the Commission urged that the Rural Electrification Administration be reorganized to be self-supporting. The REA, in hock to the Treasury to the tune of the better part of $3 billion, has subsidized the sale of power to farm cooperatives at a loss.

Making the Small Business Administration charge enough interest to pay its way. As a general policy, the Hoover Commission urged that all types of Government subsidies be brought out into the open or stopped.

The Hoover Commission made 48 suggestions on how Federal lending agencies could save the Government money by efficient operation.

WHO'S A PRESSURE GROUP? YOU, YOU, AND YOU ARE

You're always hearing about pressure groups that make Government spend money. But the best definition of a pressure group is "You."

The fact is that all our millions of taxpayers, who feel the burdens and want relief, are their own worst enemies.

You can't have your taxes cut unless you're willing to have economy invade the areas where you have a special interest. The best things in life, the song says, are free—but tax reduction defies the rule.

The Committee on Federal Tax Policy, which has been carrying a torch for economy, nutshells it this way:

"Federal taxes are too high and must come down. Upon this point the public seems to be agreed."

It then explains how farmers want subsidies; how labor, which pays a good chunk of the farmers' benefits, wants higher wages which raise prices of things the farmer buys; how veterans, etc., want special benefits. Even your PTA getting a new school building, worthy as that objective is, swells the pressure. The report concludes:

"Each group loses sight of the fact that it not only pays directly and indirectly varying shares of the costs of its own benefits, but all of the benefits of other groups.

"Taken together, these various groups make up the Nation. Their collective demands present a serious obstacle to budget reduction."

HUGE FROZEN ASSETS

Harmonizing with the ideas of the Hoover Commissions, the Committee on Federal Tax Policy points out that vast Government assets are now tied up in loan programs.

These are all to win the favor of various segments of the public—or, to put it another way, pressure groups.

As long ago as 1953, it is pointed out, Government agencies held a total of $18 billion of net loans. Four agencies were responsible for nearly half of that. They were the Rural Electrification Administration, the Commodity Credit Corporation, the Federal National Mortgage Association, and the Export-Import Bank.

It is estimated the recovery of those assets would be more than enough to pay a year's interest on the national debt, and cut taxes by that much.

In fiscal 1955, aid to agriculture cost the Treasury $2,366,000,000—a good-sized hike over the previous year—despite Secretary of Agriculture Benson's attempts to cut it down.

At least six major Federal agencies are involved in furnishing electric power, often in competition with private companies and all at the cost of billions to the taxpayers. The Government thus collects less taxes from the private power companies whose rates are undersold.

The list of programs that amount to handouts of special groups could go on and on. The picture would remain the same:

Billions a year in Federal spending (some put it as high as $8 billion) could be cut down simply by taking the Government out of subsidized competition with private industry.

And saving those billions could cut your taxes.

Curling Our Hair Is Right

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks, I ask permission to insert a very spritely editorial from one of my rural newspapers, the Halstad Valley Journal, Halstad, Minn. The editorial follows:

CURLING OUR HAIR IS RIGHT

Under the new Federal budget, the costs of the Benson farm program and operating the Department of Agriculture will increase nearly $2½ billion.

That increase is almost double what the Department of Agriculture received for fiscal 1954.

In 1954 the Department of Agriculture receiver $2,557,000,000 while in fiscal 1958 $4,965,000,000 is sought for operating the Benson farm program and his departments.

The staggering increase in costs should clearly indicate to everyone the dismal failure of the Benson farm program. Ask most farmers what they think of the program and they'll give you an earful.

The only sensible farm program is the one which functions for the benefit of the people on the farm and close to the soil. Community life can be enhanced by a sane farm program, instead of one which seeks to drive people away from the rural areas.

Farming and rural living is a "way of life" that furnishes the basic sanity to our whole social and economic way of life.

Farm people should be the ones to determine what kind of a program they are going to have; not urban residents. Would labor and business accept such domination by rural people?

The 75th Anniversary of the Rochester & Pittsburgh Coal Co.

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. SAYLOR. Mr. Speaker, we Pennsylvanians are proud of our coal industry. We appreciate the accomplishments of the companies and their employees, whose efforts in developing the mines and producing the coal have contributed substantially to the economy of our Commonwealth and the security of our Nation.

This year one such important mining company is celebrating its 75th anniversary, and I feel that the event merits the attention of this legislative body. Inasmuch as coal's vast reserves are being counted upon to supply a progressively greater portion of America's energy requirements in the coming years, it is important that Members of Congress become better acquainted with this industry and its problems. I invite you to read the brief history of an old coal company. I ask unanimous consent to have this material inserted in the CONGRESSIONAL RECORD. The title is: "Seventy-Five Years Rochester & Pittsburgh Coal Co."

I salute the R. & P. its officers, and its working force. It has been my privilege over the years to meet a good number of the R. & P. people and their families. Dr. Charles J. Potter, president of the Rochester & Pittsburgh Coal Co., is well known to many Members of Congress and to executive department officials. He spent several years as Chief of the Marketing Branch of the Bituminous Coal Division of the Department of the Interior which administered the Bituminous Coal Act of 1937. During the war he served as Deputy Solid Fuels Administrator for War in the Department of the Interior. When the Government seized the coal mines in the latter part of 1943, Secretary Ickes appointed Dr. Potter as Deputy Coal Mines Administrator with responsibility for administering Government possession and carrying out the so-called Ickes-Lewis agreement.

More recently, Dr. Potter has served on the task force for the President's Advisory Committee on Energy Supplies and Resources Policy. In pointing to this record of the man who has served as chief executive officer of the R. & P. since 1948, I remind you that he and his company have always been generous in devoting time and effort to meet requests occasioned by Government studies and inquiries.

Among the other members of the R. & P. family sharing in the spotlight of the company's anniversary is Heath S. Clark, chairman, finance committee. Mr. Clark was president of the R. & P. from 1933 until he was succeeded by Dr. Potter in that capacity 15 years later.

The historical sketch appearing in the R. & P. anniversary program follows:

The year 1957 marks the 75th consecutive year that the Rochester & Pittsburgh Coal Co. has engaged in the business of mining bituminous coal. Its predecessor, Rochester & Pittsburgh Coal & Iron Co., incorporated November 1, 1881, began the development of mines in 1882 and was selling coal commercially by 1883.

The story begins with the Second Pennsylvania Geological Survey in the latter part of the 1870's when Assistant Geologist Franklin Platt and his brother, W. G. Platt, found coal deposits in Jefferson County. They enlisted the financial support of Walston H. Brown, New York financier, for the acquisition and development of the properties. Mr. Brown also acquired control of the Rochester and State Line Railroad which ran south from Rochester to a point just across the Pennsylvania State line and consolidated it with a number of short line roads in the area to form the Rochester and Pittsburgh Railroad Company.

The railroad company then subscribed to all the stock of the newly formed Rochester & Pittsburgh Coal & Iron Co. which enabled the company to purchase 5,862 acres of coal-bearing land in December of 1881. Extension of the railroad to serve these properties was begun early in 1882. Franklin Platt was placed in charge of development of the mines.

Both companies encountered many vicissitudes in their early years and soon the railroad went into receivership. Its property, including all the stock of the Coal & Iron Co., was purchased at foreclosure sale October 16, 1885, by Adrian Iselin (1818–1905) an investment banker of New York City. The railroad was then reorganized under his direction and eventually became the Buffalo, Rochester & Pittsburgh Railway Co. It continued to own all the stock of the coal company until the end of 1906 when, in anticipation of the effective date of the amendment to the Interstate Commerce Act which prohibited railroads from transporting commodities in which they had an interest, it transferred its interest in the stock of the mining company to Mahoning Investment Co. which was formed for this purpose. The stock of Mahoning Investment Co. thereupon was distributed to the stockholders of the railway as a dividend.

In 1928 the Van Sweringen brothers of Cleveland acquired the controlling interest of the Iselins in the railway company. It was a condition precedent that the terms of sale be extended to all other stockholders, and in fulfilling this condition the Van Sweringens acquired substantially all the stock of the railway. It was subsequently sold to the Baltimore & Ohio Railroad Co. in 1929, and is now the Buffalo division of that road.

Flanklin Platt still continued in charge of the mining properties, and with adequate financial support from the Iselin interests Rochester & Pittsburgh Coal & Iron Co. grew and prospered. By 1895 its coals were well established in the markets, it had developed a profitable outlet for its fine coal in the form of coke manufactured in its more than 1,000 ovens, and had attained an annual output of 1¾ million tons of coal. Since then, its history has been much the same as that of the bituminous-coal industry in general, and in particular of the central Pennsylvania district, where, until recent years, all its coal holdings were located.

The B. R. & P. afforded the shortest route to the Buffalo-Rochester market of any railroad serving a major coalfield. The area was traversed by several east-west trunklines and coal could be shipped to many destinations both north and east at the base freight rates. Naturally, this was the area developed by the company for the marketing of its product. Its coal could reach the Canadian markets by rail via Buffalo and the Niagara frontier, by car ferry from Charlotte (Rochester) across Lake Ontario and by ships to Lake Ontario and St. Lawrence River ports. The company's principal markets continue to be in the northeastern part of the United States and in mideastern Canada.

In the earlier years most of the company's production was marketed through sales agents and wholesale coal distributors. About 1920, the company adopted the policy of selling direct to consumers and expanded its sales department accordingly. Today marketing is done by two wholly owned subsidiaries, Rochester & Pittsburgh Coal Co. (Canada) Ltd., organized in 1926, and United Eastern Coal Sales Corp., organized in 1936. The principal sales offices are in Toronto and New York, respectively, and branch offices are maintained in Albany, Buffalo, Cleveland, Philadelphia, Pittsburgh, Rochester, Syracuse, Montreal, and Port Colborne. Retail yards are operated in Buffalo, Rochester, Utica, Philadelphia, Toronto, and Montreal. In addition, coal docks and several small retail yards are operated in Canada.

Consumption of coal in the United States approximately doubled every decade until about 1920 and the coal reserves and output of Rochester & Pittsburgh Coal & Iron Co., expanded with it. Additional coal lands were acquired in Armstrong, Clearfield, and Indiana Counties, Pa., where new mines were opened. The first major acquisition was in 1896 when the coal and iron company obtained a controlling interest in a corporation formed to purchase the mines and properties of the Bell, Lewis & Yates Coal Mining Co., a successful coal company with an annual production of about 1½ million tons. In the same year the company bought another going mine with an output of about a quarter of a million tons. This was the Helvetia mine which continued to produce until 1954 when the operation was abandoned because the coal remaining could not be economically recovered.

In 1898 the B. R. & P. Railway was extended to and beyond the Armstrong County field, finally justifying the inclusion of Pittsburgh in its name by obtaining trackage rights over the B. & O. into that city. Shortly thereafter a branch of the B. R. & P. was built into Indiana County and new mines opened in that area. The Ernest mine opened in 1904, the Lucerne mine in 1907 and the original Kent mine in 1910, are still in operation.

New corporations were formed to develop and operate many of the coal fields so acquired. The banking firm of A. Iselin & Co. furnished the money for the acquisition of these lands and title to them was taken in the name of Adrian Iselin. After the accumulation of sufficient acreage to constitute operable properties for one or more mines, a new corporation would then be formed and the coal lands purchased from Adrian Iselin for the exact amount he had paid for them, including the expenses involved and interest at the prevailing rates, a practice somewhat unusual for the times. The Rochester and Pittsburgh Coal & Iron Co. acquired no stock interest in these companies, but its officers and managers were also the officers and managers of the new corporations while the Iselins continued to hold controlling interest in each. By successive steps, culminating in 1939, the several operating companies were consolidated to form the present Rochester & Pittsburgh Coal Co. and the picture was com-

pleted in 1950 by merging the Mahoning Investment Co. into it. Ownership of a majority of the stock of the company continues in the Iselin family.

The manufacture of coke constituted an important part of the company's business in its early years. The coke was of superior quality, particularly for foundry use, and the markets for it extended as far west as the Mississippi River, large shipments being made to such cities as Chicago, St. Louis and Milwaukee. Eventually the company found it could not compete with coke made in the nonunion Connellsville field. It procured a controlling interest in two corporations and they constructed blast furnaces at DuBois and Punxsutawney which afforded outlets for much of the company's coke production. Over many years they were profitable enterprises in themselves. By 1935, however, the furnaces had become obsolete so they were scrapped and the companies liquidated.

A battery of beehive coke ovens had been constructed at the Ernest mine when it was opened in 1904. Coke manufacture was interrupted with the scrapping of the blast furnaces but operation was resumed in 1936 and continues today. Through a wholly owned subsidiary another battery of beehive ovens was constructed at Lucerne mine in 1952. Much of the product of these ovens is presently sold to the steel industry.

The companies now comprising the Rochester & Pittsburgh Coal Co. attained their peak production in 1917. Thereafter, in common with the so-called northern fields, a considerable amount of the business the company had enjoyed shifted to the nonunion fields in the South. The central Pennsylvania field was among the earliest to be organized by the United Mine Workers of America. The company operated under contract with the union until 1925 when, out of sheer competitive necessity, it went nonunion and continued so until the advent of the NRA in 1933. Since then, it has operated under contract with the United Mine Workers.

Throughout its history the Rochester & Pittsburgh Coal Co. has equipped its mines with the latest and most efficient machinery available. As early as 1895 more than half its output was produced by machine mining, a method of undercutting the coal seams with machines driven by compressed air, instead of by a pick-swinging crew of strong-armed coal miners. It was one of the first companies to introduce electricity into coal mines and to install electrically driven cutting machines, locomotives for underground haulage, pumps for draining the mines, and fans for ventilating them. It was perhaps the first company to replace the usual small powerplants, located at each mine, with central powerplant generation and its own transmission system. Today, its four operating mines are fully equipped with modern mining machinery underground and for the mechanical cleaning of coal produced. Photographs of some of the early and modern plants and mining equipment will be found in the following pages.

For all practical purposes piecework rates in bituminous coal mines went out of existence with the advent of the contract negotiated with the United Mine Workers in 1947. This imposed a hardship on most of the mines in the central Pennsylvania field where natural conditions, generally speaking, do not permit as hight a rate of productivity as prevails in the fields from which central Pennsylvania's principal competition comes. This, along with the antiquated railroad freight rate structure which in effect deprives the field of its one principal natural advantage, that of a geographical location nearest to the major eastern markets, caused the company to look to other coal-producing districts. In 1948 a going mine, renamed O'Donnell, was acquired in the northern West Virginia field. In 1956 a leasehold interest in a substantial acreage of coal, also in northern West Virginia, was acquired where, if exploratory mining now in progress confirms the existence of a body of coal to the extent and quality indicated by the initial core drilling, a mine of a capacity of approximately 1 million tons per year will be developed and equipped.

The company also has endeavored to find stiuations outside the coal industry where its mining and marketing experience would be of value. To date, it has found one deemed worthy of exploitation and, through Vitro Minerals Corp. owned equally with Vitro Corporation of America, it is successfully operating an open-pit uranium mine in Wyoming. The company expects to continue to seek further opportunities of this nature.

Men play an important and interesting part in the history of any business organization. It is regrettable that space allows for the telling of only a few incidents about the men who exerted much infleuence upon the fortunes of this company.

One of the early presidents of the company, George E. Merchant, resigned the presidency of the company to become general superintendent of the B. R. & P. Railway. Very likely Mr. Merchant considered this a substantial promotion and probably it was, for at that time, managerial control of the coal company was vested in the railway.

The old Rochester mine was famous for its double-track, rope-haulage system using 4 drums powered by 2 large steam engines. This was a very complicated but, in those days, a highly efficient means of hauling coal from the mine workings to the tipple and returning the empty coal cars underground. Mining engineers from this country and from many parts of Europe came to see it in operation. One of its marvels of efficiency was that only one man was needed to operate it. Oldtimers say that only three employees of the company were capable of operating it, among them, the president of the company, Lucius W. Robinson and James Craig, father of the present general manager of operations of the company. It is history that Mr. Robinson actually did operate the hoist for several days when a majority of the mineworkers struck for higher wages.

Mr. Robinson served the longest term of any of the chief executives of the company, from 1899 to 1928, first as president and then as chairman of the board of directors. During his regime, the company achieved its greatest expansion in production and in coal reserves.

Great changes in the bituminous coal industry have occurred during the life of the company, and great improvements have been made in the industry's public and labor relations as well as in the efficiency of its producing and marketing methods. The policy of the company has been to keep pace with these changes and improvements. For example: In 1917 the companies now comprising the Rochester & Pittsburgh Coal Co. produced more than 9 million tons of coal from 28 mines with approximately 10,000 mine workers; in 1944, the peak year of World War II, it produced just short of 7 million tons from 9 mines with approximately 4,000 mine workers; in 1956 it roduced 5 million tons from 4 mines and 2 small strip pits with approximately 2,000 mine workers.

In the first 75 years of its existence the Rochester & Pittsburgh Coal Co. has produced more than 335 million tons of coal and owns unmined reserves sufficient for more than another 75 years at current rates of production. Not all of these reserves can be mined economically under today's conditions but, if experience is a criterion, most if not all of them eventually can be recovered as new methods of mining are developed and as the more easily recoverable beds of coal in the country are depleted. In the belief that there is a place in the bituminous coal industry for a well-managed and well-financed company of its size, the Rochester & Pittsburgh Coal Co. looks forward with confidence to the next 75 years.

The American Way

EXTENSION OF REMARKS
OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. SCUDDER. Mr. Speaker, the American way for getting things done is by private enterprise, where this is not possible then it should be based on the principle of partnership between Government and private enterprise.

The Trinity River project in California exemplifies the public gain to be realized from the application of this principle. A private utility company has submitted a proposal by which it would construct, operate, and maintain the hydroelectric power phases of the project. The proposal has wide support because it would save the taxpayers $55.5 million in capital outlay; provide the Federal Government with a net return of $165 million from sales of falling water; and result in tax payments of an estimated $145.6 million to Federal, State, and local governments.

Secretary of the Interior Seaton recommended to Congress on February 13 that it approve the joint development plan. On the 17th of April, I introduced H. R. 6997 to provide for joint development of the project—as being in the best interest of the Government and the taxpaying public.

Seventy-two newspapers in northern California have endorsed the partnership plan. Among them is the Humboldt Times, published at Eureka, Calif. I desire to include with my remarks the following editorial, entitled "The American Way," from the March 24, 1957, edition of this newspaper:

THE AMERICAN WAY

The controversy stirred up by only a handful of Congressmen over the offer of the Pacific Gas & Electric Co. to develop the Trinity River project on a partnership plan with Uncle Sam provides voluble echoes once again of the faint-hearted philosophy of the depression years which asked Americans to put its trust in empire-building bureaucrats.

That paralytic doctrine, born of anxiety and fear, yet ever since threatening the moral fiber of our free institutions, has in recent years been repudiated by the great majority of Americans.

President Eisenhower has expressed the renaissance of America's people, a rebirth of self-confidence and personal dignity, in what he has defined as a partnership policy on the part of Government with private industry to promote the general welfare of the Nation.

This kind of cooperation is not something new, it is intrinsically American. It dates back to the earliest beginnings of our Nation. It is, in fact, one of the great themes of the American epic and one of our great contributions to civilization at large—the concept of teamwork, the ideal of fair play, the ethic of a living democracy.

To us, this is the compelling reason why we feel the P. G. & E. partnership plan, endorsed by Mr. Seaton, the Secretary of the Interior, should be quickly approved by Congress.

Even more than the sound reasons that the P. G. & E. proposal would save the taxpayers $56 million—the cost of building the power facilities, and provide a total net gain of $310 million from Federal, State, and local taxes, and project revenue during the 50-year period of the contract.

The Secretary has pointed out that the basic purposes of the reclamation program are the development of irrigation water supply and the reclamation of land. Electric power is generated only incidentally to the basic purpose of the program.

We believe that the development and distribution of electricity is the job of private industry. We feel it can, does, and will do the job better and cheaper than Federal agencies which all of us, already burdened with heavy taxes, will have to dig still deeper in our frayed pockets to pay for.

We submit that the Trinity project, which Congress has decided to be a program urgently needed to promote the general welfare of our people, should also be the handiwork of cooperation and teamwork—for therein, we feel, lies the real meaning of democracy.

The Old Santa Fe Trail as a National Monument

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. BREEDING. Mr. Speaker, on February 28, 1957, I introduced a bill to provide that the Secretary of the Interior shall investigate and report to the Congress as to the advisability of establishing as a national monument a site on the Old Santa Fe Trail near Dodge City, Kans. As further evidence of the desirability of establishing this monument I want to bring to your attention a letter from Mr. James P. McCollom, a member of the board of directors of the Southwest Kansas Historical Society at Dodge City, Kans.:

DODGE CITY, KANS., *April 20, 1957.*

Hon. J. FLOYD BREEDING,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. BREEDING: After the Louisiana Purchase and the Lewis and Clark Expedition, came the most historical event west of the Mississippi River—the opening of the Old Santa Fe Trail.

President Jefferson made a master stroke in making this purchase. He immediately backed it up by commissioning the great explorers to traverse the Missouri and beyond to the Pacific. Immediately before Lewis and Clark returned he commissioned Col. Zebulon M. Pike and 23 other men to explore the south and southwest boundaries of the new purchase—as far as the mountains. Pike followed a course along the north side of the Arkansas River to the mountains, a course destined to become the Santa Fe Trail. He then crossed over to Mexican territory and old Santa Fe. Pike's glowing accounts of huge profits to be made by trading with Santa Fe spurred many venturesome men to begin a packsaddle train of merchandising to that far-off city. Captain Becknell, with a few wagons, made the trip up the river in 1821. In 1822 he made another trip with 30 loaded wagons, this time going by way of the Cimarron Cut-off-wagon Bed Springs route. He touched Colorado and Oklahoma and thence into New Mexico.

The old Santa Fe Trail is easily the most historical spot in Kansas, since its earliest establishment and continuous use over 68 history-making years until the railroad opened the West to further settlement.

The site on the old trail which we propose for a national monument is on the main line of the trail (all travel centered here with no branch-offs). The site is almost exactly midway between Independence and Santa Fe and is adjacent to U. S. Highway 50. This makes it very accessible to millions of tourists. From a headquarters building a commanding view could be had of the Arkansas River and Valley, the main line of the Atchison, Topeka and Santa Fe Railroad and famous Highway 50. The remains of the old Santa Fe Trail are the most extensive in existence, having 2 miles of continuous paths with 8 to 15 separate and distinct trails. They are also the best preserved of the entire length of the trail. They are sodded over and practically in an unspoiled condition. The plow is a constant threat to the preservation of this trail for posterity.

It would be only fitting and proper that the old Santa Fe Trail should be first on the list for historical recognition. This would be a national monument equal to and as dignified as the Scotts Bluff National Monument commemorating the old Oregon Trail.

Yours sincerely,

JAMES P. MCCOLLOM.

Leadership and Responsibility

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. DORN of South Carolina. Mr. Speaker and ladies and gentlemen of the House, my South Carolina colleague, the Honorable ROBERT W. HEMPHILL, is in much demand as a public speaker because of his forthrightness and keen analysis of the problems facing our country and the world today. I commend to the attention of the House the following splendid address delivered at a banquet of the Omicron Delta Kappa Leadership Society at the University of South Carolina:

LEADERSHIP AND RESPONSIBILITY

(Speech of Hon. ROBERT W. HEMPHILL, Member of Congress, before Omicron Delta Kappa Leadership Society, University of South Carolina, Columbia, S. C., April 25, 1957)

Mr. President, distinguished guests, ladies and gentlemen, some time ago I witnessed an argument between two little sisters about an office in a little club of their neighborhood. The younger of the two sisters had been elected recording secretary and the older of the two was making fun of the younger. The younger recording secretary lashed out: "You just don't understand, you see, this is the first time I have ever been elected to anything, and I am proud of it."

The little wisdom expressed here might well illustrate something so evident here as well as in the Capital of the United States where I have some responsibilities.

Leadership and recognition are treasures only a few attain. Every honor that you and I receive, such as election to this fine organization, is not only a privilege, but has far reaching effect and responsibility. The organization of which you are a part—the school where you have attained these honors—the community from which you come—your families and their names—the church to which you belong, and even your girl friend, are now in the spotlight that your success has gained for you.

The examination of a critical world is never limited to a man or woman, regardless of age, who is in a coveted position; everything he or she touches, and everything with which he or she is surrounded, is on the block for testing. And so, we must understand, that if we are to accept the reins of leadership we can never turn them loose, nor can we escape our public and private responsibilities—and this applies to the great heroes in the world governments.

Early in 1953 there disappeared from the American scene a man who had been denied his greatest desire. His father had been President of the United States, and by right he should have been. Some felt he was cheated—others, just defeated, in his aspirations of 1952. Without rancor or bitterness he returned to his seat in the United States Senate and his responsibilities as the majority leader. He worked unceasingly for a party which had refused him, believing that he was working for a nation that must survive. In the midst of his efforts he was stricken by cancer, but continued despite terrific physical pains and colossal discouragements. In an article about him shortly after his death, a great publication [1] carried an item entitled, "Heroic Last Days of Robert Taft." All of his colleagues knew that he lived like a leader. The world knows now that he died like a leader, and even in death he is an inspiration to great and good men everywhere.

Most of you gathered here today are leaders on an American campus. As a member of the public, a citizen, and even as a Member of Congress, I have every right to expect of you the highest type of citizenship, outstanding integrity, and highest morality in your mature life. You have what it takes—you have been recognized and honored for it and you cannot let us down now—you must not even let yourselves down.

I mentioned morality, as a delineation between right and wrong, which is more important to me than any other factor in the history of what man calls civilization. The same moralities that today are necessary in the huskings of the market are necessary among the nations of the world. If America departs from her morals, or any high Government official disregards them, we suffer. We are suffering now from the burden of some taxation from a decade of tension, from a loss of friendship among our most honored and ancient of allies, from a loss in fact over the entire globe, all of which might be blamed on our departure from moral truths; everybody knows that you cannot buy a friend—that is, everybody but the United States Government.

I suppose every speaker you have had has had something to say about communism. My classification of communism is very simple. Communism is the devil's form of government, and behind the Iron Curtain there is a hell on earth. History may blame our governmental policies, our efforts to combine good and evil at the same conference table—as one of the main causes of the growth of communism in a world that wanted freedom.

Let us look at the Communist leadership for a moment. Red China is the world's biggest dope peddler.[2] The government is in the business of dope and corruption. Red China is not responsible to world opinion, to

Footnotes at end of speech.

world morality, nor concerned with common decency. Let us then compare the record of Nationalist China on this evil. Before the war and before the Communists were encouraged by our diplomatic stupidity, narcotics were decreasing in China, and to those who may criticize Chiang Kai-shek and his government, I wish to point out this one fact as an evidence that the Chritianity he and his wife believe in works among the peoples of the East.

At the Geneva Conference in 1954 the Communists were present[3]—present, too, was the climate of fear and suspicion which always prevails when Communists get together. The Russians brought their own food and their own automobiles. The Chinese Communists would not rent a house which the Russians had previously considered because of fear of hidden microphones and wiretappings. The American representatives rode about in a rented automobile; but the Communist had bullet-proof cars. Which way of life will you and the world choose, and in which direction will you leave the future—in the direction of morality or otherwise?

I wish I could tell you that this lack of appreciation of morality is confined to those who do not believe in our way of life or the religions which have made this country great. Unfortunately, I cannot. On Saturday, April 13, we had no mail service. An American businessman had been given a high cabinet post and responsibility for the operation of the Post Office Department. On January 10, 1956,[4] he had made a statement about his budget as follows: "To provide the American people with an even better mail service," and "That tried and proven concepts of business management have been introduced into every phase of the Post Office Department's activities." Despite these statements we find that he had disobeyed the law known as the "antideficiency law," and this fact was confirmed by Democrats and Republicans in debate which followed.[5] Instead of applying the business methods required by law and appropriating the funds by quarters sufficient to take care of any threatened or anticipated emergency, the law was violated and the American public was alarmed, and properly disgusted, as it should be. If the Congress needed any defense because they provided the funds requested by the Budget Bureau and the Post Office Department, neither the Postmaster General, whose unbusinesslike methods were partially responsible, nor the Director of the Budget,[6] whose appalling ignorance was such that he did not even know that the Post Office revenue does not go to the Post Office, has had the morality to admit the wrong. Great Americans of the past have been quick to say, "I made a mistake." Shall we now cultivate leadership or leaders whose morality is lacking or who have neither the courage nor the patriotism to admit mistake?

The American people are quick to forgive a mistake, honestly admitted. I hope the leaders of the future will have the honor and integrity the American people deserve.

I have talked here of people of nations, politics and morals, and of leaderships and responsibilities. The campus leaders of Omicron Delta Kappa have furnished many leaders in the maturing life of the Nation—internationally, as well as on a State and community level. I wish I could look into the magic glass and see your place tomorrow. I believe each of you will be cognizant of the responsibility you have. You must, if civilization is to flourish and continue, develop to an even greater extent than you already have your sense of morality, and your dedication to the principle that there is no substitute for honor and trust, there is no justification among men or among governments which superimposes the wrong way over the right way.

And—lest you forget—a recording secretary has an important position of leadership and responsibility.

I salute you as the patriots, the leaders, of the America of tomorrow.

Thank you for allowing me to come.

Federal Participation in Flood-Drought Control Projects

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD I include a copy of the joint statement relating to Federal participation in flood-drought control projects by the Governors of the States of Missouri and Kansas. This is a statement urging the Congress and its committees to give prompt are careful consideration to appropriations for the planning and completion of flood-drought control projects previously authorized for construction in these two States:

We, the undersigned Governors of the States of Missouri and Kansas, respectfully urge Congress and its committees to give prompt and careful consideration to appropriations for the planning and completion of flood-drought control projects previously authorized for construction in these two States. Both States contain great river valleys in which the water-flows of navigable streams are and have been under the control of the Federal Government and which historically have been plagued by recurrent extremes of flood and drought.

We are satisfied that the flood-control projects designed by the Corps of Army Engineers and the Bureau of Reclamation present the only comprehensive, feasible plan for the alleviation of flood and drought damages in our major river valleys. In our judgment appropriations for such purposes would represent capital investment of the highest order both from the standpoint of necessity therefor and national economic return.

Some of the flood-drought control projects designed by the Corps of Engineers and Bureau of Reclamation in these States were approved and authorized by Congress as early as the year 1938 and have never received initiation or construction through appropriations to cover planning or construction costs. The time lag between authorization and construction which was the result in some instances of the demands of war, has and will continue to result in greatly increased costs above the original cost estimates. While the potential loss and damage as the result of failure to construct these authorized projects is correlatively increasing it would be in the interest of governmental economy to proceed with the construction and completion of these projects as soon as possible.

We recognize also the subsequent need for watershed or upstream control programs in the interests of both soil and water conservation. Such programs present a measure of flood control for their immediate localities but engineering research and study establishes the fact that such projects are not a substitute for the controls provided by larger down-river reservoirs.

Therefore, we urgently request that appropriations be made by the current Congress sufficient to permit orderly and economic construction to commence or proceed on all authorized Federal flood-drought control projects approved by the Bureau of Reclamation or the Corps of Army Engineers in the States of Missouri and Kansas and that further appropriations be made for planning work on the additional projects suggested by such Federal agencies as essential to complete the comprehensive plan for flood-drought control in the great river valleys in these States.

JAMES T. BLAIR,
Governor, State of Missouri.
GEORGE DOCKING,
Governor, State of Kansas.
KANSAS CITY, MO., April 16, 1957.

Must Post Office Make Money?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very comprehensive article on the fundamental question of whether our Post Office Department should be self-supporting, which appeared in the Boston Sunday Globe on April 21, 1957:

MUST POST OFFICE MAKE MONEY?—ITS LOW COST SERVICE HELPED AMERICAN BUSINESS—DEFICIT IS NEGLIGIBLE COMPARED WITH BENEFITS TO ALL CITIZENS

(By John Harris)

The outpouring of indignant words that has resulted in the Post Office Department's restoration of normal services has still left unanswered the fundamental question, Should our Post Office Department be self-supporting?

Ever since the founding of this Nation each generation has argued, without reaching a permanent understanding, whether our Post Office Department should be operated as a business venture or as a public service.

Benjamin Franklin, our first Postmaster General, previously served in that capacity under the Crown. When Franklin took over for His British Majesty, the postal agency was functioning in the red. Shrewd businessman Franklin turned this into a profit. He even exults in his autobiography that when he was fired, as a result of his becoming embroiled with the Governor of Massachusetts, the agency again was run at a loss and returned to the British Treasury "not a farthing."

IF FRANKLIN COULD DO IT—

Postmaster General Arthur Summerfield, with prior experience mainly in the world of business, has been trying to repeat Franklin's example of bringing into balance his department's expenditures and revenue.

Summerfield's background undoubtedly made such an objective inevitable. More-

---

Footnotes at end of speech.

over, he was faced with challenges that inspire the business mind to action. He heads a multi-billion-dollar organization, one of the largest on earth, with more than 500,000 employees, 37,000 post offices. And, on account of rising costs with which we are all familiar, Summerfield has been confronted with what appear to be mammoth deficits.

In 1953 the operating loss was $622 million; in 1954—$399 million; in 1955—$362 million; in 1956—$463 million; and, projected for 1957—$651 million.

Summerfield's recent clash with Congress over additional funds, which involved the unprecedented shutdown of our postal system, was actually part of his persistent drive to solve his deficit through increasing postal rates. He has found Congress adamant in resisting this proposal, and in this course Congress has the support of the Citizens' Advisory Council to the Senate Post Office Committee which maintains we should not turn our back on "the proven American ideal of a post office dedicated to service, not revenue."

OTHER COUNTRIES BREAK EVEN

A survey of post office systems abroad—in Great Britain, France, Spain, Italy, India, Pakistan, for instance—shows generally that they are just breaking even or run at a deficit. Their setup is radically different from ours. In all these countries, and in most other foreign lands, the government unifies and operates all three communications, post, telephone, and telegraph. Revenues from the latter two offset deficits from postal operations.

Great Britain, first nation to utilize penny postage and the country regarded as the founder of modern postal service, encountered a deficit last year in its post office department. Revenue from its telephone and telegraph departments more than counterbalanced the deficit, and thus money was funneled into the lean British treasury.

Such a solution here would certainly work mathematically, if this were the only consideration. American Telephone last year showed a $616 million profit while Western Union showed $14 million. Their combined earnings, during recent years, would more than have offset the deficits of our Post Office Department. But even entertaining such a solution would violate our conception of a free economy.

The thought that our Post Office Department, through a sharply altered rate structure alone, should bring its books into balance, appears equally violative of our American experience which has seen this Nation's prosperity and widespread dissemination of information assisted by the constant availability of inexpensive postal communication. Indeed, it can be argued that Americans have been wise not to be distracted by postal deficits, for in meeting them patiently, we have benefited uniquely from the often unappreciated instrument of civilization which low-cost postal service has offered us.

Sending letters was once the exclusive prerogative of kings, nobles, and government officials. In the not too distant past, when most mail services were privately operated, the cost was prohibitive for average citizens. The rate for sending a letter from Boston to New York was once 25 cents, then an onerous charge. Letter writing was widely discouraged until the reforms of the last century which introduced low-cost postage. This helped to provide something else essential to our democracy, an informed electorate.

As for our prosperity, the Citizens' Advisory Committee noted "It was low-cost postal service that made possible the growth of America's business. Many of today's giants of trade and industry began as tiny establishments and grew great through the enactment of helpful postal services. There still remain many more small businesses than large in America. These small businesses need the same opportunity."

PROFITS FOR ALL

Government was not established for the purpose of making profit. We do not expect it of its agencies, such as the State, Commerce, Labor or even the Treasury Departments. It may be argued that where limited numbers of citizens benefit from some Government service, the operation should be made self-sustaining. In the instance of our Post Office Department the benefits accrue literally to everyone. And, if we divide the recent Post Office Department deficits by the number of the population, the per capita cost is negligible compared with the benefits. Congress has been prudent in keeping postal costs within the reach of everyone's purse.

Postmaster General Summerfield, hailing President Eisenhower's signing the legislation which furnished extra funds and restored Saturday postal service, refrained from demanding higher rates. Summerfield spoke instead about "trying to give the public the best possible mail service; to keep postal employees on the job; and to operate as economically as we can." These are objectives truly in harmony with public service and our best tradition.

Even sage Ben Franklin had different views to express, earlier in his autobiography, when he was still a small-business man and he had just been appointed postmaster in his adopted city of Philadelphia. He joyously discovered that access to postal service increased correspondence, enlarged the number of people interested in his product, and multiplied profits to his business so he could give his time to public service. This, because of the nature of postal service, is the better example Franklin has left us.

Great Lakes Water Diversion

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. GRIFFIN. Mr. Speaker, on Friday, April 12, 1957, representatives of every Great Lakes State except Illinois, met in Cleveland, Ohio, together with officials of many municipalities and port authorities in the Great Lakes region, to discuss the legislation now pending in Congress which would permit an increased diversion of Great Lakes water through the Illinois Waterway.

The conference, called at the invitation of the Honorable C. William O'Neill, Governor of Ohio, unanimously adopted the following resolution:

RESOLUTION ADOPTED BY GOVERNOR'S CONFERENCE, CLEVELAND, OHIO, APRIL 12, 1957

Whereas the States of New York, Pennsylvania, Ohio, Indiana, Michigan, Wisconsin, and Minnesota hold title to the waters of the Great Lakes under a high public trust to protect and preserve them for the benefit of some 50 million of their citizens; and

Whereas any diversion of these waters from the Great Lakes watershed materially injures the interest of the 50 million citizens in this natural resource; and

Whereas the commerce of the Great Lakes is a major factor in the economy of the region made up of these States and of the Nation itself, specifically in the coal, chemical, steel, and utility industries and public hydroelectric facilities; and

Whereas diversion of Great Lakes waters, outside the Great Lakes watershed materially injures the above-described commerce and the above-described industries; and

Whereas tremendous public expenditures have been made in and are continuing to be made in the improvement of port facilities throughout the Great Lakes, which facilities will be materially injured by any impairment of the natural levels of the lakes; and

Whereas the Government of the United States and the Government of the Dominion of Canada have expended and are expending tremendous public funds in the development of the St. Lawrence seaway, which development will be materially injured by any impairment of the natural level of the lakes; and

Whereas the Congress of the United States has authorized the deepening of the connecting channels of the Great Lakes involving further tremendous expenditure of public funds, which deepening will be directly reduced by any impairment of the natural level of the lakes: Now, therefore, be it

Resolved, That this conference of State, municipal, and industrial officials, speaking directly for and on behalf of the 50 million citizens of this region, hereby expresses unalterable opposition to any diversion of water from the Great Lakes watershed and specifically urges the Congress of the United States to defeat legislative attempts by the Chicago Sanitary District, the State of Illinois and oher groups outside the Great Lakes area which would pillage the natural resources vested by law and by specific Supreme Court decision in the people of the Great Lakes watershed and which would violate the rights of the people of the Great Lakes and Canada under existing treaties between the two nations; and be it further

Resolved, That a copy of this resolution be transmitted to the Vice President of the United States as President of the Senate, the Speaker of the House of Representatives, the chairman of the Senate and House Committees on Public Works, and to each Member of Congress from the States participating in this meeting.

El Dorado County Chamber of Commerce Reaffirms Endorsement of Cooperative Trinity River Development Plan

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. SCUDDER. Mr. Speaker, on April 19, 1955, the Board of Directors of the El Dorado County (Calif.) Chamber of Commerce adopted a resolution favoring a cooperative plan for development of the power facilities of the Trinity River project.

This stand was reaffirmed by resolution approved March 12, 1957. In transmitting a copy of the same to me, chamber officials urge that the partnership plan be supported in the interest not only of the taxpayers of California but of the United States.

El Dorado County is situated in the heart of California's famed mother lode country. Geographically, it is in the immediate users' area to be served by Trinity River power. Therefore, the public position of its chamber of commerce is especially significant in connection with Secretary Seaton's recommen-

dation, and my bill (H. R. 6997) to provide for joint development.

For the information of Members of Congress, I desire to include with my own remarks the following resolution pointing out the desirability of the cooperative plan:

RESOLUTION FAVORING PARTNERSHIP DEVELOPMENT OF TRINITY RIVER PROJECT

Whereas recommendation for the joint development of the Trinity River unit of the Central Valley project in California by the Federal Government and the Pacific Gas & Electric Co. was made February 13, 1957, by Secretary of the Interior Fred A. Seaton; and

Whereas the El Dorado County Chamber of Commerce believes that the development of the Trinity River should be carried out at the least cost to the Federal taxpayer; and

Whereas the development under the cooperative plan would result in a beneficial broadening of the local tax base; and

Whereas it would mean a surplus of $165 million in project revenues in 50 years of operation, as compared to an all Federal development project; and

Whereas according to estimates it would also mean an additional $135 million in Federal, State, and local taxes during the 50-year period: Now, therefore, be it

Resolved, That the El Dorado County Chamber of Commerce directors at their regular board meeting March 12, 1957, reaffirm their stand, made in a resolution drawn April 19, 1955, on the desirability of the cooperative plan; and be it further

Resolved, That this chamber of commerce hereby respectfully urges Senators KNOWLAND and KUCHEL and every member of the California congressional delegation to support the cooperative plan by the Federal Government and the Pacific Gas & Electric Co. in the development of the Trinity River project.

Approved by the board of directors of the El Dorado County Chamber of Commerce, March 12, 1957.

Attest: HARVEY E. WEST, Jr., *President.*
WALTER G. DRYSDALE, *Secretary-Manager.*

Third Annual Model Congress of Genesee County

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. OSTERTAG. Mr. Speaker, the schools of Genesee County, N. Y., annually hold a model congress as a means of acquainting the students through experience and participation, with the mechanics and content of representative government. This is a most commendable undertaking.

This year, the model congress was held at the New York State School for the Blind at Batavia, with students from the following schools participating: Elba Central School, Batavia High School, LeRoy Central School, Pavilion Central School, Oakfield-Alabama Central School, Corfu Central School, Byron-Bergen Central School, and the New York School for the Blind.

A number of bills were submitted by the high school students to the congress, and after consideration by the appropriate committees, were acted upon by the congress in plenary session.

The following measures were approved:

Bill No. 61, submitted by Terry Graham and James Griffith, Pavilion Central School:

Be it enacted by the Model Congress: That a tax of $0.01 be placed on every pack of cigarettes earmarked for Federal aid to education.

(A) The lump sum should be given to each State in proportion to size, population, and number of schools.

(B) The State legislature should regulate how the money should be divided among educational needs.

Bill No. 67, submitted by Lois Benthin, Elba Central School, a bill to increase from $600 to $800 the personal income-tax exemptions of a taxpayer:

Be it enacted by the Model Congress: That the Internal Revenue Code be amended to allow $800 as an exemption for a spouse, and for each dependent and an additional exemption of $800 for anyone over the age of 65.

Bill No. 65, submitted by Diane Ketchum, and Jean Ann Huber of Byron-Bergen School, a bill to provide adequate medical care for low-income families:

Whereas only one-half of the families of the Nation are covered by some form of sickness insurance; and

Whereas this insurance covers less than 25 percent of all medical expenses; and

Whereas families with incomes under $3,000 have twice as much illness as those families with higher incomes;

Be it enacted by this Model Congress that:

1. A cooperative Federal-State program be established to assist in the financing of personal health services. Each State would draw a plan to assist the development of the health service which conforms to a program of minimum Federal standards.

2. Federal grants-in-aid would be made from general tax revenues for the purpose of assisting the State in making personal health services available to the general population and the lower income families in particular. The Federal Government would also assist the States in operating facilities for tuberculosis and mental care.

Bill No. 53, calling for Federal aid to schools which adopt the four-quarter plan of year-around operation was defeated. It was submitted by Wendy Fosburg of Batavia High School.

Bill No. 13, calling for increase of the immigration quotas was also defeated. It was submitted by Suzanne Beebe and Lorna Lamb of Corfu High School.

The Congress was under the chairmananship of Samuel Giansante, of Elba Central School.

Under leave to extend my remarks, Mr. Speaker, I also include in the RECORD an editorial from the April 8 issue of the Batavia Daily News with respect to this model congress:

MODEL CONGRESS SHOWS THE WAY

The model congress staged by area schools at the State School for the Blind commends itself as a most sensible and worthwhile project.

It involved students from throughout the county assembling after the fashion of the national legislative body, studying, debating, presenting and finally voting on measures of nationwide significance.

It was edifying to see the grasp of national issues that the students have.

Certainly, an endeavor of this kind promotes not only a knowledge of the mechanics of government, but also encourages thinking on all sides of an issue and, in effect, puts significant meaning and "life" into what is between the covers of a textbook.

Unofficial Visit to the Jewish Colony at Sosua in the Dominican Republic

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. ZELENKO. Mr. Speaker, during the Easter recess, accompanied by three of my distinguished colleageus, Hon. ISIDORE DOLLINGER, of New York, Hon. EARL CHUDOFF, of Pennsylvania, and Hon. SAMUEL N. FRIEDEL, of Maryland, I made an unofficial visit to the Jewish colony at Sosua in the Dominican Republic. We were guests of the colony which was established 17 years ago to provide a haven for persons of the Jewish faith who were victims of Nazi horror and inhumanity.

We spent several days in Sosua where we worshipped in their synagogue, lived in their homes, visited their farms, factories, school, and hospital.

We found a happy and prosperous people in a thriving community. Those who came there oppressed and forsaken are now proud citizens of the Dominican Republic, living in harmony with their neighbors, respected and welcomed everywhere.

The Sosua settlers told us, and we can report from personal observation, that the promises made to them by Generalissimo Trujillo in 1940 have been fulfilled. He has kept his word.

In Ciudad Trujillo, the capital of the Dominican Republic, we witnessed a history making and significant event.

Alfred Rosenzweig, who came there with the small band of Hitlers' victims, was sworn in as a Congressman of the Republic. He was the first of the Jewish faith to achieve this honor. To us this was indicative of the freedom of opportunity, freedom of religious belief and worship, and the absence of discrimination of any kind, because of race, creed, or national origin in the Dominican Republic.

We were invited to meet with Generalissimo Trujillo. In the course of our discussion, we mentioned the plight of the Egyptian refugees who are now seeking a haven from communism and Nasser terrorism. We were particularly concerned because President Eisenhower and Secretary of State Dulles have refused the same preference to the Egyptian refugees as was given to the Hungarians.

Generalissimo Trujillo assured us that he would be happy to do today what he did in 1940. He said that the door of the Dominican Republic is open to all oppressed people, regardless of race, creed, or national origin and that 5,000

Jewish refugees can be admitted immediately. He further advised us that he is making available sufficient fertile land for all those who will come.

Middle East Situation Serious

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the people of the United States and perhaps of the world are thinking about the ultimate possibility of war in the Middle East area. As part of my remarks I am including a timely article by a Scripps-Howard staff writer, Mr. R. H. Shackford, who is presently in Amman, Jordan. It is obvious from a reading of the article that until the difficulty between the Arabs and the Israeli is resolved, there will be but little chance for peace in the area. The article follows:

AMMAN, JORDAN, April 25.—The odds are heavy on the side of civil war here. If that happens Jordan's neighbors, like jackals, probably will devour her.

That is the opinion of most foreign observers and the fear of many moderate Jordanians. But they sit mesmerized and helpless.

Tension is near the breaking point.

DESPERATE

The economic situation is desperate. The mood of two-thirds of the people—1 million Palestinians in a country of 1,400,000—is that they have nothing to lose. The only thing worth gaining, for them, is revenge against Israel. The West has blocked such revenge, but the Reds promise it for them.

Young King Hussein still is fighting with the moral support of neighboring Kings Saud of Saudi Arabia and Feisal II of Iraq. He hopes for their military support if the lid blows off. But only a minority of the people are behind him—the majority being Palestinians, not Jordanians.

The struggle between the King and the extremists has grown rapidly ever since the extremists won last year's elections—the first free ones in Jordan. The issue was drawn early this year when Jordan was faced with choosing whether to support the Eisenhower doctrine.

The extremists, who want closer association with Egypt's President Nasser and Moscow, and a policy of positive neutrality, reject the doctrine. The King and some of his advisers want such support, because they now are conscious of the strong hold communism is getting on Palestinians in their midst.

WALKING THE TIGHTROPE

The current crisis started early this month when the King dismissed the old cabinet headed by extremists and set up a new one. He is trying to walk a tightrope by getting rid of pro-Nasser extremists, while not alienating the Palestinian rank and file who are attracted by them.

The King's dilemma is this: If he should come out enthusiastically for the Eisenhower doctrine, or if the Richards mission appeared here now, the extremists probably could give the street mobs the signal for all-out riots. That may happen anyway. Countrywide demonstrations the last few days were a possible prelude to a major effort to overthrow the present Government and the King.

There are few if any hopeful signs either here or in the more tension-ridden area west of the Jordan River—the section of old Palestine the Israelis failed to conquer in 1948.

The most encouraging sign is the King's strong measures to keep the lid on—deployment of the Arab Legion and police in trouble areas, abolition of all travel within the country, a purge of officers and probably stiffer measures to come. If the extremists decide to push it, there will be a fight—and everyone agrees a bloody, tragic one between Arabs.

UNITED STATES SCAPEGOAT

The United States is the major scapegoat. The Reds carefully maneuvered the situation so a million Palestinians in Jordan—half in miserable refugee camps—look on the United States as their enemy and Russia as their friend. "If my enemy (Israel) is your friend, then you are my enemy," they say. "The Soviets say Israel is their enemy and therefore the Soviets must be our friends."

Only those who have lived in squalor and hunger and without hope of returning to their old homes for 8 years can understand this reasoning. These people do not look beyond the Israeli question—and it does little good to lecture them on the dangers of communism. "What about Israel?" they reply.

Time and again I asked Jordanians and Palestinians of moderate cast what could the United States do when they asked me, "What is the United States going to do?"

Time and again the answer was undeviatingly the same: "Admit justice is on our side in the dispute with Israel, and do something about getting justice for us."

It is pretty hard to reply to this in the middle of a refugee camp of 40,000 desolate, forlorn people living in mud huts and tents on barren plains west of Jericho. Even harder to answer when the refugee is standing on the edge of no man's land and looking 50 feet across barbed wire to his orange grove now tended and harvested by Israelis.

The Western World often forgets the crux of the Israeli problem is right here in Jordan. Likewise the crux of Jordan's current problems revolve around the Israeli problem.

Looking at hard facts it is hard to conclude otherwise than that the cards are stacked against continuation of Jordan in its present state. The United States unfortunately today is seeking to maintain what is an untenable status quo.

Jordan really is two countries:

First is old Transjordan the area east of the Jordan River. It is primarily desert and mountains; until the Israeli war it was inhabited by a few hundred thousand Bedouins and shepherds.

Secondly is a small chunk of old Palestine—an area 75 miles long and 30 wide, north and south of Jerusalem and west of the river. The Israelis failed to capture this and the late King Abdulla annexed it.

MOSTLY PALESTINIAN

This area is populated by about a half million Palestinians. To it and nearby Jordanian areas another half million Palestinians fled and still remain. The present population of Jordan is thus two-thirds Palestinian.

Palestinians, being much more sophisticated and politically conscious than the desert nomadic Jordanians, quickly came to dominate this country. King Abdulla gave all Palestinians Jordanian citizenship.

The present prime minister is a Palestinian refugee. His predecessor was a Palestinian. Most members of the cabinet are Palestinians. Palestinians have only one objective in life—get rid of Israel and return to their lands.

Although the indigenous Jordanians are less strongly inclined, their country is a paradise for Reds and extremists.

A former moderate cabinet member, dismissed a week ago by King Hussein, discussed the situation with despair:

"No one knows from hour to hour what will happen. Extremists are in control of the crowds and refugees, thanks to the West's refusal to face up to the refugee problem all these years.

"These demonstrators are not Communists. They don't even know what communism is. But Communist leaders are taking full advantage of their frustrations.

"It is a classical Marxist revoluntionary style. Demonstrators are Palestinians driven from their homes 8 years ago, who feel 8 years of injustice is enough. They are sick and tired of seeing sympathetic foreigners like you come here and look at them, go away and write nice words—but then nothing happens.

"They sit, and brood, and plot. But something is going to happen now. For years Moscow paid no attention to them. Now Moscow says it is on the side of the Palestinians. Your answer is a proposal to save us from communism. That isn't what these people want. They want what the Soviets are saying—that their case against Israel is just."

If Hungarian Refugees, Why Not Egyptian?

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. CELLER. Mr. Speaker, I am dismayed to learn that the administration sees fit to reject the entrance of Egyptian displaced Jews to the United States under the parole provisions of the McCarran-Walter Act. Yet, this is the very provision in the law which gave the administration authority to admit 32,000 Hungarian refugees. I note that Mr. Rogers, in replying for the Attorney General, stated that the decision to admit Hungarian refugees was taken in "a sudden unexpected emergency which arose while there was no Congress in session." This answer is completely illogical.

The authority to admit the Hungarian refugees was based on law and the law operates whether or not Congress is in session. It is heartless mockery to say that existing law is operable for one group of people and then inoperable for another group of people who are similarly situated. Whether or not Congress acts on the administration's proposals, is completely irrelevant. The law as it exists today, provides sufficient authority to admit the helpless deportees of Egypt.

Moreover, the administration has announced that it will continue to permit the entrance of additional Hungarian parolees. No one finds fault with that, but then what happens to the excuse given by Mr. Rogers that the administration will not act on Egyptian deportees while Congress is in session, pending action on the proposed legislation affecting parolees? The Hungarian refugees are still being admitted although Con-

gress is in session and the pending legislation has not been acted upon.

There is more to this than meets the eye. What is the real basis for this discrimination? The Committee on the Judiciary, of which I am chairman, will put that question to Mr. Rogers.

Resolution Concerning Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I include a senate concurrent resolution passed by the South Dakota Legislature which memorializes the Congress to substitute the Scrivner, Republican, of Kansas, bill for H. R. 1 in the event there is action on the part of Congress to provide Federal assistance to education. In presenting this concurrent resolution, I likewise call attention to a senate resolution passed by the South Dakota Legislature which I inserted in the RECORD under date of April 15, 1957, and which appears on page 5114 of the RECORD, wherein the South Dakota Legislature went on record in unequivocal opposition to the whole philosophy of Federal aid to school construction or education in any manner.

Mr. Speaker, I am convinced that these two resolutions, which were passed by the South Dakota Legislature, clearly define the feeling of the people of South Dakota on not only education but on a majority of these Federal-aid grants. The senate concurrent resolution is as follows:

Senate Concurrent Resolution 11

Concurrent resolution memoralizing the Congress of the United States and his Excellency, the President of the United States, the Honorable Dwight D. Eisenhower; the Honorable KARL E. MUNDT and the Honorable FRANCIS CASE, United States Senators from South Dakota; the Honorable E. Y. BERRY and the Honorable GEORGE McGOVERN, Congressmen from South Dakota; relating to a sound approach to more increased educational funds through local control by providing that 1 percent of the personal and corporate Federal income tax generated in the State of South Dakota shall either be retained in or returned to the State to be used for such educational purposes as the State of South Dakota may determine

Be it resolved by the Senate of the State of South Dakota (the House of Representatives concurring therein):

Whereas there are some people in public life that feel that there is a pressing need for Federal aid for schools based on the premise that this country faces an educational crisis caused by the fact that while more and more children have been entering our schools every year, there have been fewer and fewer teachers and school buildings to take care of them; and

Whereas other people in public life, who recognize that there is a need for more educational funds in our Nation, feel that the problem can be met quickly and sensibly at the local level but not on the Federal plane because Federal aid results in Federal control in its distance from the people, and fails to solve State and local problems; and

Whereas the Government of the United States, through taxes, is siphoning a great part of the wealth of our Nation out of the several States and Territories into the Federal Treasury; and

Whereas the Government of the United States is collecting taxes from nearly all sources of revenue, including taxes on individual and corporate incomes, admission, beverages, communications, gifts, luxuries, transportation, and from excise and other taxes, leaving to the States but relatively few other sources of tax revenues; and

Whereas at rates approaching confiscation of property, States are still not able to raise revenue sufficient to carry the rising costs of State and local governments, and especially not to meet the demands for needed improvements and higher salaries for the training of our youths; and

Whereas it has been proposed that the Federal Government grant aid to the State for educational purposes; and

Whereas it is neither economical nor efficient to withdraw huge sums out of the States and Territories and redistribute funds under bureaucratic regulations from the Federal Treasury; and

Whereas there was introduced in the 85th Congress of the United States, House Joint Resolution 159, which resolved in part, "That 1 percent of all income taxes collected on individual and corporate incomes under Federal statutes shall be deemed to be revenue for the State or Territory within which it is collected, for use, for educational purposes only, without any Federal direction, control, or interference," and in line with said House joint resolution Representative ERRETT P. SCRIVNER, of the Second District of Kansas, and Representative E. Y. BERRY, of the Second District of South Dakota, have introduced bills to aid education through this direct transfer-to-the-State treasury plan; and

Whereas it is desirable that if aid is required by the States, that it be accomplished by a simple, easy, direct, and efficient method, not hampered with bureaucratic restrictions, or dictation: Now, therefore, be it

Resolved by the Senate of the State of South Dakota (the House of Representatives concurring therein), That the Congress of the United States be respectfully urged and requested to adopt legislation in line with the Scrivner plan of aid to education and House Joint Resolution No. 159 whereby the State of South Dakota would retain 1 percent of all income tax collected on individual and corporate income under Federal statutes which would be deemed revenue for the State of South Dakota for educational purposes and without any Federal direction, control, or interference; be it further

Resolved, That the secretary of the Senate of the State of South Dakota transmit copies of his resolution to His Excellency, the President of the United States, the Honorable Dwight D. Eisenhower; to the Honorable KARL E. MUNDT and the Honorable FRANCIS CASE, United States Senators from South Dakota; the Honorable E. Y. BERRY and the Honorable GEORGE McGOVERN, Representatives in Congress from South Dakota.

NILS A. BOE,
Speaker, House of Representatives.
WALTER J. MATSON,
Clerk, House of Representatives.
L. R. HOUCK,
Lieutenant Governor, President of the Senate.
JOHN EWELL, for
NIELS P. JENSEN,
Secretary of the Senate.

Northerners Need To Know Facts in the South—There'd Be Less Misunderstanding

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I am including an article written by Mr. Albert Taliaferro, Jr., of Cordova, Tenn.

He emphasizes that the South does not have a real Negro problem. It is provocative of great interest and I am sure you will be interested in reading it.

The article follows:

NORTHERNERS NEED TO KNOW FACTS IN THE SOUTH—THERE'D BE LESS MISUNDERSTANDING

(By Albert Taliaferro, Jr.)

A message to white northerners and to higher class Negroes:

There would be no hate or misunderstanding over integration if you could understand the following facts and do something definite to correct the practices of southern Negroes which produce those facts.

In Shelby County, Tenn., last year there were 2,986 illegitimate Negro children to 23 whites. That means more than 129 Negroes born out of wedlock, to 1 among whites. And that picture does not take into consideration the fact that there are almost 3 whites to 1 Negro living in Shelby County. Taking this into consideration, the ratio is at least 260 Negro illegitimate births to 1 white.

Scripps-Howard Reporter Andrew Tully saw one Negro woman in Mississippi who had 7 children by 7 different men.

THE DISEASE ISSUE

A study of United States statistics on venereal disease in the South showed very much the same sort of ratio.

I have never seen these detailed facts brought to public attention, in an effort to explain why southern whites do not want integration forced upon them and why the Southern States are setting up laws to block forced integration. Our good Negro brethren deserve to know these reasons, in order that they may correct them.

Those infected with venereal disease leave germs on toilet seats where they are caught by innocent people. Could anything be more convincing to integrationists?

White southerners simply do not want to accept such an unprepared race on an equal basis. Higher class Negroes do not expect them to. We have hundreds of higher class Negroes in many of our southern white colleges, who understand the problem. They know that they are held back by lower level Negroes.

Negro preachers of our Nation, according to that great Negro publisher, Davis Lee, instead of preaching the gospel against sin, are fanning hate against the southern whites who really are their friends. Wise Negro leaders, especially preachers, should first insist on cleaning up the southern Negroes' sins and then ask for recognition. But so far the NAACP and many Negro leaders are not doing this.

QUESTION OF DUTY

Is it the southern white peoples' duty to cleanse the Negro race? No; the Negroes would consider that as meddling in their private affairs. I think it is the duty of the NAACP, and they should be forced by higher class Negroes to get going on that job.

Some northern whites have the crazy idea that they are somehow different from the southern whites and for so thinking, they are completely responsible for the unnatural hate with which the southern Negro is being infected.

Results of Questionnaire Mailed by Hon. John F. Baldwin, of California, to Residents of the California Sixth District

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. BALDWIN. Mr. Speaker, early this year I mailed a questionnaire to every family of registered voters in the California Sixth Congressional District. The response to this questionnaire was the largest that I have ever received. Many constituents not only answered the questionnaire, but sent supplementary letters or wrote detailed comments on the back of the questionnaire. I have spent many hours personally reading all of these comments, and they have been most helpful. I am firmly convinced that a Congressman can better represent his constitutents if he knows the views of all of these constituents, than if he has only heard from pressure groups.

The tabulation of the questionnaire is summarized below:

1. A civil-rights bill is under consideration by Congress which would provide that any intimidation or other effort to prevent a citizen from legitimately voting in Federal elections is a Federal offense, and that the United States Attorney General be given authority to prosecute such a violation. Do you favor or oppose such a bill? Favor, 86.4 percent; oppose, 8.6 percent; undecided, 5 percent.

2. President Eisenhower has proposed that Congress authorize him to use our Armed Forces, if necessary, to protect the territorial integrity and political independence of any Middle Eastern nation requesting such aid, against overt armed aggression from any nation controlled by international communism. Do you favor or oppose such authorization? Favor, 63.6 percent; oppose, 25.5 percent; undecided, 10.9 percent.

3. The Refugee Relief Act, which permitted admission into the United States of refugees, expired on December 31, 1956. Proposals have been made that an extention of this act be passed so that additional refugees from Hungary and other countries might be admitted to this country. Do you favor or oppose such an extension? Favor, 41 percent; oppose, 48.5 percent; undecided, 10.5 percent.

4. President Eisenhower has proposed to Congress that the McCarran-Walter Immigration and Nationality Act be liberalized so that unused immigration quotas could be transferred to country whose quotas are oversubscribed. Do you favor or oppose this modification in the act? Favor, 47.4 percent; oppose, 41.7 percent; undecided, 10.9 percent.

5. The present tight-money situation has resulted primarily from Government efforts to prevent inflation. If you had your choice, which of the following would you prefer:

(a) High interest rates, with reasonable stability in prices—89.3 percent.

(b) Lower interest rates, but with higher prices for the goods you buy—10.7 percent.

6. It has been proposed that the Veterans' Administration's interest rate on veterans' home loans be increased from 4½ to 5 percent to stimulate lending agencies to make more VA home loans. Do you favor or oppose this increase in the VA interest rate? Favor, 56.6 percent; oppose, 34.3 percent; undecided, 9.1 percent.

7. It has been proposed that the veterans' preference, which gives priority to veterans over nonveterans in Federal civilian employment, should not apply after a nonveteran has a minimum of 15 years' Federal service. In other words, a nonveteran with more than 15 years of Federal civilian service could not be "bumped" (ousted from his job), in case of a reduction in force, by a veteran with less Federal civilian service. Would you favor or oppose such a limitation of the veterans' preference.

Answers from all constituents: Favor, 73.8 percent; oppose, 21.8 percent; undecided, 4.4 percent.

Answers from veterans: Favor, 66.5 percent; oppose, 27.4 percent; undecided, 4.1 percent.

Answers from nonveterans: Favor, 80.1 percent; oppose, 15.8 percent; undecided, 4.1 percent.

Answers from Federal civilian employees who are veterans: Favor, 44.6 percent; oppose, 51.6 percent; undecided, 3.8 percent.

Answers from Federal civilian employees who are nonveterans: Favor, 90.5 percent; oppose, 8.6 percent; undecided, 0.9 percent.

8. (Answered by residents of Solano County.) The Air Force has announced that it considers it essential to construct 500 additional housing units at Travis Air Force Base to provide adequately for military personnel stationed at the base, and for our national defense. In order to do this, under present law, the Air Force must first purchase the existing 900 housing units at the base which were originally built under the Wherry Act. Such purchase would remove the Wherry housing units from the tax rolls, depriving Solano County of approximately $45,000 in property tax revenue per year. With these facts in mind, do you favor or oppose the Air Force proposed construction of the 500 additional housing units? Favor, 36.8 percent; oppose, 51 percent; undecided, 12.2 percent.

Foreign Aid Fails To Hit Target

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. George Todt, editorial correspondent for the Valley Times, North Hollywood, Calif. His comments regarding our foreign-aid program are timely and I commend the article to the House membership:

OUR ALLIES AND OUR BAG HOLDING

(By George Todt)

"All hope abandon, ye who enter here."—Dante—Inferno.

The ludicrous aspects of our foreign-aid giveaways become more apparent with the passage of time. There are so many flagrant examples of what our global doles have failed to buy for us—friendship, security or peace—that it would be easier to write a book than a short article on the subject. Let's take a look at the recent antics of our partner, Great Britain, for a starter.

Our strongest ally has just told us—in effect—to go fly our kite. Not only is Her Majesty's Government's bowing out of the picture insofar as the global military defense of the Western alliance may be concerned, but it is also preparing to open the floodgates of trade with the Iron Curtain bloc as well. Is this Britain's revenge for President Eisenhower's stopping her midway in the recently attempted conquest of the Suez Canal? If so, then we will possibly find France—our No. 2 ally—following suit.

France is practically a military nonentity for the time being anyway—at least insofar as any adequate contribution to the North Atlantic Treaty Organization's defense of Western Europe is concerned. She has some half million men, armed by courtesy of the United States, and they are presently gallivanting over north Africa instead of maintaining their share of our mutual burden at the Rhine, which was the reason why we gave them weapons and economic aid in the first place. France has spent our wherewithal in Indochina and Africa, instead.

But to get back to our British cousins. They have thrown in the sponge and now say they must rely on the American taxpayer to pay for their defense. How come? For answer, John Bull points to the Suez fiasco. Really crushing, you know.

And yet quite a case might be made to the neat effect that Britain lost no money whatsoever on the ill-fated expedition. The military costs were previously given as approximating $300 million. Afterward, London picked up nearly $2 billion in credits and loans from the World Bank and from us, these to tide her over. We have generously agreed to postpone interest payments extending many years into the future on the postwar British loan. This means, in effect, another grant-in-aid gift of billions in savings.

We came to Britain's rescue—as we have on numerous other occasions—with enough oil to keep her going without any economic letdown in any quarter. In fact, there was a boom—not a recession—in England during the last winter. Production was at an all-time high. In fact, things were so good that the Government announced early in April that income taxes would be cut; also taxes on entertainment, household goods, and gasoline sales. How about that?

It must seem strange to thinking Americans that after we came to Britain's rescue in the last two World Wars, after spending more than $120 billions on economic and military aid to our allies since 1945, and after paying the highest income and other taxes in our history—the American people must now be treated to the spectacle of our closest ally's handing us the ball and taking a powder on the next play. This doesn't make sense to our side.

Let's face it. When British fat was in the fire, the Empire knew how to maintain its share of military forces in the face of world tensions—and did so magnificently without aid or direction from Uncle Sam. The British Commonwealth could do so today if it wanted to make the effort.

But what is the incentive for it to do so? As long as our politicians in Washington are too weak to insist that our allies do their full and fair share in our mutual system of alliances—why not allow the American taxpayer to carry the Old Man of the Sea on his back? Can we actually blame the British? Is this sad turn of affairs their fault—or ours?

Frankly, we have only ourselves to blame. It is sheer stupidity on our part to undertake the defense of others who are neither enthusiastic nor willing to share equally in their own defense against a hideous, alien ideology such as militant Marxist socialism. But far from being interested in doing more

than a token share, our allies—namely, the British and French—seem more interested in open trade with the enemy. Or do they really think of the Communist leaders as enemies? Why have they left us holding the bag? What's up?

Classroom Shortage

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call the attention of my colleagues to an excellent editorial in the Monday edition of the Washington Post and Times Herald on the subject of classroom shortage.

Opponents of the plan to have the Federal Government make grants-in-aid to State and local school districts for needed classroom construction must realize that the bulk of the American press and a vast majority of the American people favor the idea.

I want, on behalf of the proponents of this legislation, to commend the Post and other outstanding newspapers for their stand favorable to legislation that means so much to America.

The editorial follows:

CLASSROOM SHORTAGE

Of all the unfinished business which Congress faces on returning from its Easter recess, nothing can make a stronger appeal to its conscience and its concern for the national welfare than the proposal for Federal aid to school construction. In one form or another, the proposal has been before it for more than a decade. The need for Federal aid has grown more acute each year. Continued neglect of it can result only in impairment of the Nation's public school system. Congress has a heavy obligation to act upon it before the session's close.

Opposition to Federal aid seems to rest on two arguments. One is the contention sponsored by the United States Chamber of Commerce that no classroom shortage exists; this ostrich method of approaching a serious problem by closing one's eyes to it may be comforting to economizers but it is neither constructive nor realistic. The other argument is an old one and deserves more serious consideration: it is rooted in a fear that Federal aid may lead to Federal control of the public schools. Marion Folsom, the Secretary of Health, Education, and Welfare, dealt with both these arguments in a notable speech recently at Rochester, N. Y.

Taking the figures supplied by State and local school agencies throughout the country as a basis, Mr. Folsom attacked the contention that no classroom shortage exists. "For the third year in a row," he said, "the States reported our schools are overflowing with about 2¼ million children above their capacity. These children are not imaginary. They are in school today, and they can be counted with reasonable accuracy. These children, and millions of their classmates, are handicapped by half-day school sessions or badly overcrowded conditions or use of makeshift facilities. * * * The latest and best estimate by the States places the total classroom shortage at about 159,000 classrooms."

The Secretary's reply to those who fear Federal control of education seems to us equally persuasive. All that is proposed in the administration bill, he points out, is a grant of Federal funds for a limited emergency period to be allocated to the States, matched by their own resources, and then allocated by them to local school authorities for local disbursement and administration. The Federal contribution would amount to only 15 percent of total funds for school construction in the country and to no more than 3 percent of total funds for public schools for all purposes. Moreover, the Federal contribution would be limited to construction and would, by explicit legislative provision, have no relation to the selection of teachers, the determination of school curriculums or the administration of school programs. It is hard to see in this any genuine threat to the independence of local school boards.

From the beginning of the American Republic, the Federal Government has given assistance to education through land grants to colleges. This aid has brought rich dividends to the American people as a whole. Something like it is needed now for the public-school system because neglect of school construction during the war and postwar years has created an emergency classroom shortage which the States cannot meet out of their own resources. The need is immediate, temporary, and real. Federal aid means the salvation, not the sacrifice, of community control of the public schools.

Bertrand-Harrrison Bend Migratory Waterfowl Refuge

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of my colleagues to the Iowa Senate Concurrent Resolution 23 as adopted by the 57th General Assembly of Iowa.

The resolution follows:

Senate Concurrent Resolution 23

Whereas it has been proposed that the United States Fish and Wildlife Service establish a migratory waterfowl refuge and recreational area on the Missouri River in and adjacent to Harrison County, Iowa, in what is known as the Bertrand-Harrison Bend in connection with a project of bank stabilization being constructed by the United States Army Corps of Engineers; and

Whereas such an area would greatly enhance the recreational facilities of Iowa; and

Whereas outdoor recreation tends to lessen juvenile delinquency by providing a wholesome and healthy outlet for youthful energy as well as fulfilling a basic need for the people of Iowa in general; and

Whereas the United States Army Corps of Engineers has made a study of the proposal and finds that the necessary alterations in its plans can be carried out at no additional cost: Now, therefore, be it

Resolved by the senate (the house concurring), That the Legislature of the State of Iowa commends the Federal agencies involved for their forethought and efforts in the interests of outdoor recreation and urges their continued cooperation in advancing this project to a successful completion; and be it further

Resolved, That the secretary of the senate send copies of this resolution to the United States Senators and Representatives from Iowa; the United States Senators and Representatives from Nebraska; to Brig. Gen. J. L. Person, United States Army Assistant Chief of Engineers for Civil Works; and to Mr. Ross Leffler, Assistant Secretary of the Interior.

SENATE CONSERVATION COMMISSION,
ALBERT WEISS, *Chairman*.

We, William H. Nicholas, Lieutenant Governor of Iowa; Richard W. Berglund, secretary of the Senate; W. L. Mooty, speaker of the house of representatives; and William R. Kendrick, acting chief clerk of the house of representatives, hereby certify that the above and foregoing resolution was adopted by the Senate and House of the 57th General Assembly of Iowa.

RICHARD W. BERGLUND,
Secretary of the Senate.
WILLIAM R. KENDRICK,
Acting Chief Clerk of the House.
WILLIAM H. NICHOLAS,
Lieutenant Governor of Iowa.
W. L. MOOTY,
Speaker of the House.

Food Fair Decision Threat to FTC

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the following statement made by me and text of a letter to Representative OREN HARRIS, chairman, Committee on Interstate and Foreign Commerce:

FOOD FAIR DECISION THREAT TO FTC

The meatpackers' exemption from surveillance by the Federal Trade Commission that was created in the Packers' and Stockyards Act of 1921 poses grave threats to the continued usefulness of the FTC and to its ability to proceed against unfair and discriminatory practices by any American company.

Under a ruling by a Federal Trade Commission hearing examiner in the Food Fair case, which involved unfair practices in the operations of a supermarket grocery chain of 238 stores, any company, no matter what its primary line of business is, simply by establishing a small meatpacking operation can oust the FTC of jurisdiction over its activities. I have written a letter to the chairman of the Interstate and Foreign Commerce Committee urging him to take early action in order to resolve the statutory ambiguity that gave rise to this condition and to affirm the FTC's jurisdiction over monopolistic practices of meatpackers.

The text of my letter to Representative OREN HARRIS, chairman, Committee on Interstate and Foreign Commerce, is as follows:

"On April 11, 1957, a hearing examiner for the Federal Trade Commission issued a ruling that underscores the urgency for early consideration by the Interstate and Foreign Commerce Committee of necessary legislation to close the loophole in the Federal Trade Commission Act created by the meatpackers' exemption. In the *Food Fair Stores, Inc.* case (FTC Docket 6458), FTC's hearing examiner ruled that Food Fair's ownership and operation of a meatpacking plant ousted the Federal Trade Commission from jurisdiction over unfair methods of competition that violate the Federal Trade Com-

mission Act and discriminatory practices that violate the Robinson-Patman Act even though these unfair and discriminatory practices are totally unrelated to the distribution of meat and meat products, or for that matter, even to the distribution of agricultural products.

"By vesting $2,700,000 in a meatpacking plant, Food Fair has been able to remove FTC surveillance over the business of a supermarket grocery chain of 238 stores with gross sales of $475 million. This is a case where the tail wags the dog.

"Unless the Federal Trade Commission overrules its examiner, his decision leads to absurd results. Any company, no matter what its primary line is, with a minimal investment in a meat packing operation can deprive the Federal Trade Commission of jurisdiction over its activities. Under the examiner's ruling, this device could be used by tire producers, battery manufacturers, automobile manufacturers, integrated oil companies, or any other industrial giant, to eliminate antitrust enforcement by the Federal Trade Commission over monopolistic practices that result in unfair and discriminatory methods of competition.

"I hope that the hearing examiner ultimately is found to be in error. The fact that there is much to support his interpretation of the packers' exemption, however, further demonstrates the need for Congress to clarify this statute and to affirm the jurisdiction of the Federal Trade Commission over the activities of meatpackers.

"As the law now stands, the Secretary of Agriculture has jurisdiction to enforce the antitrust provisions of the Packers' and Stockyards Act of 1921. The Secretary of Agriculture, however, for more than 30 years has done nothing to enforce these antitrust provisions, even with respect to those companies whose primary lines are slaughtering, processing, and selling meat and meat products. It is obvious that the Secretary of Agriculture is neither equipped for nor qualified by experience to continue these antitrust responsibilities.

For these reasons I urgently request that you schedule early hearings on my bill, H. R. 5282, to return to the Federal Trade Commission jurisdiction to prevent monopolistic acts and practices and other unlawful restraints by persons engaged in commerce in meat and meat products."

United Nations Aid Suggests That the United States Reduce Its Spending Abroad

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the head of the International Monetary Fund has proposed that the United States cut its Government expenditures in the interest of a more stable world economy. Will our policymakers heed his advice? I doubt it. The statement by Mr. Per Jacobsson, managing director of the International Monetary Fund to the United Nations Economic and Social Council follows:

UNITED NATIONS, N. Y., April 17.—The head of the International Monetary Fund proposed today that the United States cut its governmental expenditures in the interest of a more stable world economy.

Per Jacobsson, managing director of the body, told the United Nations' Economic and Social Council that inflated international budgets today represented "the greatest obstacle" to monetary order.

Previously he expressed the opinion at an interview that it would be unfortunate if the United States foreign-aid program should be such as to stand in the way of possible budget reductions and tax cuts.

He said, however, that the current high volume of demand for goods and increasing private investment throughout most of the world had been of benefit to the United States, enabling it to maintain its export markets in the years after the Korean war.

BUSINESS IS HELD KEY

Noting the economic theory that governments should spend largely in times of shrinking private business and retrench correspondingly when private investment stands at a high level, the Swedish expert asserted:

"It now seems as if the authorities were quite willing to accept and apply the first part of this theory but that they show great hesitation and unwillingness to apply the necessary retrenchment in a period of boom.

"There are, however, some countries which recently have taken steps to cut down effectively the volume of their government expenditure; among them I would especially mention Belgium, the Netherland, Great Britain, and, as far as investment expenditure is concerned, Austria.

"Under the influence of the examples set by these countries, it is not excluded that a new fashion involving a curtailment of government expenditure will gain ground, instead of the practice of ever-mounting budgets followed in most countries during the post-war years. For such a fashion to be firmly established it is probably necessary, however, that some extra-European countries—and particularly the United States—should partake in the movement.

"For anyone who has had the occasion to examine the internal position of a number of countries in various parts of the world, it is difficult to avoid the conclusion that if only the budget deficit could be brought down to manageable proportions the greatest obstacle to monetary order would have been eliminated."

SEES NEED FOR COURAGE

Mr. Jacobsson conceded that cuts in government spending would require much political courage and determination. But he added that fortunately people everywhere are tired of inflation and this should make it easier for authorities to take without fear or hesitation the necessary measures, whether these are popular or not.

WORLD MARKET STRESSED

He went on: "It is, I think, advisable for most countries to remember that if they continue to allow their costs and prices to rise, they may not be able in the future to count on an increase in the general level of world-market prices but become exposed to the risk of getting into an unbalanced position internally and externally.

Mr. Jacobson outlined the measures taken by the International Monetary Fund to support the pound sterling during the Sues Canal crisis. There was a surprising unanimity of view regarding this course among almost 60 member nations, he said, and an amount equal to the United Kingdom's quota of $1,300,000,000 was made available.

"It was found to be not only in the interest of the United Kingdom but also in the general interest that support should be given to a currency with the worldwide importance of sterling, in which over one-half of the world's currency transactions are settled," he said.

The Fund Director noted that despite political stress over the last few months, no grave monetary disturbances had taken place and progress had been made in several nations toward increased transferability of currencies.

He reported, however, a distinct feeling of uneasiness regarding increasing living costs in such countries as the United States and Britain, despite the pronounced increase of private business investments.

The Trend Toward Monolithic Banks

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by me before the convention of the Independent Bankers Association, at the Golden Gate Hotel, Miami Beach, Fla., Friday, April 26, 1957:

This morning I should like to discuss with this most distinguished assemblage a matter of grave national concern. I am referring to the trend toward monolithic banks that is wiping out independent banks on a wholesale scale and concentrating control of the Nation's banking business into fewer giant financial institutions. This trend is an ominous one indeed for the future of the independent banking system; permited to continue unchecked, it could have dangerous consequences for the entire competitive economy which depends for its lifeblood upon banking credit.

Traditionally the banking system of the United States has relied for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Unlike other countries, such as Great Britain and France, where a few mammoth institutions control nearly all the banking facilities, the American system is based on unit banking—that is, strong, growing community banks which provide a wide range of financial services to the people in the area. It is the unit banking system which has played a key role in the economic development of this country. And it is this kind of system, premised on small units effectively competing with each other, that our antitrust fabric is designed to perpetuate and preserve.

CONCENTRATION OF BANKING FACILITIES

Against this background, what are the details in respect to concentration of banking facilities? In this connection, let me refer you to the report of our House Judiciary Antitrust Subcommittee, dealing with corporate and bank mergers. Our subcommittee found that at the present time, the 100 largest banks control approximately 46 percent of the total assets of all the commercial banks in the country and more than 48 percent of the bank deposits. It found that in 10 of the 16 leading financial centers, 4 banks own more than 80 percent of all commercial bank assets; 2 banks more than 60 percent; that in each of the 16 leading financial centers, the first 2 banks own more than 40 percent of all commercial bank assets; the first 4 banks more than 60 percent.

There is yet another facet—concentration through bank holding company control. In

my State of New York, for example, 14 holding companies control banks having deposits of $7.2 billion, amounting to 19.5 percent of all commercial bank deposits in the State. In Arizona, 2 holding companies control over 80 percent of all commercial bank deposits. In Minnesota, 2 holding companes hold 45 percent of the commercial deposits; in Montana, the same 2 companies control over 44 percent of the commercial deposits; in North Dakota, 29 percent; and in South Dakota, 37 percent of the commercial bank deposits. One holding company controls 42 percent of Oregon's bank deposits, and the same company in Nevada holds 78 percent of the commercial bank deposits.

PACE OF BANK MERGER ACTIVITY

Largely responsible, in my judgment, for the present degree of concentration has been a spate of mergers accomplished through acquisitions by banks and by holding companies. In fact, the rapidly accelerating trend towards mergers has been the major development in banking over the past 7 years. Thus in the period from 1950 through 1956 some 1,017 of the Nation's commercial banks have disappeared by way of mergers and consolidations. Banks so eliminated have not been, for the most part, the financially weak, unsound banks that needed rescue in the depression pattern. Nor have they been, in the main, the specialized, poorly organized, or the inefficiently managed. On the contrary, most of the banks that have disappeared have been growing, efficient, profitable, vigorously competitive banks taken over at peak earning capacity. The merger pattern is not predominantly a situation where two or more small, inadequately financed or managed banks, falling behind in the competitive race, seek by merging to form a big integrated institution, able to compete on equal terms. On the contrary, a large percentage of mergers involved one or more giant banks having assets of $100 million or more. And the absorbed banks were likewise no minnows; a large percentage of those banks having assets in excess of over $50 million.

There is yet another consideration. During the last 35 years, the number of banks has been reduced by more than half. In 1921 there were over 30,000 commercial banks serving the Nation's borrowers and creditors; by contrast, at the end of 1956 some 13,680 commercial banks remained in operation—a new low. This despite the postwar boom, the 286 percent growth in bank assets, the new high level of loans and deposits, the greatly increased use made of banking services, and the enormous growth in the number of depositors.

REMEDIAL LEGISLATION TO CURB BANK MERGERS

Particularly in light of recent experience, additional legislative action is imperative to prevent bank mergers having substantial anti-competitive effects. At the present time bank mergers are circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. Illegality is established by proof that the merger has actually resulted in an unreasonable lessening of competition; it is immaterial whether the merger was accomplished by stock or asset acquisitions.

Section 7 of the Clayton Act, adopted in 1914, on the other hand, deals specifically with corporate and bank merbers and bans those achieved by stock purchases where there is the mere reasonable probability of a substantial lessening of competition or a tendency to monopoly. Responsibility for enforcing the section insofar as banks are concerned was vested concurrently in the Attorney General and the Federal Reserve Board.

Section 7 was designed to stop mergers beyond the reach of the Sherman Act but its failure to include mergers accomplished by asset acquisitions resulted in a loopole which so far as nonbanking corporations are concerned was closed by passage of the Celler-Kefauver Act of 1950. However, because of revisions made in subsequent versions of antimerger bills, it became impracticable to include within the scope of this act corporations other than those subject to the jurisdiction of the Federal Trade Commission. This left assets acquisitions by banks unaffected by the new law since authority to enforce the provisions of section 7 dealing with banks is vested in the Federal Resrve Board and not in the Federal Trade Commission.

This loophole in existing law not only has no logical basis, but, more important, it has seriously hampered enforcement efforts to proceed against bank mergers injurious to competition. For this reason legislation is urgently needed which would provide enforcement agencies with the same authority to move against bank mergers accomplished by asset acquisitions as they now have to move against bank mergers achieved by stock acquisitions.

During the last session I introduced a bill, H. R. 5948, to provide such authority. This bill was approved by the House without a dissenting voice but the Senate was not given opportunity to consider the measure.

It is significant that after the House passed my bill, Mr. Ray M. Gidney, the Comptroller of the Currency, spearheaded a drive to have the Senate Banking and Currency Committee consider another bill dealing with bank mergers. This bill, drafted by Mr. Gidney's assistants, represented an obvious maneuver to head off Senate passage of H. R. 5948. It was contrary to the President's recommendations calling for revision of antitrust legislation to cover bank mergers accomplished by asset acquisitions, as envisaged by H. R. 5948.

The bill drafted by the Comptroller would amend section 18 (c) of the FDIC Act and give the Federal bank supervisory agencies sole jurisdiction to approve or disapprove a proposed merger, taking into account as one of the factors to be considered whether the transaction may lessen competition unduly or tend unduly to create a monopoly. Concomitantly, it would deprive the Attorney General of enforcement jurisdiction under the Clayton Act notwithstanding that in the more than 60 years since passage of the first antitrust law, no one had previously suggested that its provisions did not apply to banks as well as to other sectors of the American economy. According to the Department of Justice any pretense that this measure would provide protection for competion is a sham.

Notwithstanding these considerations, the Comptroller's bill was approved by the Senate during the last Congress and was again adopted by the Senate this year as section 23, chapter 5 of title III of the financial institutions bill of 1957, commonly known as the omnibus banking bill.

Let me quote what the Attorney General had to say before our Antitrust Subcommittee several weeks ago about this provision sponsored by Mr. Gidney:

"First, the proposed banking legislation prescribed for bank mergers would weaken section 7 standards. The factor of competition would be only one of numerous considerations to be taken into account by a banking agency in scanning a merger. Beyond that, the competitive considerations of section 23 specified, whether the acquisition may 'lessen competition unduly or tend unduly to create a monopoly' are completely novel and are intended simply to be less stringent than those specified by the Clayton Act, section 7, for other American business. As the result, not only does that proposal prescribe pale antitrust standards, but even that lesser standard is only one of many factors banking agencies must consider. All told, then, that proposal does little more than give lipservice to insure competitive enterprise in banking.

"Banking agencies themselves recognize inherent difficulties in construing this jerry-built standard."

What is more, the section proposed by the Comptroller would weaken the standards which he states his office now follows in respect of bank mergers. In this connection it must be remembered that under present law, approval by the Comptroller of the Currency is required in all cases of mergers between national banks or between a national bank and a State bank where the resultant institution is to be operated under a national charter. May I point out that Mr. Gidney has averred before our subcommittee that before giving his approval to any such merger, he will determine whether its effect in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in short, whether the merger is violative of the policy of the Celler-Kefauver Antimerger Act. He has stressed that he would not approve any bank merger or consolidation which he considers to be in violation of the principles of this act.

But what does the record show? It shows that up to January 1956 the Comptroller's office did not even promulgate standards embodying these principles or acquaint its examiners with this alleged policy. Indeed, it was only after our subcommittee brought this dereliction to light in December 1955 that Mr. Gidney hastily promulgated standards for considering the competitive consequences of bank mergers.

The record also shows that from April 1953 (when he assumed office) to the end of 1956, Mr. Gidney approved 424 bank mergers, with banks absorbed in such transactions having total resources of $6,977,985,576. Furthermore, from April 1953 to the end of 1954 the Comptroller approved 193 mergers involving absorbed banks with resources of $2,581,943,159. Not once during this period did he disapprove an application for competitive reasons.

After hearings before our subcommittee in May 1955, Mr. Gidney's record became a shade better. Thus in June 1955, for the first time, he informally disapproved a merger application for competitive reasons; and followed that up in November 1955 by refusing, for the same reasons, to approve certain proposed mergers in cases involving 8 banks. However, in 1955 he approved 126 bank mergers involving, in respect of banks absorbed, resources of $2,015,225,452. In 1956 Mr. Gidney approved 105 bank mergers, the banks absorbed in such transactions having total resources of $2,380,816,965. In that year he informally disapproved 10 applications for competitive reasons.

In the last analysis, the conclusion is inescapable, as the Attorney General has testified, that Mr. Gidney has tended to give little or no consideration to the question as to whether or not competition would be substantially lessened. In fact, the Comptroller apparently assumes that a merger which tends to monopoly is in the public interest. By his own admission, he is utterly unconcerned by the current wave of bank mergers—a view, I might add, that is diametrically opposite to that of the chairman of the Federal Reserve Board.

To be blunt, Mr. Gidney's normal procedure is to rubberstamp, as a matter of routine, any monopolistic proposal that may be presented. I recognize that it is not an uncommon administrative tendency for regulatory agencies to be more or less responsive to the industries which they are supposed to regulate. Mr. Gidney's case is more unique, however, since he appears to have been taken over completely by the giant banks he is supposed to regulate. His concept of the public interest is to identify the functions of his

office with the private interests of the banks subject to his jurisdiction.

In light of these considerations, it is clear that to give the Federal bank supervisory agencies unfettered jurisdiction over the antitrust implications of bank mergers and to weaken the standards, all as proposed by the Comptroller, would only stimulate the tempo of present bank merger activity.

Fortunately, the bank omnibus bill, and particularly section 23, will not be considered by the House Banking and Currency Committee until the next session of Congress. I deem it imperative, in the interest of preserving the integrity and vitality of the unit banking system, to work unceasingly, to prevent passage of this section.

On the positive side, legislation is necessary to amend the antitrust laws to encompass bank mergers, however accomplished. Such legislation must insure against the Attorney General being deprived of antitrust jurisdiction in bank merger cases. It must also embody present section 7 standards. My premerger notification bill, H. R. 2143, which was recently approved by the subcommittee, originally contained a section identical with my bill of last year, applying these principles. However, in order that premerger notification not be confused with legislation amending the substantive standards of section 7 of the Clayton Act, as amended by the Celler-Kefauver Act, the bank merger section has been deleted. In the near future I will introduce a new bill dealing solely with bank mergers. While I have not yet come to a final conclusion, I am giving careful consideration to a proposal amending the antitrust laws which will (1) give the Federal bank supervisory agencies jurisdiction over bank mergers but prohibit approval of any transaction where the effect may be substantially to lessen competition or tend to create a monopoly; (2) require the agency to obtain the views of the Attorney General in respect to the antitrust implications of the proposed transaction, together with the views of the State bank supervisor in respect to banking factors, where a State bank is involved; (3) reserve to the Attorney General antitrust enforcement jurisdiction.

I hope that you will give this proposal your immediate consideration and examination.

ACTION NECESSARY TO CURB HOLDING COMPANY EXPANSION

In addition to bank merger legislation, action is equally necessary, at the Federal level, to prevent the holding company device from being used to circumvent State branch district lines drawn to safeguard against banking monopoly. In the absence of effective Federal or State legislation on the subject, these geographic limitations can be avoided by the simple expedient of forming a holding company to acquire control of banks throughout a State without regard to district lines. As one holding company candidly acknowledged when organized, it felt itself compelled to carry out its plans by this method of group banking because the laws of the State and the National Banking Act both prohibited branch banking beyond certain limits.

Such circumvention is possible notwithstanding that a holding company system is a substitute for a branch system and that there is no essential difference between branches and affiliates, or subsidiary banks. As the House Banking and Currency Committee pointed out: "Great stress has been placed on their difference in form, which everyone of course recognizes. * * * (H)owever, in a large measure they are differences without a distinction. Other than in form, what is the practical difference between a branch and a bank the stock of which is owned by a holding company that can select the bank's directors and change them at its pleasure, even holding repurchase rights to the directors' qualifying shares; that can hire and fire the bank's personnel and otherwise supervise its operations; that can make its investments, handle its insurance, buy its supplies, originate and place its advertising; can pass on its loans to local firms and individuals, usually receiving a fee for services performed?" The fact is that "as each new bank is * * * added to those already a part of the holding-company system, such bank automatically becomes in effect, though not in name, a branch of that banking system."

To my mind the conclusion is inescapable that despite all that has been said about the distinction between bank-holding company groups and branch-banking systems, both accomplish the same thing, the operation of a number of banking units under one control and management. Also inescapable is the fact that through the corporate device, holding companies still can be used to evade branch-banking laws and thus defeat the declared policies of the State regarding branch banking.

Largely through the efforts of your association, Congress in 1956 enacted the Bank Holding Company Act for the purpose of maintaining competition among banks and minimizing the dangers inherent in concentration of economic power through centralized banking control. But it is most unfortunate that the Senate deleted from the bill a key provision passed by the House prohibiting holding-company expansion of banks within a State except in accordance with the branch-banking laws of that State.

This whole issue of holding-company circumvention of branch lines came dramatically to life in New York State when the First National City Bank applied to the Federal Reserve Board for permission to form the largest bank-holding company in the Nation. Initial objective of First National City was to acquire control of the County Trust Co. of White Plains, N. Y., the dominant commercial bank in Westchester County, and thus pierce the branch line separating New York City and Westchester. In short, through the device of forming a holding company, the same management which was restricted in its operation under a bank charter to New York City, sought to acquire a unit bank in another district, operate it in the same manner a branch would be operated, and flout the expressed will of the legislative body of New York State regarding the establishment of banks. Moreover, there was every prospect that the First National City Bank plan would initiate a chain reaction until ultimately a handful of giant New York City banks, through the holding-company device, would be in control of nearly every sizable bank in the State of New York. Success of the plan would have meant that the day of independent unit and regional banking would have passed and that money and credit in New York State would be largely controlled by a few gigantic banking institutions.

For these reasons, I testified at length befor the Federal Reserve Board calling attention to the alarming competitive consequences of the proposal. In addition, I testified in the early part of January 1957 before the State of New York Joint Legislative Committee To Revise the Banking Laws, and pointed out the necessity of amending the State's banking laws to prohibit any bank holding company from acquiring in the future any bank located outside the district prescribed for branch banks.

It is gratifying that Governor Harriman and the New York State Legislature recognized the threat to the State banking structure implied in the First National City plan. This was evidenced by adoption on January 29, 1957, of stopgap legislation, effective until May 1, 1957, prohibiting any bank holding company from acquiring a bank located outside the branch banking district. It was also evidenced by legislative approval of a measure extending this legislation until May 1, 1958, which I have little doubt that the Governor will sign. In these circumstances, the First National City proceeding before the Federal Reserve Board would become moot since the transaction would be barred under State law.

It is clear, of course, that this action at the State level is extremely important particularly since New York is the banking center of the Nation. Nevertheless it is my firm conviction that the effort to pierce branch district lines through the holding company device is a matter of national import and should, therefore, be considered at the Federal level. Otherwise, action would be required in State after State, on a piecemeal basis, to obtain legislation preventing holding company attempts at banking dominance. For these reasons, I urge you immediately to undertake an all-out effort, which I will join, to pave the way for amendment of the Federal Bank Holding Company Act so as to prevent holding company expansion except in accordance with State geographic limitations applicable to branch banks. Such an amendment should be similar to a provision contained in the House-approved bill which was deleted by the Senate.

Your efforts should be concentrated toward having the amendment considered by the House Banking and Currency Committee when it begins hearings on the omnibus banking bill. Part of the effort should be directed to obtain the support of other like-minded organizations determined to stop the trend toward monolithic banking.

The consequences of banking monopoly are ominous indeed. It is my hope that with your help Congress will take prompt, effective action to insure that that condition will not come to pass.

Letter Expressing Concern Over Hearings in the Senate Subcommittee on Labor and Management Practices

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. DINGELL. Mr. Speaker, I recently received a letter from Mr. Joseph Curran, president of the National Maritime Union and a vice president of the AFL–CIO, expressing to me his deep concern over the hearings presently going on in the Senate Subcommittee on Labor and Management Practices.

His letter expressed the feelings of all decent and honest union men and union officials everywhere. His concern was not over the hearings, nor over the danger to those who have not been true to their trust and duty to the unions and their membership. Rather, Mr. Curran feared that from these hearings would come laws which would restrict upright and honorable working men in their efforts to combine to secure better working conditions for themselves and others yet to come. I insert this letter into the RECORD and hope that my colleagues in Congress and the people of the United States will read this statement by a sincere, honorable unionist. America does not fear investigation, nor does it fear punishment of those who have failed to carry out their duty to their members and to the labor movement. Indeed,

the degree to which labor has cleaned its own house of Communists and racketeers is remarkable. Restrictive legislation will break down the labor movement and will destroy one of the strong cornerstones of a free capitalist America.

The letter follows:

NATIONAL MARITIME UNION OF AMERICA,
New York, N. Y., April 16, 1957.

Hon. JOHN D. DINGELL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DINGELL: I am writing to express our deep concern for the manner in which the present hearings of the Senate Subcommittee on Labor and Management Practices are being used by forces hostile to organized labor for the promotion of legislation which would seriously restrict trade unions in the conduct of their legitimate activities.

The AFL–CIO has no reason for concern about honestly motivated efforts by the Congress to determine the nature and extent of malpractices with a view toward determining whether any additional legislative safeguards are needed. We have made clear that we of labor will not tolerate corrupt use of union office or of union funds by any individuals within the united labor movement.

We have spelled out this determination in an ethical practices code which set standards far stricter than those which could be contemplated by law. Congressional investigations such as those of the McClellan committee and others can serve labor in this work because they have facilities for uncovering wrongdoing not available to the labor movement itself. As such evidence has been produced it has resulted in fast and effective action by the AFL–CIO.

But it would be a perversion of the committee's purpose if these hearings were to pave the way for legislation designed to weaken unions, obstruct their organizing efforts and reduce their ability to protect the living and working standards of their members. Such a result would be harmful to labor, industry, and the Nation.

There is concrete evidence that groups such as the National Association of Manufacturers and the chamber of commerce are using revelations of the McClellan committee for the promotion of legislation which is basically antiunion. One of their major objectives is a national prohibition on union security in any form. The same forces have been promoting such legislation in State legislatures under the grossly misleading label of right-to-work laws. Unions from bitter experience have given such legislation the appellation "right to wreck laws." Another objective of the antiunion group is legislation to outlaw industrywide bargaining.

It should be obvious that such legislation has no connection with the problems posed by the committee's investigation. The purpose of such legislation is not to protect workers; on the contrary, its purpose is to weaken the only effective protection which workers have against exploitation and abuse by their employers.

This legislation is being pushed forward under cover of an emotional press barrage in which little effort has been made to pinpoint the attack to specific individuals and unions. The bulk of the press treatment of the hearings has been such as to apply the sins of a few within labor to the whole labor movement and to obliterate the great good work done by the vast body of honest unions and their officers. Although individuals in high office in business, banking, government, legal, insurance, and other fields have been exposed in the past as having broken trusts as outrageously as have some in labor, no greater smear campaign has been carried out against a whole group as is now being thrown at the labor movement.

No responsible official of the labor movement would belittle the seriousness of the offenses which have been revealed by the McClellan committee. But the reaction in the press has without question been entirely out of proportion.

Labor's battle against corruption goes back many years. It has been fought on every level, in the great majority of cases with employers working on the side of racketeers. The records are full of evidence which shows how employer groups persuaded racketeers and gangsters to infiltrate trade unions in the first place or to establish opposing unions with the objective of destroying honest, dedicated trade unions as they struggled to get a start.

We consider it important that none of this be lost sight of in considering legislative proposals in the labor-management field. The battle against corruption is a continuing battle in the labor movement, as it is in business, politics, the entertainment fields, and so many other areas. There are sufficient laws on the books now to make it possible to act against swindlers, embezzlers, and gangsters. The answer is more rigid enforcement of these laws.

The record and the program of the AFL–CIO and the public statements of its president, George Meany, and other officials make clear that labor ready now as it always has been to cooperate with public agencies and right-thinking citizens in the matter of safeguarding union funds and welfare trusts against possibility of abuse. Most unions long ago established strict and inflexible controls which provide such protection for their funds. The AFL–CIO certainly is ready to aid in preparing and will support legislation aimed at requiring the strictest standards for all such funds. The same holds true for any legislation which is needed to protect and advance the legitimate aims of organized labor and is clearly designed for that purpose.

But the fact that corruption has been uncovered in a few spots within the labor movement cannot be used as an excuse for punitive and restrictive legislation against unions without serious damage to the interests of workers, industry, and the Nation.

Such legislation by weakening and obstructing honest unions would aid and encourage racketeers and gangsters in seeking prey in this area.

Such legislation would lessen the ability of the American worker to protect his living and working standards and would lead to economic imbalances which would have a harmful effect on the Nation as a whole.

The contrast between the strong free labor movement through which American workers promote their interests and the government-dominated labor movements behind the Iron Curtain and elsewhere in the world, is one of America's most persuasive arguments in the crucial worldwide battle for men's minds. Such legislation would undermine America's vaunted position in this regard.

It is our sincere hope that you will oppose any effort which may be made to push through punitive and restrictive legislation against trade unions on the basis of isolated abuses. It is our hope that you will insist that any legislation in the labor-mangement field be based on recognition of the importance of a strong free labor movement for maintaining the well-being of individual working men and women and the economic strong of the Nation.

Sincerely yours,

JOSEPH CURRAN,
President National Maritime Union,
Vice President, AFL–CIO.

Foreign Aid Booby Trap—Stalin's View That Capitalist Nations Will Pay Way to Destruction Is Cited

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. WEAVER. Mr. Speaker, the majority of my constituents in the First Congressional District of Nebraska have convinced me, by personal conversation and by their letters, that they are opposed to foreign aid. It is apparent that this aid does not necessarily do the job for which it is intended, and the moneys thus profligately expended are wasted, to the detriment of our own citizens, who pay exorbitant taxes to keep the foreign aid program in existence. Our national debt is too high, and we must stop this wastefulness before it climbs higher. In short, we can no longer afford to indulge those who cry on our shoulders. The welfare of our own citizens and the economic well-being of our own country must come first.

In this connection I am inserting the following article by Constantine Brown, which appeared in the Washington Evening Star on Monday, April 22:

FOREIGN AID BOOBY TRAP—STALIN'S VIEW THAT CAPITALIST NATIONS WILL PAY WAY TO DESTRUCTION IS CITED

(By Constantine Brown)

The latest administration proposal for a lavish and practically unlimited program of foreign aid is an old plan in new fancy wrappings. The goal that the bureaucrats have been aiming for these many years is a blanket foreign-aid authority, backed by huge available sums of the American taxpayers' money. With this fabulous treasury the do-gooders and the officeholders would be able to do quite as they pleased without the embarrassing necessity of going to Congress every year for appropriations.

Congress is going to take a very wary view of the newest giveaway move. While the lawmakers are studying the issue, it would be well for them and for all of us to remember something said by one Josef Stalin back in 1921. The Russian Communist dictator knew his subversion. Apparently he realized fully how the foreign aid approach to saving the free world from Communist conquest would work to the overall benefit of the Reds and their world revolution.

Stalin, in a book published in an English edition in Moscow called Marxism, and the National and Colonial Question, predicted that the reign of socialism would be eventually accomplished through the economic and social equalization of nations. The effort of the richer capitalist nations to bolster up the poorer, he predicted, would have just that result.

In Stalin's view, capitalist money would pay for its own destruction. The depletion of American wealth, for example, by huge giveaway programs for aid to needy nations, would be equalization and would set the stage for the inevitable takeover by Communists.

He said that real and prolonged aid extended by the advanced nations to the backward nations would inevitably lead to the

destruction of capitalism and the creation of a single world economy so essential to the final triumph of socialism under the world leadership of the Soviet Union, the home and hearthcenter of the world revolution.

What Stalin knew in 1921, his wily successors know today.

Some apologists for American foreign aid have pointed to Soviet programs of aid to weaker nations, suggesting that Russia is competing with the United States in giving away resources to win friends. Nothing could be further from the truth.

Soviet aid is no giveaway. For every shipload of wheat, for every cargo of tanks and guns and ammunition, the plotters in Moscow receive something they covet. They give nothing. They will lend, if the borrower is thereby bound to Soviet interests by his indebtedness. They will make barter deals, swapping Communist arms for Egyptian cotton, for example, thereby mortgaging the future economy of Egypt for years and years. But there are no presents.

While the Communists cannily insure that every deal they make is one of permanent gain to the Soviet world, our side lavishes American wealth on dubious projects of no earthly use to backward peoples. We do send refrigerators to Eskimos, and we do build desert roads that go nowhere, and we do maintain armies of bureaucrats, both American and foreign nationals, at staggering cost all over the world. This is, apparently, the way we seek to implement the predictions of Stalin, and equalize the economies and societies of the free world. Then the way is paved for the Red victory.

Even Mr. Khrushchev has publicly laughed at foreign aid as practiced by our ambitious global planners. He sneered at the story of aid to other nations as plain evidence of the built-in folly of American leaders. Apparently the jolly Russian doesn't fear that the openness of his amusement will cause the United States to take a second look at the doubtful wisdom of the foreign-aid program.

He seems to be safe in his assumption. Despite rising and clamorous public opposition to a continuation of this unstinted generosity, President Eisenhower and Secretary Dulles cast about for new ways to make the giveaways even larger, while making them seem smaller to the suffering taxpayer. Hiding the cost of military aid in the Pentagon's budget, for example, effectively deceives the public as to the real cost of the aid program. Then substituting alleged loans for the outright gifts heretofore made has the virtue of appealing to the common sense most people have. But the history of such loans speaks for itself. The money is gone and forgotten.

Aramco's Magic Lamp

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. VANIK. Mr. Speaker, it was indeed gratifying to learn that Senator HARRY BYRD, of Virginia, will submit to the consideration of the Senate Finance Committee the tax-avoidance practices of the Arabian-American Oil Co. Certainly tax loopholes by which a quarter billion dollars of oil profits annually escape the Federal tax collector should be eliminated.

The discovery of this tax loophole came about as the result of congressional inquiry. Why did not the Internal Revenue Service advise Congress of its tremendous tax losses through the operations of obsolete internal-revenue laws? The Service is in possession of the records and should be making constant review of statute distortions which fail to carry out the spirit of the law. The Service should be vigilant and prompt to call congressional attention to legal devices which permit the escape of tremendous revenues.

President Eisenhower has recently indicated that he would ask the Secretary of the Treasury to prepare a study of the laws which enable the Arabian-American Oil Co. to pay no American taxes on their oil operations. There is no need for him to bother his Secretary of the Treasury. The answers can be quickly provided by the numerous White House guests during King Saud's recent visit. Practically all of them were experts on income-tax avoidance.

Following is a timely editorial which appeared on this subject in the Washington Post of Friday, April 26, 1956:

ARAMCO'S MAGIC LAMP

We hope that President Eisenhower will follow through with his recent statement that he would ask Secretary Humphrey about the laws which enable the Arabian-American Oil Co. to pay no American taxes on its oil operations. Aramco's net earnings were about $280 million last year. Aramco did pay about $280,000 tax last year on stock transactions; but this sum was not a tax on direct income from oil operations. At this melancholy time of the year for less fortunate taxpayers, Aramco's immunity inevitably piques curiosity.

Aramco holds the fabulous oil concession in Saudi Arabia. It is jointly owned by four large American oil companies. The secret of Aramco's tax bonanza is outwardly simple, but—on closer inspection—raises some interesting questions. Under a 1918 American revenue law, taxes paid to a foreign government can be used as an offset credit against American income taxes. Since 1950 Saudi Arabia has collected a handsome income "tax" from Aramco—so handsome, indeed, that the Arabian "tax" wipes out all of Aramco's American tax obligations on its oil operations.

Critics contend, however, that the Arabian "tax" is actually a disguised form of royalty. Aramco's original agreement with Saudi Arabia, signed in 1933, provided that no taxes should be imposed on the oil company. But when the Arabians later asked for a larger profit split, similar to Venezuela's 50–50 oil agreement, the company "as a practical solution" accepted the tax. When added to the existing royalties, the "tax" raised Saudi Arabia's share to half of total profits.

For several years, American tax officials wrestled with the problems posed by this eminently practical solution. In the end, it was decided that the "tax" was a tax, and not a royalty. Of course, as President Eisenhower pointed out, the four parent companies pay some taxes on Aramco's earnings—but on the far lower intercorporate dividend basis. As reported by Bernard Nossiter in this newspaper, the Federal tax saved by Aramco in 1955 was about $80 million.

Unquestionably, this is good for Aramco, but is it also good for the United States? Is it fair to other businesses less favored by the tax laws? Aramco, of course, also benefits from the 27½ percent oil depletion allowance, which some think is quite enough. Obviously there are hazards to investment in the kind of foreign operation Aramco conducts; and obviously it is very much in the national interest to encourage participation by American companies in Near East oil development and production. But surely Aramco's position would be just as secure, and the reputation of the oil industry would be enhanced, if the tax oblibations were applied more equitably. Senator BYRD has expressed interest in closing this loophole. He merits support.

Courage and Candor

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. BERRY. Mr. Speaker, under unanimous consent, I insert in the RECORD a constructive statement regarding a man who has through the years known the inside of the State Department.

Because of certain adverse information in opposition to Bryton Barron, I present this statement covering the background of this man who knows the facts.

All students of government realize that one of the greatest obstacles to economy, efficiency, and reform in public affairs is the reluctance of men and women who possess a firsthand knowledge of particular evils to come forward and lay the facts on the line. Such reluctance arises from a natural loyalty to old associates, combined with an awareness of the fact that if one speaks up he may bring down on his head no end of calumny and abuse from those whom he may expose. The latter is a particularly menacing prospect for the lone citizen if those who would be affected by his testimony happen to have the vast resources and machinery of government at their disposal to defame their accuser and confuse the issue.

It is, therefore, appropriate that I express the admiration which some of us from South Dakota hold for a man who spent his formative years in our State and who has been forthright and vigorous in urging reform in an important area of government, namely, the State Department, which he probably knows better than most of us because he served in it here in Washington for more than a quarter of a century. I speak of Bryton Barron, the author of a recent book entitled "Inside the State Department," now in its second printing. Mr. Barron and his wife reside at 401 Waterway Drive, Falls Church, Va., but their friendship with Senators MUNDT and CASE and many other South Dakotans has extended over the years. Both Mr. and Mrs. Barron have close relatives in South Dakota, and Mrs. Barron's brother, Louis Lillibridge, of Burke, S. Dak., is a former member of the State legislature and a highly respected citizen of the State.

Bryton was reared by his pioneer grandparents on a farm near Sioux Falls. Following his graduation from the high school there in 1916 at the head of his class, he entered the local Baptist college. Soon he had captured nearly every honor on the campus, including his class presidency and captainship of an undefeated debate team as well as the editorship of the college paper. He dropped out for 1 year to earn money working on the Argus-Leader, the leading newspaper in the State, and then returned to compete for and win a Rhodes scholarship in State competition. He entered Oxford University in 1920, was awarded a diploma in economics and political science in 1922, and then in 1923 became the first South Dakotan to obtain a research degree—bachelor of literature—at Oxford.

Bryton returned to Sioux Falls with his bride in mid-1923 to become the Argus-Leader's editorial writer. Some years later the distinguished editor of the paper, the late Charles M. Day, wrote of Bryton that he was "a shark for work and a deep student of history and economics, earnest, loyal, and efficient."

In 1925 the Barrons set off for the Philippines on teaching appointments. Of Mr. Barron's record while in the Orient, the director of education in Manila wrote as follows on January 5, 1929:

> It was through Mr. Barron's effort that our division of publications was created and organized, and it was my pleasure to appoint him chief of this division. We have never had a man in the Philippine service in whom I had greater confidence. This is evidenced by the fact that he won such rapid promotion. * * * Mr. Barron is the type of man who is never satisfied unless he is doing two men's work and doing it well.

While in the Philippines, Mr. and Mrs. Barron collaborated in the preparation of a series of textbooks on grammar and phonics. Over 150,000 copies have been sold, and they are still in demand.

Mr. Barron entered the Department of State in Washington on July 11, 1929, as an editorial assistant at a salary of $2,600. Inside of 6 months he had been advanced to chief of the section and jumped 2 grades in salary. His work on the official register of the Department brought to him data regarding the records of various individuals in the service. His previous editorial experience enabled him to play a leading role in the inauguration and development of the Department's weekly publication, the Department of State Bulletin. Supervision of his staff of a score or more editors required him to follow closely the work on diplomatic correspondence compiled for publication. Important State papers, including Presidential proclamations, came across his desk in draft form for editorial attention. Further promotions followed for Mr. Barron, and he was given charge of preparing the Department's printing and binding estimates, along with control of appropriations for those purposes, and participated in hearings before the Bureau of the Budget and congressional appropriation committees. In 1940 Mr. Barron was promoted again, this time to Assistant Chief of the Division of Research and Publication, one of the largest then in the Department, and given another increase in salary along with responsibility for day-to-day administration of the Division.

In 1944 Barron was again promoted in salary and given an opportunity to rebuild the Department's treaty staff and restore treatymaking to its proper role in the conduct of foreign policy. He pursued the task with the utmost vigor, taking steps to set the records in order and to train treaty technicians so that all future commitments for the Nation would be properly drawn. In 1946 Barron was rewarded for his efforts with another grade increase in salary. In due time he initiated and obtained congressional approval of legislation designed to require prompt publication of all United States treaties and agreements. He also inaugurated a looseleaf service to provide for the maintenance of up-to-date treaty information, an innovation which was highly praised. Always a stern taskmaster, Barron eventually ran into discontent in his own staff. His fight against the abuses of executive agreements also made him enemies among those who were running the Department at that time, and finally in 1950 he was reassigned to other work. The year previous a national biographical reference service had listed Bryton Barron as 1 of the 10 outstanding men in the Department.

After 20 years of the strain of administrative responsibility, Barron welcomed the change in assignment, to historical research, to which he could bring to bear his familiarity with treaty problems, even though it involved a slight cut in salary. In this area his last and most interesting project was the compilation of papers dealing with Yalta and the betrayal of American interests at that 1945 meeting between Roosevelt, Churchill, and Stalin, with Alger Hiss in attendance.

Mr. Barron's last performance rating in the Department, signed by the Chief of the Historical Division, G. Bernard Noble, as well as by the Assistant Chief of the Division, and dated January 14, 1954, read as follows:

> Overall work performance is very competent. Research is done carefully and painstakingly; organization of material is logical; attention to technical details and security is entirely satisfactory.

The review of Mr. Barron's work for the previous year, signed by the Chief of the Policy Studies Branch along with the Assistant Chief of the Division, and dated December 10, 1952, was to the same effect as the foregoing, with the added comment that the review by Barron of the work of others shows very good critical insight.

The picture changed a few months later when Barron officially protested suppression of controversial documents. The division chief who had praised his work in the above-quoted 1954 signed statement, but who was on record in opposition to release of the Yalta story, took steps to have Mr. Barron fired. The attention which this patriot from South Dakota focused on the attempt at suppression resulted in the Yalta papers being released in 1955, even though only in expurgated form, but Barron paid for it with his job, having been forced to retire effective February 1, 1956. In some quarters Barron was accused of insubordination in this connection. It is his comment that the insubordination, if any, was on the part of those who resisted prompt and unexpurgated publication of significant documents as requested by Congress and promised by the Department—not on the part of those like himself who pressed to fulfill the program. It may be noted in passing that the compilations of documents on Teheran and Potsdam, conferences which paralleled the one held at Yalta and on which Department historians were working when Barron was busy on Yalta, have strangely enough not yet been released to the American people.

Mr. Barron was interested in economy and a housecleaning in the Department long before he left the service. Back in 1952 Senator CASE of South Dakota, in writing to a fellow Senator, said of Mr. Barron:

> He really knows the personnel of the Department and has watched with dismay as it became infiltrated with Reds and padded with people who were not needed.

He spoke of Mr. Barron as "a career man with an excellent reputation and a good educational background." After the Republicans took office in 1953, Mr. Barron had several talks with Donald Lourie, the new Under Secretary for Administration. Speaking on behalf of several veteran employees who made it a matter of record at the time that they sought no favors for themselves but were willing to be detailed to help Mr. Lourie for a few months, Mr. Barron presented specific recommendations regarding personnel and organizational changes in line with the 50-percent reduction in the size of the Department which Secretary Dulles was said at the time to be considering. Some changes were made along the line of those suggestions, but opposition within the entrenched bureaucracy prevented any thorough housecleaning.

In line with the suggestion given, Mr. Barron himself was detailed to Scott McLeod's office on a special assignment shortly after the new security officer was appointed in early 1953. Senator MUNDT wrote the Department congratulating it on the use being made of the services of "tried, trusted, and able career men like Mr. Barron," adding:

> I know that for years Mr. Baron has been disturbed over some of the laxity which has continued in responsible positions in your Department men and women who lack the sturdy sense of dedication to our American ideals.

After this detail had been completed and Mr. Barron had returned to his regular work, the Security Chief wrote the Assistant Secretary in charge of Barron's work as follows:

> I want you to know how deeply indebted I am to you for your generous understanding of my problems in making available to me the services of Mr. Bryton Barron, who has made such a useful and practical contribution to the survey team studying the organization, direction, and administration of the Bureau of Security and Consular Affairs. I fully realize that the assignment to my office stretched out considerably longer

than originally agreed upon, but the problems he faced were numerous and intricate, and it was only due to his perseverance, long hours of work, and devotion to his task that the job is completed as of this date.

The rank and file of the employees in the Department of State indicated their respect and confidence in Mr. Barron on frequent occasions and to an unusual degree. In his early years there he managed its first softball team, which had a most successful season, and he was subsequently elected manager of the basketball team. In 1935 he helped organize the employees recreation association and was elected its first president. He also helped organize an employees union, served for many years as an elected member of its board of directors, and was designated a spokesman of the employees before the Bureau of the Budget and the Civil Service Commission. It is particularly noteworthy that he helped obtain the charter for the State Department Federal Credit Union and was for 8 successive years elected to its board of directors by the members of this organization, the largest employee group in the Department. The board of directors in turn elected Mr. Barron treasurer and general manager of the union each of those years, a remarkable demonstration of the high esteem in which he was held by his fellow workers. This was again reflected in a letter which came to him from an official of the credit union just before Mr. Barron left the Department and which concluded with these words:

Your unselfish service to this institution is so well known to the membership that it requires no repetition on my part. Nevertheless, I cannot let the opportunity pass without reminding you that as a founder, charter member, holder of No. 1 account, treasurer during many formative years, and as my colleague on the board of directors, you have exercised a powerful and wholesome influence upon the affairs of this institution which now numbers upward of 8,000 accounts with accumulated assets of more than $2 million.

In his private life, Barron demonstrated 20 years ago some of the resourcefulness of pioneer ancestors when, lacking money to buy a home, he took leave from office, borrowed to buy some materials, and then proceeded to build with his own hands an 8-room house. Much of the interior he finished off working nights and holidays. Years later, when the family moved to a new home on Lake Barcroft, the house that Barron had built 18 years before found a ready market.

The Barron family has always been a well-knit unit. Those who follow model aviation as a hobby knew the group—father, mother, daughter Bebe, and son Roger—as the Flying Barrons, winners of innumerable prizes and trophies in model contests all over America. Bebe, now grown and married, has two sons; Roger, who was graduated from Princeton with honors, is also married and doing graduate work at MIT. As an outgrowth of activity in the model hobby, Bryton was in 1952 elected national secretary-treasurer of the Academy of Model Aeronautics. Mrs. Barron, who for years operated a private school of her own in Fairfax County, has helped many of the young people in that area.

Looking back over the record, it is clear that Bryton Barron's years at the head of the Department's treaty staff, where he had to deal with policy questions and responsible officials in every area of our foreign policy, his 20 years of administrative experience in the Department at a time when that agency's prestige was at its height, his years of working in the secret archives of the Government, and the wealth of biographical and other data which he has accumulated at first hand, render him peculiarly qualified to report on conditions in the State Department.

In addition to his book, he has in recent months written magazine and newspaper articles on the subject, has been heard on both local and coast-to-coast broadcasts, has indicated his readiness to cooperate with congressional committees, and has been in wide demand as a lecturer before interested civic and patriotic groups. Commenting on his book, a writer in National Review has aptly remarked that—

Mr. Barron is the first man to report to the American public on conditions inside the Forbidden City in Foggy Bottom.

Walter Trohan, veteran Washington correspondent of the Chicago Tribune, after commenting that the book was "packed with dynamite," went on to say that—

No one can question Barron's experience or qualifications for writing the inside story of the State Department.

The Tablet, that stanchly patriotic weekly published in Brooklyn, has commended Mr. Barron for his courage. And the Honorable Spruille Braden, who served as an Ambassador to several Latin-American countries and as Assistant Secretary of State, has stated that he can confirm much of what Mr. Barron has written as being absolutely accurate, adding:

Mr. Barron * * * has done a splendid patriotic job, and one that was much needed.

In arguing for economy and a housecleaning in the Department he knows so well, Bryton Barron contends that the bureaucratic setup has become so big that it is both unmanageable and a perfect cover for undesirable elements. He wants only those employees retained who by the record are wholeheartedly in support of the American way of life and our sovereignty as a nation. Personal attacks on him will not divert him from the basic issues.

Cost of Federal Power Facilities

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. DINGELL. Mr. Speaker, for the past year or so private power companies have been inserting into the periodicals of this country a number of ads attacking public power, the Rural Electrification Administration, and the co-ops which farmers and others have set up to furnish themselves with power.

I recently received a letter from Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, pointing out certain fundamental errors in the advertisements of the private power companies. The gist of his letter and the error which the private power companies have displayed appears in the third paragraph of his letter. That is, that taxpayers do not pay the cost of Federal power facilities because the facilities are self-liquidating and the costs borne by the consumers of the electricity produced.

I hope all of the Members of Congress and the people of the country will read this letter and will realize the importance of the services furnished by the TVA and other Federal power-producing agencies.

The letter follows:

NATIONAL RURAL ELECTRIC
COOPERATIVE ASSOCIATION,
Washington, D. C., April 18, 1957.

Hon. JOHN D. DINGELL,
House of Representatives,
Washington, D. C.

DEAR MR. DINGELL: Attached is another of the long series of propaganda advertisements by the private power companies attacking competition in the electric industry and the Federal water and power resources development program. It is in itself a fine study in false statements, supported by innuendos, and by statistics which must have been conjured up out of a crystal ball.

It says in part:

"Part of your taxes are used to help pay the cost of electric service for customers of Federal Government power systems [because] your taxes help build the Federal powerplants that produce electricity for these people [and] you have to be taxed more because they don't pay all the taxes in their electric bills that you pay in yours. People who get electricity from TVA, for example, pay less than one-fifth of the taxes on electric service that you pay."

In the first place, taxpayers simply do not pay the cost of Federal power facilities because those facilities are self-liquidating and the costs are borne by the consumers of the electricity produced. This is a plain, simple fact, and the statement in the ad is a flat falsehood.

In the second place, this argument of you pay more taxes because somebody else doesn't pay more can be used at a thousand points in our economy. What the power companies are really saying is that Federal wholesale, State wholesale, local public, and cooperative electric systems do not pay Federal income taxes (or, in some cases local or State property taxes)—but the emphasis is on income taxes. This argument runs to the whole root of our constitutional system—on the payment of taxes by governmental units—and to the whole Federal tax system as regards the difference between the taxes of (1) individuals, (2) partnerships, (3) cooperatives, and (4) profit corporations. To charge that the Federal, other public and cooperative electric systems are peculiarly privileged is simply at variance with the fact. Presumably because a lot of people buy power from profit-making power companies which pay profit taxes which they collect from the electric consumers, no citizen should be permitted to buy nonprofit power, and therefore all nonprofit power systems should be sold to the profit corporations creating a 100-percent private power monopoly. (Incidentally, 52 percent of the cost of these fabulously expensive progaganda ads come out of the United States Treasury, and by a

clear line of reasoning make others pay more taxes to make up the theoretical difference.)

As to the contention that people buying TVA power pay less than one-fifth of the taxes on electric service that consumers of profit-power pay, we have no idea where this statistic came from. In the first place, TVA does not retail power—so unless the statistic is a flat fabrication it must rest on a comparison of private generating and transmission facility taxes with TVA's payments in lieu of taxes, and there just aren't any figures on which to base such a comparison.

Please note the attached chart, too, showing (1) that the private power companies purchase 10.7 percent of the Federal wholesale power (more than the rural electric systems do); and (2) that over half of the TVA power is purchased by Federal Defense Agencies and thus benefits all the people very substantially.

The details of these dishonest advertisements—paid for by the electric consumer, including a majority of the farmers served by our cooperatives—vary, but the purpose and aim is consistent—to destroy all competition in the electric industry and create a private power monopoly.

We urge most strongly that you take steps to stop this flood of propaganda, financed by the cost-plus electric power monopoly at the expense of the electric consumer. We reiterate that any utility manager or stockholder should have the right to buy advertising space or exercise his rights of free speech in any manner in accordance with the laws and customs of a free country, but there is absolutely no justification for permitting monopolies to levy the equivalent of taxes on the electric consumer for the purpose of propagandizing for the destruction of what little competition there is in the electric industry.

Sincerely,

CLYDE T. ELLIS,
General Manager.

THIS TRICK'S ON YOU!

A bucket of water over the door is one of the risks of April Fool's Day. But being tricked on other days is something else again.

Yet that's what happens as far as your taxes are concerned. Part of your taxes are used to help pay the cost of electric service for customers of Federal Government power systems.

First, your taxes help build the Federal powerplants that produce electricity for these people. Then, you have to be taxed more because they don't pay all the taxes in their electric bills that you pay in yours. People who get electricity from the TVA, for example, pay less than one-fifth of the taxes on electric service that you pay.

Next time you hear someone talk in favor of Federal Government electricity, ask him about the trick it plays with your taxes (and his). Chances are, he'll stop talking and start thinking.—America's Independent Electric Light and Power Companies.

Moscow, Cairo, and Suez

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Herald Tribune of April 11, 1957, makes most interesting reading:

MOSCOW, CAIRO, AND SUEZ

In the first of a series of exclusive articles in this newspaper, Mr. Tom Lambert of our Washington bureau revealed yesterday that Soviet Russia is in the process of sending Nasser's Egypt a supply of its latest model, most powerful jet fighters. Mr. Lambert's survey discloses that Czechoslovakia and possibly Poland are joining the Soviet Union in replacing at least a portion of the armaments that were captured from Egypt during Israel's lightning invasion last fall. Considerable evidence also exists that two other Arab nations, Syria and Yemen, are expanding their armed forces, with Moscow supplying the arms plus technicians to instruct the Arabs in their use.

This is foreboding news. However one may assay the Israeli invasion of Egypt, there can be no doubt that the loss of armaments suffered by the Egyptians seriously impaired their ability to make war in the future. Great stores of trucks, tanks, and guns were seized in the Sinai Peninsula, where they had been abandoned by the Egyptians in their precipitate flight. The only Egyptian warship that tried to take part in battle was captured intact and is now a part of the Israeli Navy.

It is in the air, however, that the primary danger may lie. And the menace of the technicians must not be overlooked, for these may be the fifth column of infiltration. Prior to the invasion of last fall, the best Egyptian fighter plane was the Mig-15, made in Russia. Even in the 2 days of Israeli-Egyptian fighting prior to the Anglo-French intervention, relatively few Egyptian pilots took the air, and when they did so their Mig-15's proved inferior to the French Mystères of the Israeli Air Force. Once the Anglo-French bombardments at Port Said began, a good many Egyptian planes were destroyed on the ground with some reportedly flown away to safety in Syria and elsewhere.

Now, however, Mr. Lambert reveals that instead of Mig-15's, the Communists are believed to be supplying Cairo with a "large number" of Mig-17's, Mig-19's, and Yak-25's, all of which are later and better jet fighters than the 15's. In addition, the Egyptians have been industriously rebuilding the airfields that were damaged and pitted by British and French bombers. From the standpoint of armaments, though not from the standpoint of the fighting quality of her army, it is very likely that Egypt is emerging from her defeat of last autumn stronger than ever. Similarly, more than ever the Soviets are displaying their eagerness to stir up trouble and heighten tension throughout the Middle East.

Against such a background, it would be surprising if Nasser displayed a willingness to compose his differences with other nations on future regulation of the Suez Canal. Speaking, as he believes, from a position of strength, he has as yet shown no inclination for moving toward a genuine meeting of minds. Indeed, he is in less of a compromising mood than ever, for although he had previously accepted the Security Council's six principles for a settlement, including a provision that operation of the canal be "insulated" from the politics of any nation, he now has turned his back on them.

Nevertheless, the negotiations in Cairo between American Ambassador Raymond A. Hare and Egyption Foreign Minister Mahmoud Fawzi went on yesterday, just as they went on all last week. At his press conference in Washington President Eisenhower stressed the importance of continuing negotiations in the hope of obtaining a satisfactory agreement. Yet the United States will have to face up to the reality that it may not be possible to get a satisfactory agreement from a dictator who is riding high. And despite the present relative lull in the Middle East, the situation remains basically incendiary, with Israel reportedly considering a test of her rights in the Suez Canal, Jordan in political turmoil—and Communist arms steadily flowing into the area.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address by Congressman Overton Brooks, of Louisiana, Before the Red River Valley Association

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. PATMAN. Mr. Speaker, the 32d annual convention of the Red River Valley Association met in Shreveport, La., April 22–23, 1957. Congressman OVERTON BROOKS made a very fine address. It is filled with interesting facts, particularly about navigation of Red River. It is as follows:

In the year 1899 the last boat steaming up the Red River arrived at Shreveport and after leaving its cargo retraced its course back to the Mississippi. Since this date no river boats have arrived at Shreveport and the Red River has not been used for navigation. The question naturally arises, "Why has this stream not been used for waterborne commerce in more than 50 years?"

The answer is that the Red River over the years became unsuited for navigation. It has developed like many other streams in this Nation which have changed due to the stripping of the hillsides of timber and to the cultivation of the lands by draining them and making possible the quick removal of water from the land. The little streams throughout our countryside have often dried up and have even disappeared in many instances in the course of the development of our Nation.

Red River has suffered this fate. The banks are soft and crumble and melt away under the terrific impact of high water rushing downstream to the sea. Channels have changed in the course of time to such an extent that boundaries have disappeared and old lines have been marked out. Parts of Bossier Parish, for instance, now find themselves on the Caddo side of the river. In at least one instance we have built a great bridge over the Red River and this was in Avoyelles Parish—only to find later that the river actually bypassed the bridge and left the structure high and dry, making a several-million-dollar structure, in the course of a very short time, worthless and unusable. In another instance, in northern Bossier, within the last few years, the State was compelled to spend tens of thousands of dollars to stop the ever-moving process of a Red River-changing-channel in order to save another bridge in the course of construction in the Plain Dealing area and prevent it from being bypassed.

From the time the last river boat came to Shreveport, our people began to yearn for and to hope for the day when navigation would be restored to the river. They have seen other river ports in Louisiana and elsewhere thrive and grow and expand while our own valley, as fertile as the Garden of Eden, does not keep pace with this growth of these other areas. We have the people, the climate, the natural advantages of other localities; but we fail to provide the water transportation and water rates which they enjoy. This is the real difference between the Red River Valley cities and towns and other places.

In the years prior to 1946, we who were interested in the further development of our valley had been at work trying to restore navigation. At first we asked for navigation on the Red River itself as the answer to our traffic problems. We know that every large community must of necessity have every form of transportation—road, rail, air, pipelines, and water—and that the community that fails in any one respect does not contribute fully to its own development competitively with other more fortunate communities. After working on this matter for years, our plans were submitted to the Board of Rivers and Harbors of the Army engineers in Washington, a board composed of the best hydraulic engineers in America.

I was present when this hearing occurred in Washington in 1946. I can look back over the years and realize how important this hearing was to our people here. Claudius Dickson, of Shreveport, was president of the Red River Valley Association and headed the delegation going to Washington. John Ewing, of the Shreveport Times, a director of the Kansas City Southern Railway, came up especially and made a splendid presentation. Senator John H. Overton, my uncle, organized the meeting and presented the witnesses. Other distinguished citizens, many now gone to their rewards, made appearances on behalf of water transportation along the Red River. We all asked for navigation on the river itself.

After months of study and deliberation, the Board of Rivers and Harbors on April 19, 1946, in effect turned down our request for navigation on the Red River, but approved a plan for a waterway to be built on the south side of the river in the alluvial valley as a canal. There can be no question but that the approval of the Overton Waterway was a rejection of the use of the channel of Red River for navigation purposes. Since this decision was rendered, year by year, we have asked the Congress for money for the purpose of planning, blueprinting, and for engineering work for the lateral canal, and the Congress has granted this request; and has provided in all $515,000 for this purpose.

Why did the Board of Rivers and Harbors turn down the use of the channel of the Red River for navigation purposes but, at the same time, approve the construction of a canal along the south side of the river from Shreveport to the Atchafalaya? There were a number of reasons for this decision.

The first reason was that which I have already discussed; namely, the shifting of the channel, the caving and the disintegration of the banks of the stream, the lack of availability of an adequate supply of water in the Red; and the greater cost of providing for navigation along the channel of Red River and the greater length of the channel of the river for transportation, for such purposes over that of the canal.

I think it is obvious that navigation on the Red River would require more water than navigation on the Overton Waterway. This is, of course, because the Red River is a flowing stream and the canal will be a slackwater course. It will require much more water to maintain a channel of a specified depth on the flowing stream than on a slackwater canal. How much more will be required depends upon the rate of the flow of the river and this will depend upon the number of obstacles placed in the path of the current.

The third reason that the use of the Red River channel for navigation purposes was discarded is that such a route must be much longer than the canal type of waterway. The Overton Waterway, as designed, is 205 miles long. On the other hand, the Red River channel is 280 miles long—75 miles longer than the proposed Overton Waterway. The Red River channel, of course, is longer because it is filled with curves, and bends. Then, too, its current will provide a serious obstacle to upstream navigation. The lack of current on the Overton Waterway, as designed, makes for much less bank wash and erosion; and provides for a greater stabilization of bank and channel.

The use of the Red River channel, if this were feasible, would require 12 locks and dams. The dams on the river, of necessity would be much larger and longer than those on the canal, for from bank to bank the river is much wider and, of course, would cost much more money to construct. It is obvious also that banks above and below the locks and the dams would have to be completely stabilized for some distance to prevent what occurred in Avoyelles Parish when the Red River cut a pathway around one of the bridges which had been constructed and thereby rendered the bridge useless. This would require much money. The project to stabilize the banks of the Red 3 miles above and 3 miles below Shreveport has already cost the Government over $10 million. This will give you some idea of the cost of stabilizing the river for a distance of 280 miles.

The original estimate of the cost of the Overton Waterway was $42 million. Since this estimate was made in 1946, of course, prices have gone up considerably. The engineers will give you a further cost estimate; but I would guess that it would certainly run under $100 million. On the other hand, the cost of building the Red River route, using the river channel for navigation, will run $300 million or better—2 or 3 times that of the cost of the waterway.

Besides this, the engineers say that it is not feasible to build the waterway on the Red River. Constant shifting of channels, crumbling of banks and varying elevations of water make real problems; and these, in turn, make the river itself unsuited and unusable for navigation purposes.

You may say, "Well, Congressman, who says that the river is unsuitable for navigation besides yourself?" I answer, "The United States Corps of Army Engineers."

When we are sick, we go to a doctor; when we have a toothache, we visit a dentist; and when we need to build a great canal for navigation, we look to our engineers. They have not let us down in any emergency.

This is the group of engineers which has built the program of flood control and navigation for our Nation since its inception. It is the group which was founded by the Father of our Country, George Washington, when he was President of the United States. He sent to Europe to obtain three of the very best engineers from the armies of Napoleon, and they formed what is now our Army engineers. Since that time our Corps of Engineers has rated tops in conduct, ability, and efficiency.

The Army engineers is the same organization which landed its men on the shores of

Normandy in France in World War II, even before the combat troops landed; and they cut the barbed wire and removed the obstacles, preparing the way for the landing of the infantry and the artillery, the tanks and the jeeps. They won an immortal place in the hearts and minds of our people; and neither time nor distance will efface the valor of their efforts nor the impact of their achievements in the development of America. I think we can safely depend upon them in the building of the Overton Waterway.

The canal when built will begin at the confluence of the Old and Mississippi Rivers, and will continue on up to Shreveport, 206 miles to the northwest. The first 7 miles is through Old River, and the next 24 miles through the Red River, at which point it follows Coulee des Grues, Choctaw Bayou, and Chatlain Lake Canal to Alexandria. It then proceeds through lands cuts to Cane River through Natchitoches, and then on to Bayou Pierre and to Shreveport. It will use 120 miles of existing waterway as compared to 86 miles of land cuts. At Shreveport a turnaround basin will be built and a basin for loading and unloading will be built at all of the large stopping points.

It is fair to say that most of the land utilized will be far removed from urban centers and will be low or swampy land not normally used for cultivation. By the same token, the number of roads to be rerouted will be reduced to a minimum.

I have heard it said that such a canal will split the countryside wide open, and that a barrier greater than anything we have experienced will be erected to prevent the free passage to and fro across the waterway. This, of course, is not true. The waterway, of course, will be no greater a barrier than is Bayou Pierre and Cane River at the present time. At this time these streams and others like them must be bridged if we are to cross them. The same will apply to the canal.

On the other hand, the canal will pass through rather low places in the countryside, and this waterway will provide means of draining these sections of central and northwest Louisiana, which they do not now have. It is estimated that flood control and drainage benefits for the area will exceed $1 million per year. Flood control is an item for which we will spend millions of dollars even though we do not build the canal. If built, the canal will help take care of this expense, and no other development presently contemplated will provide flood control and drainage benefits as indicated by the building of the canal.

Of course, this canal will cost lots of money. Any worthwhile project will cost money; and the question is whether or not it is justified. The Army engineers will settle this question, and I submit that they are better able to dispose of this question accurately than any other group of people.

The actual or total benefits from the construction of this project will be inestimable. A million and a half people have settled in this portion of the Red River Valley and they are all affected by freight rates. Every rate increase of the railroad companies and the truck carriers and the buses adds to the cost of living of our people. Those who live in the areas of Louisiana where navigation is available know the difference in the costs. A rate increase is often the difference between success and failure of business.

Throughout the length and breadth of this country, we see the great cities and towns grow up along the rivers and the harbors. Navigation has attracted the people and businesses to these spots. Cost of living is lower and business prospers in such locations. And we see the great highways terminating at the sea and at the inland ports; and even the railroads, feeling the quickening impulse of lower rates, lay double tracks, add to their equipment and personnel and begin to boom in the stimulus of the increased transportation attendant with the port and with navigation. It is largely in places where there is navigation that the communities grow and prosper. New Orleans, the crescent city; St. Louis, the hub of America; Chicago, the windy city; Pittsburgh and its golden triangle—all of these great cities are built on waterways and the backbone of their prosperity and growth lies in the development which lower freight rates and navigation have given to the community.

The Overton Waterway will open up to us, for waterborne commerce, the great ports along the Mississippi, such as Baton Rouge, New Orleans, Memphis, and St. Louis; the ports along the Atchafalaya and along the intercoastal canal, such as Lake Charles, Houston, and Beaumont. It will connect our communities directly with navigation all along the inland waterways of America—with Pittsburgh, Chicago, Minneapolis, and Sioux City. It will develop in our midst a new type of industry and bring fresh opportunity and new accomplishment to our people.

If we are going to have navigation for the Red River Valley below Shreveport, it is going to be by way of the Overton Waterway. Congress will never appropriate funds for the construction of a great project such as this if it is not approved by the Corps of Engineers. Nor will the people who must support the project by local cooperation approve it in the absence of the recommendations of the Army engineers. We can use all of the persuasion possible and apply political pressures, but I can tell you this—the Army engineers will not yield to the point of recommending a project which they feel is not worthy of the approval.

If, therefore, we reject the canal proposal, make no mistake, navigation in the Red River Valley is dead. We have no alternative. If we accept the proposal, we move forward. The way is not smooth. It is rough; filled with opposition and difficulties; but at the end of the rainbow, it offers the fulfillment of a dream of 55 years—navigation in the Red River Valley. We move forward—at times, it is true, slowly—but always forward, and ultimately over the years we leave to our children the priceless heritage of having developed our God-given resources to the best of our ability. We leave to them the basis for competitive commerce in our valley, for further development greater than otherwise would have been possible; for prosperity and for happiness.

Keep Out the Piranha

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. REUSS. Mr. Speaker, since I introduced H. R. 6572 on April 2 to regulate the importation of the maneating South American piranha fish, I have received many inquiries from individuals, magazines and newspapers.

Despite the obvious danger to other fish, wild animals, livestock and human beings if the piranha were introduced into American waters, there are today no restrictions on its importation. They are being sold right now in pet and curio shops for as little as $1.

A warm water fish, the piranha could not live long in our northern waters. But it could be introduced into our southern waters, in Florida, for example, where it could become acclimated, breed and spread. Surely we must guard against that happening.

To illustrate the potential danger posed by unrestricted importation of the piranha, I offer an editorial and an article from the Milwaukee Journal of April 18, 1957. The editorial follows:

KEEP OUT THE PIRANHA FISH

Congressmen get concerned about strange things—such as a South American fish.

Those who learned about the bill introduced by Representative REUSS, Democrat of Milwaukee, to bar importation of the little piranha, called the cannibal fish, may have wondered whether a congressman didn't have something more important to worry about. The best explanation is to read up a little on the piranha and then wonder what would happen if some of them—now being sold by pet dealers in considerable numbers—got loose and multiplied in some of our warmer lakes and rivers. (See article about the piranha below.)

Many a less dangerous animal, bird or insect has been imported—sometimes innocently and sometimes with serious good intent—only to become a serious pest. Representative REUSS mentioned the English sparrow, the starling and the carp. (Wisconsin seined out more than 7.5 million pounds of carp last year to protect game fish species.)

So there is reason for congressional concern about the terrible piranha, and sound reasons to keep these fish out. Americans with a yen for strange fish in their home acquariums should be content with something less ferocious—and happy to keep their fingers intact.

The following article, written by Mr. Gerald W. Kloss, a feature writer for the Milwaukee Journal, vividly describes the ferocious nature of this tiny fish:

THE BLOODTHIRSTY PIRANHA—BILL BEFORE CONGRESS WOULD CONTROL IMPORTATION INTO UNITED STATES OF SAVAGE SOUTH-AMERICAN FISH WHICH IS A MENACE TO MAN AND BEAST

(By Gerald Kloss)

When cattlemen in certain sections of South America have to move their herds across streams, they sometimes resort to a peculiar stratagem: They pick out the sickliest cow or calf in the herd and send it into the river some distance from the ford.

Within seconds the water boils furiously around the expendable beast. Out of nowhere, it seems, a school of beautifully colored, bass size fish swarms about the cow, ripping vicious bites and shreds of flesh from its abdomen. The sight and smell of blood madden the fish to an even higher frenzy, and the cattlemen take this opportunity to run their herd across the stream in comparative safety.

But they have to do it in a hurry, for these fish have been known to skeletonize a 400-pound hog in 10 minutes. They are called piranha—pronounced pee-RAN-ya—and their list of credits qualifies them for the title of the most bloodthirsty creature in nature.

HORROR DEVISED BY PARADOXICAL NATURE

They are afraid of nothing—not even man. Teddy Roosevelt wrote of seeing a man lose a foot to the piranha before he could be pulled out of a Brazilian river by his friends. "The most ferocious fish in the world," Teddy called them.

Dr. R. L. Ditmars, the famous naturalist, said that piranha "would make a ferocious wildcat seem tame by comparison." Christopher W. Coates, director of the aquarium in the Bronx zoo, goes even further: "The tiny piranha, at least for my money, is the most horrifying and soul shuddering spectacle devised by a paradoxical nature."

The prospect that these piscine murderers might get loose in our own rivers and lakes, gobbling up game fish (and fishermen), has resulted in a bill introduced in congress recently by Representative REUSS of Milwaukee. The bill would require import licenses for piranha so that safeguards could be set up.

Until recently piranha cost up to $100 a specimen in the United States, for they were found only in South America, chiefly in the waters of the Amazon and La Plata basins. West German biologists, however, have learned how to breed them in tanks for tropical fish collectors, and the cost has gone down to about $1 per specimen on the east coast and $10 in the Midwest. (One is on display here now at the public museum.)

Fortunately for Wisconsin, nature has provided the best defense against these killers: They can't live in waters below 70 degrees, so they would hardly survive long in our climate. In the south, however, they could become a menace if they were allowed to breed in the warm streams and lakes.

A LITTLE MONSTER WITH RAZOR TEETH

At first glance, the piranha belies its evil reputation. It somewhat resembles our sunfish, flat and deep bellied, and it seldom measures more than a foot long. Some species have beautiful coloring—purplish-blue backs blending into silvery sides and crimson bellies, with bright and red gill covers and tails. The eyes have a black iris outlined in red.

What identifies it is the fleshy, undershot jaw and a set of razor sharp teeth that can snap through a man's finger in a split second. The triangular shaped lowers mesh with the pointed uppers in a grip that leaves marks on hard steel. South American Indians use the teeth for arrowheads and knives.

Coupled with this impressive dental equipment is an appetite that demands a weekly ration of food twice the weight of the eater. A 150 pound man with the same craving for food would eat 300 pounds a week.

But even beyond the hunger drive, piranha apparently just like to kill for fun. After eating their fill, they will strip a victim to the bone, dropping the shreds of flesh in their haste to get another bite. When no other food is available, they don't hesitate to go after one of their own kind.

THEY ATTACK IN SCHOOLS

An experiment was conducted with a number of immature piranha in an aquarium to find out whether they might grow up under artificial conditions with less vicious tempers. Placed in a large tank, they seemed to get along all right for a time.

Then, when they had grown to about 2 inches in length, their native savagery asserted itself. One piranha, without any apparent provocation, bit another. Immediately, the other seven tiny fish turned on the bitten brother and snapped off the back two-thirds of it.

The aquarium keeper reached into the tank with a pair of steel tweezers in order to save the head. Incredibly, the dying pihanha's jaws clamped on the tweezers and held on until the fish head was placed in formalin. The tweezers were dented by teeth marks from the infant fish.

Attacking in schools, piranha take on opponents hundreds of times their own size. On larger fish, they take their first bites out of the tail, immobilizing the victim so that they can slash away the rest in comparative leisure.

Alligators are safe from attack as long as they don't have any open wounds—but a bleeding creature, no matter how big, is finished if there are any piranha about.

PADDLERS HAVE LOST FINGERS

Because of their insatiable greed, piranha are suckers for any kind of bait. One cast of the line and you've got a bite. They fight the hook like game fish several times their size, and, even when out of water, they continue to snap the air in attempts to sink their teeth into a victim.

Tales of the piranha's ferocity are abundant and well documented.

Men have fallen off boats in South American rivers and been reduced to skeletons in a matter of minutes.

Natives who dipped their canoe paddles too deeply have paid a cost of several fingers.

Women who washed clothes along the shore of piranha infested streams have lost toes and fingers.

There is, however, one redeeming feature about this nasty creature: Once caught—and make sure it's dead before you try to retrieve the hook—the piranha makes good eating. And that, to put it mildly, seems only fair.

General Aniline & Film Corp.

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. COLE. Mr. Speaker, on April 30, 1956, I testified before the House Interstate and Foreign Commerce Committee in support of my bill, H. R. 80, 84th Congress. Subsequently, I inserted the text of my testimony in the Appendix of the RECORD for May 8, 1956. The remarks begin on page A3674. The subject of my testimony concerned a warning that the United States should not repeat the mistakes which we committed following World War I when we returned vested enemy assets to the German Government and thereby deprived American citizens with valid claims against the German Government of a source of funds for payment of these claims. These claimants are still waiting for full payment.

I am deeply concerned with this problem of assets vested during World War II because there is located in my district the Ansco plant owned by General Aniline & Film Corp. Majority stock of GAF is held by the Alien Property Custodian and it is my hope that the Department of Justice will, in the near future, sell this stock to American citizens. My bill, H. R. 597, 85th Congress, is concerned with this subject.

In my testimony before the committee in 1956, I made a statement to the effect that I. G. Farben had ordered destroyed a nitrocellulose plant located near Afton, N. Y., and that this destruction, ordered just prior to Hitler's aggression in Europe, deprived the United States of a production potential of vital nitrocellulose.

My statement was based on testimony given by Mr. Harry L. Derby, former president of the American Cyanamide Corp. and a minority stockholder in GAF, before a subcommittee of the Senate Judiciary Committee on July 1 and 2, 1954. Mr. Derby was also Chairman of the Army and Navy Munitions Board of the Chemical Advisory Committee during World War II.

Subsequent to my testimony, Mr. D. A. Schmitz, who was president of GAF in 1936 when the plant at Afton was leveled, disputed the statement that the destruction of this plant had been carried out on orders from Germany. He stated that the action was taken because the plant had not been in use for several years and the local taxing authorities had levied on the property a tax which was uneconomical for the corporation to pay for a nonproducing unit. Mr. Schmitz believes that statements concerning destruction of this plant have cast a doubt on his loyalty as an American citizen and on the loyalty of his board of directors and subordinates during this period.

Mr. Schmitz has sent to me a photostat of a letter from Mr. H. W. Sachs, Ansco's chief engineer at the time, which gives Mr. Sachs' statements concerning the destruction of this plant:

BINGHAMTON, N. Y., *January 3, 1957.*

Mr. D. A. SCHMITZ,
Greenwich, Conn.

DEAR MR. SCHMITZ: I am in receipt of letter of December 19 written by Mrs. M. Stiegelmaier at your behest. The essential facts regarding dismantling of the Afton plant are as follows:

The cotton nitrating plant in the town of Afton, N. Y., was built approximately 1916, and I understand operations were discontinued about 1920. The plant had been idle ever since.

In the course of the years, the masonry structure of most buildings suffered from severe deterioration due to weathering as well as chemical action in those sections where acids had been used. Machinery and equipment was sold piecemeal, at suitable opportunities, or taken to the Binghamton plant. By 1936, the remaining balance had no further use value and this included much of the boilerhouse installation. Some of the buildings were used for storage of baled scrap film waiting for disposal.

Even though the plant had reached an extremely low use level the town of Afton insisted upon a tax assessment way out of proportion. Repeated attempts were made to lower the tax payments, without success; negotiations were carried on by Mr. Chris King, assistant treasurer, now deceased.

In order to remove the tax burden it was finally decided to dismantle the plant. Consequently, in the summer of 1936 all buildings were leveled to the ground and the stack was blown up. The actual work was carried out by Levine & Sons, scrap dealers in Binghamton, under the supervision of the writer, who was Ansco's chief engineer at that time.

These are the true circumstances which led to the dismantling of the Afton plant. I do not intend to enter or participate in any controversies but the facts should speak for themselves.

I trust the above will comply with your request.

With kindest regards,
Sincerely yours,

H. W. SACHS.

Mr. Speaker, the statement concerning the nitrocellulose plant at Afton was a very minor of my testimony.

It was not my intention to cast doubt on the loyalty of the American management of GAF and no such intention should be inferred. It is, of course, well known that I. G. Farbenindustrie was a cartel of tremendous power which aided Hitler's war machine in its early successes but Mr. Schmitz has written to me:

First, to my knowledge, the I. G. Farbenindustrie in Germany had definitely no control over the management or policies of General Aniline & Film Corporation during the period that I was president of that company, beginning in June of 1936 and until I was relieved of my position when the Alien Property Custodian seized the company in 1942.

Regarding the Afton plant, to my knowledge no order for its dismantling was ever received from any source outside the company. In the event that such a directive could have been made, it most certainly would not have been honored by my management. Certainly any such action would have required a board of directors' resolution.

I am pleased to insert Mr. Schmitz' statement and Mr. Sachs' letter so that they can be a matter of public record.

Republican Foreign Policy

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an address given by my very capable colleague, Congressman JOHN M. VORYS, of Ohio. These remarks were given at the Arneson Institute of Practical Politics held at Ohio Wesleyan University on April 22.

This Institute of Practical Politics of Ohio Wesleyan has received worldwide recognition and speakers of both parties are annually invited to participate. I was most happy to have the privilege of being in attendance and I consider it a pleasure to incorporate the remarks of my colleagues in the RECORD:

REPUBLICAN FOREIGN POLICY

(Speech of Representative JOHN M. VORYS, of Ohio, member of the House Foreign Affairs Committee, Monday afternoon, April 22, 1957, on Republican Day at Ohio Wesleyan University, sponsored by the Arneson Institute of Practical Politics)

Our foreign policy is bipartisan on fundamentals, set forth in the platforms of both political parties, and supported by the leadership of both parties in Congress. Many people grumble about this. They want their party to have all the good, sound principles, and the other party to take all the ideas they disagree with. But neither of the great parties will accommodate such people. Both parties support the sound, patriotic ideas.

Personally, I rejoice in this demonstration of the essential unity of our people. It brings continuity to our policies, hope to a divided world, despair to the despots.

Nevertheless, there are differences between our two parties that show up in methods, in means, in performance, in results. Under our Constitution, the President has primary and paramount responsibility for conducting foreign policy. Today, and for the last 4 years, the people and the daily papers talk about the Eisenhower foreign policy, and Republican foreign policy, and the history books will say it that way.

We are in the fifth year of Republican foreign policy under President Eisenhower, a troubled, turbulent, complicated, critical period of continuing tension, controversy, and change throughout the world. Foreign policy is more than a speech, a set of principles. It involves courses of action on our part going on day and night, here and all over the world, some secret, many unnoticed, some exciting and dramatic. A day-by-day, play-by-play review now would be impossible. Regardless of the ups and downs and zigzags of each day's headlines, the heart of Republican foreign policy under President Eisenhower is simple, noble, practical; we work for peace.

President Eisenhower's first administration started with action for peace.

He had promised to end the war in Korea, and he did it.

He made his historic atoms for peace proposal in the United Nations, and the only nation that had ever dropped an A bomb in war become known as the leader in devoting atomic energy to peace.

He electrified the world with his open skies inspection proposal at the summit meeting, as a practical, workable step toward disarmament.

We obtained a peace treaty at long last for Austria. We settled the explosive status of Trieste. The President asked for and obtained authority to use our Armed Forces in the area of Formoa, where war threatened 2 years ago; and peace has been maintained in Asia ever since.

He and our great Secretary of State, John Foster Dulles, with courage and skill have prevented war by Soviet miscalculation by letting the Reds understand clearly that we would fight if they launched aggression, but never letting them know where or when we would not fight. If this policy had been followed in earlier years, we might have avoided the last 3 wars under Democratic Presidents. If the Kaiser had known beforehand that we would come in, World War I might never have started. If Hitler had not heard "again and again" that we would not send our boys to fight on foreign soil, World War II might have been avoided. If the Chinese Reds had not heard that Korea was beyond our defense perimeter, they might have held off. To prevent war by miscalculation, our leaders must be courageous, but careful. Time and again in the last 4 years, we have gone to the brink of war, but we haven't gone over, because Eisenhower and Dulles took care that we didn't miscalculate, and neither did our enemies.

But peace to us means more than mere absence of war. We seek peace with justice.

When the Suez Canal was nationalized, we immediately sought peaceful settlement. Then, right in the heat of our fall campaign, Britain, France, and Israel, our old friends, launched aggression. We were put to the test, and the President said, "There cannot be one law for our friends, another for our foes," and joined in pressures in the U. N. for withdrawal. But he said, "There will be no involvement of our forces in this situation." And, although the Democrat opposition criticized him and his acts day and night during the last week of the campaign, the people reelected him with a landslide. The people were for peace with justice. And today, Britain, France, and Israel have withdrawn and our forces, as he promised, have not been involved.

Where do we stand now? President Eisenhower, in his great second inaugural address in January said, "We live in a land of plenty, but rarely has this earth known such peril as today. * * * In too much of the earth there is want, discord, danger." He spoke of "new forces and new nations" * * * of old and great nations in time of change, of "the designs of international communism, dark in purpose, clear in practice." Then he said:

"We look upon this shaken earth, and we declare our firm and fixed purpose: the building of a peace with justice in a world where moral law prevails. The building of such a peace is a bold and solemn purpose. To proclaim it is easy. To serve it will be hard. And to attain it, we must be aware of its full meaning—and ready to pay its full price."

In this grim and deadly struggle with Godless, ruthless communism, the price of peace is high. Sixty-three percent of our budget is for our protection against Soviet aggression, subversion, and infiltration, military, economic, ideological. But the price of war is higher, not only in budgets, but in blood and tears. In past wars we paid with the priceless lives of the young, our bravest and best. In future wars all of us risk suffering and death.

While the price of peace is great, the rewards are great, even during this uneasy costly peace. We have had 4 years of the greatest prosperity, the highest standard of living, of any nation on earth in all human history. Under Republican foreign economic policy, our foreign affairs are profitable to our people. Last year our people received nearly $24 billion from exports, foreign investments, foreign investors and travellers, while our government was spending $4.2 billion on foreign military and economic aid, but spending fourth-fifth of it in this country. Last year our exports, our sales abroad, amounted to $19 billion, our imports, our purchases abroad were $14 billion, and we had 20 percent of the international trade of the whole world. That is, one-fifth of all commerce crossing international borders was sold by the United States, while in the last 4 years the cost of our own defense and our share in collective security, has been an ever-dwindling fraction of our ever-rising national income. Peace is not only, as our President has so eloquently said, "our duty and our destiny." Peace is profitable to the United States of America.

We have in this country people who want the profits of peace without paying the price. They say, "if we cut out our military spending and our foreign aid, we would have even more profitable peace." Now I believe that the President and Congress should, and will, cut our military and collective security costs as low as possible, but I can assure you that, if we cut it all out, we would not have profitable peace. We would soon have war, or a peace dictated from the Kremlin, and it would not be profitable to us.

Most of us understand the need, the economy, of our own vast military machine, for maintaining peace, deterring costly war. Let's look for a moment at the economics of our collective security. Our so-called foreign aid is up for reappraisal in the White House, in Congress. I can, however, give you a few facts about Republican administration of foreign aid.

It costs about one-tenth as much as our military expenditures on our own forces. Eighty percent of this is spent in this country and goes to our own farms and factories. Foreign aid appropriations in the past 4 years have been just about one-half what they were in the 4 preceding years of Democrat administration. We have about 19 divisions in our Army, Russia has 175. We have the best Navy in the world. Russia has 400 submarines to sink our Navy; Russia has the largest Air Force; we feel ours is the best. Both countries have A- and H-bombs, guided missiles. We have one thing Russia hasn't got. We have a string of air and naval bases all around Russia; Russia has no bases around us. We have small forces on those bases, and mobile air and naval forces ready to get to them quickly, but we depend largely on the forces of the countries near where those bases are located, to defend them against sabotage, infiltration, sudden attacks. When we help those countries to defend their own soil and keep these bases ready for massive retaliation, we contribute to our mutual security. That system, as Admiral Radford says, is "part and parcel of our own defense."

It cost us last year $6,600 to maintain an American serviceman abroad, without count-

ing his weapons. It cost us last year $789 per man in mutual security funds to help maintain an allied serviceman abroad, armed and equipped, ready for action where we want him, according to jointly made defense plans. Our so-called foreign aid helps to maintain 200 allied divisions in 44 nations, a naval force with as many vessels as our own, although not as powerful; 300 air squardons, as many as we have, but not as well equipped. It is not our forces alone that deter Russia; it is the combination of our forces with those that surround her ready to strike from every side, that maintains peace, and gives us and the free world mutual security, collective security.

Now I am opposed to give-aways; we cannot buy friends, but if we can help arm and strengthen nations that want to stay free and are willing to raise forces larger than they can arm and support, and thus help deter Soviet aggression, at one-tenth of the cost of our own forces, we are getting a bargain in our mutual security program.

Some people say we should bring our forces home, arm to the teeth, and wait for the Soviets to come here. If we did that, it would cost more, because intercontinental planes and missiles are very expensive. I think the Soviets would try to come here, after taking over the rest of the world and cutting us off from the constantly increasing number and volume of strategic materials we need to import. I have seen war-devastated countries of Europe and Asia, where they fought at home. I prefer our policy of planning to fight our wars away from home, on friendly soil, if we have to fight, and not doing all the fighting ourselves. This is not a selfish policy. In this way we give other free nations a chance to defend their soils, while we defend ours. This policy of collective security, mutual security, has given us peace for 4 years.

I have told you that foreign aid amounts to one-tenth of our own military spending. Well, about one-tenth of that one-tenth is spent on nonmilitary technical assistance and development assistance, 80 percent in loans, and goes also to nations with which we have no military mutual security agreements. This includes some neutralists nations. We wish they would join us in mutual defense, but we cannot force them. Whatever happens, we don't want them to go Communist, or be taken over by Communists, through being forced to rely on the Reds for technical and development assistance. So we help them fight hunger, disease, and ignorance. We help them develop their economic and political independence, for that adds to our security in war, and in peace we do more business with more developed countries.

You know about our agricultural surplus problem. We use farm surpluses in the mutual security program whenever we can. Since World War II just about 30 percent of our foreign aid, $16 billion of it, has been surplus agricultural products. Thus, foreign aid has been our biggest single farm aid program, while helping to maintain peace.

You have heard much about giveaways, grants. Well, $14 billion of our post-World War II aid, about 25 percent, has been in the form of loans, and we have been repaid $5.7 billion in interest and principle of these loans. Tell that to people who say that such loans are giveaways.

In the last 4 years the legislation for these policies, involving the cost of peace, and the rewards of peace, has had bipartisan support, and bipartisan opposition, although, of course, the leadership and the execution came from the Republican administration. I believe in giving credit where credit is due. I must also report that there has been more Democrat partisanship in foreign policy in Congress in the last 3 months than I have seen in my 18 years in Congress, and it has not been good for our country. I believe in placing blame where it belongs.

You are all familiar with the President's Middle East doctrine. The law was signed March 9. It applied in the Middle East methods that had been tested and found successful in earlier acts. The aid provisions were similar to the Greek-Turkish aid law, passed by the Republican 80th Congress at the request of a Democrat President. The authority to use our Armed Forces was similar to that granted in the Formosa resolution passed in 1955 by a Democrat-controlled Congress at the request of a Republican President with but 3 no votes in the House and 3 in the Senate. No new appropriations were included. Emergency use of old appropriations winds up June 30, 1957.

You would have thought that, in view of the ominous and obvious tension and instability in the Middle East, this law would have been rushed through.

Instead, a partisan hue and cry started, saying the proposal was unprecedented, unconstitutional, a declaration of war, a blank check, and that Congress had not been consulted; this went on for over 2 months. The House acted in 25 days, in commendable bipartisan spirit, and made no crippling amendments. Now a House Member is not supposed to criticize the Senate, but somewhere, some amendments got in this bill that I feel were unnecessary, unintelligible, or undesirable. The Executive, however, considered them as merely harassing, rather than hamstringing, and the House accepted them rather than risk delay by a second filibuster—you know where.

One of these amendments involved the President's authority to use Armed Forces. A straight Democrat Party vote struck out the words which were copied from the Formosa resolution, "he is authorized" and inserted instead "the United States is prepared to use Armed Forces." It was amusing that the Democrats decided to repeal by law the charges made all through last year's campaign that the United States is unprepared to use its Armed Forces.

On this issue of bipartisan consultation, here are some facts I can give you firsthand: The President had a bipartisan congressional meeting on foreign policy, including the Middle East doctrine, at the White House for 4 hours on New Year's Day, although Congress did not convene until January 3. Before the Presidential message on Saturday, January 5, publicly stating his policy, Secretary Dulles went over the provisions of the bill, inviting comments and suggestions, with both House and Senate committees. The text of the bill when introduced reflected the results of congressional consultation and suggestions.

Nevertheless, some of the Democrats kept saying for 2 months that there ought to be congressional consultation and approval before the President takes a public position on such matters, and thereby commits the country.

Now, let's see what happened next: In March the question of whether the United States should suport sanctions against Israel in the United Nations was being publicly discussed by nearly everyone—except the President. He called a bipartisan meeting at the White House on March 21 to discuss the Israeli situation. Now those meetings are supposed to be off the record, but if any definite action is taken, it is announced in a press release immediately after the meeting. It is significant that no action was announced after that meeting except that the President was going on the air that night. The President then proposed a course for Israel, which I approved and which Israel followed, which kept the issue of sanctions from coming to a vote in the U. N., but there is no record that this course had the approval, or disapproval, of the Democrat congressional leaders.

It appears that the Democrats, after insisting on being consulted, before action, declined responsibility for action. Nevertheless, the President called a bipartisan meeting to report on the Bermuda conference the day after he returned.

When you start to play politics on this business of bipartisan consultation, you can work it two ways. You can say, "The President put us on the spot by committing himself publicly without consulting us," or you can say, "He put us on the spot by consulting us in advance before committing himself publicly."

Playing politics either way on foreign policy problems is bad for the country. We will have a Republican President conducting foreign policy for nearly 4 years. We will have a Democrat Congress now and next year. Then we need a Republican Congress.

On the perplexing, complicated, controversial problems of foreign policy, there is room for honest difference of opinion, for intelligent, sincere debate. There is no room for partisan politics. We Republicans must try to keep it out. Politics should stop at the water's edge. That means partisan politics on foreign policy should stop at Capitol Hill. When the Democrats start, we must point it out, show it up, knock it down, and stop it.

For our cause working for peace is a noble one. It ought not to be "above party." It ought to be the cause of both parties. Let us be sure it is ours.

I have dwelt, perhaps overmuch, on the practical, political aspects of working for peace, the cost and the rewards. But there are higher rewards. "Blessed are the peacemakers." I conclude with these moving words from our old soldier, peacemaker President, in his second inaugural address on the price of peace:

"Before all else we seek, upon our common labor as a nation, the favor of Almighty God. And the hopes in our hearts fashion the deepest prayers of our people.

"May we pursue the right—without self-righteousness.

"May we know unity—without conformity.

"May we grow in strength—without pride of self.

"May we, in our dealings with all peoples of the earth, ever speak truth and service justice."

A Protest From the Steuben Society

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from the Steuben Society of America objecting to statements made by a representative of Poland:

Hon. HENRY S. REUSS,
Washington, D. C.:

The Steuben Society of America wishes to protest vigorously against statements made by the Polish Ambassador to the United States before a gathering of American citizens in New York, Sunday, April 21, 1957, as reported in the New York Times on page 2, column 3, Monday, April 22. This accredited representative of a foreign power by criticizing measures initiated and furthered by the United States for the defense of our own country and the protection of Western

Europe overstepped the prerogatives and violated the accepted code of conduct of a representative of a foreign government in our country. We urge that this matter be made the subject of inquiries by both Congress and the Executive. The Ambassador's attack on the North Atlantic Pact and Western Germany as a partner of that pact constitutes an unqualified endorsement of the Warsaw Pact which is the antithesis of the North Atlantic Pact. How can our Government without any guaranties whatsoever offer financial assistance to a satellite nation which will use the proposed loan to strengthen the weapons of communism against the Western World? Mr. Spasowski's statement makes it evident where the satellite government in Warsaw stands despite all its protestations.

STEUBEN SOCIETY OF AMERICA,
OTTO HEERLEIN, *Acting Chairman.*

For the Full Story

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial by Clyde M. Reed, Jr., in the Parsons (Kans.) Sun of Friday, April 19, 1957, entitled "For the Full Story":

A study of operating statements sheds light on deficits reported by the Katy Railroad for the months of January and February. The study was made by the St. Louis Globe-Democrat and reveals several interesting facts, including at least one change not heretofore reported in the method of keeping books on the railroad.

William N. Deramus III, the Katy's president, and Robert E. Thomas of New York, executive committee chairman, have been laying great stress on the terrific losses suffered by the railroad in the first 2 months of the year.

They have done this in explanations of why the Katy management resorted to desperate practices in personnel transfers and firings during past weeks. The January and February deficits were supposed to explain everything.

Perhaps the most significant of the Globe-Democrat's findings is that $233,000 was charged off in 1957 as maintenance expense before it was spent.

The Interstate Commerce Commission has no objection to such a practice, since it may be logically done to spread expenditures over the year that likely are to be concentrated in a few months' period of good weather.

But the Katy did not engage in such an accounting procedure in the similar period last year and until now there was no public knowledge that it had been done this year. Least of all there had been no enlightenment from Messrs. Deramus and Thomas on this point in their repeated pleading about deficits.

The effect of the change, as the Globe-Democrat explained, is to depress the road's showing for the months of January and February of this year since there was no similar entry a year ago.

Further, it develops that the Katy reported an increase of $864,346 in total maintenance costs over the first 2 months of 1956. It is an increase of 27 percent. Other costs, including operational and administrative, were the same as last year's or below.

The huge jump in maintenance costs occured in the face of heavy personnel layoffs in February that are a matter of public knowledge and should account in themselves for a sizable reduction in expenses, since wages are involved.

Added to this is the fact that even with the big boost in maintenance costs shown in the railroad's statements, the Katy would have about broken even in the first 2 months of 1957 if a $500,000 adjustment had not been made in revenue accounting late in 1956.

Deramus pointed out in a letter to employees a week ago today that the effect of the revenue exchange in the closing months of last year was to overstate earnings in November and December by $500,000.

By the same token, although he failed to say so, the railroad's income in January and February was understated by an equal amount since most of it normally would have been credited to revenue in those months.

The Globe-Democrat's stuy also brings to the surface the news that the Katy's actual dollar income in January and February is down less than 1 percent from a year ago, despite the $500,000 bookkeeping adjustment.

Freight traffic was off 9 percent through March, but revenue held up during the first 2 months in comparison with the corresponding period last year because of freight-rate increases.

It's a complicated situation, to say the least. But some things are clear.

There has been a change in bookkeeping on the railroad, but no hint of it from the two spokesmen who have been busily engaged in crying "wolf" at every opportunity.

The comparisons with last year, both in revenue and expenses, are of a nature which put the recent earnings performance in a poor light.

Total revenues in the first 2 months were not off nearly as sharply as one might be led to believe by the emphasis placed on the dark side of the picture. One percent is not much of a drop in any business.

The big and as yet unanswered question is, "Why?"

Certainly some stockholders on the railroad must be asking themselves that, and so are various segments of the public in the territory served by the railroad.

The Katy is a business whose operations are of vital concern to the public. If they were not, then the Nation has been pursuing the wrong policy for three-quarters of a century in insisting upon detailed regulation and reporting on railroad activities.

Isn't it time to bring out the full story whatever it may be?

Maj. Jean Pierre Chouteau Commemorative Stamps

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. EDMONDSON. Mr. Speaker, I have today introduced a bill which would authorize issuance of a special series of 3-cent postage stamps during the calendar year 1958 in commemoration of the 200th anniversary of the birth of Maj. Jean Pierre Chouteau, who in 1796 established the first permanent white settlement in what is now Salina, Okla.

Frequently called "the father of Oklahoma," Jean Pierre Chouteau arrived at the site of Salina in the spring of 1796 in command of a party of French traders and trappers while George Washington was still President of the United States. Major Chouteau brought his group to what is now Oklahoma from the region west of St. Louis to explore the unknown country along the Grand, Verdigris, and Arkansas Rivers and to establish a settlement and trading post to open trade with the Indians in the area.

A man of refinement and culture, Major Chouteau is reputed to have read Greek and Latin classics in the original, and to have brought many of the treasures of civilization to the area. Lawns were planted in rare shrubs, trees, and flowers; and paradise trees brought direct from France remain there today.

From Salina, business, industry, and enterprise began and spread. Fur trading became a big business, and salt manufacture became important to the region. Nearby, shipyards were built for the construction of keel boats of considerable size.

Subsequently, trading posts extended across the State, and the impact of Maj. Jean Pierre Chouteau upon the area was tremendous and unforgettable. His contributions to the history and civilization of Oklahoma are recognized by the statewide observance of October 10, his birth-date anniversary, as Oklahoma Historical Day both by virtue of a joint resolution of the Oklahoma Legislature and by proclamation by the Governor of Oklahoma.

It would be most fitting and appropriate for the Postmaster General, in line with the bill I have introduced, to prepare for issuance, a commemorative stamp in honor of Major Chouteau, and to offer such stamps for sale to the public first at Salina, Okla., where Major Chouteau settled, and which the Governor of Oklahoma has proclaimed to be the Pioneer Capitol of Oklahoma for the day.

Junk Mail Also a Giveaway

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. SIMPSON of Illinois. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Macomb (Ill.) Daily Journal of April 26, 1957:

JUNK MAIL ALSO A GIVEAWAY

On Wednesday of this week we received five identical pieces of mail from a New York publishing house. Offering a book, The Great Giveaway, and a subscription to an information service, the five pieces were mailed under a bulk rate.

Upon inquiry, the Macomb post office supplied the information that it cost the publishing house only 1½ cents for each piece of mail.

It costs 3 cents to send a sealed letter from Macomb to Colchester, 2 cents to send a postcard.

Yet a piece of junk mail can be sent from New York for 1½ cents. So cheap is this rate the sender can afford to lay down a barrage, 5 identical pieces of junk mail to 1 person in 1 day. This, we suggest, is another great giveaway, a giveaway of postal funds.

Aside from the difference in cost, there is the matter of service to the people. Service to the people should be considered because the Post Office Department belongs to the people. Service to the people involves what the people want, what is of the most value to them.

As for the five identical pieces of junk mail, we could have gotten along nicely without them. The book, The Great Giveaway, which deals with foreign aid, may be a volume of much merit, but we're not going to buy because we're already a little foundered on pro-and-con arguments about foreign aid. In other words, this junk mail was of no interest to us and of no benefit to either us or the sender.

On the other hand, the letter that is sent from Macomb to Colchester at a cost of 3 cents can be assumed to be of interest, and in many cases benefit, to both the sender and recipient. At least, such letters are not shoveled into post offices by the ton. They are a means of communication between individuals. They are important to the individuals, whereas junk mail is not.

There has been much talk in Washington of postal deficits. Saturday service was curtailed recently when the Postmaster General and Congress got into a hassle over funds. Proposals to raise postal rates are pending.

It might do some good to write your Congressman and Senators, urging that their first move be that of ending the waste of junk mail.

Hold everything. We just received another copy of the mailing on The Great Giveaway. That makes six.

Improvement of the Red River

EXTENSION OF REMARKS

OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. LONG. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

SPEECH BY CONGRESSMAN GEORGE S. LONG AT THE ANNUAL MEETING OF THE RED RIVER VALLEY ASSOCIATION, SHREVEPORT, LA., APRIL 22, 1957, ON IMPROVEMENT OF THE RED RIVER

Mr. Chairman, I am highly honored and indeed very happy to have been invited to this splendid organizational meeting of the Red River Valley Association. The association has done outstanding work in the field of flood control, soil conservation, and in general promoting beneficial projects for the Red River area. It is a privilege to number among my friends the men who head up this fine organization. Your president, Mr. Fairbanks, is one of my fellow townsmen and a gentlemen whom I hold in the highest regard. And may I say here that Mr. Roy Mathius is one of the most energetic and capable men in this field, and I hold him in the highest regard. All of these gentlemen are earnest and sincere and accomplish much good for the people of our great State.

While it is true that I have not always agreed with all of their philosophies and plans, I have endeavored to disagree without being disagreeable. It has often been said that when two men in business always agree, one of them is unnecessary.

I am offering a plan which may be considered as a supplement or an alternative to the plan which is under consideration, that is, the Overton Red River Canal. I will go into this matter in detail at a later time in my discussion.

Earlier this year I introduced a bill in the Congress of the United States, known as H. R. 3844, which has for its purpose to provide a waterway accessible to several States from Oklahoma to the Gulf of Mexico. My proposal would actually begin at Denison, Tex., and work southward deepening and widening the Red River to the Atchafalaya River and thence to the Gulf of Mexico. The waterway would be more than just a deepened channel or a canal. It would encompass features of both with the end result that the people throughout the area involved would enjoy the benefits of a fine inland water system. In my plan which would begin improvement of the river at Denison, Tex., I include the establishment of a channel through Caddo Lake to Jefferson, Tex. The Jefferson, Tex., area contains a vast and virtually untapped iron ore bed which could be worked economically if water transportation were available. The utilization of the waterway for this purpose would add a vast amount of tonnage to the year traffic. My plan would encompass parts of Red River which readily lend themselves to improvement and which are feasible as an inland water system and also encompasses canals around those portions of the river which do not lend themselves to construction improvement. The river would be straightened in places and entirely bypassed in other spots.

Let me say, here, that the plan I have in mind would effectively control the waterflow on the Red River through a system of locks and dams. These locks and dams would maintain the water level throughout the year at a depth which would enable water traffic to move. During the times of floodwaters, the locks and dams could be opened to permit the floodwater to pass on through. This plan, in addition to providing a fine inland waterway system would have interesting possibilities in the field of irrigation.

I know there are some who will immediately take the position that this sort of project is not practical. There are the criers who want to cry before they know what can be done. I seriously doubt that there has ever been a large and far-reaching project without its full share of skeptics. I have the greatest respect for General Holle and his group of Army engineers. I certainly realize that they are doing a good job in their field, but at the same time, I do not propose to let the Army engineers do my thinking for me. They have been wrong in the past, and they will be wrong again in the future. The Army engineers say there is no precedence for a project of the type I propose. It is not within my scheme of operation to follow established precedence. I think it is much better to make precedence. I have known many things in my lifetime that were labeled "impossible" that are now being used for the benefit of mankind. The things that we accept as commonplace and without which our lives would not be as easy, were, for the most part, considered impossible, impracticable, unworkable, and the idea of some crackpot. I need only to mention the automobile, the airplane, the telephone, radio, television, etc.

In my boyhood it was an established fact in the minds of many that the Ohio River could not be made navigable the year around, but I personally have lived long enough to see it done.

When I was a member of the Oklahoma State Legislature some 30 years ago, we tried to secure authorization to make the Arkansas River navigable. The report from the engineers, at that time, was that this plan was impossible. Today, my friends, improvement of the Arkansas River, together with other rivers, has been authorized and part of the work toward making these streams navigable is underway or in the preparatory stage. In a few years the Arkansas River will be navigable and will be used in commerce. I do not hesitate to say to you, my friends here today, that the time is coming and will come soon when the Red River will be navigable from Denison, Tex., to the Gulf of Mexico.

When my brother, Huey Long, was Governor of this great State, he proposed to construct a bridge across the Mississippi River at New Orleans. The Army engineers told him that this positively was an impossibility and the time would never come when such a structure could be built. But he was not discouraged by the adverse report and went to work with other engineers who told him after a preliminary survey that it could be done. Today, that wonderful bridge across the Mississippi is there to facilitate the travel of hundreds of thousands. Further, as a result of the discovery of what could be done, there is today more than just the one bridge across the Mississippi.

In my opinion, if the Army engineers would be more inclined to take a second look and not steadfastly adhere to a single plan, we would all benefit by a more enlightened approach to the matter before us. I think we are in agreement that we want a workable and fully practical waterway system without too much of a penalty being imposed upon a small segment of our population. The Overton Canal, as it is proposed, is merely a barge canal. The Red River improvement which I propose would be good for small craft and barges and make available a plentiful supply of water that is much needed and which would provide a fine inducement to industry which might wish to come to our State.

There is still another aspect to the waterway proposition. In the Overton Canal plan, it is proposed that local interests pay a part of the construction and all of the main payments of this canal. To me, that is not fair, as we are saddling a few small parishes in our State with a tremendous burden in the construction of a waterway which is intended to help all the people of the States of Texas, Arkansas, Louisiana, and even Oklahoma. Actually the parishes through which the canal would pass would not benefit as much as the terminals of the canal. I know that it is claimed that the local interest share will not run too high, not over $20 million, but, here again, I disagree. I believe you will be interested to know that I have talked in private with engineers who are employed by the Government, and they have told me almost exactly what I am telling you about my plan. Many fine engineers in this country believe that by the system I have outlined to you today, through a system of canals, and straightening and widening and deepening the river, that we will have a permanent waterway with an abundance of water.

Now, let me discuss the Overton Canal briefly. In the building of the Overton Canal there will not be much water and what water there is must be pumped out of the Red River into the canal in order to provide a sufficient depth to float barges. Now there is where I differ with some of my good friends. Regardless of what our friends in the Army engineers may say, all the reasons in the world would not make this feasible. Should we go ahead with the Overton Canal, in my opinion, we would be constructing a monstrosity which would go down in history as one of the greatest engineering mistakes in our area. I do not claim to be an engineer, but as you know, commonsense can and should be used in everything.

In my district there are three parishes through which this canal would pass. The land there is rich and to dig a canal with its bank areas and rights of way a lot of good land would be destroyed. To dig a canal through a parish would cause many landowners to find their farms divided and this, of course, creates a consierable problem. These same people are going to have to pay taxes to pay for their own farms as well as for the canal. As I stated earlier, these people are not the ones who are going to benefit by such a canal if it is built. If we are going to construct a canal or a deep waterway, I propose that we let the Federal Government build it from start to finish and thereby eliminate local charges. Then you would have no trouble after the determinations were made as to how and where the canal is to be built. There is no complete survey or determination of all the facts on the Red River. It is merely said that it will reach from the mouth to Shreveport. If the canal is intended to go to Jefferson, Tex., then we should have a survey to make determinations for all of the river from Denison, Tex., to the Gulf of Mexico and the river through Caddo Lake to Jefferson, Tex.

I believe that all of the Congressmen from the States of Louisiana, Texas, and Arkansas would go along with this line of thinking. I have talked this matter over with my friend, WRIGHT PATMAN, of Texas, and we are in agreement that local interests should not be called upon to pay for this waterway; that it should be paid for by the United States Government because it will serve the interest of all the country and not just a few small parishes in Louisiana.

It is time that we stop and look and listen. We all believe that a waterway is needed. I have strongly advocated a deep waterway from Alexandria to the Gulf of Mexico ever since I first made the race for a seat in Congress. I was ridiculed by many who said that this was impossible. I thought we might go down the Red River into the Atchafalya River, thence into the Gulf of Mexico, or we might travel into the Calcasieu River and enter the deep waterway at Lake Charles. However, I believe that deepening the Red River and traveling from there into the Gulf of Mexico is much more desirable and feasible. This would furnish our area with a fine water outlet to the entire world.

Incidentally, it is only a short distance from the waterway to Oklahoma, and by constructing some 35 miles of canal the large limestone- and cement-producing areas of Oklahoma would provide a great boost in tonnage.

If we proceed with deepening the Red River at places, it will be desirable to make lakes such as the one that is on the Sulpha River just south of Texarkana. Lakes of this type serve as reservoirs during floodtime and an invaluable asset to a water system of this type. Further, when the lakes are full, water can be released during drought periods to maintain a proper water level and also provide possible irrigation sources. In this manner the water in the Red River could be controlled and there would be no such thing as another disastrous flood. Water will be there to irrigate the land, and the great valley of ours from Denison, Tex., to the Gulf of Mexico would become a veritable paradise, a Garden of Eden without equal anywhere. To improve our area in this manner would attract residents, and the value of land up and down the river would double and triple in value. Business would increase, industry would move in, and our lot would be vastly improved.

So, my friends, I urge you to get your great organization to go into this matter in a serious way so as to arrive at the best and most feasible way for the United States Government to build a deep waterway through this great land of ours.

In time of war, this being an area far inland, industry could be developed for the manufacture of various war materials with a ready outlet to the sea. We would have power, we would have labor, we would have raw materials, and we should have transportation. Further, a deep-water system this far inland would provide storage areas for our ships during times of repair.

To me, just to build a canal from the mouth of the Red River to Shreveport would be much less than half a loaf and would not serve the purpose for which we need a deep waterway. Let's be fair and honest and realistic. Local interests would never receive enough benefit from it to pay even a small portion of the taxes. You would ask seven small parishes to build a waterway for the benefit of big businesses such as Lone Star Steel. Also, in my opinion, it would serve as a place for our Government to manufacture war material for our national defense. Large paper mills would be able to come into the area, as they could bring their timber to the mills and their products to the rest of the world. I do not feel that it is fair to burden these seven small parishes to the tune of some $20 million, because, my friends, that is a large sum in itself. The $20-million figure is not a realistic one, because I have gone into this matter completely and I estimate, when you take into consideration the bridges, pipelines, and other items, in addition to the upkeep of the canal, the cost will exceed $50 million. I have had the pleasure of discussing these things with your president and executive vice president. I do not wish to be put in the position of opposing a waterway, but sincerely and earnestly urge you to make a change so that the expenses will be taken off the parishes of this State.

Gentlemen, it has been a privilege and a pleasure to meet with you today. I appreciate this opportunity to think out loud.

Thank you and goodby.

Congress Should Not Accept the Philosophy of Atomic Electric Power at Any Cost When It Means Further Displacement of Our Adequate Coal Supply

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. VAN ZANDT. Mr. Speaker, one of the most lucid and rational papers delivered at the recent Nuclear Congress in Philadelphia was that presented by Mr. Jack K. Busby, executive vice president of the Pennsylvania Power & Light Co., Allentown, Pa. Mr. Busby participated in a panel discussion devoted to the subject, The Latest Prospects for Economic Nuclear Power.

It first reviews briefly pertinent material developed by other speakers at the Nuclear Congress. It refers to testimony of Marling J. Ankeny, director of the Bureau of Mines; Frank Weaver, Federal Power Commission; Karl Mayer, consultant, Stanford Research Institute; W. Kenneth Davis, director, Division of Reactor Development, Atomic Energy Commission; and James H. Harlow, chief mechanical engineer, Philadelphia Electric Co.

The combined testimony of the distinguished gentlemen which Mr. Busby cites is worthy of appraisal for everyone concerned with the commercial development of the atom. When the complete minutes of the meetings are on printed form, I shall ask that they be made a part of the reference file of the Joint Atomic Energy Committee.

Mr. Speaker, from time to time I have taken the floor of the House in defense of the Atomic Energy Commission's opposition to a so-called crash program. Let me point out that AEC Chairman Lewis L. Strauss, at a press conference on April 1, explained that he opposed the Gore-Holifield bill last year because, among other reasons, it would have slowed down other developmental work on nuclear fission. He added:

"I think the same reasoning prevails [this year] and I would hope that the same people who opposed it before in the Congress would oppose it this time and perhaps with some recruits."

Mr. Speaker, I too hope that we shall have recruits for the AEC program and in opposition to expensive hit-or-miss projects. I commend the Busby statement to the attention of any Member who may be uncertain as to America's proper pursuit of the atom's potential.

Mr. Busby and Mr. Ankeny have lent emphasis to a statement which I made last month in regard to the abundance of coal reserves in the United States. To invest millions of dollars in an atomic power system merely for the satisfaction of producing electricity from this source of energy would be a betrayal of the trust invested in us by the people who would be forced to bear the cost of such a project—the general public. In addition, such an undertaking would be in violation of the inherent rights of those families who depend upon a going coal industry and a progressive railroad industry for a livelihood.

Now that it has been established without qualification that there is sufficient mineable coal to satisfy the growing demands of the electric utilities industry for centuries to come, what reason would Congress have for the summary establishment of a more expensive competitive industry? For the information of Members of Congress not close to the coal industry picture, I should like to point out that, while there was a modest increase in bituminous coal production in 1956 over the previous year, unemployment in mining communities is still a most serious problem.

As for anthracite, the people of our colliery areas in northeastern Pennsylvania rightfully look upon Government-subsidized competitive fuels as an unfair body blow, for it threatens them with further deprivation and discouragement.

I wonder how many Members of Congress noticed this headline in the Journal of Commerce for March 28: "Pennsy to lay off 1,600 maintenance men." Let me say that 600 of this number were employees at car shops in Altoona, my home town. Those unfortunate workers could not very well be expected to accept the philosophy of "atomic electric power at any cost," for further displace-

ment of coal would only mean greater decline in rail traffic and less need for maintenance men, repair workers, and operating crews.

As explained in Mr. Busby's statement, North America—particularly the United States—is the most unattractive market in the world for high-cost nuclear power and Europe is perhaps the best market for such power. Mr. Busby's sagacious appraisal of the contrasting conditions between America and Europe are exceedingly relevant. "Rather than borrowing difficulties, it would seem wise to stand firmly on the economic advantage we do have," he explains. "We should not sacrifice these to the lure of engaging in a kilowatt race where fossil fuels are scarce and power is comparatively high cost and in short supply."

When this factor is taken into consideration, the impracticability of a crash program becomes all the more evident.

Mr. Speaker, no one could be more enthusiastic than I about the role of the atom in a peacetime economy. As a member of the Joint Committee on Atomic Energy, I am in the fortunate position of being close to the Atomic Energy Commission. I have an opportunity to talk with our leading scientists and engineers. I am constantly impressed at the progress that has taken place since our ingenious technicians first began to look into the atom to find out what it might yield for promoting the general welfare.

Unfortunately, so much glamour has attached itself to the subject that Congress, like the general public, may be inclined to automatic approval of entirely too many projects evolving around the peacetime atom, regardless of their practicability. The crash program belongs in this category. The idea of wholesale generation of electric power from fissionable material is of course an attractive proposition until, that is, the cost factor is taken into consideration. Commercial generation of atomic power is not going to be economically useful for many years to come; in support of this conclusion, I now invite you to acquaint yourselves with the opinion of an outstanding power compahy executive, Mr. Jack K. Busby. His statement follows:

Mr. Chairman, at the outset, permit me to disavow the kind of broad knowledge and technical familiarity with matters atomic which might be implied by my presence here on this panel in company with men whose attainments in the field are so well known.

My experience with atomic energy is indeed quite limited and stems entirely from a general acquaintance with the work of my company in association with Westinghouse in research and development on the homogeneous type of reactor. The objective of this research program is to establish the feasibility of constructing a 150,000-kilowatt nuclear powerplant on the Pennsylvania Power & Light Co. system.

Thus, I approach this question of a desirable nuclear program here in the United States primarily from the point of view of a utility executive—but, I should add, as a spokesman for no one other than myself.

The presentations you heard this morning highlight certain facts:

1. As to coal, Mr. Ankeny has made it clear that we have ample supplies of economically minable and transportable coal adequate to more than take care of power generation needs and other coal needs through the period here in question.

2. As to hydro, Mr. Weaver has reported, in effect, that the maximum amount which could be developed would have primary usefulness in carrying peak loads and would not be sufficient in amount to affect the overall capacity situation. Thus, the hydro potential is seen to be complementary to the base load power supply and not directly competitive with either conventional steam or nuclear powerplants for the future.

3. As regards markets, Mr. Mayer neatly capsuled the matter in his statement that for the decade 1960–70, North America—particularly the United States—is the most unattractive market in the world for high-cost nuclear power—and that Europe is the best market for such power.

4. As regards nuclear-power costs, Mr. Davis' projections tie in very closely with Mr. Mayer's analysis. Mr. Davis' figures indicate that in 1970 nuclear power in the United States will begin to be low enough to be competitive in cost with conventional power.

5. As regards conventional-power costs, Mr. Harlow's paper on the characteristics to be expected of a conventional plant as of 1980 suggest a cost of about 6.1 mills per kilowatt-hour assuming 36 cents per thousand British thermal units for coal and today's levels of construction costs. Assuming 2 percent per year inflation between now and 1980, the result should be a substantially higher cost per kilowatt-hour. This again tends to confirm Mr. Davis' projections that as of 1980 nuclear power should be fully competitive.

The facts in the papers presented this morning indicate to me the reasonableness of the following general conclusions on this subject of national policy for atomic-power development.

First of all, that there is no need for a crash program of atomic-power development in the years immediately ahead in order to make up for a shortage of fossil fuels. Mr. Ankeny has made it entirely clear that we have adequate supplies of economically minable and transportable coal sufficient to cover our power generation and other needs.

Secondly, there is no need for a crash program of atomic-power development in the years directly ahead as a basis for counteracting high prices of fossil fuels. Mr. Mayer has in his turn made it entirely clear that power costs in the United States, based on fossil fuels, are lower than in other industrialized regions elsewhere in the world.

Thirdly, there is no need for a crash program because of a power shortage since no such shortage exists or is threatened here in this country. This is conceded by everyone.

These three factors of shortage of fuel, high cost of fuel, and shortage of power are the reasons for the crash programs for atomic-power development abroad. We are not confronted with these serious problems. Rather than borrowing difficulties, it would seem wise to stand firmly on the economic advantages we do have. We should not sacrifice these to the lure of engaging in a kilowatt race with nations abroad where fossil fuels are scarce, and power is comparatively high cost and in short supply. If we should do so, we would be placing a substantial extra burden on the Nation's economy at a time when we can ill afford it.

On the other hand, the fact that we should not have a crash program for atomic-power development at this time certainly does not mean that we should sit back and do nothing. Clearly there is a need for research and development as against the time in the future when we will be requiring atomic-power plants as sources of economic power.

How should such research and development proceed? It is reasonable that this be handled in two phases:

(1) Experimentation which would culminate in the construction of prototypes of reactors. This field of experimentation and prototype construction should certainly be open to industry and industry should be encouraged through research assistance which the Atomic Energy Commission is authorized to grant under the Atomic Energy Act. Also, at the same time, it would be expected that AEC would carry forward an experimentation program—nonduplicative of industry projects—to meet its responsibilities under the act to insure that all promising peaceful applications of atomic energy are being looked into and developed.

(2) For the next phase in research and development, there should be construction of full-scale atomic powerplants when the basic experimentation and prototype development show that such construction on the large scale is justified. Again, this is something that should be done by industry, with appropriate assistance by AEC as necessary and appropriate under the particular circumstances.

The difficulty that exists—and one which has led to considerable political controversy—is the making of a fair determination as to when a given reactor type should be further developed on a full-scale basis.

On the one hand, the Government should not inject itself into the situation by Government building of powerplants which are technologically premature, or which would be built by industry if industry were given the chance. Such action would be Government intervention in the business of power supply on the basis of a partisan decision to extend nontaxpaying Government power at the expense of the taxpaying utilities and other taxpayers who have to foot the bill.

On the other hand, a failure of industry to test out worthwhile reactor concepts on a full-scale basis could prejudice an orderly development and progress toward commercial and economic atomic power.

Much of the sound and fury about the Gore bill and reactor acceleration would be eliminated if we can find a fair and acceptable way to make these necessary determinations on the timing for full-scale development.

One proposal that has been made is that a national evaluation group of highly qualified persons should be formed. This group could make periodic reviews of the situation and render public reports to the Congress and the executive branch. And such reports, being prepared out of political context, might well serve to mark out an orderly process of development which reasonable people could accept.

Finally, I suggest that a crash program is not automatically justified by reference to potential foreign markets. The foreign situation—particularly the 15 million kilowatts of nuclear capacity to be in service by 1967 as spoken for by Euratom—should be scrutinized with caution. Europe has never provided much of a market for power-generation equipment. Further, the dollar shortage situation has to be taken into account as do the forces of national pride in the countries abroad. It could easily be a serious mistake for this country to disrupt a sound domestic program for the development of atomic power by adopting a crash approach when the foreign markets may prove to be nonexistent or existent only in minor degree.

All of these considerations, coupled with our favorable national situation as regards fuel and power, emphasize the wisdom of pursuing in orderly fashion an aggressive and orderly program of research and development. And as economic circumstances justify it, nuclear power will take its proper place in the field of power supply. As this evolutionary process occurs, industry should progressively stand more on its own feet and Government assistance be correspondingly curtailed.

A Toast to Oklahoma

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Roy P. Stewart for the Daily Oklahoma magazine of April 21, 1957, and entitled: "A Toast to Oklahoma." As my native Oklahoma is now celebrating the 50th anniversary of its admission as 46th State of the Union, this fine article by an outstanding feature writer is most timely and captures beautifully the infinite variety of Oklahoma with its unique history and its ever-colorful people. I commend this article to your attention.

The article follows:

A TOAST TO OKLAHOMA

(By Roy P. Stewart)

Ladies and gentlemen, on this anniversary eve of the greatest land rush in history, thundering overture to the appearance of Oklahoma on the national stage, I give you the 46th State: a land matured and yet forever young, with a culture that spanned in 68 years the ethnological gap from stone age to steam heat, from tepees to towers, from arrows to atoms.

A State whose human currents are as diverse as its geological formations: One whose eager, awkward footsteps, stumbling over obstacles both human and animate, have echoed over the Nation and the world.

I present to you a State that began life with a name borrowed from a transplanted Choctaw tribe, with its white people loaned by 45 States and some foreign countries, its red people taken from lands between swamps of the Everglades and the verdant valley of the Mohawk.

For the people, events, places, and incidents to follow—each a part of Oklahoma for good or ill—I ask your salute:

Footweary Spanish and French explorers who first crushed this premeval grass—Coronado, Du Rivage, Du Tesne, Du Bourgmont, La Harpe, and their dreams. And with them the men whose gleaming shares have brought from Oklahoma loam more treasures than those adventurers' visions held—men who now can go into the field and plow again above the grave where last year's hopes lie buried by drought—men undefeated and unafraid.

Nathan Boone, son of Daniel, who led troops of the First Dragoons across the State; Washington Irving, traveling our land to put his impressions into print; Henry M. Stanley, visiting our Indians before going to Africa seeking Dr. Livingston; and the two Red River wars; Col. R. A. Sneed, last prototype of the bearded Confederate officer and gentleman; the Durant girls who won a national basketball championship, and El Reno boys who did the same feat.

Sam Houston, living in the teepee of Oo-loo-te-ka, chief of the Cherokees; Marquis James, writing The Raven, the story of Houston, because of youthful admiration of Sam's son, Temple, one of the most dramatic trial lawyers to stalk into a northern Oklahoma courtroom; Jefferson Davis, serving at Fort Gibson long before he led the lost cause of the Confederacy; Robert E. Lee, serving here under Albert Sidney Johnson, before he faced Grant at Appomattox with a heart heavier than a sword. And Ben Locke and his Choctaw company in War I, whose language on communications wire drove the Germans crazy, trying to decipher it as a code.

An Irish lad named Murphy, mess-wagon driver for Col. Phil Sheridan, pounding the location stake for Fort Sill; Payne, author of Home, Sweet Home, putting feeling into his song as he sat in the home of John Ross in the Cherokee nation; Tessie Mobley, the Ardmore Chickasaw, singing arias at La Scala in Milan, where Giuseppe Bentonelli sang before he stepped into a Metropolitan role on 2 hours' notice—as Joseph Benton.

Lone Wolf, Satank, Satanta and Big Tree, the Kiowas; Clermont the Osage; Quannah Parker, the Comanche, and Geronimo, the Apache, proud leaders of their vanquished and vanishing people. Joseph Oklahombie making the most outstanding individual record in War I without the publicity of Sergeant York; Otis Leader, another Oklahoma Indian, being selected by Pershing to model for a French statue depicting the most representative American doughboy; John Smith, Jack Treadwell, Ernest Childers, Jack Montgomery, among Medal of Honor winners of War II.

Miles, Leavenworth, McClellar, and Arbuckle stationed here with troops; Custer, who raised his own rank and made it stick after the massacre of the Washita when Black Kettle and his Cheyennes were killed, along with women, children, and the aged in a snowbanked village. And Little Raven, buried with the ribbon of the Medal of Honor around his neck, then reburied to make way for Canton Reservoir. Jim Thorpe, the Sac and Fox, returning to the King of Sweden the Olympic decathlon medal because he once played professional baseball under his own name.

The Negro slave in the Choctaw Nation who wrote the beautiful Swing Low Sweet Chariot from the depths of a melancholy, religious heart; Sequoyah, inventor of the Cherokee syllabary, the only man ever granted a literary pension by the United States Government; Douglass H. Johnston; governor of the Chickasaws, so trusted that he could be removed from office only by death or an Executive order of the Nation's President. And Frank Phillips, the Iowa barber who founded a billion-dollar oil empire; the discovery well of the Healdton field which opened a vast boom, drilled a mile away from the intended location because rig timbers, bull wheel, and cable tools were off-loaded from wagons there so a creek could be forded and it was too much trouble to load them again.

The Cherokee Advocate, first newspaper published in Oklahoma, and Poor Sarah, by Elias Boudinot, the learned Cherokee, first book published here. John Joseph Matthews, who told in Wah-kon Tah steps taken by his Osage people along the white man's road. Grant Foreman and Thoburn the historians; Elgin Groseclose, Paul B. Sears, Stanley Vestal, Don Blanding, Dora Aydelotte, George Milburn, Todd Downing, Burton Rascoe, and Savoie Lottinville, lifting Oklahoma letters into prominence. Lynn Riggs, with three plays on Broadway at the same time and whose Green Grow the Lilacs will live long as Oklahoma!

Milton Reynolds, covering Indian treaties for the New York Tribune, remaining here to found the Edmond Sun.

The Easter pageant at Holy City; Robber's Roost, the Ardmore explosion, Tulsa race riots, Urschel kidnaping, and Great Salt Plains. Jesse Chisholm cutting a trail and Cessna building his first airplane in an Enid garage. And shortlived highway commissions, cement sale scandals, voting hassles, vanishing railroads, the book and movie Cimarron, based on the life of Mrs. Thompson Ferguson; the Winnie Mae around the world and Art Goebel's first flight from Hawaii.

The Ewe Lamb rebellion, Osage reign of terror, the State of Sequoyah and Territory of Cimarron. Johnson's and Walton's impeachment as governors; the Big Pasture of our southwestern counties which Aaron Burr hoped to make a western empire. The Braniffs expanding a three-passenger plane into an international airline; W. B. Anthony, carrying the great seal of the State from Guthrie to Oklahoma City, in the dead of night, without waiting for formal notice on changing the capital.

Stand Watie, the Cherokee, wearing epaulets of a Confederate general and Pat Hurley, from the Pittsburg County coal mines, chosen for Secretary of War, Apiatan, the intelligent Kiowa, bringing back word that quieted plains tribes and helped break up the ghost-dance excitement. Houston B. Teehee of Tahlequah signing currency as Treasurer of the United States; Dennis Flynn, introducing in Congress a bill to admit Oklahoma and Indiana territories as a single State.

The 101 ranch as an inland empire of 101,000 acres and the 101 ranch as a farm security project; the Miller brothers, the Mulhalls and Charley, the last of that clan; Pawnee Bill touring the Nation; Charley Tompkins twirling a rope in an Italian arena; Will Rogers, making fun of the world's imagined ills; Wiley Post, who flew around the world alone, taking his first lessons from barnstormer Burrell Tibbs. Oklahoma rodeo hands, then and now, making more money from Madison Square Garden to Cheyenne than men of any other State.

Formal dances of our collegiate Greek orders and white tie affairs with former wildcatters in uncomfortable clothing; Percy L. Gassaway thumping his boots in the Halls of Congress. The convention dominated by delegates from Indian territory which adopted the longest constitution of any State under the whip of William H. Murray: Campbell Russell, the reformer, and Gooch, first kidnaper hanged under the Lindbergh law. Longhorn trail herds and a $100 million terminal market now; Pretty Boy Floyd and the statue of the Pioneer Woman; Bud Ballew sheathing a smoking gun to drink coffee in the California Cafe at Ardmore, where Dow Brazil lay dead on the floor. The McFarlin Memorial Church at Norman, Boston Avenue Methodist Church at Tulsa, the Price Tower at Bartlesville, denoting eras in architecture.

Hooley Bell, the Cherokee lobbyist in Washington, who could quote poetry in three languages; the Santa Fe and Rock Island railroads lending farmers 25,000 bushels of seed wheat to get them started; old Greer County coming back to Oklahoma from Texas and a slice of Roger Mills taken away. The Receiver's field south of Granfield, where a fight over oil led the Supreme Court to establish our southern boundary on the far bank of Red River; triple Snyder tornadoes, the Woodward and Leedey holocausts; Crazy Snake, the rebel, the first normal school at Alva and boats rowed down the main street of Pauls Valley.

The National Guard and the Thunderbird legend and Lt. Gen. Raymond S. McLain, the Nation's outstanding citizen soldier—and only guardsman ever to reach such high permanent rank in the United States Army. The first Oklahoma electors throwing away their votes on Bryan; a dozen men insured for $1 million each and community camps. Plowing under pigs and Government buying of drought cattle and Zato Heir, the sleepy-eyed Hereford, siring more than $1 million worth of bull calves. Henry G. Bennett, builder of a great school, first administrator of point 4, who kept a rendezvous with death on an Iranian hillside.

Buck Garrett, striding through the Carter County oilfields with a gun bumping his hip and Ewing London, his reform successor, dodging bullets fired through his office door. Miss Alice Robertson, daughter of a governor, selling Indian relics to pay taxes; Arch Dixon making the State's first glider flight; Tonkawa and Three Sands and the Seminole boom; Bill Tilghman dying with his boots on at

a Cromwell dance hall; Rhodes scholars and martial law; Gene Autry pounding a telegraph key; the Wild Mary Sudik and Andy Payne, flatfooting across desert and plain to win the bunion derby.

Tom Mix leading a cowboy band; a gatekeeper at a Ponca City refinery winning $4,500 on a terrapin derby and Black Gold, winner of the Kentucky derby. Roy Harris, whose the Third Symphony Toscanini praised after he conducted it; the senate oligarchy and the young Turks of the Marland administration; toll bridges on the Canadians and the Red; Jake Hamon walking two blocks with a bullet in his stomach from the gun of a jealous woman; the Wilburton mine disaster and Appollo Soucek, seeking the path of the sun god for whom he was named, to set a new altitude record for airplanes; Clarence Tinker, the Osage warrior, vanishing in aerial combat over the central Pacific.

Tom Slick with mud on his only pair of boots and sale of the Slick holdings for $35 millions. Grubstakes for a thousand leases; Lew Wentz, Halliburton, Hinderliter and Lloyd Noble; Nelson Johnson appointed minister to China and congressman Manuel Herrick, serving 6 months in Baltimore for violation of the prohibition amendemnt. Virginia Highland, one of the best five-gaited horses ever to win a stake event; Lon Chaney, Sr., working in a Grand Avenue furniture store; the Brizzell Bible collection and Custer County farmers standing off mortgage foreclosures with a rabbit gun. Alice Brown Davis, only woman ever to be Governor of an Indian nation, a gentlewoman who made a fortune and gave it all away, and the big bucks who cried openly and unashamed at her funeral.

The jakeleg epidemic, a million free textbooks and a 2,000-year-old mummy found near Kenton. C. C. Julian dying by his own hand in Shanghai after fleecing gullible speculators here; Norma Smallwood becoming Miss America; Walter Emery winning the national intercollegiate golfing championship; the Big Red football team and Port Robertson's wrestlers, taking over in the national arena the place Ed Gallagher's A. and M. lads once held. Hugh Johnson, "Old Iron Pants," the Okmulgee fire-eater, running NRA; legalization of beer that is not intoxicating by statute; the drink wet-vote dry jiggers.

Jackson Barnett, the eccentric Creek, directing traffic on Wilshire Boulevard in Los Angeles while people fought over his Oklahoma oil money; Josh Lee, of Norman, the teacher turned politician, and Josh Lee, of Vinita, the farmer, who gave Joe Scott goose pimples when he ran for head of the board of agriculture. Lindbergh stranded near Woodward; Charley Colcord building the city's first "skyscraper" and helping erect one of its last; the Babbs Switch fire, the largest junior livestock show in America; Mrs. George Waters running the Granite reformatory and the Indians winning the Dixie championship.

Van Heflin, the Walters boy, starring on stage and screen; Erik Rhodes, Rochelle Hudson, Darla Jean Hood, Kay Francis, and Glenda Farrell in the movies; Emily Stevenson and Larry Cotton singing with dance bands over the Nation's airways and the Teagarden brothers with their own dance bands. Sherman Billingsley leaving the speakeasy business to go respectable with one of New York's finest supper clubs; the Keys quadruplets, Babe Hunt the boxer, and John Levi, one of the greatest football players of them all, as Pop Warner said.

Pepper Martin, the Dean brothers, the Warners, Carl Hubbell, Sam Allen, Allie Reynolds, Mickey Mantle, and Art Keller putting the Oklahoma touch to big-time baseball; Cicero Murray and the "hot oil" army; Dillard with 1 street, 3 miles long, with never a stone or brick in its length; 6 horse hitches of teamsters' wagons crawling 30 miles like 1 twisting worm. Ragtown, which only the Post Office Department knows as Wirt. And Pete Traxler, Al Jennings turned reformer, Belle Starr, the Daltons and Doolins; the frontiers of science marking a trail toward a new and brighter land.

All these I give you, each in its separate place, for in no other time or in no other setting have a people so earnestly sought their destiny with such complex aims. As the sands move slowly down the Cimarron, so have the sands in Oklahoma's life glass poured. We have been impulsive and often crude; gentle and harsh; considerate and unyielding. None can say we have not been picturesque.

Power for the Northwest

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. ULLMAN. Mr. Speaker, the April 21, 1957, edition of the Washington Post and Times Herald carried an editorial which I believe will be of interest to my colleagues in the House.

The editorial draws attention to an aspect of the Hells Canyon fight which unfortunately has been frequently overlooked in the extended discussions that have occurred concerning this important issue. Advocates of the high dam at Hells Canyon, however, have never lost sight of the real issue involved in this long battle—maximum development of our natural resource heritage.

Mr. Speaker, under unanimous consent, I include this editorial in the Appendix of the RECORD:

POWER FOR THE NORTHWEST

Congress has a last chance during this session to provide for maximum development of the magnificent electric power potential at Hells Canyon. This dam site in western Idaho is said to be the finest on the North American continent. Now that the Supreme Court has declined to review an appellate court decision upholding the license granted the Idaho Power Co. to build three relatively small dams on the Snake River, only action by Congress can assure full use of the Hells Canyon site.

Unhappily the situation has been beclouded by the controversy between proponents of private and public power, and by a multiplicity of plans for the development of the Snake River. There is the plan for construction of low-level dams by the Idaho Power Co. as finally authorized by the Federal Power Commission and now partially under way; there is the plan proposed by the FPC staff but rejected by the Commission itself; there is the hint by Secretary of the Interior Seaton of a compromise Federal proposal; and there is the original comprehensive plan devised in 1948 by the Corps of Engineers calling for construction of a high dam at Hells Canyon.

The fact that Mr. Seaton has been considering a proposal for an alternate high dam downstream at Pleasant Valley (which would affect plans of the Pacific Northwest Power Co. as well as the Idaho Power Co.) virtually acknowledges that low-level dams will not make adequate use of the power potential. Of all the plans so far, that of the Corps of Engineers would produce the most power and provide the greatest flood-water storage.

It has been and is a mistake, in this newspaper's judgment, to approach the question out of any doctrinaire preference for public or private power. The governing considerations, in our opinion, are two: First, the Northwest is drastically in need of additional power for its future industrial and agricultural development. Second, the great sources of waterpower are not so numerous in the United States that the country can afford to see them wasted.

If these considerations are valid, then it seems to us that the important thing is to insure that the Hells Canyon site is available for maximum development. The issue of private or public development is secondary. In the nature of things, the full project is of such size that no private company might want to undertake it; at least, none has so far. Still, there would be nothing to prevent a group of utilities from pooling their resources as they have done in respect of atomic-energy plants. Nor should the possibility of joint development by a group of States be ruled out.

Alternatively, if only the Federal Government could build the high dam, the matter of power distribution, and provisions to insure that the dam would pay for itself, could be worked out to general satisfaction. Understandably there is a wish not to add to the Federal budget at this time; but there are ways to approach the problem without relying altogether on Federal financing. In fairness to the private companies and to the power needs of the Northwest which must be met soon one way or another, the final decision cannot long be delayed. All the same, it would be better to put up with some delay pending the devising of a formula in order to protect the site. What Congress needs to do is to take another look before Hells Canyon is foreclosed to the future.

Public Power Is Not Cheap Power

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. SAYLOR. Mr. Speaker, under unanimous consent, I insert three articles in the Appendix of the CONGRESSIONAL RECORD. One is an editorial from the Johnstown (Pa.) Tribune-Democrat for April 13, 1957; the second is a news item that appeared in the United Mine Workers Journal on March 1, 1957; the third is from the Washington Evening Star editorial page of February 26, 1957. All pertain to the generation of electric power.

The Tribune-Democrat's assertion that public power is not cheap power has long been documented, yet it must be repeated—at the risk of seeming platitudinous—only because seeds of truth have difficulty in taking root in adverse political climates.

I hope that Members of Congress will pay particular attention to the excerpt by Robert Moses, chairman of the Power Authority of the State of New York, which states:

Powerplants on top of coal mines produce power as cheap or cheaper than almost any hydroelectric plant that can be built today.

The spasmodic outcries for developing Government-sponsored hydroelectric

power to replace that generated in steam plants are regrettable for two reasons: First, ultimate costs would constitute heavy losses to the taxpayers; secondly, when water power replaces steam power it puts coal miners out of work. A parallel situation is being developed by supporters of Government-subsidized atom-generated electric power. Last year the House beat down an attempt to put across a crash program that would have provided for constructing a number of reactors in various parts of the country, and I am confident any such proposal will meet a similar fate this year.

A year ago the AEC was firmly opposed to what was known as the crash program sponsored by the Democratic leadership. The Commission agreed with some of us who felt that the program was unnecessarily costly and would intensify scientific manpower problems. Now, a year later, the AEC has a crash program of its own design, although in different garb. Either way you look at it, the construction of more and more reactors at taxpayers' expense is extravagant and can lead to extension of public power.

Only if the Government subsidizes construction of the reactors, underwrites most of the insurance risks, and pays the fuel bill, will the cost of atomic power be competitive with that produced by coal. Crash program supporters do not dare to try to challenge this conclusion, although their attempts to befuddle the public with tall tales of low-cost atomic power continue unabated.

The material from the Mine Workers Journal and the Evening Star furnish further enlightenment on the subject of public versus private power. Please note that the Utah Power & Light Co. has invested a minimum of $26 million in its expansion program. This money does not come from the Federal Treasury, and no bureaucrats will have to be added for operating the powerplants or for distribution of the electricity; in addition, the company will pay taxes—like every American business should—and whatever this figure amounts to will be that much more than would come into the Treasury under a public power program. The editorials and news stories follow:

[From the Johnstown (Pa.) Tribune Democrat of April 13, 1957]

PUBLIC POWER ISN'T REALLY SO CHEAP

The announcement that Pennsylvania Electric Co. has broken ground for a $25 million, 185,000-kilowatt addition to its steam generating station at Shawville, near Clearfield, calls to mind a recent controversy between Senator JOSEPH S. CLARK of this State and Robert Moses, chairman of the Power Authority of the State of New York.

Senator CLARK had proposed that some of the hydroelectric power generated at Niagara be distributed to Pennsylvania public power agencies. He wrote Mr. Moses that "I campaigned on that issue and think I'm on sound ground." Mr. Moses, in an open letter, replied: "You may be on sound ground from a political standpoint, but you are waist deep in quicksand from a factual standpoint."

Mr. Moses said that if a transmission line were built to carry 100,000 kilowatts of Niagara power to the Pennsylvania border near Jamestown, the cost would be about 7 mills at that point.

"Pennsylvania has lots of coal," Mr. Moses wrote. "Burning coal produces steam. Steam produces power. The cost of coal is the largest component in the cost of steam power. The cost of transportation is often the greater part of the cost of coal. In Pennsylvania coal can be used to produce power without substantial transportation costs. Powerplants on top of coal mines produce power as cheap as or cheaper than almost any hydroelectric plant that can be built today.

"In West Virginia," Moses continued, "where coal is plentiful, the average generation cost to power companies is less than 5 mills. Most of your municipals and cooperatives are closer to West Virginia power than to Niagara power. A steam plant was recently constructed at Shawville in western Pennsylvania. It is right near a coal mine. It produces power for a total of about 4 mills, including fixed charges such as taxes and return on investment. If public bodies in Pennsylvania built a similar steam plant without the necessity of paying taxes and without the necessity of paying a return on investment, they could produce power for about 3 mills."

As a matter of fact, the Tennessee Valley Authority which set out to develop hydroelectric power is now producing something like two-thirds of its power with steam from plants burning coal—and is trying to get Congress to appropriate more money to build another steam plant.

Some days ago the Lon Angeles Times looked into the power situation at Memphis, which had decided to build its own generating plant to avoid the so-called Dixon-Yates contract—now canceled. Memphis has sold revenue bonds in New York at a coupon rate of 4.4 percent, the Los Angeles paper reported, whereas the Dixon Yates bonds could have been sold at 3.5 percent.

And now Memphis, which was to have bought power under the Dixon-Yates plan for 3.98 mills, will have to pay 4.48 mills and maybe more. The Dixon-Yates plant would have paid Federal, municipal, and State taxes, while the Memphis plant will pay none. Public power is, in fact, not cheap power.

[From the United Mine Workers Journal of March 1, 1957]

COAL PLUS KILOWATTS EQUAL COAL-O-WATTS AT UTAH POWER & LIGHT'S PLANT

SALT LAKE CITY, UTAH.—In August 1957, Utah Power & Light Co.'s carbon plant will almost triple its energy output when the new 100,000 kilowatt unit begins whirring out electricity.

The new $14.5-million unit, currently under construction by Bechtel Corp., is adjacent to the first 66,000-kilowatt section of Carbon plant—so named because of its location in coal-rich Carbon County in central Utah.

Together, the two units will cost $26.7 million and will produce 166,000 kilowatts—enough energy for a city of 300,000 people.

Basic task of the Carbon plant with its new unit will be to furnish electricity to central and southeastern Utah including mines and mills of the now maturing uranium industry. Electricity not used there will be transported through the company's integrated network northward to load centers.

The coal field site was selected for the new unit after months of intensive fuel and water studies.

The availability of coal from nearby mines was a major factor affecting the decision. Engineering studies of the UP&L system load movements and the operation of the present Carbon plant prove it is cheaper to wheel electricity to load centers than to transport coal from the Carbon-Emery fields to steam-electric plants located in northern Utah population and industrial centers.

The economic prudence of building the plant near its fuel source is also supported by potential spiraling coal transportation costs.

At full capacity the new 100,000-kilowatt addition will consume 950 tons of coal per day. Added to present consumption of 740 tons per day of the present 66,000 unit, the two units will consume 1,690 tons per day.

That's 608,400 tons a year—enough coal to keep some 225 Utah miners employed 7 days a week a full year.

Coal is delivered from nearby mines to the plant's coal-handling system where it can be distributed to the bunkers for immediate use or placed in the storage yard.

Water for the completed plant will be supplied from deep wells from winter stream flow and from reservoir storage.

Water is delivered from these sources into the Price River, which flows past the plant, and thence through a diversion dam and intake structure into a settling and impounding basin. Water from the basin is used in a cooling tower system, and a portion treated by a water softening process for use as boiler water.

Carbon plant is the company's second largest power maker. Largest is the 241,000-kilowatt Gadsby steam-electric plant in Salt Lake City.

Gadsby plant's coal burning boilers can consume up to 1,700 tons of coal per day—enough to keep 240 Utah miners employed 7 days a week throughout the year.

Construction of Carbon plant number 1 unit was begun in the summer of 1953 when engineers literally moved a mountain to provide suitable bedrock foundation for the plant. Construction of the second unit was begun April 1956.

Coupled with plant construction was enlargement of nearby Helper substation which steps down high tension voltage and serves as a key electrical energy distribution point for growing electricity requirements of central and southeastern Utah.

[From the Washington Evening Star of February 26, 1957]

POWER IN THE NORTHWEST

The Wall Street Journal, in a report from the Pacific Northwest, has cited some impressive figures that tend to pull the rug out from under Senator MORSE and other politicos who have been clamoring for a vast Federal dam-building program in that part of the country. The figures leave little room for doubt that the clamor, which has included all sorts of dire predictions about an imminent and critical power shortage has had a considerable amount of hot air in it.

Actually, according to these figures, private companies and local governmental agencies in the Pacific Northwest have been doing a tremendous dam-building job of their own. In fact, as the Journal reports, they now have approximately 4.6 million kilowatts of hydroelectric power under construction, just completed or definitely licensed for development, and they are seriously considering projects designed to produce an additional 4 million kilowatts. In the words of one utility official, this postwar program has been the largest of its kind ever undertaken at any one time in any single area in the history of America. By way of contrast, all the Federal dams built in the same region in the past 25 years amount to no more than 4.6 million kilowatts.

Indeed, after looking over the Northwest's private and local public utility accomplishments of recent years, the head of the Federal Bonneville Power Administration—which a year ago warned of a near-future serious shortage in electrical output in the region—now asserts that the danger of a crisis has been deferred until at least 1964 or 1965. All of which makes one wonder about the accuracy of the information that has led Mr. MORSE and like-minded legislators to predict a sort of calamity unless our National Government steps into the picture and goes on a dam-building spree.

We Need A-Power Now

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article on Hon. Thomas E. Murray, member of the Atomic Energy Commission, written by Roger Stuart and appearing in the April 13, 1957, issue of the New York World-Telegram and Sun Saturday magazine.

The splendid article of Mr. Stuart presents to the reader the deep faith and the sound, logical reasoning of Commissioner Murray, one of the truly great men of this age and period, and a man who is universally respected for brilliant abilities, his constructive mind, his devotion to duty, and his nobility of character:

WE NEED A-POWER NOW

(By Roger Stuart)

WASHINGTON.—Atomic Energy Commissioner Thomas E. Murray is an independent-minded champion of free enterprise. Also he's a philosopher. If he weren't, the discovery that he is regarded in some quarters as a public-power advocate undoubtedly would cause him much greater distress than it does.

To have one's position occasionally misunderstood, as Mr. Murray sees it, is a penalty which a conscientious public official must be prepared to face. Under such circumstances, the veteran Commissioner says there are two things to do:

Stick to your guns.

Try to make your stand—and the reasons impelling it—better understood.

Being highly articulate and possessing a sturdy backbone, Mr. Murray has no great difficulty meeting either of these requirements.

Whatever misunderstanding exists about him can be traced to the opposing views of Mr. Murray and AEC Chairman Lewis L. Strauss (who, despite their differences, have great respect for each other) on the important question of industrial atomic power development.

Both are eager to bring about wide peacetime use of nuclear power. But while Chairman Strauss considers the current rate of development "most encouraging," Commissioner Murray insists it isn't fast enough.

The only Democratic holdover on the 5-member Atomic Energy Commission, Mr. Murray was a successful inventor, industrialist, and power engineer in New York before his appointment to AEC by President Truman in 1950.

His term will expire in June, and there have been rumors that he does not wish to be reappointed. Another misapprehension. The 65-year-old nominal Democrat, who has made it clear that "as long as I remain a Commissioner, it will be part of my duty and purpose to keep this vital agency of Government free from partisan politics" would like very much to serve another term.

Intimates say, moreover, that Mr. Murray's stanch support of President Eisenhower's policies on key issues, including the atoms-for-peace program, is "recognized and fully appreciated." At the same time, his independence of judgment, it's claimed, actually has had a salutary effect on the Commission as a whole.

In any event, the difference in viewpoint of Messrs. Murray and Strauss on the development of nuclear energy for industrial purposes, according to the former, is merely one of "economics." Each has defended his position before the Joint Atomic Energy Committee of Congress, which itself is concerned lest the United States fall behind other countries in promoting this type of power.

Mr. Murray, long apprehensive on that score, urges that its development be stepped up "on an urgent basis." Calling specifically for the Government to launch a program of large-scale reactor development, he wants this to augment the current effort of private companies in the costly, time-consuming field.

Failure to do so, in his estimation, could mean that "industrial atomic power will not be developed soon enough to enable us to meet our responsibilities as a nation."

"Much as I'd like to see private industry go ahead on its own," Mr. Murray explained to this reporter, "the truth is that construction costs, in relation to the limited prospect of profits, do not justify private industry's proceeding as rapidly as the national interest demands."

The engineer-trained New Yorker knows from personal experience how difficult it is to finance large-scale power projects, and likewise, what it takes at times to insure that private enterprise gets its rightful chance to participate.

It was in the fall of 1950, a few months after he had joined the AEC, that the new Commissioner made an interesting discovery. The Tennessee Valley Authority, a Government agency, had submitted the only bid to supply a million kilowatts of electric power required by the AEC's gaseous diffusion plant at Paducah, Ky.

Unwilling to assume that private companies were either uninterested in the business or could not successfully compete with the TVA, Mr. Murray took it upon himself to find out. On the day that the Commission formally decided to award its contract to the Government agency, he set out to induce private enterprise to put in a bid.

The upshot was that a group of privately owned utilities decided to pool their resources and go after some or all of the contract—even though, by then, Congress was ready to proceed on the assumption that TVA would supply the whole load.

As a result of Mr. Murray's move, the AEC reversed its action and awarded the new group—called Electric Energy, Inc.—half of its load requirements. TVA kept the other half.

This solution was a turning point in AEC developments. It paved the way for arrangements of a similar nature in other cases. Now private concerns are supplying a total of 3 million kilowatts of power needed in the atomic energy program. But for Mr. Murray's initiative in bucking precedent to fight in behalf of a fair share for private enterprise, the entire load would have been furnished by Government power projects.

But that represents one kind of situation. The urgent need for rapid development of industrial nuclear power, according to the Commission's minority of one, as Mr. Murray sometimes is called, poses problems of an entirely different nature.

Appearing recently before the Joint Congressional Committee, he noted that the issue of private versus public power is continuously being interjected into the question of power reactor development. This, he declared, serves only to confuse the main issue.

For the matter of methods and rate of speed by which atomic power becomes available, he insisted, transcends the issue.

While adhering firmly to his belief that it's absolutely essential that the traditional primary role of private industry in the production of electric power be preserved, he told the legislators, he believes it would be a serious mistake for the Government to indulge in prematurely yielding its primary responsibilities in the power reactor field to private industry.

Certainly it's no criticism of the latter, he holds, that they are prepared today to provide no more than a portion of the financial support to the power reactor development program which the national interest requires. Still, he contends, there's a widespread and unfortunate tendency to underestimate the intricate and difficult problems involved in the design and construction of large-scale reactors.

In this connection, it is significant that President Eisenhower, though he has thus far rejected the proposal for the Federal Government to assume responsibility, felt it necessary to declare in his recent budget message:

"However, if acceptable proposals for non-Federal construciton of promising reactor types do not materialize within a reasonable time, a request will be made to the Congress for funds for direct construction by the * * * Government."

What the ultimate decision will be, and only Congress and the Chief Executive can decide the issue, is problematical. In any case, it's likely to stack up as one of the biggest stories of the year, whichever way it goes.

Because, with power-shy Europe and Asia pushing to make up for their shortages of conventional fuels through development of nuclear energy, the speed at which the United States program is carried on may count heavily, both in this country's prestige abroad and in its ability to supply defense plants with ever-increasing demands for power.

For friendly, hard-working Tom Murray, meanwhile, the current policy battle is not by any means the first occasion when he has felt it necessary to dissent from the views of his colleagues.

Long since convinced that there is no upper limit to the size of H-bombs that this country is capable of making, Mr. Murray has vigorously championed, for example, what he calls "rational armament." Arguing that United States policy must be based on all the facts about nuclear weapons—our need of them, their usefulness, and the dangers connected with their misuse, he contends that no nuclear weapon is really useful if it is so big and so overwhelmingly destructive that it won't be used.

It was this point of view that lay behind his proposal, in June of 1954, that a hydrogen bomb be exploded in a demonstration to disclose the destructiveness and horror that would attend a nuclear war. To witness such a demonstration, he said, world leaders—from both sides of the Iron Curtain—should be invited.

The proposal promptly earned Mr. Murray a rebuke by Chairman Strauss and the other three AEC members. They called the plan impractical. And so, too, they insisted, was his further suggestion that, once the big bomb had been exploded, further tests of the largest H-bombs be discontinued.

But Mr. Murray held stubbornly to his purpose. On one occasion, the four AEC members took formal action rejecting Commissioner Murray's motion to invite foreign observers, among them Communist observers, to witness tests of nuclear weapons in the Pacific. * * *

But now, at last, the picture has begun to change. Last fall President Eisenhower himself declared in a speech that "we witness today in the power of nuclear weapons a new and wider dimension of the deadly horror of war. Humanity has now achieved * * * the power to end its history."

Moreover, the United States Government finally has joined Great Britain in inviting Russia to observe western nuclear tests next summer in the Pacific, if the Soviets will allow the free nations to observe theirs.

In large degree this amounts to a vindication of the Murray position. Technical capacities and inventive achievements have won Mr. Murray wide renown.

In World War II he earned a special award from the Government for his invention of a new method of manufacturing shells which saved tons of strategic material and accounted for 25 percent of all trench mortar shell production. More than 200 patents have been granted him covering a wide range of inventions.

The Term "Pork Barrel" Is Out of Date

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. BLATNIK. Mr. Speaker, its time we discarded entirely that time-worn and obsolete phrase "pork barrel" in referring to waterway projects. Except for a few die-hard editors, the people of the United States regard river and harbor and flood control projects as much needed improvements and not as local patronage. A letter from George H. Palmer, president, Marine News, New York City, addressed to the editor of the Washington Star on this subject calls attention to the fact that no other Federal expenditure is subjected to closer scrutiny and that local interests often are required to contribute to the cost of waterway projects with cash, rights-of-way, and spoil areas for dredged material. Mr. Palmer's letter appeared in the Star on Monday, April 29, 1957, and is as follows:

PORK BARREL

The Star editorial What Comes Naturally, saying Congress "scorned economy in passing a $1.5 billion rivers and harbors bill," has just come to our attention. We believe the following facts will be of interest.

There is probably no legislation enacted in Washington that is less understood by the public than that for waterway improvements. It is astounding that so many people, many of them well informed, still believe that old cliche "pork barrel" with respect to waterway legislation. Such legislation is entirely free from so-called "pork" by reason of the method of its adoption and enactment and has been for a generation. Moreover, almost all projects are initiated by local interests, not by politicians or Army engineers.

Approved projects are those that have been certified economically sound after public hearings and long study by the Corps of Engineers, United States Army, made first by the distric officer, reviewed by his superior, the division engineer, then by the Board of Engineers for Rivers and Harbors, and finally by the Chief of Engineers. No part of the study is perfunctory. Having passed that test, they go to the House Public Works Committee. If approved there, and later by the Senate Public Works Committee, they are incorporated in a river and harbor authorization bill which carries no money. After the bill becomes law, funds for those selected for prosecution are made available by Congress.

With over one-half of the projects investigated down through the years, the decisions by Army engineers have been "the principal grounds upon which the adverse conclusions are based, are the benefits to be anticipated * * * are insufficient to warrant the expenditure of Federal funds for the purpose."

There is no other Federal expenditure subjected to closer scrutiny as to its worth. Labeling such legislation "pork barrel" impugns the integrity of the Corps of Engineers and its Chief, committee members, and all others of the House and Senate.

It is rarely mentioned that piers, wharves, elevators, warehouses, trackage, and other necessary facilities are wholly the work of local authorities or private interests; the Federal Government improves only the waterways. The two, of course, are inseparable, one is utterly useless without the other. The waterway might have been derided as a pork-barrel project; the land structures serving it commended as civic advances. Civic interests also often contribute to the cost of many harbor and channel improvements with cash, rights-of-way, and spoil areas for dredged material. The derisive term "pork barrel" is absurd. While not always deliberate, it is a disservice to the people.

The great strength of the Nation today owes largely to harbor and channel development done in the past. The greater strength of the future will come largely from continuing development. Money spent for this purpose is an investment in the building of a nation.

GEORGE H. PALMER,
President, Marine News.
NEW YORK CITY.

Military Implications of the Eisenhower Doctrine

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Prof. Alfred J. Holtz, department of political science, Western Reserve University, before the Naval Officers Club of Cleveland on March 19, 1957. I voted for the passage of the President's Middle East resolution with some reluctance, pointing out particularly that it is no substitute for a workable and just United States foreign policy—see my statement in the RECORD on March 7, page 2889. In view of the present serious crisis in the Middle East the following critique of the Eisenhower doctrine may be of interest to my colleagues.

The speech follows:

MILITARY IMPLICATIONS OF THE EISENHOWER DOCTRINE

Passage of the Eisenhower doctrine appears to have allayed the fears in American circles that the United States lacked a firm, effective foreign policy in the Middle East. Tragically enough, the congressional resolution merely compounds the administration errors that brought the original Middle East crisis into sharp focus, thereby resulting in the armed intervention by Britain and France, and necessitating the limited war, in self-defense, by Israel.

These drastic errors are briefly: (1) an erroneous administration estimate of the nature of the threat in the Middle East to our vital interests; (2) an inadequate administration theory of international politics, including the appropriate use of military power as an instrument of national policy; (3) an incapacity to act through the employment of concrete power rather than through abstract slogans.

The Middle East crisis erupted primarily because of the Eisenhower-Dulles conception that the sole threat to western vital interests was direct Soviet military aggression into the Middle East region. This oversimplified conception did not perceive of another type of threat, less dramatic, yet equally drastic—the threat of a localized aggression designed to upset the local balance of power, against Western vital interests. Such a threat was posed by rampant nationalism, personified by General Nasser, and supported by Soviet diplomacy and arms shipments.

Lenin had clearly outlined this indirect Soviet strategy when he declared that the way "to Paris and to London was through Peking and Calcutta," thereby associating Communist objectives with Asian objectives, to defeat the West. In 1949, the Chinese Communist theorist, Liu Shao-ch'i, augmented this strategy when he stated: "The path taken by the Chinese people in defeating western imperialism and in founding the People's Republic of China is the path that must be taken by the peoples of all colonial and semicolonial countries in their fight for national independence."

At the 20th Communist Party Congress, February 1956, Anastas Mikoyan openly boasted of the merger between the Soviet Union and the newly independent Arab-Asian states, with specific reference to Egypt and India. Thus, Soviet objectives and Nasser's objectives combined to weaken western vital interests through seizure of the Suez Canal, the jugular vein of West European economy.

When the British and French properly estimating this threat employed limited military power for limited objectives, to redress the unfavorable balance-of-power, President Eisenhower improperly invoked his moralistic platitude that force was not to be used as an instrument in defense of western national interests. Thereupon, Nasser imperialism, combined with Soviet imperialism, and supported by American moralism, established a new balance-of-power postuer in the Middle East that cannot be redressed, in favor of the West, by the belated and ill-conceived Eisenhower doctrine.

Parenthetically, the President's 1956 campaign oratory that "the advance of communism has been checked, and at key points thrown back" is contradicted by his newly espoused Middle East resolution. That doctrine was sold to Congress and the American people on the basis that Soviet Russia might intervene directly, or that international communism might capture one of the Middle East states.

In one sense, the Eisenhower doctrine is an improvement over the previous noninvolvement policy maintained by the administration as late as the armed intervention by our western allies and Israel. This startling reversal of conception of the American national interest has, however, not been accompanied by a reappraisal of the required military implementation to adequately sustain and defend our national interests in the Middle East. In brief, the Eisenhower doctrine perpetuates the illusion that bombastic propaganda is a substitute for drastic policy.

Nowhere, is this continued political error as clearly discernible as represented in the military implications of our new Middle East policy. Consider for the moment the geographic-strategic position of the Middle East, and the American military capabilities for deterring direct Soviet armed intervention.

This huge land-mass area, the crossroads to three continents, is far distant from American conventional armed forces. To

be sure, our Sixth Fleet could have a decided military effect on those states that border on the eastern Mediterranean. Moreover, our NATO commitments, and the military implementation thereof, provide reasonable safeguards for the defense of that vital country.

Yet, Iraq and Iran would be difficult to defend except by our Strategic Air Command, and such massive retaliation would require a political decision to initiate world war III. Who, among us here, is prepared to assert that Iraq and Iran are so vital to our national security that such a calculated risk should be undertaken. Our propaganda policy of deterrence is in sharp contrast to our policy action, for the administration has, thus far, refused to fully adhere to the Baghdad Pact, on the assumption that such a direct step would alienate the Arabs of the southern tier—Saudi Arabia, Egypt, Syria, Jordan.

However, the real danger to our vital interest remains in the Middle East. This danger is a dual one—local aggressions directed against our Western allies who also have vital interests in the Middle East, and indirect aggression engineered by international communism. The first type of aggression is illustrated by such ultra-nationalists as Nasser of Egypt, Serraj of Syria, and Nabulsi of Jordan, supported by Soviet arms and diplomacy. The second type is represented by leftist nationalists, combined with Communist fellow travelers, who would grab power through the use of Communist techniques of mob demonstrations, with view to further destruction of western power and prestige in the Middle East.

Recently, a Jordanian weekly, Sawt ash Sha'ab typified this danger: "America • • • has either lost her mind and really believes in the Communist danger to Arab State, or else she thinks we are little children and wants to frighten us with the big bad wolf in order to use us as tools for her own ends and for increasing her own wealth. Communism in Russia, China, and Europe has come as a result of the free will of the peoples. We have never heard of aggression on the part of the Soviet Union."

Does the Eisenhower administration understand this indirect, though real threat, and does it comprehend a military policy to forestall these dangers? Witness Secretary Dulles in his answer to questions from certain discerning Senators as to whether the United States would and could act against such local aggressions. His answer in each case was "No."

During the House hearings on the Eisenhower doctrine, Adm. Arthur Radford gave reassurances that are incapable of fulfillment. When asked by Congressman ROBERT BYRD, Democrat, West Virginia, as to whether the United States would have the capability as of now to move into any one or any group of the nations in the Middle East effectively and quickly with enough manpower and material, the Chairman of the Joint Chiefs of Staff replied: "I think we would, Mr. BYRD." He added: "The passage of this resolution will make it less likely that we will have to fight a limited war."

When further questioned as to what military capabilities could be brought to bear in the Middle East, Admiral Radford observed: "I am thinking primarily of air and naval action which I think would be our largest contribution and most immediate." Yet, it is clear that these types of military action, unsupported by conventional land forces, would be incapable of preventing a local war initiated by arrogant Nassers, or by leftist Arabs, encouraged by Soviet diplomacy and arms.

Nasser's absolute control over the Suez, an international waterway, and Arab fanatic designs to liquidate Israel, the one true democracy in the Middle East, will not be shaken by present American military policy which is geared solely to deter a global conflict initiated by the Soviet Union. Our major military dilemma remains, despite congressional passage of the Eisenhower doctrine—how to prevent the continued loss of the local balance-of-power positions that once were held by Great Britain and France. Our present Military Establishment, with increasing emphasis on the Strategic Air Command, merely means that we await the wrong war, in the wrong place, at the wrong time, and against the wrong enemy.

It can be assumed that new and equally dangerous Nassers will soon arise in the Afro-Asian world, and that the Soviet-Red Chinese coalition will cleverly utilize these antiwestern nationalists for Communist imperialist objectives. Soviet atomic blackmail, combined with Nasser's political and economic blackmail through unilateral control of the Suez Canal, will not be contained by the military ineptitude of the Eisenhower doctrine.

As Thucydides quoted the warning by Pericles: "For I am more afraid of our own mistakes than of the enemy's designs"; so, too, must America reevaluate the military implications of our new Middle East policy.

O'Mahoney's Stand Sound

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the Memphis Commercial Appeal:

O'MAHONEY'S STAND SOUND

As southern Members of Congress battle for inclusion of the right to trial by jury for anyone who might be charged with contempt under the Eisenhower administration's so-called civil-rights bills, Senator JOSEPH C. O'MAHONEY (Democrat, Wyoming) has taken his stand with them.

The veteran Wyoming Democrat remarked that he had observed that the Norris-LaGuardia Act provided jury trials for defendants in contempt cases arising from labor disputes, and said he thought it "a pretty good policy." He added: "I believe in the jury trial. I don't believe we should be afraid of a jury trial in matters involving civil rights."

It is interesting to note that Senator O'MAHONEY's sound stand is directly opposite to that taken by administration supporters of civil-rights legislation. They contend that amendments guaranteeing jury trials for defendants in contempt cases developing from their bills would emasculate their measures, surely a peculiar form of reasoning. It suggests that their primary purpose is to convict and punish, regardless of justice, constitutional rights, and freedom generally.

The right to a trial by a jury of his peers is basic for anyone charged under any law. It is particularly important to assure that right in this instance, because the bills are so loosely, vaguely, and widely drawn that almost anybody might be accused by almost anybody else for the most nebulous reasons. A Federal commission, for example, would be empowered to seek out and air racial grievances, a procedure that would lead to endless controversial hearings.

During Alice's adventures in Wonderland there was debate over how to try an animal for an alleged offense. The dog, named Fury, graciously offered to be both judge and jury, and he added: "I'll try the whole case and condemn you to death." There is no room for that sort of performance in this Nation in the name of civil rights or any other cause.

Timely Observations

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Joseph (Mo.) News-Press of April 3, 1957:

TIMELY OBSERVATIONS

Seventeen years ago this day it was our privilege to meet a gentleman of noble stature. Every April we have met him since that April 3, 1940. It is a privilege to say a few laudatory words about him while he is alive; the press will heap encomiums galore on him after he goes. That man is James Aloysius Farley. At that time he was Postmaster General in the Cabinet of Franklin Delano Roosevelt. Also he was chairman of the Democratic National Committee.

We were introduced right in this News-Press office by Henry D. Bradley, then publisher, now president of the News-Press Gazette Co. Mr. Bradley had come to us only 4 months earlier from Bridgeport, Conn. The two long had been friends. They are to this day. The occasion of Postmaster General Farley's visit was the dedication of the new post office building on the then 80th anniversary of the start of the Pony Express (United States mail) between St. Joseph, Mo., and Sacramento, Calif. Theo J. Quinn was postmaster.

The visit of Mr. Farley recalls, after all these years, that already there was reason to believe that the man who made Roosevelt President was near a break with his chief. For even in St. Joseph that April day of the last year of Mr. Roosevelt's second term, we learned that the Postmaster General opposed a third term. And we felt Mr. Roosevelt was determined to run for a third term.

Much was written about the Roosevelt-Farley friendship and the break between the two. Our own belief, then and now, is that James A. Farley was a loyal, devoted guide and friend to the gifted, unpredictable squire of Hyde Park. Mr. Farley was standing on principle in opposing Mr. Roosevelt for a third term. An overwhelming mandate of the American people (article XXII, amendments, United States Constitution) has since confirmed Mr. Farley's view.

After a social visit in Mr. Bradley's office, Mr. Farley turned to this writer and asked about Missouri sentiment for a third term for Mr. Roosevelt. The editor replied that while the News-Press and Gazette would oppose a third term, Missouri Democrats likely would fall before the magic charm of F. D. R.'s magic voice. They did.

"I'm against a third term," said Mr. Farley. We retorted, "You will line up when the time comes." Quick as a flash Mr. Farley shot back, "You don't know Jim Farley." He told the truth. He did oppose the third term all through the convention. Then he resigned as chairman of the Democratic National Committee and as Postmaster General. But unlike that 1936 bolter, his old friend Al Smith, Jim Farley did not bolt his ticket.

The years have been kind to the six-footer, handsome, though bald James A. His face is as youthful looking today as then, as he

walks at a fast pace through that long lobby of the Waldorf-Astoria. James A. Farley is no youngster. He will be 69 years this next May 30. He was 45 when he entered the Cabinet of Mr. Roosevelt. What an odd pair, those two. Franklin Roosevelt and James Farley. How did they ever get together? From that 1940 day to this day we have never mentioned Mr. Roosevelt to Mr. Farley.

This do we know. No man was ever more devoted to a friend than was Jim to the chief. Alfred Emanuel Smith, F. D. R.'s mentor and Democratic candidate in 1928 and loser, wanted to try again in 1932. All three were friends, Mr. Farley, Mr. Smith, Mr. Roosevelt. Had Mr. Farley thrown his weight to Smith we believe Al would have been nominated. Could he have been elected? That is debatable. You can find some who (remembering Herbert Hoover's decline in popularity) will say that a "yellow dog" could have been elected on the Democratic ticket, as the saying goes.

Long months before 1932, as early as 1930 and F. D. R. was governor of New York, Jim Farley was his roving ambassador. He went all over the country selling the scion of that castle up the Hudson to the common people of the Democratic Party. F. D. R. would go New Deal? We doubt it. Did Jim Farley ever go New Deal? No. All apologists for the New Deal, leading off with cantankerous Harold Ickes, never considered Mr. Farley a New Dealer.

James Aloysius Farley is a living example of what is so rare: The Gentleman Politician. No man ever held a higher reputation, in or out of cabinet, than Mr. Farley. Mr. Farley to us is proof that politics can and does draw good high-minded men of solid worth. They are not many, true, but we find them in every State and in almost every city. We never knew a man who knew Mr. Farley who was not proud to call him friend. And a more friendly soul than big, handsome gum-chewing Jim Farley never have we known in a lifetime of knowing men in high place from Jefferson City, Mo., to Washington, D. C.

Address by Hon. Marion B. Folsom Before Rochester, N. Y., Rotary Club

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. KEATING. Mr. Speaker, it was my privilege recently to participate in ceremonies in connection with presentation of the Rochester, N. Y., Rotary Club award for public service to the distinguished Secretary of Health, Education, and Welfare, Marion B. Folsom. Secretary Folsom is a long-time resident of Rochester, where he was for many years an officer and director of the Eastman Kodak Co.

The Rotary award comes as well-deserved recognition for Secretary Folsom's contributions over many years, in and out of Government service, to help achieve a better life for his fellow Americans.

In an able and earnest address following acceptance of this award Secretary Folsom set out cold, hard figures concerning his Department and the Federal budget, which shoud be studied by all of us. It is directness and clarity like this which have won Marion Folsom respect and esteem wherever he has given of his time and talents. He is clearly one of the most competent and valuable members of this administration.

Under leave to extend my remarks, I am pleased to insert the following excerpts from Secretary Folsom's informative speech at this point in the RECORD:

The Federal Government often is called upon to undertake some programs in health, education, and economic security when the needs of the people have not been met by private effort or by local and State governments.

When Federal action is necessary, the most helpful action often is not for the Federal Government to take over the whole show. Instead, Federal activities should be designed to encourage greater initiative and enterprise by individuals, private agencies, and State and local governments. In this way, a pattern of cooperative action is brought into play—a sharing and division of responsibility designed to foster the best combination of services for all the people.

In a moment I want to tell you about some of the prudent and constructive investments the Department is making, or proposing, in health, education, and welfare. But first, because these activities need to be considered within the framework of the total Federal operation and our total economy, I would like to mention briefly a subject that is getting a lot of public discussion these days, the Federal budget as a whole.

When we talk about the size of the budget, we should remember that we are talking primarily about the cost of national security. We are talking not only about the cost of protecting our homes and businesses today, but about the cost of veterans programs and interest on the debt, which are largely the result of past wars.

The fact is that these expenditures for national defense and related items amount to more than 75 percent of the whole national budget. These expenditures have increased from 4 percent of the total national income in 1940, to 11 percent in 1950, and to an estimated 15 percent in fiscal 1958. As the President has said many times, we all wish that large defense expenditures were not necessary but certainly our country can and must afford the price of protecting our free society in this age of peril.

While the portion of our income spent for national defense necessarily has gone up, nondefense Federal activities in the proposed 1958 budget would take about the same proportion of the estimated national income—about 4.3 percent—as for the previous 2 years. Furthermore, this proportion is down substantially from the level of almost 6 percent in 1950, and more than 7 percent in 1940.

Many of the most experienced men in Government tell me that the testing and review of the budget that goes on within this administration—the search for economies and savings—are greater than they can remember. From my experience in business I would say that the budget of a business firm is not subject to anything like the exacting and painstaking review and justification required for the budget of a Government agency today.

This search for greater economy and efficiency is continuous. Only last week, the President pointed to possible savings which would reduce Federal spending somewhat in 1958 and lead to even greater economies in 1959. The fact is that total expenditures proposed for next year would take a smaller proportion of the estimated national income—about 19 percent—than in any of the 6 preceding years.

Some concern has been expressed about the effect of the budget on our total economy. And yet, in recent years, when the budget was larger in relation to the economy than it is today, business and industry have grown and prospered as never before. Almost all the indicators of economic progress—wages and profits and plant expansion and many others—set a new high record last year. And most of these indices have continued to climb so far this year.

I am just as concerned as anybody about the long-range effects of high rates of taxation—and I am anxious to see taxes cut again as soon as this can be done without injury to the national security and welfare. But in today's expanding economy there is no sound basis for picturing the 1958 budget as if it were an economic catastrophe.

In considering the administration's budget and fiscal policies, it is important to look at the whole structure of what has taken place since President Eisenhower first came into office. In January 1953, the President inherited a prospective deficit of about $11 billion in his first year. Now what has happened since then?

Well, first, we have had the most complete overhaul of our tax system in history. I am proud to have had some part in this revision. Many tax provisions which stifled the healthy growth and expansion of private business were eliminated or modified. Many inequities which placed an undue burden on old people, on working mothers, on those with heavy medical expenses, on parents with children in college were removed.

In addition to these changes, the excess-profits tax was eliminated and individual income taxes were reduced approximately 10 percent. Altogether, in 1954, taxes were reduced by $7.4 billion annually, the largest reduction in any single year in history. These tax reductions and the other tax changes have benefited, directly or indirectly, every man, woman, and child in the country. And I believe they have been important factors in the recent unparalleled growth of our economy. As an indication of this growth, business expenditures for new plants and equipment are now running at a level 43 percent above 1954.

In the second place, the President has now proposed a budget which provides a surplus for the third successive year. It has been a quarter of a century since we have had three balanced budgets in a row.

In a period when circumstances beyond our control compel large expenditures for national defense, this is a notable achievement. It is an achievement in which business and professinal leaders, as all citizens, can well take pride. And yet this achievement seems to me to have been largely ignored in much of the current discussion of the size of the budget.

We should remember that the budget is related to our population and our economy as a whole. It is only natural that some budget figures should tend to increase as the Nation grows. We can hardly expect to have a big, growing, increasingly prosperous country with a budget suited to horse-and-buggy days. Since 1950, our population has increased 13 percent, and our total output of goods and services—not counting price increases—has increased about 30 percent.

In discussing the proposed budget, President Eisenhower told the story recently of his conversation with some of the heads of the biggest corporations in America. The businessmen described how their budgets were increasing, on an average, from 6 to 10 percent. The businessmen were surprised that anyone would not expect this or would question it. One by one, they said, "Why, we are a growing company."

And the President replied, "What do you think America is?"

In the Department of Health, Education, and Welfare, the programs and services we have recommended for next year would amount to about $2.8 billion—4 percent of

the total Federal budget, or less than 1 percent of the national income.

It is important to understand, however, not only how much money would be spent—but in what way and why. Where we have recommended increases to Congress, we have first made a most careful study and we are deeply convinced that there is a genuine need for these programs and that they will be of real and lasting benefit to the country as a whole.

These programs are, in the best sense of the word, economical. For they are investments in human resources—in the health and vigor of the people; in their education and training for living and working in an increasingly complex world; in their protection against economic emergencies and distress and want. These are the resources which, in the final analysis, have been responsible for our expanding prosperity, our national security, our progress as a Nation. To neglect these human resources now—to slip backward in these fields—would only pile up greater costs and more acute emergencies in the long run.

And so we are placing the strongest emphasis on constructive investments which will reduce human need in the future. The value of such emphasis is well illustrated by two figures. More than $1½ billion, or about 65 percent of the Department's proposed budget for the next fiscal year, will be required for the regular program of public assistance grants for the needy aged, dependent children, the blind, and the totally disabled.

We believe that to relieve human need is good but that to prevent it is much better. An so one of the proposals in the new budget is for $2 million for research to help find out why people become dependent upon public welfare and to help eliminate some of the basic causes of dependency. We propose to spend $2½ million to train more professional workers to help persons receiving public assistance rebuild their lives toward financial independence. Already there have been a few demonstrations of dramatic success when trained professional workers have concentrated on providing the services that not only help people in need but help them out of need. We feel, therefore, that these two proposals are relatively small investments which will return far more than their cost by reducing the need for public assistance in the future. This is an example of constructive economy in the best sense of the word.

One of the first constructive national programs to reduce human need was started 20 years ago with the social security insurance system. This program has increased the financial security and independence of almost every family in America. Today, almost 3 out of 4 workers reaching 65 are eligible for social security benefits as a matter of right, based on their contributions and the contributions of their employers over the years. Altogether, 9.4 million persons are getting benefits now. If it were not for this program, the annual cost of public assistance would be several billion dollars higher today. In the past 6 years, for example, while the population over 65 has increased by more than 2 million, the number of older persons receiving public assistance has dropped by about 200,000. Many of those receiving public assistance today were not eligible for social security during their working years. Now that social security coverage is almost universal, the reduction in old-age assistance will be even greater in the future.

The value of a constructive approach also has been demonstrated dramatically in medical research. Funds have been increased more rapidly for this program than for any other major program in the Department. Yet there can be no doubt that sound medical research returns far more than it costs—through the sparing of human life, through reductions in the human and economic toll of disease and disability. Within the past 10 years the average life span in the United States has increased 5 years and the death rate has declined 12 percent. There have been dramatic reductions, for example, in the incidence of poliomyelitis and in deaths from influenza, tuberculosis, pneumonia, and other diseases.

Surely it would be false economy to cut back funds for research to help cure or control mental illness, cancer, heart disease, or other major killers and cripplers of our times when these diseases take such a terrible toll in human suffering and economic loss each year.

Or consider the program of vocational rehabilitation. This program provides medical care, training, and other services to disabled persons, to help restore them to productive jobs. Last year, largely because of modest budget increases in this program, the number of persons rehabilitated was increased to 66,000—a new record. Before they received these services, these people had annual earnings of about $17 million. After rehabilitation, their earnings were increased to about $127 million a year. And so the increased income taxes alone will pay for the cost of rehabilitation within a few years. Furthermore, about 13,000 of these people were receiving public assistance before they were rehabilitated. The cost of public assistance in 1 year alone would almost equal the cost of rehabilitation.

In the field of education—crucial to the future of our country—there are many problems which call for constructive action now. We know, for example, that in the next 10 to 15 years, the number of young people seeking higher education will double, perhaps even triple. And this will call for an educational expansion and adjustment beyond anything we have known before. Higher education, of course, is primarily the responsibility of the States and private institutions. We are proposing a very limited investment—grants to the States of $2.5 million a year for 3 years—to encourage planning and action within the States to meet this critical and growing need before it becomes even more acute.

Another problem of far-reaching significance is the very large number of capable students whose education is ended too soon. If current trends continue, about 40 percent of the young people who enter high school will drop out before they graduate. And of those who do graduate from high school, only half of those in the upper fourth of their class will go on to college. Only 6 out of 10 of the top 5 percent of high-school graduates receive a higher education. This is a tragic waste of human resources. Another example is in the field of mentally retarded children. Without special help, many of these children are destined to a life of dependence on others, falling far short of their real potential. Given the right kind of special attention and training, many of these children will grow up to lead happier and more useful lives. For the first time in the history of this country, the Federal Government is supporting a program of research to help solve these and other long-standing problems in education. This is a constructive investment in the future of our young people and the future of the Nation.

Another sound and prudent investment is the proposed program of emergency Federal assistance to help relieve a critical shortage of school classrooms in many communities. We have studied and restudied the classroom problem—carefully and objectively. Three conclusions are clearly evident from the facts.

First, there is a serious shortage of public-school classrooms. This shortage developed because not enough schools were built during many years of depression and war and because, more recently, we are having by far the biggest enrollment increase in our history. The problem also has been aggravated by record-breaking shifts in population.

Second, despite a great increase in school-building efforts, the States and many communities are not making enough headway in reducing this shortage.

Third, unless financially needy communities get help, the classroom shortage will persist for many years, hampering the education of our children and limiting the progress of our country.

Now I understand and respect honest differences of opinion as to whether the Federal Government should help build more schools in this emergency. It is unfortunate for the welfare of our children, however, that many of the public statements on such an important issue have been seriously misleading, and some have been clearly inaccurate.

It is contended, for example, that the classroom shortage is a myth or figment of imagination. Those who take this position offer no new or additional information of their own. They accept bits and pieces of data from the various surveys that have been made, and they quote these bits and pieces out of context or only in part. Yet the essential fact is that every responsible survey of actual conditions in the schools has reached the same clear conclusion—there is a substantial, widespread, and continuing classroom shortage.

It seems to me that the best source of information is the State and local school agencies who are closest to the situation and best able to get the facts. I have complete confidence in the integrity of these authorities. The latest survey was made last fall by the chief educational agency in each State. For the third year in a row, the States reported our schools are overflowing with about 2¼ million children above their capacity. These children are not imaginary. They are in school today, and they can be counted with reasonable accuracy. These children, and millions of their classmates, are handicapped by half-day school sessions or badly overcrowded conditions or use of makeshift facilities. The States reported 80,000 additional rooms are needed now simply to accommodate this overflow of students.

The States also reported they need 79,000 additional classrooms to replace facilities which are obsolete or unfit. I recognize that obsolescence is more difficult to measure—opinions on this will vary—but, nonetheless, it is a very real and important factor. And so the latest and best estimate by the States places the total classroom shortage at about 159,000 classrooms.

It is important to remember that we must deal not only with this backlog of shortage, but with continuing vast enrollment increases and with annual replacement needs in the future. The States indicate, for example, they will need 59,000 to 65,000 additional classrooms next fall simply to meet the new needs developing since school started last fall. Therefore, even if the States actually build this year the 69,000 classrooms they have predicted—a record high—they would make only a small dent in the accumulated shortage.

A second major fallacy is the argument of some critics that the administration is proposing Federal assistance for classroom construction as a means to leap into Federal control of education in this country.

Let us understand what is proposed here. The Federal Government would allocate some funds to the States. The States would put in some money, too, and then the States would administer grants to the local communities which need help very badly to provide schools for their children. So even in the building of the schools the Federal connection would be pretty remote. But, even more

important, by the time the first teacher or student entered the new school, when the actual education of children begins, there would no longer be any Federal involvement or connection whatsoever. How, then, could this proposal result in Federal control of education, even if we wanted it that way?

Furthermore, I don't know anybody who wants it that way. Certainly the President and we in the Department have emphasized many times we would be the last ones to want to control the instruction of the Nation's children. Certainly the State and local school authorities who are supporting this bill are most anxious to keep the Federal Government from controlling their affairs. In 1950, the late Senator Taft, after careful and objective study, sponsored a program of Federal aid for operation, as well as construction, of schools—a broader and more liberal program than is proposed today—and certainly Senator Taft was no advocate of Federal controls.

It is important to remember also that the Federal funds proposed by the administration would amount to only 15 percent of total funds for school construction in this country. These funds would be allocated only to the districts with the most acute shortages and the least resources to build needed schools. The Federal funds would amount to only about 3 percent of total funds for public schools for all purposes. It has been contended that even if this program itself would not mean Federal control, it would serve as a foot in the door and would lead to Federal domination of education in the future. The fact is that throughout our history the Federal Government has assisted the cause of education—and is doing so today—without domination or control. As far back as 1787, Congress required that public lands be set aside for educational purposes. In 1862, under the leadership of President Abraham Lincoln, the Federal Government began making financial grants to support the land-grant colleges. Only recently, by the way, the Association of Land-Grant Colleges adopted a resolution expressing appreciation that there has been no Federal control in this program. For 40 years, the Federal Government has been making grants to support vocational education. Since World War II, the Federal Government has invested $18 billion to help war veterans continue their education. For 6 years now, the National Government has provided funds to help build and operate schools in communities overburdened by Federal installations. In all these activities, over all these years, the Federal Government has helped meet national needs in education—and there is no Federal control of education today.

Furthermore, we are advocating only a temporary program. Once the backlog of shortage has been removed, with the help of emergency Federal aid, then the States and communities could meet future needs on their own, simply by continuing their current rate of construction.

Finally, the proposed legislation specifically provides, and I quote, "In the administration of this act, no department, agency, officer, or employee of the United States shall exercise any direction, supervision or control over the personnel, curriculum, or program of instruction of any school or school system." I don't see how it can be put any plainer than that.

Clearly, in the light of all these facts, the argument that we are seeking Federal control of education is simply a phony.

We believe the people of America are with us in seeking Federal assistance to help eliminate the classroom shortage. Emergency Federal assistance was strongly supported in the platforms of both political parties. Recent public-opinion polls seem to indicate that people in all walks of life, in all parts of the country, favor this program by about 4 to 1. The people know that badly overcrowded classrooms and half-day sessions are hurting the education of many children every day. They know that educational opportunities lost today may never be regained.

In all these programs in health, education, and economic security, we are proposing constructive investments in the future. Our objective is the same as yours in Rotary: service to society.

By acting now, with foresight, in community action and in national action, we may invest in our most priceless asset—the individual human being. As the individual advances in health, education, and economic security, his own life is enlarged and our whole society is enriched.

Address by Dr. Aaron Kottler

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Dr. Aaron Kottler, president of the Kings County Medical Society, at the dedication of the Seafarers Welfare Plan Medical Department on Tuesday, April 16, 1957, in Brooklyn, N. Y. This is the first of four union-management medical centers of the United States maritime industry to be established.

The address follows:

Mr. Chairman, Reverend Monsignor Sala, Honorable Senator MAGNUSON, distinguished guests on the dais and in the audience, and ladies and gentlemen, hearing all the praises of the previous speakers, I should begin my address with the famous Shakespearean quotation "Friends, Romans, and countrymen, I come here to bury Caesar and not to praise him." I come here to bury a misconception which never should have originated between organized labor and organized medicine.

The Medical Society of the County of Kings and the Academy of Medicine of Brooklyn, sends to you its felicitations and best wishes for continued success of the Pete Larsen Medical Center. This is a momentous occasion both to industry, labor, and medicine. It demonstrates that important health problems can be solved in a democratic way without the aid of foreign socialistic ideologies.

The people of our free, great city receive the best medical care and are among the healthiest in the world. No person can honestly state that he has been medically neglected if he only sought medical care which is made available to him by the city of New York, through its hospitals and health department and by the medical profession. In 1955 it was estimated that the physicians in the County of Kings have donated medical services in clinics and nonprofit and municipal hospitals to the amount of $40 million.

However, the great majority of our people do not seek charity; they want to be paid fairly for their labors and are willing to pay for medical services received. They are willing to pay according to their ability to pay. This has been most recently proved in Brooklyn by the mass polio-inoculation program sponsored by the Medical Society of the County of Kings and the New York City Department of Health. The people pay a small nominal fee, just enough to cover the costs.

The cost of medical care has increased during the past decade. So has the cost of every commodity, including food, clothing, and wages.

Newer miracle drugs have been discovered in the past years. When penicillin was first made available it cost the physician $2.80 per cubic centimeter. Salk vaccine when put on the market cost the physician, only 1 year ago, $1.50 per cubic centimeter. The mycin drugs still cost 90 cents a tablet, and some even more. In 1955, it has been estimated that $3.4 billion was received by physicians throughout the country for complete medical care. Three and seven-tenths billion dollars were the hospital costs, $2.3 billion were spent for drugs and appliances, one-eighth billion dollars went for nursing and other charges, therefore, only one-third of the total cost for medical care can be justly charged to the medical profession as service fees.

A sound, healthy public makes a sound country. Not all sick people require hospitalization. Overutilization of hospitals increases the cost of maintaining the hospitals. It is cheaper to treat ambulatory patients at home and doctor's offices and health centers such as this one, provided the necessary diagnostic procedures can be obtained. The problem of how to provide the employee with ambulatory diagnosis and treatment is one that has to be solved by management, labor, and medicine. It is a problem of who will pay for the services.

Management, through its day-to-day conduct builds the character of a firm by the fairness and integrity of its business dealings. But the reputation of any firm as to the quality of its product or service is solely the results of labor. Management can assure these results by fair and humane treatment of its employees. All men regardless of station in life have an inherent dignity which must be recognized and reckoned with by management if a superior quality of product or service is to be maintained. Management may have the best shop equipment available, but if its employees are not healthy, both physically and mentally, then the quantity and quality of their output along with the firm's reputation inevitably suffer. Maximum results can only be achieved and maintained where management and labor recognize the inalienable prerogatives of each other with the mutual respect such recognition engenders and by operating as a team.

Good health involves proper nutrition, housing, clothing, and the discovery and correction of remediable impairments. All of these may be purchased by those who have the ability to pay for them. There is a definite relationship between health and the economic status of the individual.

Management contributes to the health of its employees by increasing their ability to maintain health by paying good wages and by providing certain additional benefits, such as diagnostic clinics and nonprofit voluntary health insurance programs.

Twenty years ago, 1½ million people were covered by some form of health insurance. In 1949, there were 50 million people covered by voluntary health insurance plans. Organized medicine then contended that voluntary coverage would expand, thus obviating the need for Government insurance. The following figures prove that this was a good estimate of the situation. One hundred and ten million persons are now covered for physicians' charges for survery, 5½ million for medical charges in hospitals, 10 million for major medical expenses (catastrophic).

Very little provision is made in the average group insurance plans which will provide for ambulatory diagnosis and treatment and preventive medicine. The employee must pay for this type of medical care. He will do so if the need appears to be urgent. If it does not so appear, he may use his money for

some other purpose with the result that many impairments are not discovered and treated.

Absenteeism costs industry more than $5 billion in terms of services and lost production. It does not include the economic loss incurred by employees whose efficiency is at a low ebb. This loss in dollars is greater than the $3½ billion that the medical profession receives for its services throughout the country.

Industry by doing its part to keep the worker healthy is not taking on an unnecessary burden but is protecting its own interests. Even the most comprehensive medical program will be less costly than the losses incurred through work absenteeism.

Medicine knows that it must get into the act and industry depends upon medicine to participate in this program.

Medicine must determine the physical abilities and limitations compatible with the demands of a job that an employee is seeking. Is the employee an undue compensation risk? Will he be an absentee problem? Is the employee mentally fit for the job he seeks? What is his attitude toward society, and his fellow worker, and his employer? The physician must acquaint himself with the job.

This health center will help the physician provide the necessary answers. Diagnostic procedures are costlier than the actual treatment of disease. This center, the only and the first of its kind in Brooklyn, with the cooperation of management, labor, and the medical profession, will prove that the above can be accomplished and that there is no need for any compulsory health insurance acts.

The Medical Society of the County of Kings is willing and ready to participate in this health center where the results of these diagnostic procedures will be transferred to the patient's family physician of his own choice.

Capital Praise for McCormack

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article of commendation to the gentleman from Massachusetts, Congressman JOHN W. MCCORMACK, which appeared in the Boston Daily Globe of April 29, 1957:

CAPITAL PRAISE FOR MCCORMACK

TO THE EDITOR:

Members of the Washington Group of Housewives United (an unpaid lobby of housewives) would like, through your paper, to congratulate the housewives in the 12th District of Massachusetts on the fine work their Congressman, the Honorable JOHN W. MCCORMACK, did for them recently in the House of Representatives in Washington, D. C.

It was during debate on the floor of the House: The question was whether or not to accept the amendment of Representative CHARLES R. JONES, of North Carolina, to cut the requested appropriation of the Food and Drug Administration by $1,327,000.

As wives and mothers who run our households on budgets, we are quite economy-minded ourselves. But we are not for economy at all costs. And we were not for economy then at the expense and well-being of our families. There were other places where we felt the Federal budget might get cut, but not in the Food and Drug Administration.

Your Representative, Mr. MCCORMACK, made a fine speech in Congress in favor of giving the FDA the appropriation asked for (which had already been approved by the President's Bureau of the Budget and by the House Appropriations Committee).

In the end, your Congressman's point of view won out: The requested appropriation was granted.

MRS LOUIS B. WRIGHT,
President.
MRS. ROBERT Y. KERR,
Legislative Chairman.
WASHINGTON, D. C.

Townsend Plan Legislation

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. BLATNIK. Mr. Speaker, for many years legislation embodying the principles of the Townsend plan "pay-as-you-go Federal social security for all" have been before the Congress. Last year, for instance, I joined with the gentleman from California [Mr. GUBSER] in sponsoring the Townsend plan bill in the 84th Congress.

I have today introduced the new Townsend plan bill which differs from previous Townsend bills, but not with respect to any basic principle, objective or standard. As a classification, it may generally be said that the new bill differs in terms of legislative form, in respect to technical form.

CHANGES IN 1957 TOWNSEND PLAN BILL

First. The 1957 Townsend plan bill is specially drafted as an amendment to the Social Security Act, repealing or suspending, as the applicable case may be, the various provisions of Old Age and Survivors Insurance and Federal Disability Insurance title II and instituting in place thereof the Townsend plan program.

Second. It provides for a transitional period and process whereunder it would be eased into effect, starting at a low rate of tax and benefits, these gradually increasing during the first year and a half, thereby progressively absorbing the benefits existing under the present system—without anyone being in any way dislodged or subjected to any less benefit that they are receiving. Likewise the tax system would be correspondingly brought into effect on a progressive basis, starting at 1 percent and increasing to a final maturity of 2 percent over a period of about a year and a half.

This transitional feature provides for the using of the reserve fund of OASI for precisely what it was created to be used for, namely, payment of the benefits under OASI, until the development of the Townsend program fully displaces them by way of absorbing them and progressing on to the maturity of the fully adequate benefits of the Townsend program.

Third. The 1957 Townsend plan bill specifically defines the objective it seeks. It provides that each year the Department of Commerce, under its Census Bureau work of annually surveying the distribution of money income in the United States population, report to Congress each year, specifically, what rate of tax would have been necessary during the preceding year, under the program, in order for the overall income of the aged population not to have been inferior to that of the younger adult population. This feature is designed to create a situation under which the Congress and everybody else will henceforth know, as a matter of clear record exactly what the relative position of the aged is economically. This provision would create a basis on which everybody could henceforth deal with the primary question of "just how much pensions should justly be" on a basis of fact. Up to now, this question of exactly how much pensions really ought to be has not been officially dealt with. The Townsend program is fundamentally predicated upon exactly that study and approach to the whole problem. This bill would provide, in the Social Security Act, the legal requirement that this question be authentically reported on each year, to Congress by the Department of Commerce.

Fourth. There have always been a long list of arguments, in principle academic arguments, about the workability of the gross income tax predicated in the Townsend plan. This bill provides, in its definition of "gross income" the conclusive end to this whole field of confusion, purely theoretical and academic argument and of wasted time and effort dealing with entirely unrealistic claims and counterclaims very simply: Since 1933, a genuine gross income tax has been operating with unchallenged efficiency and practicality in the State of Indiana. Correcting jurisdictional references, the precise text of the definition of gross income contained in the Indiana Gross Income Tax Act of 1933, as amended up to and including 1953, is incorporated in the 1957 Townsend plan bill.

It is specifically to be noted that this does not constitute any change in principle or departure in policy by the Townsend organization. The tax proposed in the Townsend bill has traditionally been exactly what is now proposed. However, there have always been those, in and out of Congress, who insisted persistently that the Indiana tax really was not the same, was in reality quite different from the Townsend proposal. Actually the definition of the tax base in the Townsend plan bill is precisely identical with that in the Indiana law.

Fifth. Citations to the Internal Revenue Act, bearing upon tax procedures are converted so as to cite the Internal Revenue Code of 1954.

Sixth. The 1957 Townsend plan bill provides for old-age retirement at the age of 60 years; for full benefits to persons disabled between ages 18 through 59; for full benefits for female heads of family groups with one or more dependent children; and for proportionate benefits of one-third the full benefit rate for dependent children under 18. This last is new coverage.

Seventh. The 1957 Townsend plan bill does not require compulsory spending of benefits by beneficiaries.

Eighth. The 1957 bill does not require complete and outright, all-or-nothing retirement by beneficiaries, but encourages their participation in the Nation's productivity—but, at the same time, it provides a deterrent sufficient to prevent pensioners from selling their services so cheaply as to constitute unfair competition with other work seekers. The provision is that above the amount of $75 per month, adult beneficiaries would lose $1 of their benefit for each full $2 earned in employment or self-employment. For the secondary beneficiaries, the children, they, too, would lose $1 of their benefit for each full $2 per month in excess of $50 earned in employment or self-employment.

Ninth. The requirement of citizenship is eliminated as a condition of qualification to receive benefits. In place of it is the requirement that any person over 18 must have resided in the United States for a total of not less than 10 years in order to qualify. The reasons for this alteration are manifold; but suffice it to point out that very rare would be the citizen of the United States who would not satisfy this requirement before his childhood was over. At the same time, this residence requirement, imposed on our own citizens, would abridge the treaties we have with various nations, reciprocally agreeing that we treat each others' nationals exactly as we treat our own citizens; and it would conclusively bar persons from becoming simply retirement emigrees to the United States, as all would have to be here long enough to support the system quite significantly before being eligible to draw its benefits.

The bill exempts dependent children from this residence requirement even if the adults upon whom they depend may be barred by its residence requirement. These changes in the Townsend bill are not changes in any sense of principle, methodology, or standard. In reality, they are developments in the line of incorporating into an actual legislative instrument—a bill—provisions and definitions which more fully and, in fact, pretty completely embody and express the principles and meaning of the Townsend plan in the form of a law.

There are many reasons why this project was not feasible in former times, the most compelling, for example, being historical, namely, that the thinking of Congress has not reached the point of surrender to certain very fundamental tenets of the Townsend plan. In the 1956 amendments to social security Congress really gave in to universal coverage; they gave in the very basic principle of disability insurance; they cracked on the very severe issue of reduction of the age of eligibility for retirement. Prior to these events the Townsend movement was restricted to fighting for these fundamentals which were necessary as "breaks" in the structure of the present social-security system before the real fight toward the Townsend plan could be planned timewise.

With these changes accomplished as outlined above, the turn in the road was at hand, the opinion of Congress has changed fundamentally, and the specifics can be designed. This new bill embodies that new, final stage of evolution in the fight toward the Townsend plan. The 1957 Townsend plan bill is the first embodiment of the Townsend plan in terms of these long-fought-for and now accomplished necessary achievements in the development of the thinking of Congress on the subject of social security. It is in this very comprehensive and complex sense that this bill is new or different. It is not different in its principles, methodology, or standards.

THE NEED FOR TOWNSEND PLAN LEGISLATION

The need for this type of legislation is embodied, first, in the fact that we have a Social Security Act in the first place. This means that in 1935 Congress recognized that the social security problem existed to such a degree that the act was adopted. This realization extended to the level of the problem being recognized as, in principle at least, a national, not a local or regional problem, a problem requiring basically Federal legislative action. This legislative action in itself certified to the ruling conviction that privately the problem could not be handled. Placed on the fundamentally Federal base, it recognized that the problem was beyond the capabilities of local and even State governmental scope. The consequent actions of Congress after 1935, and up to and including 1956, certify unanswerably that this opinion as to the problem has continuously solidified and strengthened.

The system of OASI and Federal disability insurance—its latest phase—has done good as far as it has gone, or could go. When it is all summed up, however, the truth is this: We have a social security problem simply because the great majority of the American people reach old age and find themselves lacking the financial ability to command income and living standards reasonably comparable to the general standards of living prevailing around them. As a matter of fact, about 22 percent of persons aged 65 and over in the United States, as of 1955, had no money-income whatsoever from any source; they are totally dependent people.

The Townsend plan is based squarely on the belief that Americans should achieve economic sufficiency and independence as the final result of life.

In February 1954, the Social Security Bulletin carried an article by Jacob Fisher of the Social Security Administration's Division of Research and Statistics, namely, postwar changes in the income position of the aged. This report shows:

The population aged 65 and over increased 17 percent from 1947 through 1952—while the total population aged 14 and over increased only 5 percent—but their share of total personal income increased from 7 percent in 1947 to only 8 percent in 1952.

Analysis of Census Bureau data shows the share of the elderly to have been 7.3 percent in 1953, 7.7 percent in 1954, and 7.9 percent in 1955. By 1955, the aged population had increased 31.7 percent over its 1947 number—while the total population aged 14 and over increased only 8.3 percent. Thus, the average aged person's comparative income position declined, seriously, from the pitifully inferior 1947 level to an even more inferior level in 1953, 1954, and 1955. The increase of the aged as a portion of the total population continues unabated, while their total share of income remains unchanging.

This took place despite congressional action in 1950 increasing OASI benefits by 70 percent and in spite of congressional actions in 1952 and 1954. It took place in spite of the dramatic increase of private pension systems and the liberalization of just about every existing public and private retirement system as well.

Since World War II, OASI has not only failed to solve the social security problem; it has even failed to prevent it from getting worse.

Furthermore, a 1955 report from the Social Security Administration plainly warns that to establish even so modest a minimum OASI benefit as $75 a month would entail payroll tax rates so high as to endanger public support of its contributory principle, in their view.

Unabated surpluses of production dictate that we must keep buying power abreast of our ever-expanding ability to produce. Unless we stop destruction of the average American's buying power upon his reaching old age, this can never be done. This is what OASI has proven unable to do. It is exactly what the Townsend plan will do.

Added to what we authentically know the American people can do privately for their retirement, Townsend plan benefits will end poverty and dependence in old age, retiring all persons on fair economic equality with their fellow adults in general—thus amplifying buying power, the only way prosperously to absorb surpluses.

Therefore, the Townsend plan should be adopted immediately, in place of the present system of old-age and survivors insurance.

HOW THE 1957 TOWNSEND BILL WOULD WORK

This is a program that is capable of specific illustration. On the first day of the sixth month following the enactment of this bill, the program would go into effect. For purposes of simplicity, let us assume that this effective date of the program were January 1.

Then as of January 1, the tax proposed in this bill would go into effect and the present payroll tax—the National Insurance Contributions Act—would cease under the repeal provision of the bill. For the 6-month period of January through June the gross income tax would operate at the rate of 1 percent. For the 7th, 8th and 9th months, the tax-rate would be advanced to 1¼ percent; for the 10th, 11th and 12th months—through December—the tax-rate would be advanced to 1½ percent; for the 13th, 14th and 15th months, the tax-rate would be advanced to 1¾ percent; and for 16th and all succeeding months the tax-rate would be 2 percent. Meanwhile, as of the first of the seventh month, the revenue collected from the first month, less specifically the cost of administration for that first month, would be distributed as

benefits to the beneficiaries qualified as of that date to receive them. The amount of benefits would be determined by simply dividing the revenue available by the number of primary beneficiaries plus the number of secondary beneficiaries—children and others not qualified for the full primary benefit—converted into the number of primary beneficiaries the sum of their fractions represent.

As of the first of the eighth month, the revenue available from the second month would be so distributed; and, thereafter, as of the first of each month there would be distributed as benefits the revenue collected from the sixth preceding month. Thus, as the tax-rate matured and as beneficiaries qualified the program would ease into effect over a period of about a year and a half.

Statistical studies show that the first benefits under this program, as of the seventh month, would probably be between $60 and $70 per month. In each succeeding month, obviously, they would rise, generally—and starting with the 12th month—when the revenue collected under the first advance of the tax rate to 1¼ percent would come up for distribution—benefits would certainly rise then and thereafter.

The 1957 Townsend plan bill provides that benefits under OASI and disability insurance would continue to be paid to whatever extent they might be greater than the benefits being paid at any given time under the Townsend program, and to the extent that such benefits under OASI would continue to be paid, they would be paid out of the reserve funds of OASI.

However, since the average benefit under OASI—that is, the average retired worker's primary benefit—is only about $63 a month—and wives' benefits little over half of that, and widow's benefits, and so forth, about three-fourths of it—it is clear that most OASI benefits would immediately be absorbed by the benefits under this program. As this program matured under the full 2 percent rate of the gross income tax, there is no doubt whatsoever that all benefits under the present system would be absorbed. Thus, it is to be noted that a total transition from the present system to the Townsend program is provided for and spelled out in the 1957 Townsend plan bill. At no time would any beneficiary of the present program get a single penny less than the present program provides for him, but, duly, they would all receive far better benefits than are presently provided for. All benefit-obligations of the present system would be completely honored.

Beneficiaries under the Townsend program would be all persons aged 60 and over retired from gainful occupation; all persons 18 through 59 who are totally and permanently disabled; all female heads of family groups having dependent children under 18 in their family groups and all such dependent children and orphans under 18 years of age—these latter to receive benefits in the amount of one-third of the current primary benefit being paid to the foregoing. This benefit coverage of the people of the United States certainly takes account of all who could possibly expect to qualify under any of the present programs of the Social Security Act; and it takes into coverage the few elements that OASI still excludes. Any possible exceptions to the coverage of this program who might possibly be entitled to benefits under the present programs are hard to imagine, indeed, especially once the Townsend program is fully instituted under its full tax rate of 2 percent. Whatever possible cases there might be, they would obviously be so infrequent and so few that they do not constitute anything of such magnitude as to be classed as a problem. The Townsend program, once operating under the full support of the 2 percent rate of the gross income tax—as indicated by 1955 statistics on the population, the distribution of income, and the volume of business in the United States—would provide primary benefits of the order of $130 to $140 a month.

This level of benefits, under the coverage provided for in the Townsend bill, would involve a revenue of about $2.5 billion a month. The immediate question becomes this: How can so large a number of beneficiaries at these benefit levels be justified? In other words, the immediate question to be settled is that raised by those who are forever denouncing anything that is going to cost money. Obviously, this is a program the financial features of which really raise their dander. However, the answer is not difficult to set forth.

The first fact is a simple one: As of 1955, the group aged 65 and over lacked by 48 percent an equal income share as compared with the younger adults—aged 25 through 64. They endured this lack—about 22 percent of them having no income whatsoever from any source—despite all the programs presently in force under the social-security system as it is, despite all other public and private programs, despite the expanded rates of savings and investment that these times of unprecedented prosperity afford.

The nub of the matter is that less than the Townsend program will not fill the gap, will not eliminate the economic inferiority of the aged. Less will not secure the future of the younger people from the fate of economic deterioration when they reach old age, and so forth.

So, it comes down simply to this: Is the solution of the social-security problem a beneficial thing to our society or not? If it is a beneficial thing to do, then it is worth the price. The Townsend program is simply the only one ever designed and put forth actually to eliminate, fully solve this problem. If the problem is ever to be solved in any other way than through the Townsend program, it will have to be by providing the same standard of benefits for the same number and classes of people as are provided for under the 1957 Townsend plan bill. That is all there is to it, in reality. Either the problem is a valid one and should be solved or it should not.

To those who say that the financial magnitude of the problem has been overestimated, I say that economic sufficiency and independence should be the final reward in life for the people of the United States; that this requires two things: First, that people, retired people primarily in this context, not be subjected to an income level that involves poverty, insufficiency in terms of the actual general living standards of the times; and, second, that as an overall group retired people should enjoy an up-to-date share in income and living standards as compared to those enjoyed by younger adult people. Less than this constitutes inferiority, lack of freedom and independence, curtailment of the ability to participate fully in the social, economic life of the day—injustice, in short. The Townsend plan bill is calculated on the basis of those convictions and standards.

Now, if somebody feels, in their own view, that less than this is really an answer, let them state how much they believe should be the share of the aged. On this basis the whole matter can be settled; but the burden of proof is theirs. The Townsend plan bill alone is based upon the square question, "How much should an old-age pension be?" The Townsend bill provides the ways and means of providing the answer to achieving that pension—whatever it should be.

Since it is self-evident that whatever the final decision of Congress turns out to be as to what an old-age pension really ought to be, provide for, there still remains this unassailable truth—"It will require just as much money to be raised for just as many people under any other plan as under the Townsend plan." Therefore, the whole question reverts back to the primary one: Is the genuine solution of this problem of social security desirable or not?

To those who feel that it is desirable, we present the Townsend plan, embodying the defined ways and means of solving it. To those who do not wish its solution we say, "It is time you frankly said so." This is the essence of the Townsend plan bill.

The Post Office Department

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Los Angeles Examiner on April 15, 1957:

The arrogance of Postmaster General Arthur E. Summerfield has brought about a bureaucratic shakedown of Congress and the American taxpayers.

His arrogance succeeded last Saturday in canceling all regular mail deliveries in the United States on a business day, for the first time in history.

It has succeeded, beginning today, in curtailing deliveries and hours when post offices are open to the public.

Mr. Summerfield high-pressured a congressional committee into voting him $41 million extra to run his Department through the remainder of the fiscal year, ending June 30. But even this did not move him to call off his cutback of services. He demands the money in hand.

His arrogance has hampered the operations of business and gravely inconvenienced the American people.

The crack-of-doom methods he has used raise questions of his efficiency and competence.

Whatever bureaucratic victory he has gained, the Postmaster General has lost the confidence of the public.

He ought to resign.

Asia Has Two Real Fears: The Power of Red China and the Uncertainty Regarding the Steadfastness of American Policy in Firm Opposition to Red China's Aggressive Designs

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following article by Walker Stone, editor in chief of Scripps-Howard newspapers. One marvels at the incredible speculations by some Americans regarding the nebulous advantages which they believe might conceivably come from recognition of or trade with Red China, while they ignoré the absolutely certain disastrous results such acceptance of Communist China would produce among our allies in Asia, the strategically located overseas Chinese in southeast Asian countries, the neutrals who realizing their own weaknesses are waiting to see which side is going to win in Asia, and the enslaved millions behind the Iron Curtain who hope and pray that we will remain steadfast on the outside while they resist valiantly from the inside.

When have we ever been successful in improving our own situation by helping our enemies become stronger?

The article follows:

ASIA'S REAL FEAR: RED CHINA—FRAGILE BALANCE ON COMMUNISM

RANGOON, BURMA, April 10.—Back in the late war, when his country was overrun by the Japanese, President Manuel Quezon of the then Philippine Commonwealth ran his government-in-exile from Washington.

"I'm not worried about Japan," he said then. "When the Americans get around to it, they'll make short work of the Japs. What worries me is that out of all this holocaust may emerge a warlike, aggressive China. That would mean trouble in Asia for generations to come."

President Quezon never lived to see his Filipino people gain independence, nor his dire prophecy fulfilled on Asia's future.

MYTH GROWS

The great population and land mass of mainland China today compose the central magnet which shapes and twists the politics of free Asia countries around Red China's crescent rim from Japan to Burma.

The prewar myth of the white man's invincibility has given way to a new myth of Red China's invincibility.

This was helped along when the United Nations settled for a phony armistice in substitute for victory in Korea and the French were driven ingloriously from their Indochina colonies.

PROVES REAL MENACE

The Peiping radio never lets up in its belligerent boasts that volunteer Chinese defeated the choice troops of 17 nations in Korea, and that Indochinese natives routed the flower of the French army at Dienbienphu.

The white man may still be the whipping boy of demagogs in former colonial lands, but the real fear of the peoples and governments in this area is expansionist communism and Red Chinese imperialism.

Red China has an army second only to Russia's; the world's third greatest air force, surpassed only by Russia's and America's, and a potential fifth column more menacing than any other imperial power ever possessed.

More than 20 million overseas Chinese reside in the Philippines, Malaya, Indonesia, Vietnam, Cambodia, Laos, Thailand, and Burma. And their influence is far greater than their numbers, for they are the bankers and traders who control commerce. Most of them balance allegiance between their countries of residence and their fatherland. Had they a free choice and secret ballot as between Free China and the Red regime, most overseas Chinese, being rugged free-enterprisers, probably would vote against communism. But so long as there is a possibility—it now seems to them more a probability—that communism will come out on top, they will avoid alienating themselves from the homeland of their ancestors.

In Bangkok, when the Korean war was on, it was said you could tell how the battle was going by whether Nationalist Chinese or Red Chinese flags were flying in front of Chinese shops. Yet Thailand does not recognize Red China, and is a member of SEATO.

In Indonesia, a few weeks ago, when President Sukarno was barnstorming through northeast Sumatra, delivering orations against the long-gone Dutch—orations which ended always in "Merdeka! Merdeka! Merdeka!" (Freedom, freedom, freedom), almost as many Red Chinese as Indonesian flags flew from village shop fronts.

Red aggressiveness is countered by wavering neutralism, as in Burma, India, and Indonesia.

ALIBIS IN TOKYO

It is countered by indecision and opportunism as in Japan where the new Prime Minister, Nobusuke Kishi, is basically anti-Communist but would like to have his cake and eat it, too. He talks in the same breath of increasing trade with Red China, complains there are too many United States military forces in Japan, yet alibis for failure of Japan to build its own defenses.

Communist expansion is countered by fortitude, by resolute opposition of peoples and leaders with a look over the shoulder at what the United States will do—as in Korea, Formosa, the Philippines, Vietnam, and Thailand. These are nations which have gambled that America meant what she said when she declared Communist China an outlaw nation.

Americans engaging in academic disputes about free press over whether United States correspondents should roam through Red China or in disputes involving the principle of free trade, over whether goods should be sold to Iron Curtain countries—they cannot know the effects of their words in this part of the world. These are not academic questions here. They are matters of life and death. When someone sneezes in Washington politicians out here catch cold.

Any sign in the United States of yielding to Red China is taken as a step toward recognition and giving respectability to the Communist regime.

Announcement of Senator ELLENDER's committee in favor of selling surplus agricultural products to Iron Curtain countries is greeted by Manila editorials demanding to know whether America sticks to a principle only until an opportunity for profit appears. And in Bangkok, opposing political parties scurry for credit in proposing repeal of Thailand's anti-Communist laws.

Unlike in America, politicians and peopleas out here are up against Communist guns, airpower, and fifth columns.

Once convinced the United States is coming to terms with Communist China, political leaders in this part of the world would not merely follow a trend, nor even march abreast. They would race to make their own terms first—as indeed, Burma, Indonesia and India already have.

A Tribute to Industry Leaders

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the annual meeting of the Super Market Institute held in Cleveland, Ohio, on April 10, 1957:

A TRIBUTE TO INDUSTRY LEADERS

I would like to say here at the start how happy we of the Coca-Cola Co. are to be your host at this session. It affords us an opportunity to tell you how highly we regard the long associations we have held with so many of you.

You have been gathered at this 12th annual meeting of the Super Market Institute to discuss How To Strike a Profitable Balance Through Management, People, and Productivity. You have been considering the various aspects of this current topic. But I don't believe that, in your busy probings of the problems at hand, you've had time to reflect on the part your industry and your leaders have played in the drama of change in American life.

For, through the improvements in your businesses, affecting so many facets of daily living, you have been responsible, probably more than any other one industry, in helping to bring more convenience, quality, and luxury to one of the fundamental parts of everyday living—the dinner table. Because of these innovations the American family has an opportunity to enjoy the pleasures that other technological advancements have provided.

I would like to take you back with me now to my own mother's grocery store at Grassy Point, N. Y., during the second decade of this century. It was a small store, stocked with an assortment of foods, staples, sundry items. My mother, one of my brothers or myself took turns behind the counter.

We had to watch carefully in the dimly lighted store when we scoped up a handful of non-brand cookies from the cracker barrel that the open bag did not spill on the non-standard swinging scale. And, after we had scurried to fill the orders of the housewife, we might often be asked to keep an eye on the package while she went and

shopped down the street for articles that our neighbor stocked.

Now this was a typical situation. Sometimes the store was larger, more often than not it was smaller. Customers lined up to wait while the clerk filled orders from unpackaged supplies, a good portion of them stacked out of sight beneath the counter or on an almost inaccessible top shelf.

Then, almost simultaneously, changes occurred in the industry—in packaging, selling, merchandising, wholesaling, and retailing—all toward making the one-stop shopping concept more efficient and profitable.

The oldest food chain—Great Atlantic & Pacific Tea Co.—developed under the guidance of the Hartford family, was one of the first chains to use the ideas of a convenient food store with standardized, labeled, and packaged articles at low prices.

Now let's look at some of the individual pioneers who blazed new trails in the development of the food industry.

Smith M. Flickinger, a wholesaler from Buffalo, who believed that a group of retailers associated with their wholesaler to promote a brand through a common name could meet chainstore competition. He started the Red & White Corp. and lived to count his system used among 5,000 stores in 34 States with $1½ billion in sales.

J. Frank Grimes, a Chicago accountant, who contributed to the voluntary chain movement with the master plan of teaching the independent to increase volume and reduce overhead and thus lower prices. The system became the Independent Grocers Alliance of America.

Clarence Saunders, a grocery salesman from Virginia, who opened probably the first self-service grocery store—Piggly Wiggly—at Memphis, Tenn., in 1916. The innovations of a turnstile and checkout counter, his visionary step, were significant milestones in supermarket development and paved the way for future supermarket owners. At one time there were 2,660 Piggly Wiggly stores across the country.

William H. Albers, whose Albers Super Markets, Inc., in Cincinnati, during the early 1930's, was probably the first use of the term "supermarket" in a company trade style. This pioneer and statesman in your industry became the first president of your institute and helped to formulate policy. At the first meeting of your organization 20 years ago he stressed the importance of sound merchandising with correct pricing of nationally advertised foods to stimulate increased good will and confidence of both the manufacturers and the customers.

Albert Ralph, of Ralph's Grocery Co. of Los Angeles: One of the first in the food business to develop systematized markets. Incredibly, a few of the structures built 30 years ago for his business are in use today.

Joe Weingarten, of J. Weingarten, Inc., of Houston, Tex., one of the first operators to use walk-in refrigerators and a "kiddie" car to transport on wheels the shopper's basket through the aisles. He has served for several terms as your president.

Michael Cullen, who caused a stir when he took over an empty building at Jamaica, N. Y., in 1930, stacked piles of merchandise in baskets and on shelves, made up handbills in large type to advertise his new operation, reduced both the overhead and the profit margin to try and give the greatest price benefit possible to the consumer. His flamboyant departure from customary business operations attracted the attention of competitors, who in turn modified their own business because of the drastic measures employed in "King Kullen" markets.

Paul S. Willis, president of the Grocery Manufacturers of America for the past 25 years, who recently was honored by the Sales Executives Club of New York for his contributions to the industry in fostering cooperation between manufacturers and distributors. He was the speaker at your first convention, when he advocated constructive planning for mutual problems and interests of the manufacturer and retailer. Last year you presented to him the William H. Albers award for improving relationships between these two interests in the food industry.

John Logan, president of the National Association of Food Chains since its organization in 1936: Through his leadership with farm groups and food-chain executives, a program was evolved to move into the market place large supplies of farm products temporarily in abundance. His efforts in combating food-chainstore taxes have helped to stop the growth of that campaign.

Watson Rogers, head of the National Association of Food Brokers, who welded food brokers into an ethical group performing a service for both the operator without a sales force and the one who did.

Campbell Stewart, president of the Certified Grocers of California, who proved that an individual retailer, through collective buying, can be successful. He began his business with the purchase of a carload of soap and promoted it into one of the largest distribution units in the country.

Mrs. Marie Kiefer, secretary-manager of the National Association of Retail Grocers of the United States, who has helped to guide that great organization for so many years.

Clarence Birdseye, a Brooklyn inventor who traveled to Labrador as a fur trader and conceived a process for quick-freezing foods. The method of rapid freezing, foods frozen in containers by pressing them between refrigerated metal plates, resulted in a new line of convenience foods with almost unlimited merchandising possibilities for the operator and a timesaver for the homemaker.

Daniel Gerber, whose attempt to save his wife effort and time in preparing foods for their child, led to a new line of convenience foods. Strained foods have been expanded for adult consumption and are now a part of regular shelf displays.

Clarence Francis, retired chairman of General Foods Corp., helped to found this giant organization and then was instrumental in molding it into probably the largest manufacturer of packaged goods. He has been a leader in the food industry for decades.

Many of the pioneers and statesmen in your business whom I have mentioned, as well as others, put in long hours with the Government in Washington during the depression years of the thirties and later in World War II. These representatives gave unselfishly of their energy and time to help feed the Nation during an era of legislative codes and later, in the war years, to see that men and women in uniform here and overseas, as well as the populace on the home front, had adequate food supplies.

Ironically, the emergencies of war were responsible for a number of technological advancements in food production, packaging and distribution. Short-cut production methods applied to meet time requirements were utilized later for peacetime manufacturing.

Many a blueprint containing an inventor's ideas was rolled off the drawing board and onto a shelf for the duration because of wartime restrictions. But it was at this time that the industry could look at itself and decide what changes would be most beneficial to it. And, with the relaxation of wartime regulations, numerous improvements benefiting the consumer came off the assembly line.

You know, being a member of the Coca-Cola family, I'm familiar with a motto of the Coca-Cola Co. that expresses the aim of this industry as well as our own business. We strive to put ice-cold Coca-Cola within an arm's reach of desire. This is, in fact, the purpose of all the manufacturing, merchandising, and distribution connected with the industry—even to stocking the shelves in the supermarket—to bring products within an arm's reach of desire.

As a part of your great industry, we have other things in common. Nineteen hundred and sixteen, the year that marked the beginning of self-service, is also the year in which the regular-size bottle for Coca-Cola as we know it today was introduced to become one of the most well-known packages in the world.

And, like you, we continue to experiment for improvement in bringing our product to the consumer. Under the administration of Robert W. Woodruff in the past, and, it goes without saying, now as well, we at Coca-Cola endeavor to place a standard-quality, well advertised and merchandised product in the hand of the consumer in the most effective and economical manner. Our research has aided us in pioneering the production of cartons, vending machines, and other equipment that have benefited the soft-drink industry as well as us.

Reflect, gentlemen, on the impact technical advancements in this industry have had on your day-to-day business and the consumer.

The use of transparent film for packaging, perfected to be moistureproof, developed by such scientific investigators as Dr. W. H. Charch and J. D. Rankin, of the Du Pont organization, brings all types of produce and supplies to the consumer in a form that the customer can see exactly what is being purchased and yet be assured of its freshness, quality, and sanitation.

Also, the housewife can feel confident that the attractively packaged food she brings home contains all the nutrition possible as a result of the work of researchers, biochemists, and others in vitamins, amino acids, etc.—nutritionists such as Dr. E. V. McCollum, Dr. Henry Clapp Sherman, Dr. L. A. Maynard, Dr. William C. Rose and T. B. Osborne, and L. B. Mendel.

In some supermarkets today the customer can stroll past row after row of food-o-mats—a system of gravity-fed displays and dispensers that allow the packages, whether they be cartons or cans, to be slid down and lifted up with a twist of the housewife's hand. This system was contributed to your industry by Lansing P. Shield, president of Grand Union Co.

And as the housewife accumulates packages, containers, bottles, cans, etc., during her journey up and down the aisles of a supermarket she no longer becomes discouraged about the weight of the purchases piling up. For S. N. Goldman, head of ACF-Wrigley and Humpty-Dumpty and a former president of your institute, became an inventor in addition to his other food store activities. He put a folding chair on wheels and then successfully improved it until we have the relatively light-weight, easily propelled shopping cart of today. This literally encourages the consumer to stock up on supplies until she arrives at the checkout counter with an order stuffing numerous grocery bags.

Then there are the myriad other inventors and builders connected with your industry—the refrigeration firms who have kept pace with your packaging necessities with improved storage methods—both for your warehouse and the display bins, the lighting experts who have assisted both you and your customer in the illumination of your market and the products, the cash register concerns who have calculated when you needed a faster checkout system and provided it for you, the architects and builders who have adapted your constructions to changing community life—and many more.

There is another facet of this industry that is significant but not as obvious to the spectators of our business—communications. As this field has mushroomed into a national industry it has been difficult at times to keep

track as well as inform each other of the news, the changes, the trends. The editors of your trade publications have in many instances assisted you in making the correct decisions regarding the progress of your organization by circulating the vital information and seeing that you had it in printed form when you needed it.

A few of them are: M. M. Zimmerman, founder and editor of Super Market Merchandising, chairman of your first convention, and your first executive secretary; Carl Dipman, for many years editor of Progressive Grocer and another pioneer in helping the growth of food merchandising; Godfrey M. Lebhar, founder and editor of Chain Store Age and first secretary of the National Chain Store Association.

Gentlemen, you are indeed members of one of the greatest industries in this country. By pooling your efforts, supplying a variety of goods, selling them in volume and at a low cost, you have helped elevate the standard of living of the American people.

In addition, you have accomplished another feat, if I may be permitted a comment at this point. When you look back across the decades it becomes apparent that the American housewife has decided herself that she would rather trundle her own shopping cart through a market, make her own selections and tote them, than have a clerk perform all these chores. In other words she actually would rather do it herself—and gentlemen—when you can make a woman think she likes to work, well, I call that good politics.

As you know, I started in the food business and then transferred to another line of work where there was a different system of checkouts. Well, I've been in the food business for a number of years now and I am not only happy to be in it, but proud to be a member of your industry.

Let us all strive to maintain the excellent standards established by the great pioneers, some of whom, but certainly not all of whom I've tried to bring back before your memory today, that this field of service to the American home can continue to progress. For, the work of these pioneers, and many more who are nameless, is being forwarded by you devoted, able and industrious men. Were you not devoted, you would not be here, projecting a successful and dynamic past into an equally dynamic future of unlimited opportunities for the good of the industry.

As for these meetings, I believe they are a tribute not only to you, but to the imagination, ability, and energies of the professional staff of the Super Market Institute and herewith I feel we should join in a tribute to Don Parsons, your executive director, and his associates for their splendid work.

And a particular accolade to those dedicated men who have given so unstintingly of their time and heart to this industry, your distinguished past presidents in addition to those I have mentioned already—Sidney R. Rabb, Claude W. Edwards, and Ray Dillon—and your current one, Joseph P. Mott.

Good luck to you all.

Time and Civil Rights

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a timely article which appeared in the Boston Herald of April 29, 1957:

TIME AND CIVIL RIGHTS

Time is running out on the civil rights bill, and unless backers of the measure can get speedy action now that the Easter recess is over the little group of willful men who oppose it will have won another round.

Earlier the consensus was that some kind of civil rights legislation would be fought through this session as a sop to mounting public demands. The old lineup of southern diehards was still there, but the civil righters were convinced they had the votes.

Now the outlook is less certain. The timetable of the pro group was to get the measure out of committee and ready for floor debate before Easter. This was considered necessary in order to forestall a filibuster which would naturally be more effective as the session drew to a close and the pressure of unfinished business became heavier.

That deadline already has been missed. In the House the bill is still firmly bottled up in the Rules Committee, headed by Virginia's hard-bitten HOWARD W. SMITH. And in the Senate a compainion measure is waiting consideration by the Judiciary Committee, which is under the thumb of Mississippi's EASTLAND.

Observers say that the two committee chairmen cannot hold out much beyond the recess, but they are men of strong purposes and great parliamentary experience. They will have to yield, but it may take a good many days yet.

The prospect is still good for some final action in the House. Once the bill reaches the floor there, a vote is unavoidable. But can the Senate be moved? It will certainly deliberate—at great length—and deliberation may turn into a filibuster. At this late date in the session, even the well-intentioned majority leader, LYNDON JOHNSON, may not be able to force action.

If civil rights legislation fails again this year it will be a tribute to the patience and ingenuity of the southern bloc. The bloc is holding out against seemingly insuperable odds. But there is consolation in the fact that it cannot continue to win must longer. Ingenuity has a limit. And so does the public's tolerance of delay.

Time is running against civil rights legislation this session, but it is running against the whole anti-civil-rights position in the longer term. The reform will come, if not this year, then in 1958 or 1959. The old guard has just about talked itself out.

No Change in Suez Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. MULTER. Mr. Speaker, the following excerpts from press and radio point up the fact that Egypt intends to continue its policy of aggression against Israel, a fact which by this time should be most apparent to our Secretary of State. These excerpts appeared in the April 24, 1957, issue of Israel Digest:

NO CHANGE IN SUEZ POLICY

"Informed sources in Cairo said that Egypt's official policy regarding the passage of Israeli ships through the Suez Canal was the same as in the past—that is, that Egypt was still in a state of war with Israel and that Israeli ships had no right to pass through the canal." (Radio Damascus, March 9.)

"The War Effort Office has notified the customs houses at Suez and Port Said that officials of the office will inspect all vessels heading for or coming from Israel." (Al Akhbar, Egyptian daily, March 11.)

"Abdul Nasser, in an interview with a correspondent of the French newspaper Matinee Dimanche, said that Egypt will continue to prevent the passage of Israeli vessels through the Suez Canal." (Radio Damascus, March 18.)

"Nasser, in his talk with Secretary General Dag Hammarskjold, today reiterated his claim to the rights of a belligerent, emphasizing that he would not permit the passage of Israeli ships through the Suez Canal, it was reported by reliable sources in Cairo." (A report from the United Press, March 23.)

SOON WE'LL DANCE IN TEL AVIV

A delegation of Egyptian artists came to Jordan to participate in celebrations marking the ending of the treaty with Great Britain. Interviewed by a correspondent of Al-Dif'a, Tahiya Kiryuka, a dancer, said: "God willing, we shall dance in Tel Aviv in the near future to entertain the Arab armies after they enter that city in triumph." (Al-Dif'a, Jordan daily, March 17.)

Our Overseas Bases Are the One Ace Card Which We Hold and Which the Soviet Cannot Match

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following article by Virgil Pinkley, editor of the Los Angeles Mirror-News:

OVERSEAS BASES ESSENTIAL

(By Virgil Pinkley, Los Angeles Mirror-News editor and publisher)

Trying to get America out of overseas bases continues to be a prime objective of Russia.

In addition, we face related problems on Okinawa and in the Philippines. Further, Moscow is trying to frighten and blackmail Norway and Denmark on the issue of guided missile bases as was demonstrated this week.

Moscow reasons quite logically that if United States forces ever left foreign bases we probably never would return short of another global war. It would take months and years and fantastic expense to reoccupy these bases if they were not in our hands. Our withdrawal would cut lines of communications and supply and eliminate our vast depots.

For 7 years the Kremlin has striven mightily to break up NATO because Red military leaders look upon this entire organization in Scandinavia, Western Europe, Italy, Iberia, the Mediterranean, Greece and Turkey as one gigantic American-Western Allies base. This area swinging around Russia like an arc to the west and south contains thousands of air, naval, and rocket or missile bases. From them could come nuclear weapons of retaliation. It would be virtually impossible for the Soviets to knock out all these bases even in enormous surprise attacks. Weather alone would dictate otherwise.

STRONG POINTS FEARED BY RUSS

Moscow fears and respects these strong points we and our allies hold and man. Most of them were brought into being by the military grabs and aggressive power politics played by the Soviets during the closing phases of the last war and the years immediately following. The capture, suppression, and occupation of the slave states behind the Iron Curtain made free nations understand the peril of ruthless communism used to the hilt by the Russians in a modern and terrible form of imperialism.

The Soviets would love to get us out of European bases and then induce us to leave ones now occupied in Britain, Spain, north Africa, Saudi Arabia, and Iceland. If this happened, Europe, the Mediterranean, Africa, and the Middle East would lie helpless before the might of Russia's massed and mobilized 171 Red Army divisions, the world's largest jet air force of more than 20,000 planes, a frightening submarine fleet of more than 500, a mighty arsenal of nuclear weapons, and power politics.

These Red forces would be operating on interior lines of communication. The Kremlin could mass divisions and planes along a frontier and make demands in political, economic, military, and even territorial fields.

What would stand before the rulers of the Kremlin? In most instances little or nothing. America in that event would lie between the Atlantic and the Pacific. We could not stave off Russian aerial and guided-missile attacks if they were launched against us. We now know the hard way through experience that no nation, especially a large power with world trade and responsibilities, can be isolated or go it alone.

GIVING UP BASES RANK FOLLY

The most costly mistake we could make for our security and that of much of the world would be to abandon these overseas bases. It would be rank folly and utter stupidity.

Even in these days of strategic air forces, nuclear bombs and warheads, and intercontinental rockets or missiles, we need these overseas bases. They are paramount. Their being is the strongest possible brake on overt military action by the men who rule the Communist world from behind the walls of the Kremlin. Our strong points in foreign lands are like NATO—instruments of defense and for security. If we are forced into war they can become powerful offensive springboards, enabling full use of our growing inventory of military hardware.

If any administration or Congress proposed to eliminate these bases or cut down on their maintenance, the public should raise an outcry which continued until commonsense returned to Washington. There is no likelihood of any such action now or in the immediate future. In view of the Russian deeds in Hungary and the Middle East, the menace we have faced continues.

This past week, Premier Bulganin sent strongly worded and blunt communications to the Prime Ministers of Norway and Denmark, threatening all kinds of dire results if guided missile bases are established on the territory of either sovereign nation. Neither of these fine, brave, little countries has reacted in a frightened way. Each is a stanch member of NATO and has airbases which can be used by NATO. Further, naval forces of the North Atlantic Treaty Organization have maneuvered in their territorial waters and off their coasts.

DENMARK, NORWAY STAND FAST

It was the act of a "brave, courageous nation, ruled by the principles of justice" for Russia, with its 220 million population, to try and scare 4,500,000 Danes and 3,500,000 Norwegians. Moscow knows, as does the world, that Norway and Denmark have no aggressive military aspirations. Each country is devoutly democratic and dedicated to working for peace. There are only limited military forces in these Scandinavian nations whereas Russia has the world's largest military machine, mobilized. This is not to say that the Soviet juggernaut is necessarily the best or that Russia and the slave states could outproduce the free world.

The Kremlin keeps reminding Norway that there are 120 miles of frontier between Russia and that country. Also, that Soviet jet bombers could reach Copenhagen in less than 30 minutes.

Despite the huffing and puffing of the big Red bear, our friends and allies in Denmark and Norway are standing fast. Their adherence to NATO is greater today than ever.

When the world situation is considered from almost any aspect, it is obvious that our oversea bases are essential. They must be held at all costs now and for a long, long time to come.

Brig. Gen. Louis H. Renfrow, a Devoted, Loyal, and Faithful Public Servant, Resigns as Deputy Director of Selective Service

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1957

Mr. JONES of Missouri. Mr. Speaker, it is my privilege to call to the attention of his many friends in Congress that May 1, 1957, is the effective date of the resignation of Brig. Gen. Louis H. Renfrow, who for more than 15 years has rendered a most faithful and loyal service to our Nation as Civilian Deputy Director of Selective Service.

Many of our colleagues have had the opportunity to come into contact with and to know General Renfrow when he was serving as an assistant to the Secretary of Defense, Chief Legislative and Liaison Officer with Selective Service, and as an assistant military aide to President Truman. Others will remember him for his active and effective service in the American Legion.

After almost 40 years of military service—16 active duty and 23 reserve duty—and upon reaching the statutory age, General Renfrow was retired from service on February 1, 1957, and with his resignation from Selective Service, he expects to avail himself of an opportunity to affiliate with business.

I know, Mr. Speaker, that I am joined by many of my colleagues here in the House in wishing Lou Renfrow and his charming wife, Ruth Kelso Renfrow—a native daughter of the 10th District of Missouri—all of the success and happiness which they so richly deserve.

I think it is apropos to include in these brief remarks copies of letters which have been written to General Renfrow on the occasion of his retirement from Gen. Maxwell D. Taylor, United States Army Chief of Staff, and from Maj. Gen. J. P. Epperly, Chief of the Dental Corps. Also, I am including a letter from the Director of Selective Service, Lewis B. Hershey, lieutenant general, United States Army, as well as an article from the April 1957 issue of Selective Service:

UNITED STATES ARMY,
THE CHIEF OF STAFF,
March 16, 1957.

Brig. Gen. LOUIS H. RENFROW,
Army of United States, Retired.

DEAR GENERAL RENFROW: On the occasion of your retirement from the Army of the United States after many years of devoted service to the Nation, I write to express to you the Army's appreciation for all you have contributed to its achievements.

From the time you first served as a dental surgeon with the 57th and 43d Infantry Regiments during World War I, you have consistently displayed outstanding devotion to duty. Following the war and your release from active duty, your participation in the activities of the Army's Reserve components proved excellent preparation for the duties you were to assume during World War II. In that conflict the Army was fortunate to have an officer with your qualifications to serve as dental adviser to the Medical Division of the National Selective Service System in Washington, D. C. In that capacity and later when you became executive officer and then Assistant Chief of the Medical Division, your experience and ability contributed significantly to the formulation of sound policies essential to meet the armed services manpower requirements.

After the war, your proved capabilities were of continuing value in your duties as Chief of the Liaison and Legislative Office of the Director of the National Selective Service System. While in this assignment and including your service as assistant military aide to the President with duty as Assistant Coordinator for Veteran Affairs, your ability assisted materially in the effective operation of both the selective-service organization and the Veterans' Administration. In your subsequent assignment as aide and special assistant to the Secretary of Defense, your judgment and tact were of substantive assistance in the many liaison activities which you performed for the Secretary. Later, as Deputy Director of National Headquarters of the Selective Service System during the Korean emergency, your ability and extensive knowledge of the manpower needs of our Armed Forces were important factors in the efficient operation of selective service. Throughout your career, culminating in your performance in the last mentioned assignment, your efforts have consistently promoted the security of our country and the free world.

In your retirement, I hope that you will maintain a lively interest in the Army and its doings. The Army needs informed friends throughout the country to interpret its requirements to our citizens. Your community will properly look to you, as a retired senior officer, for views on military matters. I trust that you will be an active spokesman for the Army, keeping abreast of current matters through contacts with the Army headquarters of the area in which you reside.

The best wishes of the Army follow you as you leave its active ranks. May you find in your retirement the happiness and good fortune you so richly deserve.

Sincerely,

MAXWELL D. TAYLOR,
General, United States Army,
Chief of Staff.

DEPARTMENT OF THE ARMY,
OFFICE OF THE SURGEON GENERAL,
Washington D. C., April 3, 1957.

Brig. Gen. LOUIS H. RENFROW,
Army of the United States, Retired, Deputy Director of Selective Service, Washington, D. C.

DEAR GENERAL RENFROW: Upon your retirement from active duty I wish to express

both officially and personally my appreciation of the loyal and efficient service which has characterized your career as a member of the Dental Corps—a period marked by participation in three wars, World War I, World War II, and the Korean conflict. Throughout your military career your professional and administrative ability has earned for you an enviable position in the field of dentistry, in both military and civilian circles, as evidenced by your selection as the first dental Reserve officer of the Army to be promoted to the grade of brigadier general.

It occurs to me that the word "first" is most significant as it applies to your career, in that, to you has been accorded the honor of being the first dental officer to be assistant military aide to the President; the first dental officer to be assistant to the Secretary of Defense; and the first dental officer to be Deputy Director of Selective Service. In each of these capacities you established an outstanding record, and the pride of achievement, which is rightfully yours, is shared not only by the Dental Corps but the Medical Service as a whole. But few attain such honors, and the dental profession is indeed fortunate to have numbered among its members one so richly honored.

Your abundant knowledge of, and your unbounded interest in Reserve matters are particularly worthy of note. I can think of no one who accomplished so much in this field, and I am sure your return to civilian life in no way will dampen your interest in military affairs.

To summarize your many activities without stressing the importance of the role which you filled as Deputy Director of National Headquarters of the Selective Service System would be remiss on my part, for here too you displayed the knowledge, keen judgment, tact and devotion to duty which typified your every endeavor in the interest of the Nation and the dental profession.

It is with regret that I note the retirement of our experienced dental officers, for I realize the distinct loss sustained by the Army in being deprived of the services of those who, like yourself, by their professional ability and devotion to duty have contributed in such an outstanding manner to the esteem in which the Army Dental Corps is held.

My best wishes are with you and Ruth always, and in the years ahead may health, happiness, and success be yours.

Sincerely,

J. M. EPPERLY,
Major General, Dental Corps,
Chief of the Dental Corps.

THE DIRECTOR OF SELECTIVE SERVICE,
Washington, D. C., March 22, 1957.

Brig. Gen. LOUIS H. RENFROW,
Deputy Director of Selective Service,
Washington, D. C.

DEAR GENERAL RENFROW: Your letter of March 21, 1957, tendering your resignation as Deputy Director of the Selective Service System, effective May 1, 1957, contains impelling reasons with which I cannot in conscience take exception. I must, therefore, with deep regret, perform the duty of approving your request.

Your references to the System, your associates on the staff, and the personnel make me extremely proud. Your reference to me leaves me deeply grateful and most humble.

The years since December 20, 1941, have been eventful, both in our lives, in the life of the Nation, and in the change which the whole world has undergone. We have shared in some small way in the unfolding of these events. It has been my high privilege to benefit with our organization and our Nation from unusual contributions which you have made. Your capacities and your energy have been given without reserve to the successful operation of the Selective Service System.

You have earned many times over the privilege of applying yourself to activities nongovernmental. I know that you have the contentment that can come only to those who have made their full share of contributions to their Nation.

To you, to Mrs. Renfrow, to the sons, to the daughters, and to the grandchildren, officially and unofficially, collectively and individually, go from us all every good wish and every fond hope for the years that are to come.

Sincerely,

LEWIS B. HERSHEY,
Lieutenant General, United States Army.

[From Selective Service of April 1957]

GENERAL RENFROW RESIGNS AS DEPUTY DIRECTOR, SELECTIVE SERVICE, MAY 1, 1957

Brig. Gen. Louis H. Renfrow who had retired on February 1, 1957, having reached the statutory age, submitted his letter of resignation as Civilian Deputy Director of Selective Service to Lt. Gen. Lewis B. Hershey effective May 1, 1957. In his letter of resignation General Renfrow gave as his reason that an opportunity to affiliate with business had presented itself. In a letter accepting his resignation General Hershey expressed sincere regret at his leaving, and thanked him for his over 15 years of loyal and faithful service to his Nation and to the whole Selective Service System, while on active military duty.

Brig. Gen. Louis H. Renfrow was born in Cairo, Ill., October 5, 1896, the son of Louis Lee and Anna Mildred Renfrow, who are still living. He is married to Ruth Kelso Renfrow, and they have 2 sons, Robert Kelso and Richard Nelson, both of whom are World War II veterans, and 3 grandsons.

General Renfrow was appointed Deputy Director, Selective Service System, September ber 20, 1950, after 2 years as assistant to the Secretary of Defense Louis Johnson.

When General Renfrow left Selective Service early in 1949 to become Assistant to the Secretary of Defense, he was a colonel and chief legislative and liaison officer of Selective Service. Date of his promotion to the rank of brigadier general was September 8, 1949.

As chief legislative and liaison officer of Selective Service, General Renfrow—then a colonel—is credited with playing a major part in formulating and guiding legislative measures pertinent to Selective Service, including the present act.

General Renfrow's military career began when he was commissioned a first lieutenant in August 1917. During World War I, he served in the 57th and 43d United States Infantry, 15th Division of the Regular Army. He resumed private dental practice, retaining a Reserve commission and maintaining, over the ensuing years, an active and sustained interest in military matters, serving for several years in the 138th Infantry, Missouri National Guard, and participating in the training programs of the Army. In 1941, he was ordered to Washington for consideration of assignment to the Selective Service System.

General Renfrow's honors include: Legion of Merit (United States); Commendation Medal with Oak Leaf Cluster (United States); Selective Service Medal (United States); Victory Medals of World War I, World War II, and Korea; American Sector Medal, Legion of Honor (France); Order du Ouissam Alaouite Cherifen (Morocco); Medal Libertee (France); Star of Solidarity (Italy); La Cruz de Merito Militar (Guatemala). He is also a recipient of the Cross of St. Michael and St. Lazarus (Italy). Recently he was awarded the gold medal of the Pierre Fauchard Academy.

General Renfrow attended Southeast Missouri State College, Cape Girardeau, Mo.; and is a graduate of Washington University School of Dentistry, St. Louis, Mo., 1917; and the Army School of Military Tactic and Oral Surgery, Camp Greenleaf, Ga., 1918.

General Renfrow's affiliations are as follows: Member, Fellow, American College of Dentists; Fellow, International College of Dentists (past international president of the International College of Dentists at Large); Pierre Fauchard Academy (past national president); Omicron Kappa Upsilon; Delta Sigma Delta (past supreme grand master); member, Christian Church; Mason, 32d degree; Alpha Phi Omega; member, Army-Navy Club; member, American Legion since May 1919; La Societe des 40 Hommes et 8 Chevaux; member and vice chairman, medical advisory board of the American Legion.

General Renfrow has many firsts to his credit. He was the first Dental Reserve Army officer to be promoted to the rank of brigadier general; to be chief legislative and liaison officer; to be assistant military aide to the President; to be assistant to the Secretary of Defense; and to be Deputy Director of Selective Service; and the first dentist to be elected to membership in the National Mental Hygiene Society for work he did on the medical-survey program of Selective Service.

Schweitzer's Appeal To End Nuclear Tests

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portentous words of one of the world's greatest men, Dr. Albert Schweitzer, as printed in the New York Times of April 24, 1957:

SCHWEITZER'S APPEAL TO END NUCLEAR TESTS

OSLO, NORWAY, April 23.—Following is the translation of excerpts from a letter issued by Dr. Albert Schweitzer through the Norwegian Nobel Committee, asking that public opinion demand an end to nuclear tests:

Since March 1, 1954, hydrogen bombs have been tested, by the Americans at the Pacific Island of Bikini in the Marshall Group and by the Russians in Siberia.

After the explosion of a hydrogen bomb * * * something remained in the air, namely, an uncalculable number of radioactive particles emitting radio active rays. This was also the case with the uranium bombs which were dropped on Negasaki and Hiroshima and those with which subsequent tests were made. However, because these bombs had smaller size and less effect compared with the hydrogen bombs, one hardly paid any attention to this fact.

Since radioactive days of sufficient amount and strength have harmful effects on the human body, one started discussing if the radiation resulting from the explosions that had already taken place represented a danger which would increase with new explosions.

RACE HELD ENDANGERED

In the course of the 3½ years that have passed since then representatives of the physical and medical sciences have been studying the problem. The material collected, although far from complete, allows us to draw the conclusion that radiation resulting from the explosions which have already taken place, represents a danger to the human race, a danger not to be underrated, and that further explosions of atomic bombs

will increase this danger to an alarming extent.

I raise my voice, together with those of others who have lately felt it their duty to act, in speaking and writing, as warners of the danger. My age and the sympathy that I have gained for myself through advocating the idea of reverence for life, permit me to hope that my appeal may contribute to the preparing of the way for the insight so urgently needed.

There are two kinds of atom bombs, uranium bombs and hydrogen bombs. To these two bombs has recently been added the cobalt bomb, a kind of superatom bomb. The effect of this bomb is estimated to be many times stronger than that of hydrogen bombs having been made till now.

The explosion of an atom bomb creates an unconceivably large number of exceedingly small particles of radioactive elements.

PARTICLES HAVE LONG LIFE

Of these elements, some exist for hours, some for weeks, or months, or years, or millions of years, undergoing continuous decay. They float in the higher strata of air as clouds of radioactive dust. The heavy particles fall down first. The lighter ones will stay in the air for a longer time or come down with the rain and the snow. How long it will take before everything carried up in the air by the explosions which have taken place till now has disappeared, no one can say with any certainty. According to some estimates, this will be the case not earlier than 30 or 40 years from now.

What we can state with certainty, however, is that the radioactive clouds will constantly be carried by the winds around the globe and that some of the dust, by its own weight, or by being brought down by rain, snow, mist and dew, little by little, will fall down on the hard surface of the earth, into the rivers and into the oceans.

Particularly dangerous are the elements combining long life with a relatively strong efficiency radiation. Among them strontium 90 takes the first place. It is present in very large amounts in the radioactive dust. Cobalt 60 must also be mentioned as particularly dangerous.

WATER MADE RADIOACTIVE

The radioactivity in the air, increased through these elements, will not harm us from the outside, not being strong enough to penetrate the skin. But the danger which has to be stressed above all the others is the one which arises from our drinking radioactive water and our eating radioactive food as a consequence of the increased radioactivity in the air.

Following the explosions on Bikini and Siberia rain falling over Japan was, from time to time, been so radioactive that the water from it cannot be drunk. And not only there: reports of radioactive rainfall are coming from all parts of the world where anlayses have recently been made. In several places, the water has proved to be so radioactive that it was unfit for drinking.

Wherever radioactive rainwater is found the soil is also radioactive—and in a higher degree. The soil is more radioactive not only by the downpour, but also from radioactive dust falling on it. And with the soil the vegetation will also have become radioactive.

The radioactive elements deposited in the soil pass into the plants where they are stored. this is of importance, for as a result of this process it may be the case that we are threatened by a considerable amount of radioactive elements.

The radioactive elements in grass, when eaten by animals whose meat is used for food, will be absorbed and stored in our bodies.

What this storing of radioactive material implies is clearly demonstrated by the observations made when, at one occasion, the radioactivity of the Columbia River in North America was analyzed. The radioactivity was caused by the atomic plants at Hanford, which produce atomic energy for industrial purposes, and which empty their waste water into the river.

FINDS PROBLEM EVADED

The radioactivity of the river water was insignificant. But the radioactivity of the river plankton was 2,000 times higher, that of the ducks eating the plankton 40,000 times higher, that of the fish 150,000 times higher. In young swallows fed on insects caught by their parents in the river, the radioactivity was 500,000 times higher and in the egg yolks of water birds more than 1 million times higher.

From official and unofficial sources we have been assured, time and time again, that the increase in radioactivity of the air does not exceed the amount which the human body can tolerate without any harmful effects. This is just evading the problem.

Even if not directly affected by the radioactive material in the air, we are indirectly affected through that which has fallen down, is falling down, and will fall down. We are absorbing this through radioactive drinking water and through animal and vegetable foodstuffs, to the same extent as radioactive elements are stored in the vegetation of the region in which we live. Unfortunately for us, nature hoards what is falling down from the air.

None of the radioactivity of the air, brought into existence by the exploding of atom bombs is so unimportant that it may not, in the long run, become a danger to us through increasing the amount of radioactivity stored in our bodies.

What are the diseases caused by internal radiation? The same diseases that are known to be caused by external radiation.

They are mainly serious blood diseases. If the cells in the bone marrow are damaged by radiation they will produce too few or abnormal, degenerating blood corpuscles. Both cases lead to blood diseases and, most often, to death. These were the diseases that killed the victims of X-rays and radium rays.

It was one of these diseases that attacked the Japanese fishermen who were surprised in their vessel by radioactive ashes falling down 240 miles from Bikini after the explosion of a hydrogen bomb. With one exception, they were all saved, being strong and relatively mildly affected, through continuous blood transfusions.

DAMAGE TO DESCENDENTS

In the cases cited, the radiation came from the outside. It is unfortunately very probable that internal radiation affecting the bone marrow and lasting for years will have the same effect, particularly since the radiation goes from the bone tissue to the bone marrow.

Not our own health only is threatened by internal radiation, but also that of our descendants. The fact is that the cells of the reproductive organs are particularly vulnerable to radiation. To the profound damage of these cells corresponds a profound damage to our descendants.

To find out how the existing radioactive radiation has affected posterity, comparative studies have been made between the descendants of doctors who have been using X-ray apparatus for years and those of doctors who have not. Among the descendants of radiologists, a percentage of still births of 1.403 was found, while the percentage among the nonradiologists was 1.222.

In the first group, 6.01 percent of the children had congenital defects, while only 4.82 percent in the second.

It must be remembered that even the weakest of internal radiation can have harmful effects on our descendants.

The total effect of the damage done to descendants of ancestors who have been exposed to radioactive rays will not, in accordance with the laws of genetics, be apparent in the generations coming immediately after us. The full effects will appear only 100 or 200 years later.

We are forced to regard every increase in the existing danger through further creation of radioactive elements by atom bomb explosions as a catastrophe for the human race, a catastrophe that must be prevented under every circumstance.

There can be no question of doing anything else, if only for the reason that we cannot take the responsibility for the consequences it might have for our descendants.

They are threatened by the greatest and most terrible danger.

That radioactive elements created by us are found in nature is an astounding event in the history of the earth. And of the human race. To fail to consider its importance and its consequences would be a folly for which humanity would have to pay a terrible price. When public opinion has been created in the countries concerned and among all nations, an opinion informed of the dangers involved in going on with the tests and led by the reason which this information imposes, then the statesmen may reach an agreement to stop the experiments.

A public opinion of this kind stands in no need of plebiscites or of forming of committees to express itself. It works through just being there.

The end of further experiments with atom bombs would be like the early sun rays of hope which suffering humanity is longing for.

Greenville, Miss.

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from Fleet Flashes, the publication of the Lykes Lines:

GREENVILLE, MISS.

Greenville, Miss., came into existence in 1826 when a band of young pioneers docked their boat at Bachelor's Bend on the eastern shore of the Mississippi River, 150 miles south of Memphis. It was incorporated as a town March 21, 1886. Since then the world's richest alluvial soil of the flat, fertile Mississippi Delta has provided a bounteous living for Greenville's ever increasing population.

Greenville today is one of the most attractive cities of the delta, noted for its beautiful gardens, wide tree-lined streets, and spacious, well-kept lawns. It is a city rich in culture whose people have developed highly the art of good living. The metropolitan population is in excess of 40,000. Harmony, mutual aid, and understanding between the races have won national acclaim for this thriving port city.

Although for decades cotton has been the mainstay of the delta's economy, rapid diversification of agriculture has brought about vast production of small grains, livestock, dairy herds, poultry, and produce. Mechanized farming has replaced the mule and the plow. New industries to process farm commodities have supplemented the two large wood products mills, and many smaller plants have sprung up, manufacturing chemicals, machinery, cottonseed oil and cake, soybean oil mill products, fabricated metals, concrete products, fertilizer, and hardwood lumber.

The world leader in wool carpet manufacturing has a modern plant located here.

Greenville's strategic location and water transportation facilities make it a distribution point and retail trade center of no small proportions, handling a tremendous volume of petroleum, farm equipment, fertilizer, automobile, and other appliances, lumber and building materials, which is disbursed over a tri-State trade area. It is also a recognized medical center.

During the decade, 1930–40, Greenville showed the largest percentage of increase in population of any city in Mississippi. The increase, 1940–50, was 43.1 percent. To meet its growing needs Greenville has experienced a continuous building boom since 1940. Over 2,000 new homes have been constructed since 1945, as well as many new commercial establishments.

Washington County, of which Greenville is the seat, produces normally 125,000 bales of cotton; the Mississippi Delta, about 2 million bales. In recent years the trend has been rapidly away from the one-crop system, toward livestock, soybeans, corn, oats, rice, vegetables, poultry, and dairying.

Greenville's trade territory includes southeast Arkansas and northeast Louisiana, and has a population exceeding 300,000, which places the city third in the State in retail sales. The largest cities of comparable size or larger are about 100 miles away.

The Greenville Bridge, a modern structure of steel and concrete, 2 miles long, spans the Mississippi River 5 miles southwest of the city. It was built by the city of Greenville at a cost of $4,650,000 and opened to traffic October 6 1940.

Until 1931 the Mississippi River flowed past the Greenville business section at the foot of Main Street, but the Father of Waters then was moved several miles west by cutoffs. Huge levees on both sides of the river were constructed and are maintained by the United States engineers. The mighty Mississippi flows swifty to the gulf, and Greenville rests securely behind this modern miracle of engineering and tested flood protection.

A great benefit of the cutoff has been the resulting formation of beautiful Lake Ferguson, which is nearly a mile wide, 6 miles long, shaped like a horseshoe, with the southern heel connecting with the Mississippi north of the Greenville Bridge. Thus Greenville enjoys a natural deep-water harbor, receiving and shipping tremendous tonnage in lumber, petroleum, fertilizer, steel, farm supplies, and other commodities.

A new integrated rail, truck, barge terminal is the latest addition to Greenville. This ultramodern port facility will offer material-handling equipment that should satisfy the needs for the movement of any presently known commodity. A public warehouse will be operated in conjunction with the port terminal for use of demurrage storage only.
